# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 2, 1904.

VOL. LXII.—No. 1.  
No. 346 BROADWAY, NEW YORK.

1904.

WITH this first number of 1904 the FOREST AND STREAM enters upon its sixty-second volume, and to all its readers, old and new, near and far, we extend sincere wishes for a Happy New Year.

### IT JUST HAPPENED SO.

THE assumption is that it happens so in every newspaper office, and in other offices, for that matter, and in the world at large. A person is mentioned in conversation—he may be a thousand miles away—and the same day the mail brings a letter from him, the first one perhaps for months. Did the approaching letter by some occult influence prompt thought of its writer? No, for his name came up in a perfectly explicable way by suggestion, one thing leading to another and to reference to him. The only explanation is that it just happened so, and was a simple chance coincidence without mystery or meaning. Doubtless if such things were noted every person could record a goodly list of similar occurrences which just happened so. And the recurrence of such chance conjunctions would go far to make one skeptical of there being any more significance than that of pure chance, when he was gravely told that a Yankee ship captain in a South Sea port had seen his wife in a vision on a certain night, it being the same night, as he learned months afterward, in which she died. Marvel and speculation in such cases are saved if the theory be accepted that it just happened so.

When Mr. J. A. L. Waddell, of Kansas City, was in the office of the FOREST AND STREAM the other day, he told of rainbow trout fishing in the Northwest, and of the difficulty experienced with the pack horses on the arduous trail to the fishing grounds. It had been impracticable to do anything with the contrary and strenuous beasts without the application to them in copious supply of the strong language for such special purposes made and provided. The conversation naturally turned to the use of profanity as an accessory of the pack driver's art. Afterward reference was made to a note which had been printed in these columns some months before relative to an address delivered by Mr. Waddell before the graduating class of a scientific school. The issue of the paper, July 25, 1903, was looked up, and it just happened so that in the column next to the note referring to Mr. Waddell was an article on the use and abuse of profanity in driving pack horses.

In the course of a desultory browsing among the bookshelves the other night, there was picked up a scrapbook, in which, among other contents clipped from newspapers, was a collection of poems of heroism. One of the poems, which the reader stopped to read, was James Whitcomb Riley's "Had a Hare-Lip," describing how, when the bridge gave way at a great baptizing, hare-lip Joney had saved thirteen lives and sacrificed his own.

Had a hare-lip—Joney did—  
Folks 'at filed apast all knowed it—  
Them 'at used to smile looked sad,  
But ef he thought good or bad,  
He kep' still and never showed it;  
'Druther have that mouth all pouted  
And split up, and like it wuz,  
Than the ones 'at laughed about it.  
Purty is as purty does!

It just happened so that the next book taken up was Lloyd's "Field Sports of the North of Europe," which opened to a chapter on hare shooting, and to a page on which it was related that after the killing of the hare "a singular operation was now performed; the head of the hare, with the exception of the ears, which remained attached to the skin, was severed with a knife from the body. The only reason I could ever hear alleged for this most strange custom, which is universally adopted throughout Sweden," Lloyd relates, "was that if a woman about to become a mother were to see the head of the animal, her offspring would inevitably have a hare-lip."

In the evening paper the other night was a note saying that the name of the horse-chestnut was given because of the fact that at the point of the branch where the leaf stalk has fallen there is "a very perfect representation on the bark of a horseshoe, the nails being evenly and distinctly marked on each side."

The newspaper having been laid down, Canon Ella-combe's book, "In a Gloucestershire Garden," was taken up, and this was what confronted the eye: "One of the first trees to put on autumnal colors and to drop its leaves is the horse-chestnut; in some seasons they take the color of old gold, and when they fall a curious horseshoe mark at the junction of the leaf with the branch is so distinct that it is not surprising some should think the name of the tree was derived from that, with which, however, it has no connection."

Trivial coincidences are noted with slight attention; it is only to those which appear to be of some moment that we attribute mystery and an occult nature. New York has recently witnessed a gathering of people from all over the country, who claim to be descendants and heirs of the original proprietors of that part of the city comprised in the old town of Harlem. They believe that they have a claim to this immense tract of land and buildings now in other hands, and they are led by a man who assured the convention that in undertaking the reclamation of the property and establishing upon it a New Jerusalem he had been guided by the admonition contained in a Bible text upon which his eye had fallen when the book was opened at random. His faith in the divine call thus revealed to him was so sincere that he has sacrificed his business, time, and means to devote all his time to the work. Since, then, however, he has decided that though "convinced that the recovery of the Harlem rights and properties was the fulfillment of prophecy, I freely admit that I must be mistaken in my scriptural interpretation of the subject;" in other words, he has come to the sensible conclusion with respect to this random reading of a Bible text, that "it just happened so."

And it further just happens so that as this is sent to the printer a letter comes from Mr. Fayette Durlin, of Madison, Wis., who writes:

I have been intending to drop you a line ever since the Christmas number of FOREST AND STREAM arrived, to tell you how much I appreciated and enjoyed this number. You certainly outdid yourself in this particular instance, and I am sure that it will more firmly establish the fact that FOREST AND STREAM is without doubt the best sporting publication in circulation. I noticed a peculiar coincidence in regard to the anecdote about the "Venerable Men" in the article on Daniel Webster. The Christmas number of the Saturday Evening Post contained a paper by Grover Cleveland, in which he referred to this same anecdote, and also to the great Daniel's love for the Mashpee.

### A CONNECTICUT WINTER WALK.

THE mercury stood below zero just before daylight, and in the dull sky no fading stars were to be seen. Keen and bitter as was the cold, the air was still. After it grew light the intense cold, congealing the moisture in the atmosphere, began to sift it down in light fine snow, which, as the moments passed, fell more and more thickly, until it was hard to see across the home lot from the house to the gate. One looked out on a white world.

Warm and cheery as it was within the house, strings were tugging toward out of doors, and before the morning had half passed, the feathery whiteness of the undisturbed snow was broken by a trail leading from the house. Though the snow lay deep, it was so light that walking was not laborious; and, though the cold was sharp, rapid exercise made the blood course swiftly through the veins. Down in the "run" all was white save where the gray stems of alder, or the thicker trunk of swamp maple rose above the snow, and standing by the brookside the ripple of the water as it poured over stones and tinkled against the shell ice was heard beneath the white covering.

The weeds stand high in the old corn lot beyond, but a multitude of migrants have long ago stripped them of seeds, and not a bird was visible until the border of the woods was reached. Then, from a bunch of ragweed a white-throated sparrow sprang into the air, paused for a moment on an alder twig, and plunged deep into the woods.

Half a mile of winding walk through the forest showed nothing alive. The swamps were frozen, yet here and there some warm spring below had melted a hollow in the icy covering, so that it broke easily with a resounding crash. At the end of the woods the rolling lots were white with only here and there a black cedar to interrupt the view. The wind had risen now, snow flakes were fall-

ing thicker than ever, and whirling about in the fashion of a true western blizzard. Along the road song sparrows and juncos were hiding from the storm among the tangled cat briers and blackberry vines, and when disturbed tossed themselves into the air and were whirled away to some other nook where comfort might be found. In another strip of woods the winter chopper had been at work, and great chestnuts and white barked beeches lay prostrate on the ground, partly cut up now into neatly piled cord wood. On the hillside at the border of the wood the warm spring, open even in this sharp cold, looked dark and deep, and somewhere down below a multitude of frogs were sleeping in its oozy bottom. From the undulating meadow which crowns the hill, dotted with conical cedars, with great erratic boulders and a few gnarled and twisted apple trees, sprang a single meadow lark, which, helpless in the wind, after a short flight threw himself down behind a stone wall.

Beyond the hill Blowaway, a narrow forest-bordered lane, had been chosen as shelter by a multitude of juncos and tree sparrows, and even by crows, which, wise birds though they are, did not suspect that human beings would be abroad on such a day, and sat in fancied security, to rise at last but ten or twelve feet away, in huge blackness against the universal white.

Up among the cedars where thick woods and the ravines of the rocky hill gave shelter from the wind, a jay was seen, and here only a moment or two before a fox had passed along, hunting his breakfast late this morning, since the impression of his round feet had hardly begun to be covered by the thick falling snow. The hill crossed, there were other fields, and down near the lily pond a dozen bluebirds were started from their hiding places among the sumacs. Just beyond them a rabbit had crossed the lot, and a little further on a gray squirrel had ventured out, daring to face snow and cold for a bit of breakfast.

The wind which had been blowing harder and harder had now shaken from the boughs of evergreen and deciduous tree alike the light snow that had wreathed them during early morning, yet the close set needles of the cedar held so much of this that near at hand they seemed gray instead of dark green.

The bitter cold had closed all open waters save here and there a warm spring from which run swift flowing brooks, and in these warm waters ducks might have been seen not a few. But this is the hard time of the year, and each one of nature's creatures has now to strive busily to procure food to support life. Why, then, in these rigorous climes, should man strive to make existence harder for them?

The wide circle of the FOREST AND STREAM readers, and their extremely varied pursuits, make easy the dissemination of information of unusual interest to all outdoor people; and letters published constantly call forth unexpected responses. The last case which comes to our attention is Mr. Emerson Carney's interesting note on "Back-Trailing Horses." Among those readers whose memories were stirred by this, and who gave some expression to their feelings, were an old plainsman, a young woman resident in a large city, an old Texas cavalry man of long experience, and a native of Flanders now resident in the United States. To each of these Mr. Carney's note appealed with a force so strong that each had something to say on the subject to the other readers of the paper, and no doubt there were many others who had something to say but did not come to the point of writing it out. This is one of the pleasantest and most useful functions of the FOREST AND STREAM; that it should serve as a medium of exchange among its readers of experiences, pleasant memories and useful information. Each reader of the paper has some bit of knowledge not shared by all the other readers. He should go out of his way to share this with the others.

In the November 18 issue of the Agricultural Reporter of Barbados, is a report of a meeting of the Legislative Council of the island, at which it was resolved to offer a bounty for the destruction of the mongoose. Other West India islands have had their sad experience with this animal, which it may be hoped will never reach these shores. The experiment of the United States with the English sparrow has, we trust, taught us a lesson.

## The Sportsman Tourist.

### A New Year's Greeting.

'Tis just ten years ago, "Ay de mi"—time is fleeting—  
That I sent to your readers a holiday greeting,  
Full freighted with hopes for good luck and good cheer,  
To follow their paths through the incoming year.

Father Time, with his scythe, has been mowing away,  
And some whom we loved has cut down day by day  
Some have followed their game o'er the last long divide,  
Some await Charon's boat by the dark river's side.

Though they drop from the column the lines do not thin,  
For the ranks are closed up by recruits falling in;  
And the tales of adventure are welcomed again,  
From the prairies of Texas, the forests of Maine.

The ascetics proclaim that this world's but a show—  
A mere prelude to one unto which we must go;  
But we hold that the Ruler, who placed us all here,  
Meant our fullest enjoyment of all its good cheer.

The flowers shall open their buds in the spring,  
The bobolink trill, and the mockingbird sing;  
The trout from his lair 'neath the alders shall rise,  
In ready response to the deftly cast flies.

The sheep on the mountain, the deer on the plain,  
Shall reward the pursuit of the hunter again;  
The goose and the mallard come down to his call,  
As they wing their way south at the coming of fall.

Here's success to them all, both the old and the new;  
May their aim be unerring, their weapons be true,  
And through FOREST AND STREAM may the fortune we hear  
Which has followed our wish for a Happy New Year!

JAN. 1, 1904.

VON W.

### Bright Eyes.

THE winter of 1872-3 in Montana was about the coldest of any that the old timers can recollect. Snow began to fall early in November, and from then on until March never a chinook broke the piercing cold. I was employed that season by old Jim Wells, who had a trading post on Milk River, just below the Bullhook, the butte overlooking the present town of Havre.

We were trading with the Gros Ventres and Assinaboines, who, to the number of two thousand or more, were camped in the timber bordering the river above and below us. They were poor. I doubt if they had more than one horse to the lodge, dogs being used to drag lodge poles and household effects when camp was moved. Still, the buffalo were so plentiful, darkening the snowy plains in all directions about us, that there was no hunger, and we did a good trade in robes.

In December the cold became more and more intense, and froze the mercury in our thermometer. The snow was a couple of feet deep, and still falling a little every day. Band after band of buffalo and antelope trooped in from the country to the north, crossed the valley, and swarmed into the breaks of the Little Rocky and Bear Paw Mountains, the wolves and coyotes and foxes trailing along behind them; the plains were deserted by every living thing. In the great camp the women toiled and shivered, cutting fuel for their lodges, felling green young cottonwoods that their horses might browse on the bark and tender twigs. Meanwhile their lords and masters kept close to the fire, leaning back on their soft robe couches, smoking, feasting, gossiping in lazy indolence.

But this state of affairs could not last. The stores of dried meat and pemmican dwindled rapidly. The medicine men began to make sacrifices to Cold-maker, the storm fiend, to pray the sun to send a "black wind"—a chinook—that would melt the snow and allow them to hunt once more in comfort and safety. But prayers and sacrifices were alike unavailing; the intense cold continued and the Indians began to starve. Old Broadface, the Gros Ventre chief, came into the trade room of the post one morning, followed by one of his wives, who tossed a couple of buffalo robes over the high deal counter. "These," said the old man sadly, "are the last we can spare, else we freeze within our lodge even by the side of the fire. Yet, perhaps it were better to freeze and die quickly than to die slowly by starvation. Give us for the one robe some flour, for the other some sugar and tea."

So, it appeared, thought his people. One by one they parted with their couch robes until they had no more. Our stock of provisions dwindled until we had no more to sell. We, too, had hoped for a chinook and the arrival of a bull train load of goods from Fort Benton, and we had sold out everything but one sack of flour, a side of bacon, a few pounds of sugar and hardtack—not much to last a dozen men and women any great length of time. Things had come down to cases; for us and for the Indians it was hunt or starve. Preparations were finally made for a hunt out to the slope of the Bear Paws, thirty miles away. We employes at the post drew cuts to determine which one of us should accompany the Indians, and the short straw fell to me.

So we rode forth one morning into the thick veil of slowly dropping frost which enveloped the plains and effectually hid an object at a distance of three hundred yards. It had been agreed that the hunters should split up into small parties, and diverging like the sticks of a fan, spread out and cover many miles of the mountain slopes where the game was thought to be. There were a dozen men in the Assinaboine party I accompanied, and one of them, a good looking, light hearted young fellow named Red Quiver, had allowed his wife to come with us. They had but recently married, and could not bear to be separated from each other even for a couple of days. I rode a good strong horse, and had four others upon which to pack the spoils of the hunt. Each one of the party had that number or more, which they had borrowed from relatives or friends unable to go themselves. We had a large lodge and lodge poles. Some were provided with a little bedding, others had none. I packed a few blankets, a couple of robes, and a wagon sheet upon one of my loose horses.

The deep snow had lain and settled so long that the

horses had hard work to travel through it. We took turns riding ahead and breaking trail, and in that way went on hour after hour all day long at a steady walking pace. Even then we only succeeded in reaching Beaver Creek, and by the time the lodge was set up and a fire built darkness was upon us. Not a living thing had we seen all that day, not even a wolf or coyote. We had crossed a few old trails of buffalo and antelope, faint and frost-rimmed paths. Not one of my companions had brought along any food—not so much as a scrap of dried meat. I had four loaves of sour dough bread and a couple of pounds of brown sugar. I produced two of the loaves and half the sugar. Bright Eyes, as I called her, Red Quiver's young wife, steeped a kettle full of spearmint tea; I poured the sugar into it, divided the bread into fourteen portions, and we feasted! But even if we had only a few morsels of bread, there was plenty of the tea, and it warmed and cheered us. I had a plug of tobacco, one of the Indians a huge stone pipe and a sack of "therb." Time and again the bowl was filled with the mixture and passed back and forth around the circle. There was some little talk; tales of by-gone hunts and memorable feasts; we felt drowsy. I gave a part of my bedding to Bright Eyes; she threw one of the heavy blankets over Red Quiver's shoulders, leaned against him, looking into his eyes with dreamy fondness. He drew her closer, shielding her with a part of the blanket. There is love in the Indian camp as well as in the town and city of the pale faces.

The fire was kept going all night, and by turns every one had sufficient sleep. In the morning we finished the bread and sugar, washed down by another kettle full of tea, then packed up and resumed our quest. About noon we came upon fresh signs of game, and a little later a large band of buffalo were sighted, looming up huge and strange in the heavily frosted air. They were busily pawing the snow and thrusting their white coated heads deep down for the dry, rich grass. Great clouds of steam escaped from their nostrils and hung over them like a fog bank. They did not notice us and we approached within less than one hundred yards, slowly and silently, and then with one accord dashed swiftly into the herd, shooting right and left. I myself killed eight fine cows, others more, some less, but enough, anyhow, to load every pack horse in the bunch. There was a grove of cottonwoods and a spring near-by. The married couple put up the lodge while the rest of us skinned the quarry, cutting the meat into suitable shape for packing. Then we all gathered around the lodge fire, and what a feasting and laughing and chatting orgie we had. It lasted all the afternoon and far into the night. I marveled at the quantity of meat those Indians stowed away.

We packed up and started homeward the next day. A light but intensely cold wind had sprung up from the north, right in our faces, bringing with it a drift of fine falling flakes which soon obliterated all traces of our trail of the preceding day. We soon wished that we had remained in camp; but, since we had started, it was decided to push on to Beaver Creek. It seemed as though we would never get there. Most of the Indians dismounted and drove their horses before them. I could not do that for I wore buffalo robe trousers, a heavy buffalo coat—was so loaded with clothes, in fact, that I was unable to do more than waddle along like an overfed duck. Twice that morning we came on to some antelope which had lain down and died of the cold. I learned afterward from the Indians that thousands of them perished in that way during the winter.

Red Quiver was in the lead when we came to Beaver Creek. We struck it where there was a long beaver pond, and on the opposite side a small grove of cottonwoods. The young man dismounted, and leading his horse started across. He had not gone half way over, however, when with a crashing and crackling of breaking ice, his animal plunged into the deep water clear out of sight, and the next moment Red Quiver went down also. He was no sooner in that one of his comrades threw him a rawhide lariat and drew him out to the bank. "Hurry," I called out, "unfasten that pack and wrap him in my bedding. Put up the lodge and build a fire."

But Red Quiver would have no blankets. His horse, his only remaining buffalo runner, must first be saved. The animal was plunging madly about in the broken ice, rising, sinking, snorting, its eyes distended in terror. A rope or two was quickly cast over its head, but our combined efforts failed to draw him out. I tried to snake him out with my own animal, but the rotten thongs broke to the strain. Then Red Quiver, wet and freezing from head to foot, ran to the timber, secured a stout dead limb, and began to break the ice from the hole to the shore. I took the club away from him and once more told him to wrap himself in my blankets. More ropes were thrown over the horse's head. I kept busily pounding and breaking the ice. It may have been ten minutes before I had a channel opened to the bank and we pulled the animal out. It lay there in the snow, shivering, nor could we get it up on its feet. I looked around. Bright Eyes had got my bedding unpacked, had spread out the sheet and a robe, and persuading her husband to lie down upon them, was covering him with the rest. Then she put up the lodge with our help. No one but a woman can set up one as it should be done, so that it is symmetrical and will not smoke. Some fuel was quickly gathered, and a fire started. We went over then and picking up Red Quiver, bedding and all, carried him inside. Bright Eyes turned down the sheet and blankets and uttered the most heartrending cry I ever heard: her husband was dead. She threw herself upon the frozen form and wailed, and called to him over again to awake, to open his eyes. We sat about the fire with bowed heads for a little, and many a dusky cheek was wet with slowly dropping tears. One by one we stole out, unpacked the horses, and made preparations for the night. It had been wasted work to pull out the drowning horse; he lay where we had left him, frozen stiff; and for this skinny carcass a human life had been destroyed, a woman's happiness wrecked. Poor Bright Eyes! My heart ached in sympathy for her, sobbing so mournfully over all that the world had held dear to her.

Since it is the law that the dead and the living cannot occupy the same lodge, Red Quiver's comrades wrapped him in a robe and laid him at the foot of a tree near-by. Each one for himself broiled and silently eat some meat.

The pipe was lit and as silently passed around. Bright Eyes—sad eyes now—continued to mourn. After a little she arose, wrapped her robe about her, and went out. We could hear her crying out there. The pipeful was smoked out and the bowl refilled several times, still no one had spoken a word. It seemed to come to us all at the same time that the girl had long since ceased crying. "I will go out and get her to return," said one. A moment later he called to us, and we hurried after him. Red Quiver and Bright Eyes lay upon the robe together, and her arms were clasped tight around him. She had gone to the open hole in the pond and immersed herself in the water, and then lain down in death with her lover. "They are even now in the happy hunting grounds," said an old hunter, gently. "Let us not mourn, but rather rejoice that they have together gained the place of peace and plenty."

We built a scaffold in a low branching tree and carefully wrapping the two bodies in robes and blankets lashed them upon it. And when we had finished our work, day having long since come, we again packed up and plodded on towards the river, not one of us but were more or less frost-bitten ere we reached home, some so severely that they lost an ear or some fingers, and one even a foot. And this was the case with all the little parties that came straggling in during the next few days. But there was now plenty of meat in camp, and save for those who mourned for Bright Eyes and Red Quiver, peace and happiness reigned. Once more we could hear the drums beating and the song and laughter echoing in the calm night air.

The buffalo did not return to the plains until March, and the Indians alternately feasted and starved. Our bull train finally pulled in, and before a pound of anything was sold we laid aside an ample supply for ourselves. To add to the troubles of the Indians about us, they lost a large part of their horse herd. Despite the cold weather a war party of Blackfeet was abroad and drove them off one night and were never overtaken.

LONG JOHN.

### Jerry's "Panthy" Hunt.

ALL day a heavy southeast wind had blown steadily up the lake, turning the blue, sparkling water to a gray, sullen hue, flecked with long streaks of white foam. The wooded mountains and sloping hills that surrounded it appeared wet and indistinct, veiled by thin, misty rain clouds, and there was a chill in the air that foreboded the coming fall.

Inside an old workshop that rested on the shore of this wilderness lake, a cheerful fire crackled invitingly in a rusty, aged stove standing on four wooden blocks near the center of the room. Its reappearance from amid a pile of rubbish and shavings had been appreciated by more than one individual, and the sage, who was the only partaker of the genial warmth, did not long remain without company.

The Veteran and Wallace had been the first to discover the rejuvenation of the old stove, and were discoursing on the deer hunting of the past and present, when the shop door opened, letting in a gust of rain and wind, and—Jerry, who bore more than one proud distinction in this region of the North Woods.

In the first place he was the brother of the only and ever famous John Plumbly, a woodsman whose personality and knowledge will never be forgotten by those, who, during by-gone days were privileged to have him for their guide. This distinction Jerry treasured more deeply than the others, although he was the first child born in the town of Long Lake, and himself one of the oldest and most experienced hunters in the woods.

Jerry, as the fourth discoverer of the comfort and cheery interior of the old shop, stamped a portion of the black muck mud off his rubber boots, and then neared the stove, with an open ear to the conversation going on.

"Come, Jerry," said Wallace, after the farmer had silently warmed himself before the crackling stove, "let's have that panther story of yours."

"He only likes to tell about those hundreds and hundreds of deer carcasses he saw coming up the lake years ago," remarked the Veteran from his seat on top of a cracker box, with a sly wink at the Sage, who reclined against the shop table. At this Jerry's demeanor suddenly changed, as was expected, and he spoke up, saying, "I'm tellin' ye facts about them deer, fer when I come up the lake one time on the ice I see five or six carcasses, jist hair an' bones layin' round whar the wolves hed killed 'em."

"That's more like it," replied the Veteran. "I tell you Jerry has to stick to facts with this crowd." And a general laugh followed at the latter's expense; but it did not seem to disturb his serenity in the least, rather he chuckled at the joke on himself, for his good nature was a hard thing to ruffle.

Setting the blue yachting cap that he wore on the back of his head with a jerk, and throwing open wide the front of his wet tarpaulin coat, Jerry planted himself closer to the glowing stove, gave a thoughtful yank to his beard, and commenced with, "Well, I tell ye how the hull thing happened, an' this was the very last panthy I ever knowed of bein' killed in the Adirondacks."

"Me an' Will Cullins heard one day, it was in March an' pretty cold, too. We heard, I forgot who told us, thet Mr. D—an' Jack Shepard was comin' in ter go up Cold River an' hunt a panthy somebody's seen around that region. So quick as a wink we rigged up thet very night an' started the next morning ter get thar ahead of 'em."

"On the way we lost one o' the dogs we hed took along, but I sez to Cullins, I thought we cud get on with the other all right, so we kept on. After travelin' about twenty miles we come ter Hough's shanty, an' was glad ter put up thar fer the night. As soon as daylight the next morning we started out again an' later on reached the head of a flo' or dam up on Cold River. Near a mile above here we struck the panthy's trail about nine o'clock. Thar was a good trackin' snow, an' we hed no trouble followin' it round Ragged Mountain, in ledges, out o' ledges, an' over ledges."

We see whar he hed killed a number o' hedge hogs, an' eat 'em. Finally we come ter one o' them peaked hills beyond Ragged Mountain an' the trail led up this; one place he hed clim' a tree an' sprung off on ter a big rock above. 'Now,' I sez to Cullin, 'we'll foller around this mountain till we come back here again, an' ef we don't cross his tracks he'll be somewhar on it. Ef he goes off we'll gain thet much on him.' So away we started, an' after walkin' quite a bit come right back to our tracks without seein' hide or hair of the panthy. 'He's on thar, sure,' I sed ter Will, an' then we went ter a big ledge ter get up. The ledge was pretty high, so I got on Cullins' shoulders an' hangin' on ter a bush scrambled on top. Whar I stood was a kind o' cut through the shelvin' rocks, an' here I see whar the panthy hed clawed dirt on the snow, an' it was mighty fresh lookin'.

"Hand up the dog," I sez ter Will below, so he reached me the chain an' I yanked him up. Quick's I hed the dog I took the strap off'n his neck an' let him go, after bendin' a scrubby spruce down fer Will ter pull himself up with. 'You put right along,' I sez ter him, an' I'll foller as soon as I get these packs fixed.' He started off, an' you kin bet I warn't slow about gittin' after him, neither! Half way up the mountain all of a sudden I see the dog cuttin' across an open stretch o' ground with the panthy ahead o' him, an' thar was Will settin' in the snow with a busted snowshoe. I didn't stop ter listen ter what he was sayin' jist at thet minute, but away I went after 'em, only carryin' my ax, fer, o' course, Will hed the gun. Down the mountain we went fer half a mile or more, until near the foot I heard the dog barkin', and thet meant the panthy hed treed. Jist before I reached 'em the panthy jumped out o' the tree, an' on ter another ledge, so quick as a wink I took the dog round a little ways whar he struck the trail agin. All of a sudden away goes the panthy tearin' up past Will Cullins with the dog close on his heels, an' when he was goin' by—"Here Jerry paused and gave a low chuckle before he continued, 'Will's gun was lyin' on the snow whar his snowshoe hed give out, an' when the panthy went rushin' by he made a dive an' grabbed fer the gun, but it was too late, an' he'd gone out o' sight."

Will hed got his shoe fixed when I was pretty near up ter him, an' he got ahead o' me an' come up with

Under Full Sail on the Upper Missouri.

the panthy before I did. Here was the panthy, I don't mean Will, jist undertakin' ter climb another tree, but thet dog he ran an' grabbed him by the hams, so Will told me afterward, tryin' ter pull him back. Ther heads was so close together fightin' an' snarlin' that he thought sure the dog would git killed, but jist as I was nearin' the scene o' action, he got a chance an' let go fer the panthy's shoulders. The panthy he kinder settled back, an' the dog sailed into him fiercer than ever, when Will ran up an' put a bullet through his head, an' he was ourn fer sure.

"It was now near three o'clock an' here we was ten miles up the river with the panthy, so we hitched a 'whit' ter him an' snaked him down the mountain ter Hough's shanty, reachin' thar about eleven o'clock at night. We hed been goin' it ever since early mornin' an' was pretty well tuckered out. Next day we skinned him, an' tried out the grease, four quarts as white as lard. An' now I'll tell ye a curious thing about panthys. Hedge hog quills never go inter them further'n the skin, fer when we skinned thet beast here they was layin' in between the hide an' flesh around his head an' neck.

The followin' day we started fer hom, leavin' the carcass, an' about half way back we run on ter Jack Shepard an' Mr. D— goin' panthy huntin' up Cold River. Mr. D— sez, 'What luck?' 'Oh,' I sez, 'We got one after some trouble.'

"Whar did ye leave the meat?" they sez to me, an' I told 'em they'd find it up at Hough's shanty. 'Well,' sez Jack Shepard, 'I suppose we'll have somethin' ter eat, anyway.' An' I guess they didn't feel very good over it, but I told Mr. D— before we started on thet I seen another panthy's tracks besides the one we killed, which was straight, so ef they wanted ter go panthy huntin' a big one was waitin' fer them some whar up in the woods.

"Well, we hed the panthy skin set up, an' it was ter Bennett's hotel on Raquette Lake, when the place burned down, so thet ended his career fer good."

Jerry's breath had about expired when he finished his narrative, and he lapsed into silence as the Sage took the floor, and related several interesting experiences of past hunting days in connection with panthers whose shadows no longer fall in the North Woods.

The twilight had commenced to settle, and sharp

spatters of rain splashed against the windows facing the gray, stormy lake, while a red glow shone out between the open dampers of the stove and sent a flickering light across the floor.

"Some time I'll tell ye some bar yarns," said Jerry, as the party broke up, "an' there's some o' them left around here, anyway, ef there ain't no panthies. Well, I suppose I must get along," he continued, buttoning up his coat with one hand and opening the door with

An Antiquated Brave of the Upper Missouri.

the other, adding, as he went out, with a twinkle in his shrewd eyes, 'I will say thet I hev ter stick ter facts with this crowd, an' I've stuck thar with this panthy story.'

CAMILLA.

## The "Upper Missouri" of To-Day.

(Concluded from page 504.)

'Twas so cold on the boat the next morning that the two passengers went ashore when approaching sharp bends in the river and found pleasure, not only in the exercise, but also in the finding of horns, skulls, and, occasionally, almost complete skeletons of the buffalo. Strange to say, only one stone arrow point was picked up.

A hot stew of rabbit and duck was much appreciated on this cold day. Tommy said afterward that he thought maybe the unusual excellence of it was due to the fact that Jim's well seasoned dish cloth had been lost in it for a sufficient length of time to have exercised a marked influence upon the brew. The Doctor captured a goose by the aid of his rifle, and all hands licked their chops in anticipation of a feast. No more than three of these fine birds were seen during the trip, and one of them was the tame "Charley," who narrowly escaped Joe's pot. It is safe to predict that if "Charley" was allowed to continue the practice of sailing up and down the river, he has struck a snag ere this. Since the scythe of time was cutting wide swaths in the 30 days of vacation, early morning starts were necessary, and so, as soon as there was sufficient daylight to mark the course of the channel, the boats were pushed from shore. When the Doctor and Colo-

Old Trading Post at Rocky Fork.

nel crawled from their bunks, somewhat later, there was always an abundance of fresh air, and they drew the conclusion that the top of the morning had a cold and forbidding nature.

Few voluntary stops could be indulged in, and, therefore, the scenes of buffalo runs, Indian wars and massacres, the sites of forts, trading posts, etc., were passed by with deep regret, and, besides, hunting was getting a slim allowance of time. Just now, however, the Mother Hubbard condition of the cupboard commanded attention, and, therefore, at 2 P. M., having had a good run of 20 miles, anchors were cast. Before disembarking four white-tail deer appeared upon

the sandy shore a half mile away. After watching their antics through glasses for a while, the nimrods sauntered forth with murder aforethought. Eight deer, one a black tail, were seen before nightfall, and three of them were, by that time, strung up near the campfire. Evidently these animals hereabouts visit the water much earlier in the day than was supposed, and our previous attempts at sighting them had been made after they had returned to cover. Jim got perky, laid claim to vindication as to deer, and said, "If the journey were being made in canoes instead of a sailboat, you would come upon numbers of them daily." Here, as elsewhere, cattle bellow among the hills and threaten to destroy the hiding places of their seclusive neighbors. Ice was very much in evidence in the morning when the boats were set at liberty and allowed to float past many bottoms where grazing herds, modern windmills and barbed wire fences occupied what was unclaimed Government land three years previous. Nevertheless, fresh deer tracks seemed plentiful on the sand bars, and small flocks of ducks were seen now and then. While making a cut-off afoot, a settler was visited who displayed an inherited pile of choice antlers of elks, white tail and black tail deer. He had also found some very interesting petrifications of fish with crystallized "insides." The day was credited with 20 miles, when camp was made near the mouth of the Musselshell River, where a coyote was engaged in running the scales of his vocal organs and cleverly imitating a whole pack of his kind.

The Doctor remarked in the morning that a deer had threatened to come aboard the boat during the night, and that he arose from his bunk for the purpose of receiving it with proper ceremony; but when his chattering teeth began to awaken echoes in the hills, he positively decided that he didn't want the animal and didn't care a continental whether anybody else did or not. The Doctor is a selfish cuss.

Many dead horses were seen in the river just below the ferry at Musselshell. The ferryman had refused a contract to transport a drover, and the result of swimming them had been disastrous. The river was no more than 50 yards in width here, and the loss must have been due to quicksand.

This is the locality where the buffalo used to ford the river, back and forth, in such vast herds as to delay the occasional steamboat for days at a time. Some skulls in a good state of preservation still lay upon the banks. The bare, yellow hills of the Bad

Glued to the Bottom.

Lands now came into the landscape, reflecting the warm midday sun through a veil of purple haze, and only palm trees were needed to depict a counterpart of the Egyptian desert. A new sensation accompanied this entire change of environment, but interest was no less keen, for here surely the settlers and lowing herds would be out of their element. The sunset was a wonderful display of soft colors which, unfortunately, the photographic apparatus would not reproduce. Stars do not seem to "stud the heavens" in this rarefied air, but suspend in space, and their brilliancy and seeming proximity commands attention.

Jim had repeatedly said, "If you want a black-tail deer you need only walk back a few miles in the hills on the south side of the river," and now it was decided to give a day or so to hunting and put this assertion to a test; therefore, on the following morning the Doctor with Tommy, and the Colonel with Jim, started in different directions for an all day exploration. Night and the latter two reached camp simultaneously. They had gone back from the river about three miles as the crow flies; but as many more in ups and downs, until they found themselves face to face with a black stallion, which was acting as sentinel and leader of a band of horses. He advanced in a threatening manner, with a confident air, and they dodged the issue with alacrity. Then coming upon the fresh track of a blacktail buck, they followed it up through the foothills, above the tops of the groups of evergreen trees, spirally ascending a high conical bluff, clinging to sage bushes and tufts of grass, until they saw where the quarry had joined a doe and fawn. Further on the tracks led to a little pool of water in the cleft of a rock, and this remnant of the recent rains was an explanation, sought by Jim, as to why so few of this species visited the river. Near this drinking place, which, by the way, was a godsend to the hunters, whose supply of water was exhausted, they awaited without avail the return of the coveted buck. During the long walk home in the twilight, they lost their bearings, thus lengthening their journey, and reached camp with shoes pierced by thorns of the prickly pear and their bones aching with weariness. 'Twas quite dark when the other pair arrived to call forth exclamations of surprise and pleasure by laying before the fire a good specimen of mountain sheep—the most

coveted game of American sportsmen. They had perseveringly climbed the highest hills to their summit, after much exertion, many hardships and risks not a few; had crawled on hands and knees along narrow alleys leading to spurs of the range and faced situations which were, to say the least, unattractive. In one instance the Doctor, when lying prone upon one of the slender pathways with his fat stomach distended over space on either side, looked down upon the jagged edges and pinnacles far below and became terrified. While in this state of mind he could not trust himself to move either forward or back. Tommy, comprehending the situation, displayed presence of mind by singing "Mandalay" in a nonchalant manner, and by thus relieving the tension released his companion from an uncomfortable if not dangerous predicament.

Finding no signs of life nearby, they were entertaining themselves with shells, from heaven knows where, curious mineral formations and petrifications, when the Doctor's attention was attracted by a movement on the opposite side of a coulee. Careful investigation with glasses revealed a band of six sheep, whose coloring is precisely that of their feeding grounds. Then followed an arduous stalk of several miles while rounding the head of the coulee, and this brought the hunters within an estimated 300 yards of the game. At the first shot the startled bunch fled with their characteristic recklessness and speed along the steep side of the hill; a succeeding shot, fired when the sheep were probably 400 yards distant, dropped one of them, which plunged headlong down into the valley, where he, a ram, about four years old, was subsequently found in a disheveled condition.

On the morrow the nimrods filled their canteens again, paired off as before and headed for the hills across the parched plains, where the prairie dogs sat on their haunches and anathematized the invaders of their village. Evening brought them home and with empty hands. It was not until they had moistened their parched mouths and soothed their aching limbs and sensitive feet in the river, that they told their stories. The tall ridges had been reached again, and as new difficulty—the wind—had aggravated the discomforts attendant upon this lung-busting, heart-straining performance, a skilled equilibrist might not have thought it a hardship to walk along the sharp back bone of the range, holding fast to hat, rifle, camera,

to overtake these apparitions. With feet so tender that every step was a flinch, feverish from thirst and weary to the point of irritability, the thought or sight of the rehabilitating river in the distance was most alluring. Again, when with face pressed against the sides of a bluff, grasping a rifle in one hand while the other, stretching out far behind, clung to a tiny prickly shrub, fearing to take a step along the shelving ledge lest the other foothold be insecure, looking down, down, down, without discovering any place of lodgment short

Here he is.

of the bottom, at such times there seemed to be many more desirable things in life than mountain sheep. Well, in the early afternoon the Colonel's languid search was interrupted by a signal from Jim on another spur, and on joining him he received the pleasing information that several sheep had just arisen from their beds and were feeding up hill across a chasm. Peeping from behind a rock they beheld, at a distance of probably 250 yards, five of the coveted critters, and among them were distinguished, by the aid of glasses, several pairs of horns upon the respective heads of an old ewe, a young ram of two years and a very large ram of five years. The latter, meriting preference, was selected as the target, and when he approached a level with the watchers, they fired; the band started to run, then, becoming confused as to the point of attack, paused long enough to permit another shot and were off at breakneck speed. The coveted ram was evidently wounded, but labored along at good speed until another bullet overtook him, and he fell out of sight into the deep coulee.

The two fagged hunters sat down and looked at each other in silence for several minutes, wondering whether there was sufficient stamina left in their bodies to bring them out of the depths below, after descending into it in search for the game. It is safe to say that nothing less desirable than a Rocky Mountain sheep would have been resurrected by their aid. When homeward bound, by a new route, it became necessary to drop from one ledge to another, 4 feet wide, 9 or so feet below. Sheep tracks indicated that several of these animals had made this leap, leaving a lamb behind on the upper pathway. This little fellow had scampered about for a while and then deliberately sat on his haunches and slid over the edge. The impressions of his four sharp feet were bunched on the very edge of the precipice, where he had alighted.

Early the next morning everybody was up and ready for departure hence, but a flock of sage hens chanced

The Castellated Heights.

that way and the taking of some of these caused some delay. Then, too, immediately after pushing off shore the men's boat went upon a bar and there it stuck as though glued. The wind was fair, however, and after freeing the boat there was still hope for a record breaking mileage, until a tremendous bend in the river's course brought the wind dead ahead. For the purpose of making the succeeding reverse curve, all hands were piped on deck and ordered over the sides—excepting the Doctor, who at such junctures usually had to go ashore to take important photographs—the hawser was manned as in old times and the fleet moved slowly forward. Quicksands were found without being sought, and to escape from them with both boats re-

quired prompt and active measures, which afforded the Doctor, from his safe position, much amusement, and this merriment of his almost fomented a mutiny.

Midst such difficulties it was easy to comprehend the tremendous task of the first navigators of the river when cordelling their heavily laden boats against the current. In spite of besetting trials, 32 miles were made on this day through Bad Land scenery. Hills were now lost to sight and bottom lands bearing groves of cottonwood formed the border of the river, which widened, became correspondingly shallow and produced inconveniently numerous sand bars from which "sawyers" or snags protruded "like quills upon the fretful porcupine." Toward the close of day, deer tracks of recent make appeared on the sand, of both the shore and bars, in great numbers. Night came on and the nights in this northwestern country are not soon forgotten, for, when standing on the river's edge looking across the dark water and, past the brilliant stars, into the darker heavens, it seems as though one were on the edge of the universe, facing nothing but space. On the day following, the scenery was entirely devoid of interest. Head winds, shallow water, uncertainty as to the whereabouts of the channel, to say nothing of sawyers galore, made navigation troublesome and afforded repeated opportunities for exercise while attempting to make haste. Rowing, pushing, prying, pulling and fending off were freely resorted to, until a change in the course of the river brought the wind to the rescue.

The first prairie chickens were seen and taken hereabouts. These fine birds flew across the river in large flocks, and occasionally alighted on the bars, where they chatted and disported. The many deer signs indicated that venison might be easily obtained by those who needed meat. An aurora illuminated the whole landscape in the evening and furnished an entertainment that delayed retirement until an unwonted hour. Twenty-five miles was the day's accomplishment.

Jim was vindicated as to chickens on the morrow. Some of the bars actually seemed alive, and judging from the numbers flying across our bow, the bottoms must have offered fine shooting. They were nearly all old birds, owing to destructive storms at the last brooding time, and wild; but none the less enjoyable as food. Port Peck Indian Reservation was now on the left shore, and the presumption was that game would

Old Fort Benton.

be entirely obliterated in this vicinity by the redskins; but on the contrary, chickens, ducks and deer signs were equal to Jim's most flowery stories. Subsequently it was learned that the Indians are not allowed on or across the river until December, when a ticket-of-leave is issued for a few weeks, in which time they take a prescribed number of deer and such fur-bearing animals as the game laws permit. In consequence of this protection the neighboring game is very numerous and tame.

At 3 P. M. on the 26th, nineteen days after leaving Fort Benton, Wolf Point was reached, and the journey of 395 miles was accomplished. The bank was lined with silent but observant Assiniboine Indians, who lead what would seem to be a humiliating existence, although they profess and seem to be entirely satisfied with the reservation life. Their subjugation must be complete, since they point out the haunts of game just across the river and make no attempt to pursue it until the annual leave of absence is officially announced. They displayed a lively interest in the firearms of our party, especially in the new Winchester .33 and automatic .22, and used them with accuracy. The bead work of this branch of the Sioux nation displays excellent design and arrangement of colors; but less of it is made each year. The "tepee Indians," who are on the plains with their stock, apart from the debilitating influence of the trading post, and leading a more natural existence, are the only remaining patrons of the art, who still continue to tan and decorate the buckskin. Some few decorated shirts, etc., were offered for sale; but prices were exorbitant. A resident trader remarked that the only time for obtaining bargains is when the owners are hungry. As our train started eastward a doughty member of the tribe still squatted midst his possessions, consisting of war bonnet, tomahawk, head dress, etc., for which all our bids had been met with a shake of the head. Evidently he wasn't hungry.

LIPPINCOTT.

BALTIMORE, Md., Nov. 20.

While the young woman was making a hurried toilet upstairs, her father was entertaining her caller. "By the way, Mr. Spoonamore," he asked, "how do you stand on this question of imperialism?" "Why," responded young Spoonamore, "I've always thought it was—er—more becoming to most people than a goatee."—Chicago Tribune.

Resembling a Fallen Castle.

etc., while leaning from the perpendicular at a proper inclination to offset the force of the gale; but these four pleasure seekers did and they admitted that the day had yielded little else than fruitless toil. The Doctor had seen only tracks, but was hopeful of having obtained some good photographs of the surrounding country. The Colonel jumped a fine blacktail doe, for which he had no use, and had fired a parting shot after an alarmed sheep as it disappeared around the distant corner of a hill.

The third and last day set apart for hunting opened with a beautiful clear sky, as had its predecessors. Rain would have prohibited the sport, for the reason that when these hills are wet, or as much as damp, the ascent or descent or travel among them is too perilous. Locomotion in any direction is accomplished by stamping upon the indurated clay with every step for the purpose of obtaining a foothold, and where the surface moist and slippery this modus operandi would be impossible. No one can know the avenues of ingress to the range from year to year, because the melting snows and summer storms effect a complete recasting of its features. Knobs of the present will become peaks, and pathways will be reduced to knife edges by next autumn. Vegetation has, of course, a most precarious existence. On the morning referred to, a flock of ducks delayed the outset for the hunting grounds until a dozen were bagged, and then with stiff joints and burning feet the quartet departed. Doctor and Tommy feeling quite content with their legal allowance and admirable specimen of *Ovis montana*, made no effort to do stunts. They scaled the bluffs at a point where a prominent rock could be examined, and were interested by signs of game, but seeing nothing more inspiring, took some photographs and reached camp betimes. Darkness had descended before the return of the others, and when they ultimately entered the circle of fire light they were seen to be laboring under the weight of a trophy. Soon after leaving camp they saw a coyote pup, which the Colonel failed to hit, thereby making a bad beginning and robbing Jim of a \$3 bounty. The ascent of an hitherto untried group of hills was the most ambitious work yet undertaken, notwithstanding their crippled condition; but the sight of fresh sheep tracks during the climb had a buoyant influence. As the day advanced, however, with no other result than some new bruises and increased fatigue, the Colonel announced that, sheep or no sheep, this was positively his last attempt

## Down the Old Mississippi.

A YEAR ago last summer I went over a part of the same ground (water) from St. Louis to Cape Girardeau, now being explored by Mr. Spears. But I went on a Mississippi River steamboat.

When moving about the country I like to study faces and then make deductions—usually inaccurate, and as the lawyers would say, "having no foundation in fact."

In due course the supper bell rang and we gathered in the saloon and took such seats as the oily son of Ham obsequiously allotted us.

And as I spread my napkin and tucked it into my lowest vest recess between the buttons, I scanned the assembled guests. My attention was at once arrested by the man seated at the end of the table as well as by the man on his left, for if Henry Clay and Daniel Webster were ever "doubled" in life, certainly here they were, seated cheek by jowl. The waiter bowed and scraped to these two men (why, I never knew, unless the waiter was particularly afflicted in the joints and couldn't help it) in a way that made one suspicious of their great importance, and this lent a glamour of reality to the situation, for would not a colored waiter be justified in kowtowing long and low were he waiting upon two such distinguished guests in the flesh?

Neither of them spoke, both Clay and Webster seemingly being weighed down by heavy matters of state. The meal through, Webster gave his high choker and black cravat a settling twist and left for the outer deck, and there paced up and down in measured tread until bed time. Henry Clay went straight to his stateroom. I called my companion's attention to the two men and he agreed with me. When he was a boy, in his school room had hung an engraving, each of Webster and Clay, and they were familiar faces to him. The likeness was certainly striking, and as Webster paced the deck, his heavy head slightly tilted forward until his chin rested upon his chest, we could only conjecture as to what was passing in his mighty brain; and when we retired that night we went to sleep with Clay and Webster in our minds.

The call for breakfast found Webster and Clay in their seats of the night before—more like their namesakes than ever. We watched them closely, and were we believers in reincarnation, we certainly would have had nothing to doubt that the two great men were once more on earth to startle us with their eloquence.

Breakfast over, Henry Clay went to his stateroom, and once more Daniel Webster paced the deck in meditative strides. We made a landing, or, in other words, the boat poked her nose in the mud, and out shot the swinging gang plank, and away the negro stevedores ran on it like ants, each man carrying a 25-pound keg of powder under each arm. My friend watched Daniel Webster as he mixed in with the crowd up forward, who were watching and listening to the singing of the negroes. I was close by, and this is what I heard when my friend, in a neighborly way, to draw Daniel, asked where he might hail from.

"I'm from Milwarky, and I'm bound for Cape Girardeau. I'm a stone mason by trade. Milwarky would be a fine place if it were not for them d—d Dutch. Would you believe it, I am thinking there are 100,000 Dutch in Milwarky. I had some Dutch neighbors, and one morning over comes Mrs. Frankfurter, and said she to me, 'Have ye ere a ham about the house? Would yez be loaning it to me for a short time, as I would like to bile it with my cabbage!' And what do yez thinks of the loikes o' that. And tell me, what would I be doing with that 'ere ham after them Dootch had had it? D— the Dootch, anyway."

I went behind the pilot house and bracing myself in a corner just simply exploded. And then I thought of Henry Clay. He kept to his stateroom, and I lost all track of him until after I reached the hotel at Girardeau, when at noon I saw him vanishing up the stairs ahead of me. "And who may that be?" I queried of the hotel clerk. Without answering he pointed to a bunch of freshly strewn circulars upon a near-by table. I picked one up and read:

1,000,000 dollars  
Thrown Away Annually  
in  
OLD HATS

Cleaned and repaired and made good as new for 25 cents.  
Hats called for and delivered.

And then I could see how I was no nearer to Clay than to Daniel Webster—and yet I had some mental relaxation even if my deductions were somewhat erroneous.

Mr. Spears speaks of the telltale yellow flood marks on the houses far from the banks of the stream. Having been frequently to St. Louis of late, I saw abundance of these marks over in East St. Louis. And they remind me of a story.

A northern tenderfoot wanting to invest in some cottonwood timber in the South, was being shown over a most thriving bunch of trees in the bottoms. They were of gigantic size and showed no peculiarity other than a brown, muddy discoloration of the bark six feet up. The Northerner saw and remarked on this, and the planter met his query so: "You see, my friend, we have down here in this kentry a powerful tall breed of razorback hogs. They run free and wild. They, like all hogs, delight to waller in the mud, and they then rub themselves against the bark of the trees, and there's your mud." The planter told this in preference to stating that "at times" the water was six feet deep where they were standing.

Keeper—"I dessay they are, sir, but any other fly with a touch o' red in it would do as well."—Punch.

## Natural History.

### The Natural Language of Animals.

HAVING got through with the Red Gods, and nobody hurt, let us get back to our mutton. One of the interesting topics under discussion just before the literary outbreak among the brethren, was the question whether or not the various cries of animals are an innate or an acquired faculty. My wife has reminded me of a circumstance which seems to have some bearing on the case. Many years ago we had a cat that never uttered any cry. I don't wish to be thought as attempting any pun, but she was perfectly mute, as she never mewed. The kittens she produced mewed all right, but the mother cat never responded to them by any cry. I am sure they never heard any other cat mew, for there was no other cat about the premises. This seems to me a very strong argument in favor of those who claim this faculty to be inborn.

The cries of animals are a species of natural language. The older grammarians, I remember, taught us that crying, weeping, laughing, etc., were examples of natural language; they were expressive of feeling natural to men, and were understood by all intuitively. The origin of spoken, or artificial language, as it is called, is a large subject, and I do not propose to enter upon it; but I presume that all forms of natural language, including the cries of beasts and birds, are, as the term implies, natural to them. That is, born with them; and the specific cry of any species must be determined by some peculiarities of the vocal organs in that species. For example, a crow croaks and a rooster crows, because by the peculiar structure of their vocal arrangements, they can utter those sounds more readily than any other. Yet, by training and effort, some of the lower creation become able to imitate and reproduce other sounds than those most natural to them, just as the first natural outcries of the infant give way through culture to the myriad utterances of artificial language.

The bawling of a cow and the roar of a lion are quite different sounds, and, as things stand now, the sound uttered by one of these animals would be quite impossible to the other; yet, as I read Darwin, either of these outcries might in time come to be the natural cry of the other. If the two species of animals could be brought to live peacefully together, and to the lion it should become apparent that the voice of the cow would be of great value to him, say in the matter of securing his food, there is no reason to doubt that he might in the course of time, from effort transmitted from generation to generation, come at length to possess the dulcet notes of the cow.

If the giraffe, which was originally only a large antelope, has developed his high forequarters, his elongated neck, and his long, flexible upper lip, from his efforts to browse on the higher branches of the trees; and if the flounder, which when young has its eyes on the opposite sides of its head, as any well-regulated fish would be expected to have, is able through long continued effort to transfer the eye that rests disagreeably on the sands around to the other side of its head, where it may be of some service, there is no telling what varieties or modifications of voice or shape may be wrought in nature in the course of the ages.

But let us have no meandering. A kitten cries out, because in common with nearly all animals, it is furnished with a certain vocal apparatus; and its cry takes the peculiarity of a mew, because that sound best responds to its special vocal apparatus. Hence, and especially in view of the little incident which I have related, I am led to believe that the young of any animal utters the same cry as its mother for the same reason as its mother, and not from imitation. I think a young rooster crows and a young hen cackles, not in imitation of their elders, but, like the poet who "lispeth in numbers," because "the numbers came." Imagine if Robinson Crusoe had landed on his solitary island with a good, fresh-laid hen's egg in his pocket, and he had put it to hatch under his pet parrot, the rooster, if such had come forth, would have crowed out lustily of a summer morning, and never would have learned to say "Poor Poll!" in the world.

T. J. CHAPMAN.

### The Story of a Metropolitan 'Coon.

I SUPPOSE this 'coon went to sleep when the unusually cold weather came on early this winter, and when the thaw came last week he came out of his sleep and found himself with a keen appetite. How he wandered into the purlieus of a large city like St. Louis is a mystery. At any rate, here he was, in a culvert under one of the streets in Webster Park, a thickly settled suburb, less than two miles from the city limits. About every other man in the park has either a setter, pointer, a collie, or a fox terrier; consequently when Mister Raccoon sallied forth in quest of food he did not get very far before the dogs drove him back to his culvert. But on last Saturday night it was raining and the dogs were not very watchful, and he started out again. He doubtless thought he was going up a branch, but he was only following the tiny streamlet coming from a leaking water plug. It was the most disappointing branch he ever followed up in his life. There was not a sign nor a vestige of food anywhere in sight. It must be that he determined to appeal to humanity at this juncture, for when I came along hurrying from the depot to my home he fairly ran between my legs and almost tripped me up. Now, I was not startled by this in the least, because the cats sometimes come down the road to meet me and do that very thing, and when I stumble I have to be careful not to tramp on them. So I says: "Hello, there, kitty, what are you doing out so late at night?" And then I saw it was too large for a cat; and when it braced up and came toward me again, I thinking of that southwestern pest, the hydrophobic polecat, hauled off and kicked him a mighty hard, and,

I regret to say, cruel kick over on to a little circular grass plot, underneath a street light, where I saw that it was a 'coon and a large one. The kick did not seem to have hurt him much, for he came toward me again, this time uttering a conciliatory chuckle, something like the cluck of a hen when eating and scratching for her brood. Oh, the inhumanity of savage man! I grasped a stone and let fly at him, with the savage instinct of the stone age, with the thought of walking up the hill to the house and throwing down a 'coon and saying to the grasping, perhaps even admiring family, "Behold my prowess, my casual on-the-way-from-the-train prowess!"

And then the 'coon climbed up a little silver maple and I began to come to my senses, and to make up my mind that this was a tame 'coon, or, at least, a very hungry 'coon, and that the confidence it had reposed in me had been cruelly abused. So I betook myself to my dinner, after which I returned to the tree, but he was no longer there. The next morning I went there again with my pointer, who promptly took the trail from that tree to another one, which she examined as far up as she could reach, and thence to the culvert, where she pointed. When she had satisfied herself and me that the 'coon was in there, I called her off. And last night, as soon as it was dark, I took a lantern and a piece of raw meat and repaired to the culvert, and before I got there I heard the dogs. They proved to be two collies and a fox terrier, barking, at a respectful distance from an apple tree. And up there sat Mister 'Coon, apparently none the worse for my onslaught of the night before. When he saw me he came down to the forks of the tree, whereupon I reached up and gave him the meat, and oh, but he was glad to get it!

I stepped over to a neighbor's, and their men and boy folks came down and watched him eat. The lady of the house also telephoned to the other boy, who failed to find it on the previous night, and he, too, came. If he comes out to-night these boys will feed him well, and doubtless catch him and give him a home. He is a fine specimen, and made a brave showing up there on the sloping limb, pulling and tearing at the meat, and stopping now and again to regard us.

GEORGE KENNEDY.

P. S.—I had planned to call this story A Municipal Raccoon and to sign it George Jones-Kennedy, being particular about the hyphen; but when I reflected that when the 'coon was lightly caressed upon his cold, black nose, he didn't seem to mind it any, treating it, as it was intended, as a caress; but when his tail was touched he quickly resented it, my natural integrity prevailed upon me to change the title to that of An Ethical 'Coon. For it is plain that he knows the *genus homo*, especially the small *homo*, being able to distinguish between the ethical significance of the two caresses. He must, therefore, have been a tame 'coon.

P. P. S.—Two boys called yesterday, anyway, who had heard that I had their 'coon.

## Horse Sense.

Editor Forest and Stream:

First in order comes congratulations for the beautiful Christmas number. The reading matter was instructive to a high degree, and the illustrations neatly framed would grace the walls of any parlor to good advantage. All in all, it was unquestionably the best Christmas number of FOREST AND STREAM I have ever seen.

It seems a peculiar coincidence that just as I had in mind a story of horse intelligence to communicate, along comes Mr. Emerson Carney with something practically in the same line. The horse I will tell of did not "back-trail," but trailed ahead instead. And in so doing unconsciously secured a contract to a certain company, for which a rival company was contesting. A Mr. Phelan, of Whitneyville, Conn., told me the story, and it runs like this, in his own words, as near as I remember:

"I was foreman of a construction company's gang, out in New York State. The Delaware, Lackawanna & Western Railroad was being constructed at the time, and our company and another company had put in the same bid on work. The result was that I was awakened at 2 A. M. one morning, and told that I must get my gang together immediately, and hurry them off to a point a number of miles away. There was a race on between us and the rival company. As our bids were the same, the railroad company decided that the first one to begin work would be the winner.

"Finally, we were off. We had a guide, and as there was nothing to do but follow him at the best speed possible, I jogged along in the rear of the gang, on the back of an old gray horse. The rest were in wagons or mounted. The morning was very dark, and I admit that I, above all others, should have kept close up with the party. But I, somehow, allowed myself to lag in the rear, trusting to the noise of the others for a guide. Then I wanted to smoke, filled my pipe and found that I had no matches. An early rising farmer at a house close to the road supplied me with matches, but he was so long in doing it that when I started on my way again I could neither see nor hear my men. I hurried the old horse along at his best speed, stopping now and then to listen, but to no purpose. I was in a predicament indeed. I must be with those men when they reached their destination to tell them what to do. The other company was undoubtedly rushing men for the same points, and the first to begin work would get the contract.

"To make a bad matter worse, I finally came to branching roads. Dismounting I lighted matches, but each road seemed equally tracked up, and for the life of me I knew not what to do. Filled with worry and disgust, I started for one of the roads, but, strange enough, my horse persisted in taking the other. Finally I decided to let him have his way, and he started off faster than ever.

"To cut a long story short, that old horse followed the twistings and turnings of that road for miles, and even cut into another road that crossed it. Then we came to a town, and I had about made up my mind we were hopelessly lost. The dawn was breaking

when the horse dashed round a corner on to a street which led out of the town. My heart gave a great bound of joy, for there in the distance was the track, and there was my gang lined up along it waiting for orders. Not only was the contract saved, but my hide as well. The old horse saved the day, and to him alone was all the credit due."

I am keeping a little, old, black mare at this very day for the good she has done in years gone by. She has hauled my carriage many a time through the darkest and stormiest of nights, over the roughest and narrowest of country roads, when I couldn't, for the life of me, see two feet in front of my face. And at such times she always picked the way, as I soon learned that she knew the road best. And never an accident did we meet. I have another mare full of fire and life, the best roadster I ever drove; she is perfectly fearless and I trust her on the darkest of nights to pick her way home, and she does it.

I once had a young man on a farm I leased. He was good to draw his pay, but strenuously poor to earn it. But that was my fault for allowing it. He of the horses into town, attached to a surrey, to bring it back again at night. Sometimes I would drive one of the horses into town, attached to a surrey, to bring home company. If the horse happened to be one that the young man drove regularly, it would steer my company and me for every "red-eye" dispensary along our route. This would necessitate awkward explanations on my part, and insane hilarity on the part of my company.

WILLIAM H. AVIS.

HIGHWOOD, Conn.

PITTSBURG, Pa., Dec. 13.—Emerson Carney, in *FOREST AND STREAM*, calls attention to the back-tracking faculty or sense of locality in horses. Any man who has traveled much horseback must have observed the same. Some twenty-eight years ago I had occasion to attend to some business for my uncle in Flanders. My favorite saddle horse was Old Brigand, a three-fourths thoroughbred English hunter, gentle, high spirited, sagacious, and very intelligent. Coming home, late in the evening, for I had tarried later with my friends than was good for me, I reached a six-legged crossroads called Nellekens Keer (Witch's Corner), where, in the Dark Ages, a poor old woman had been burned alive as a witch and a stake driven through her body. It was pitch dark, and in a deep, dense forest of small pole pines; one of the worst places to get lost in, as they all look alike. I forced my horse to go in what I thought was the way home. After riding over an hour and seeing no known landmarks I knew I was good and lost. I knew Brigand had been there six or seven years before, and I turned him loose and let him have his own way. Coming to the crossroads, without hesitation he took a road which I imagined would carry us in an entirely different direction than home, but still I had sense enough to trust my old friend, and we had not traveled an hour when I recognized familiar landmarks, and putting him on a brisk lope we were soon home, he in his stable with a good feed, and I in bed, where I should have been long before.

My maternal over grandfather, van der Meerschaut, had a little Cossack horse captured from the Russian invaders in 1814. The old gentleman was lame in one leg, as the result of a hunting accident, but withal a good horseman when once in the saddle. When out on his trips in the country on business and coming home at night he would frequently fall asleep in his commodious Cossack saddle. The horse would make a bee-line for home, at an easy but swift pace. Arriving there it would rap on the front door with its foot until the watchman would open the porch and take the old gentleman out of the saddle. My grandmother told me this happened almost every week. Horse and master understood each other. Not being able to walk very well, he would hunt from horseback, the horse following the setters and coming to a standstill when one of them was on a point; the old gentleman guiding him entirely by pressure of the knees and voice, and having both hands free for his fowling piece. The horse died of old age on the place, as most of our servants. Peace to his ashes.

JULIUS P. THE FOXHUNTER.

## A Winter Day's Walk.

AFTER a week of unusually sharp weather, the Saturday before Christmas the mercury climbed above the freezing point, and during the night rain fell.

Sunday morning the landscape was covered with an icy coat of mail, with rain still falling.

About 11 o'clock I started for a walk in the fields and woods to gather evergreen to brighten the home during the Christmas season.

Rain was falling in sheets, and a strong south wind howled so fiercely that timid ones remained under shelter.

My path led along a country road which runs north and south, and my face was against the storm. I wonder if others feel the joy I experience in defying the elements?

Everyone enjoys a trip afield in the pleasant days of the year, when the sun is warm, the breeze caressing, the flowers are in bloom, and birds singing; but few know the pleasures of a walk when afield and roads are muddy and overflowing, streams border the highways, and the rain falls in a pitiless, drenching torrent.

Along the walls on the northern sides are baby snow banks, which, with the earth's icy coating, are fast disappearing under the influence of the warm south wind.

Have you ever noticed the winter coloring of the trees?

On the right are a multitude of young birches with brown jackets, with here and there white trunks among the larger ones. The near-by pines and hemlocks are green, while the hard woods, chestnuts and oaks, and distant pines are dressed in black.

On the left in a swamp are dark alders and slimy green laurels.

The citizens of the woods seem to have remained under their various shelters, save here and there a hardy sparrow, braving the storm that he may appease his never-failing hunger.

And I am glad of his companionship as he flies from

place to place gathering here and there a seed or so.

As I enter the woods that ever-vigilant policeman of the birds, the jay, announces with a sharp scream the presence of an intruder.

In the woods a thin carpet of snow covers the earth, a fabric of ever-varying pattern. Adder's tongue and bunchberry show themselves on a white ground, and at last I come to the evergreen running along over rocks and stumps, a luxuriant growth of vine, in other places standing erect, like diminutive Christmas trees. Under the pines are partridge vines, their bright red berries contrasting strangely with their own green leaves. Mosses at the base of great trees are green as in summer.

With hands and pockets filled with evergreen, mosses, and lichens, I start homeward.

What cares one for wet and mud? Have I not worshipped in Nature's Temple?

And long after clothes are dried and mud brushed away will thoughts of this day's walk to the end of memory remain "ever green."

WORCESTER, Dec. 20.

## The Meadow Lark's Song.

WE reprint from last week's issue the portion of the notes by M. of Northside on the song of the meadow lark, with the musical notation which was then omitted:

So far from being songless, the meadow lark has several melodious notes of varying accent and pitch. In spring time, when his mate is nesting, he will sit upon the top of a tree and will utter the flute-like strains nearly resembling the following musical notes:

These notes he will vary in intonations, and by descending to a lower key. How often from childhood have I watched him in the early morning or after a shower when the sun would come out, perched on the top of a distant tree, with his yellow breast, in which was a black spot, turned toward me, while he would sing his simple but sweet lay!

In that pleasing and well written book, "Bird Neighbors," this lark is spoken of in the following language: "Their clear whistle, 'Spring-o'-the-year, Spring-o'-the-year,' rings out from the trees with varying intonation and accent, but always sweet and inspiring."

## Ruffed Grouse in Captivity.

TOLEDO, O., Dec. 23.—Editor *Forest and Stream*: A good many years ago—I am afraid to think how many—the writer undertook a series of experiments in the domestication of the ruffed grouse. The results of my various efforts were duly chronicled in the *FOREST AND STREAM*, some of whose readers will remember that while they were promising they were not favorably conclusive.

A change in the location of my residence in this city has made it possible to continue these experiments, which still enlist my interest and my affections. It has always seemed to me that during the three or four years of my study along this line, I learned enough about the nature and habits of this grand aborigine to make these efforts ultimately successful. And under the circumstances I come to the readers of the *FOREST AND STREAM* to ask their co-operation. If any of the readers of our paper has an odd bird in captivity, or knows of any which could be procured for this purpose, I should be under many obligations if he will communicate with me. It is probably now too late to expect recently captured birds to nest the coming spring, but it is not too early to begin preparations for the spring of 1905.

J. B. BATTELLE.

## Gurdon Trumbull.

ART, science, and good sportsmanship have suffered a severe loss in the death of Gurdon Trumbull, of Hartford, Conn., whose demise December 28 affects an unusually wide circle of friends. Mr. Trumbull was best known to the readers of *FOREST AND STREAM* for his "Names and Portraits of Birds Which Interest Gunners," a volume which represented a vast deal of travel, observation and toil, and which had a great and deserved success. All ornithologists will recall his notable paper on the "American Woodcock," which appeared in *FOREST AND STREAM* December 11, 1890, and which contained the first record of a bird's power to curve the upper mandible.

Mr. Trumbull was born in Stonington, Conn., on May 5, 1841, and was a brother of J. Hammond Trumbull, the eminent philologist, and of H. Clay Trumbull, so well known as a writer. He was an artist of much power, and made many notable paintings of fish, among which were "Over the Fall," "A Plunge for Life," and "A Critical Moment."

Mr. Trumbull's personality was most attractive. Though quiet and almost shrinking in temperament, yet to those who knew him well he was a most interesting conversationalist on his favorite topic, ornithology. He was a keen observer and an acute reasoner, and one never talked with him without learning some new fact in natural history.

Mr. Trumbull was one of the most valued citizens of the community in which he resided. The sense of his loss will long be felt by his neighbors, and by all those who have been in any way associated with him in scientific work.

All communications for *Forest and Stream* must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Game Bag and Gun.

All communications intended for *FOREST AND STREAM* should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

### The Game Laws in Brief

is the standard authority of fish and game laws of the United States and Canada. It tells everything and gives it correctly. See in advertising pages list of some of the dealers who handle the Brief.

## As it is in Tennessee.

WHAT hunter does not know of the rise in pulse on a bright Thanksgiving morning?

Those of my three friends and mine, however, began to quicken on Wednesday afternoon as we hastily left our offices at three o'clock (slipping out the back door with sly tugs at our dogs, whose joyous squeaks did not fail to proclaim our ulterior designs). We had to prepare for a drive of twenty-four miles, and, as usual about this time, the first touch of winter had come, and dark clouds were gathering, and a sharp wind was blowing from the north. By four o'clock our surrey was at the door and several hunting friends stood by eyeing us enviously, inquiring of our "place," and letting fall significant hints for joining our party next day. These we ignored with glittering generalities and clattered off down Market street like true lords of the chase.

The drive of twenty-four miles on a road like the Nolensville pike was not such a bad thing, as this is the best of Nashville's fine system of free roads. The south of France, which leads the world in good roads, has scarcely better thoroughfares than we have here in Davidson county. The north wind was at our backs, and so the three hours we spent on the way were passed in comparative comfort.

The farmhouse where we were entertained was a model of its kind; roomy and rambling, its generous proportions were enjoyed at every hand, and no more so than in the great fireplace. This was built after the old-fashioned models where logs were logs and where men were men to handle them. The one which was glowing and crackling and singing its paradoxical song of content as we came in must have been put in place by some such man, for it made an armful and must have burned all night.

Then came supper, which must needs be cooked fresh for us as the supper time had passed. Here hot biscuits, ham and sausage and gravy (that relic of the old time), and jam, jelly, and preserves were lavished on us in such profusion that indigestion hovered on every plate and went with us to our big comfortable rooms, where wood fires also burned. Our valiant dreams were only broken by cock crowing, and this pleasant sound seemed to crown our impression of the country and we rolled out of our feathered nest very blithely. "How's the weather, Willie T," we asked our host. "Bright and clear," and then our spirits rose to the eighteen degrees above zero which the thermometer registered. The smoking things at breakfast, the chaff and chatter and the high anticipations of the day warmed us to the frosty start through the meadow to the upland pasture, where two coveys of quail were known to use. Our three dogs soon got the trail and led us to a brush pile surrounded by sedge. Here they got up in singles and in the hurry of this first brush I somehow managed to "wipe the eye" of Jimmie, who shot too quick. This he did not forgive until late in the afternoon, when he did the same thing to me. These coveys were small and wild, and I believe we only got four birds.

Next we went by the schoolhouse to get some educated quail which our small boy (they are always along and always have marvelous things to tell) assured us awaited our coming. But our young gentleman had made no calculation for holidays, and the birds evidently had, and so we left them to enjoy in peace their Thanksgiving feast of ragweed and sorghum seed on some sunny southern hillside.

Next came the question of permits, and we stopped at the village store to add a few more names to our written permission to hunt. The later law of Tennessee is an interesting innovation in the South, and is already doing more good than any game law this section has ever known. Other Southern States are quite apt to follow us, and it would seem that our heretofore plentiful supply of game will be continued and increased. One great result obtained is the education of the public as to obeying laws in general. There are many others besides those relating to game protection which have long been dead. This one has become a very live one, indeed, as evidenced by the great number of convictions since the season opened on November 1.

One of the most telling provisions of the law makes it finable to hunt on anyone's land except by written permission. The fine is placed at \$25 as a minimum, and the game warden reporting the hunter gets one-half of this amount. Another provision prohibits the sale of game birds or shipping them through or into the State. Written permits are therefore very much to be desired, and the one we looked after as closely as our cartridge bag read something like this: "We, the undersigned landowners of Davidson county, Tennessee, hereby grant permission to — and friends to hunt on our lands during the season of 1903-4." A good number of signatures had already been obtained, but two new ones were added as we sat for a few moments around the social store stove. One man not only signed but agreed to go with us and point out the coveys. This we thought very unselfish until we heard him speak of his fine young dog, which needed just a little more experience to make him a prize winner. We had seen such promising pups before, and always associated with visions of flushed coveys and bad language. However, there was no help for it, and his sprightly novice always got there before the rest of the dogs and realized our worst fears, racing after the flying targets, yelping out his glee at having done the thing just right. "The great trouble," his owner explained, "is in keeping up with him." Amid smothered execrations we agreed that this was the point where we had failed of our duty. The quail were so rattled that

they took to the cedar trees, and I am impelled to record my suspicion as a truthful chronicler that some of these unfortunate birds met their death as they decorated the topmost twigs of this cedar grove.

Our exasperation must be put forth in excuse of this, and also in palliation for the man who immediately began to shoot rabbits.

However, our accommodating friend soon left us, as he explained he had had the colic the night before, and his wife had objected to his coming in the first place.

These excellent reasons we could not gainsay, although our regrets were expressed in a genuine and heartfelt manner.

Two of the coveys which had been so enthusiastically pointed out to us by our friend's dog hied away to forbidden land, and so our juvenile camp follower was dispatched with our humble petition for signature. After a long time, giving the birds ample time to hunt brush piles and wander off into the adjoining woods, our ambassador returned with hands and pockets and mouth full of hickory nuts. Although accepting the hospitality of the foreign power, it did not seem to have availed him, for he grinningly returned our permit, saying: "She wouldn't sign, but said you could hunt all you wanted." Her husband was absent, and catch a woman signing anything without consulting her lord if you can!

Next Willie was sent with powers plenipotentiary to subdue the most obdurate man of the community, while the rest of us hid behind a brier thicket lest our numbers handicap him. "No, sir, I said no living man could hunt on my land this year." "I quite agree with you," replied mild Willie, and this acquiescence on every point was so adroitly maneuvered that he brought away the coveted name.

We climbed the fence promptly and found without delay two fine coveys, on which both dogs and men did good work. This was lunch time, but no time for it, and we ate our "snacks" in the full acceptance of this word. Our camp follower had been kept so busy throwing at rabbits—after getting over his hickory nut feast he kept his hands full for this purpose—that he said he wasn't hungry, but we divided our limited supply of sausages and biscuits with him and he ate without complaint.

The last field we touched was a beauty for birds, if there ever was one, a hundred acres of black cover and as level as could be. We got up two large coveys and shot until four o'clock, when every one seemed to have enough, and we wandered home, the sun hanging very softly on the wooded knobs to the west, and the fierce and bitter wind which had been blowing all day lulling as it began to touch the quiet face of the night. M.

NASHVILLE, Tenn., Dec. 1.

## Grouse and Woodcock Supply.

PHILADELPHIA, Dec. 21.—*Editor Forest and Stream:* In those sections of Monroe and Pike counties, Pennsylvania, with which I am familiar, the past season was the worst for grouse I have known. I cannot remember when it was so poor nor pretend to give the real reason, but you might travel for hours through the country there and not find a single bird. Last year I counted in one day's trip in early November more than a score of birds; how many I shot "is another story." This year, probably a little later, a half a dozen would be many; the greatest number in one day would be about six, not more, and it is likely some were counted twice.

Some of the local wise ones think the wet season had something to do with the scarcity; others lay the blame on the fox and other vermin. There is no doubt there are many vicissitudes attend the bringing up of a family of grouse, from the time the egg is laid until the young is ready for flight. Snakes and four-footed beasts esteem the egg a delicate morsel, and the young bird and old ones, too, are often victim to their feathered brethren. I have often seen where there has been a conflict between a grouse and some bird or animal, the feathers of the grouse leaving no doubt of its fate.

In the section mentioned I do not think a close season entirely for a few years would make much difference in changing conditions; the birds never have been plentiful within my knowledge within the last twelve years. I attribute this more to food conditions and fires than anything else. There are few if any beech in this section, and I am told that in the beech woods the birds are more plentiful even this season. I have not verified it, but it is probable, as after November 10 I have found little in their crops but small buds, ferns, green leaves, and wintergreen berries. Some birds are left for seed, however, and we hope for a favorable season in 1904.

JAS. BARRETT.

GARDINER, Maine.—So much is being said and written about scarcity of the ruffed grouse—locally known as partridge—that a word upon the brighter side of the subject may be of interest.

From a hunter's point of view, I do not know how many birds it requires to be called "plenty," but from an ornithologist's standpoint the outlook is improving in this district. The writer has been interested in outdoor study from childhood, and in the tramps through forest and field has never flushed so many birds as during the last season.

At Cobbosseecontee Lake, easily reached by electric cars, and lined with summer cottages, only a short walk into the deep woods flushed a mother bird and her family. The only weapon carried was a camera, so no harm was done the chicks; nothing was bagged in any sense of the word, for the baby ruffed grouse refused to have their picture taken. In this case the mother bird ran a short distance before breaking cover. The trees were oaks and the ground covered with old leaves; brakes and ferns sheltered the leaves, making an ideal spot in which a partridge family could hide.

One afternoon two families were discovered in the vicinity of Rolling Dam Brook; this is some eight or ten miles from the lakes, showing the bird to be well distributed. The place was an old wood lot; both birds burst with a whirr from the cover of raspberry bushes without a warning rustle. One circled back on silent wing to her family after the intruder had apparently de-

parted; the other came stealing through the tangle, dodging and slipping along among the shadows; the observer, meanwhile, lying in a hollow, covered with brakes and branches, watching her through an opera glass.

In years past one could walk for miles with never a whirr of wings; this season almost every short walk into the woods has been rewarded with the blood-stirring rush of the ruffed grouse. The fact that the camera was not quick enough to obtain a picture was not the fault of the bird; she was there, well dressed and in picturesque surroundings.

The work that the teachers of the public schools are doing will protect the game birds and all wild life more than any game law ever formulated. The numerous nature books in the public libraries are also a help. The writer realized the important results of such teaching upon hearing a little fellow of ten years remark, while gathering wild flowers, "Don't pick them all, leave some for seed."

Game greed and collectors' selfishness will be reached in this way for the future generation; meanwhile, let the game laws go on to restrict the present generation of thoughtless people. W. S. A.

EASTON, Md., Nov. 29.—*Editor Forest and Stream:* In a recent number sportsmen in different parts of the country were asked to report on the movements of woodcock in their section. The Easton Ledger records that Lewis Booker and William Seward, Queen Anne's, bagged 58 woodcock in two hours in each of two days in a famous woodcock ground in the adjoining county. No date is given, but I have reason to think that the shooting was done within the last ten days, probably just before this cold snap. A neighbor of ours also told me that he bagged five one day last week in a pine woods close by.

Our partridge season is somewhat disappointing; birds seem rather scarce, although there seemed to be numbers of them around during the summer and early fall, judging from their whistling, and seeing the old birds while driving around the country.

The prospect for ducks is likewise very poor; they are scarcer than I have ever known them at this season; lack of feed is no doubt the principal reason, as the duck grass in these waters has almost entirely disappeared.

WHEATLAND.

SAYRE, Pa.—Ere this is printed the season for ruffed grouse, woodcock, quail, squirrels and rabbits will have closed, and it reveals the fact that so far as northern Pennsylvania is concerned the supply of ruffed grouse has been quite up to the average of former years. If anything, more woodcock were bagged than during the season of 1902. Quail were about a normal crop, which means, of course, that a few birds could be taken in favorite localities and under proper conditions. Rabbits have been plentiful everywhere, fully up to the average of any previous year. M. CHILL.

## New Hampshire Deer.

DUNBARTON, N. H., Dec. 25.—The open season on deer in this State closed with November. From what I hear a much less number were killed than in 1902. There were two reasons. First, there were hardly any days when there was any chance for still-hunting. I was one of a party of four from this vicinity who went to Rumney, New Hampshire, on November 14 and remained twelve days. At first there were several inches of very dry leaves in the woods. On the third morning some five inches of snow fell and then turned to rain and then cold. The result was the noisiest traveling I ever had. Every step sounded like putting one's foot through a pane of glass. It is discouraging waiting for better hunting with such a foundation; eight inches or so of fresh soft snow is needed. Hunting deer among the mountains of New Hampshire north of Plymouth is pretty hard work, and with a foot or so of snow it is harder still. During the night deer would come into the opening near our camp, but by daybreak they were usually well back on the mountain. On the last day of our stay came the only chance to hunt, and it was not very good. Several inches of sticky snow fell during the previous night, and every bough was loaded, and in small spruce growth one could not see twenty yards. A neighbor who was camping near us took the track of a large buck at daylight on that morning. He followed that deer for seven hours before finding where it stopped. He killed and dragged it out, reaching camp about dark. The buck weighed, dressed, 170 pounds. It may seem easy to drag any sort of a deer several miles in that region, but those who have tried it do not think so.

Another reason for the killing of less deer was on account of the season closing with November instead of December 15, as previously. I asked the chairman of our Fish and Game Commission why it had been done. He said too many deer were killed last year during the fifteen days in December. Now, none of these deer were killed other than by still-hunting. There was not snow enough with a crust for any crust-hunting. In fact, not once in a lifetime will there be such a snow in December. If two months is considered long enough, give us from October 15 to December 15. I think the majority of deer hunters in New Hampshire would prefer the above time. We cannot all hunt in Corbin's Park.

Now there is another question about deer. It is within recent years that they have appeared in the lower parts of this State. They are doing well and increasing. I can find tracks almost any morning within half a mile of my house. When these deer first began to appear I, with others, favored their protection at all times. Many of us have changed our minds, and we now regard these deer as a nuisance. They are demoralizing fox, coon and rabbit dogs. An owner of a promising young dog of the above sort is very likely when out hunting to jump a deer. Very often his dog will chase the deer, and having done so once will again, and he cannot be broken, any more than can a dog which has once chased sheep. Another objection is that this and similar localities are no places to hunt deer—there are too many roads crisscrossing the country, too many houses, and too many domestic cattle wandering about in back pastures late in the fall. With an open season so many deer hunters would be

cruising about that bullets would fly across the roads and into dooryards. In the town of Hebron, at upper end of New Found Lake (where there is an open season), the farmers and landowners have formed a league, posting their lands against all out-of-town hunters. The cause, too many cattle killed and too many bullets flying about.

Now, I hear a good many farmers in this vicinity expressing the wish for the deer to go, and the only way seems to be to kill them. The deer are certainly ornamental, and that is about all.

As for grouse, I never knew them so scarce as the past season. Since the season closed I have (when out after foxes) started a few birds. With a first-rate breeding season next spring they may increase somewhat, but it will take a number of seasons for them to get back to their numbers of two or three years ago.

C. M. STARK.

## Imported Game in New Jersey.

MR. CHARLES A. SHRINER writes in the Paterson N. J., Chronicle:

The arrival of the snow, which is about 15 inches thick over most of the northern part of New Jersey, has temporarily, at least, put a stop to the sport of local gunners, who, for some years, have indulged in shooting English pheasants in Warren county. The latter county is about the only place in the State where good shooting of English pheasants can be had. This is due to the existence there of extensive game preserves, there being three farms owned respectively by Rutherford Stuyvesant, William K. Vanderbilt and Winthrop Rutherford. These three own several thousand acres of land lying near Allamuchy and Tranquility, and the preserve thus created takes its name from the last mentioned postoffice. English pheasants are raised there by the thousands, there being also regular importations from Europe, but all the gunning there is done without a dog. When a shoot is arranged the gunners place themselves in position, and men and boys beat the surrounding bush and brush, driving the birds into the opening in front of the gunners. Two and three hundred birds are thus killed in an afternoon. The preserve also has a deer and elk park, where these animals are permitted to roam about, the fence about the park being 8 feet high and over 8 miles long.

In addition to the sport of gunning for deer, elk and English pheasants, the owners of the preserves have established wild duck shooting. The wild duck which permits itself to be used for such purposes, is brought here from Ireland, and this year was the first when they were permitted to be shot. These ducks do not migrate, but will remain in the neighborhood of the pond on which they are placed. The imported birds multiplied rapidly, and several shoots were held during the present year, and at each of these shoots several hundred birds were killed. The birds have the peculiar trait of answering the toot of a horn. When a shoot is arranged men with horns are placed at each extremity of the pond on the preserve. One set of men begins tooting, and the birds all fly in that direction, affording the gunners a chance as the birds fly over the water. Then the birds fly back to the toot of the gunners from the other side, and the killing continues until the sport is declared at an end. Although the owners of the preserves raise fancy collies and fox terriers, no bird dog is ever permitted on the preserves, this being done in order that the birds may remain undisturbed.

Several local sportsmen some years ago took advantage of this state of affairs to provide sport for themselves at the expense of those annoyed with more wealth, for the local sportsmen leased the gunning privilege on the adjoining farms. On account of the locality where the gunning is done, the local sportsmen are frequently referred to as the Allamuchy poachers. Of course the Paterson sportsmen hunt the birds after the American fashion, and the birds are just uncertain enough to afford good sport. They rise slowly from the ground, but if the gunner gives them much of a chance the probabilities are that the bird will get back to the preserves, for they invariably fly that way when disturbed, and they can carry more lead than any other bird of their size. Although the birds show a preference for marsh and bog, they are frequently found in the open fields and that during the stormy weather and under cover when the weather is fair. There is no telling where they may be found.

The birds frequently act in a most perplexing manner to the best bred and trained dogs. The latter are accustomed to quail and partridges, which almost invariably rise at the approach of the gunner. The English birds frequently run, and when they do run they get over ground more rapidly than does a startled hare. They lie to a dog and frequently very close, and the dog scenting the game is certain there is a bird where he points, only to be fooled, for while the dog is pointing the bird is running away and may frequently be seen a quarter of a mile or more from where the dog pointed.

But there is one dog in Paterson which cannot be fooled by any such antics, for, as the saying is, he is on to the game. That dog is the joint property of former Alderman William W. Stalter and Dr. William H. Pruden. The name of the dog is Trix, and he is a knowing cuss. He evidently delights more in the sport than do his owners and he has not a bit of conscience left; whether this is due to his natural depravity or his associations is not known, but he will resort to the meanest kind of tricks to bring birds within reach of his masters' guns. To show how knowing and careful the dog is, a little incident may be cited; the incident occurred recently, at least so Dr. Pruden says, and that is just as good as if it had occurred, for Dr. Pruden never told a fib in his life. Trix was at Mr. Stalter's house when another dog was taken in; Trix became huffy at this encroachment on his territory, and at once started out for Dr. Pruden's residence, about two miles away. The doctor took Trix down town with him and was very much surprised when Trix came to a decided stand near the Call

office. The dog was pointing at an envelope which lay in the gutter. Dr. Pruden could not call him off his point, and so concluded that there must be a pheasant's feather in the envelope. He picked up the envelope, and on the part turned toward the ground there was a picture of an English pheasant; the envelope had contained a letter from a sporting goods house addressed to the sporting editor of the Call. When Trix dies his hide is to be stuffed, and he will be placed in the Hall of Fame for dogs alongside the 'coon dog who pointed a locomotive and train of cars, because the conductor's name was Coon, and the dog who pointed a large pickerel in a stream because the pickerel had just dined by swallowing a quail.

Mr. Joseph Rydings, in another column in his own inimitable manner, tells of his perplexity at the receipt of a pair of pheasants, and a number of residents of Paterson will recognize his state of mind as similar to their own under similar circumstances, for the Allamuchy poachers have made presents of pheasants to their numerous friends in Paterson. The general verdict of the representatives of the feminine persuasion in each family is that the birds are too pretty altogether to be killed, and that eating them ought to be out of the question, if for no other reason than to discourage the killing of the birds. The compromise effected by Mr. Rydings has taken place in a number of families in Paterson, and a good many English pheasants are to be found mounted in residences in this city. The result of Mr. Rydings' deliberation also indicates that although he has lived in Paterson a good many years, he has not yet become imbued with the thorough American way of making the best of things, for in most instances where Patersonians had the birds mounted, they took them to the taxidermist's and then insisted on a return of the edible part of the bird, leaving the skin and feathers to be fixed up, both for the delectation of others and a reminder of a good meal.

There are different ways of cooking the birds, but the one most prevailing is to split them open like a spring chicken and broil them. Other people prefer them roasted; in fact, they may be cooked any of the many ways in which chickens are prepared for the table. One favorite way with some people is to stuff them full of oysters, boil them and then eat them cold.

A peculiar fact in connection with English pheasants and of other pheasants of Asiatic origin, is that they will breed in this country, the hen taking care of chicks very much like a chicken. In Europe they are generally raised by the eggs being placed under ordinary barn yard fowl, the pheasants in Europe, as a rule, declining to either hatch out a brood or to take care of them when they are hatched. Science has not as yet accounted for this anomaly.

There are three kinds of Asiatic pheasants in this country. There are a number of different varieties kept in aviaries and parks, but only three have been used for the purposes of the sportsman. The most numerous is the Mongolian bird which was imported into this country direct from Asia and which has become very numerous in the western part of this country. The Mongolian birds are great travelers and are frequently found fifty miles from the place where they were put out only a short time before. The ring-necked pheasant is the ideal bird, for it does not travel far from the locality where it is put out; it takes good care of its young and is a very hard flyer. The English bird comes to us from England and is more of a domestic nature, although it also frequently strays a good distance from its home. How the English bird got to England is a mystery, for it is indigenous only in Colchis, Asia. The general supposition is that it was brought to Rome and from thence to the British Isles during the invasion of Julius Cæsar.

### More Letter Writing by Main Strength.

STATE OF NEW HAMPSHIRE FISH AND GAME COMMISSION.—Lancaster, N. H., Dec. 21.—*Editor Forest and Stream*: I saw in one of your issues a letter from Mr. Carleton, of Maine, saying that the letters which he received and the questions which were asked relative to the hunter's license law were somewhat confusing as well as ludicrous.

I inclose one which I received from one of the citizens of this State, which you are at liberty to publish if you see fit.

PERLIN, N. H., Oct. 2, 1903.—Der sur—i ame Writing you a few Words to Have a kunction satle i ame a citizen of this State i was alate as dalagate to the conncition and consuetan last fall But i was miride to a widow and she Had one Sun and of cose he is not a citizen and He lake to Hunt and he been to a layer and the layer tell him the Word citizen dont mine a voter So i Would lake fur to have the quectian disade so i taught you he the proper man to ansur it i Enclose a postamp to have a ansur if you thing it right Hoprin to Hie from you i Reman your truly,

The translation of this letter follows:

"I am writing you a few words to have a question settled. I am a citizen of this State. I was elected as delegate to the constitutional convention last fall. But I was married to a widow and she had one son and of course he is not a citizen; and he likes to hunt, and he has been to a lawyer and the lawyer told him that the word 'citizen' doesn't mean a voter. So I would like to have the question decided, and I thought you the proper man to answer it. I inclose a postage stamp for an answer, if you think it proper. Hoping to hear from you, I remain, etc."

This is the worst one I received, but many of them were very ludicrous. MERRILL SHURTLEFF.

### Maryland Quail.

FREDERICK, Md.—In Frederick county quail are very scarce, and most of them are very small. This is thought to be caused by the floods in Frederick county, as the first hatchings are thought to have been washed away by the floods, and the small ones are of the second hatchings. Rabbits are very plentiful, as great numbers of them are being killed.

### Vermont Game Interest.

BARRE, Vt.—*Editor Forest and Stream*: Stanstead, under the above heading in the FOREST AND STREAM of November 28, suggested a law for the better protection of deer which to me seems to be heaping "fuel on the burning fire." That a sixty day open season would reduce the number of deer killed is hardly probable. It is true the ten-day open season was made a gala occasion, for the hills were covered with all kinds of hunters in pursuit of deer. However, if the present law were strictly adhered to the deer supply would greatly increase. Wanton slaughter of does was reported from nearly every county, but the evidence to convict was lacking.

What Vermont needs is better enforced laws. The warden system is weak in every joint. The appointing of wardens by the selectmen of towns is a farce. What is needed is State wardens that will work in sections of the State most needed for the protection of game, and men who are fearless and above reproach to fill the position. That we shall need the protection of a non-resident license law there is no doubt, for with New Hampshire and Maine now both having license laws many hunters are coming to Vermont in preference to visiting the States referred to.

I visited with many deer hunters during the open ten days, and it is a lamentable fact that the majority of hunters kill their deer, then investigate for horns. I saw four deer, two hanging in public view; one had to make close examination to find their horns. To be sure, they were bucks. What hunter could have told until shot.

I venture to say, under our present warden system, eight out of ten of the complaints or arrests for breaking our game laws are to even up some old score.

Our game laws are ignored by many in this vicinity, streams are depleted of trout of all lengths, song birds are shot and netted without stint. Send a State warden to this or any other locality where poachers abound, make a few arrests and convictions, and you will curb these lawless acts.

In conclusion, I do not believe deer should be offered for sale. There are many who hunt for the profit to be gained in selling their deer; twenty dollars is quite a speck for the "lawless fellows" referred to by Stanstead.

B. A. E.

### Mayor Bergman Clears his Record.

CEDARVILLE, Ill., Dec. 21.—*Editor Forest and Stream*: Noticing the article, "Illicit Wisconsin Deer Shipments" in last week's FOREST AND STREAM, and believing that the gentlemen from Illinois should not be convicted of unsportsmanlike conduct before being given a chance to present their evidence, I inclose clipping from the Freeport Bulletin of December 3.

WM. REINIGER.

Hon. A. Bergman, former Mayor of Freeport, refuses to rest easy under the imputation of the Chicago and Milwaukee papers that he was concerned in a violation of the Wisconsin game laws. He has sworn to the following sweeping affidavit:

STATE OF ILLINOIS, ss  
County of Stephenson, ss  
August Bergman, being duly sworn, on his oath, doth depose and say regarding the statements published in the Chicago and Milwaukee papers referring to his recent hunting trip in Wisconsin, that he had no trunk, gun or other property confiscated by any game warden or by any other person; that he paid \$25 for his non-resident hunter's license, the same being dated Nov. 6, 1903, and numbered 241, as will appear from the records at Madison, Wis., and that he has in no way violated the game laws of the State of Wisconsin.

Subscribed and sworn to before me this 30th day of November, 1903.

W. N. CRONKRITE, Notary Public.

Mr. Bergman's many friends in Freeport never believed that he wilfully violated the game laws of Wisconsin. They are glad, however, to have this straightforward statement, showing that he neither violated nor evaded them in letter or spirit, and they are also pleased to know that none of his property was confiscated. Mr. Bergman has never violated any law of any State, and he does not propose to begin at this period of his life.

### Duck Hunters' Hard Time.

BABYLON, L. I., Dec. 27.—With the thermometer about zero last night in this vicinity, two men were compelled to remain in an open 15 foot boat, and for fourteen hours they had to jump around in the boat to keep from freezing to death. As it is, one of them is ill from exposure. William Donley, a Lindenhurst hotel keeper, and John Lapley, of New York city, left Lindenhurst yesterday afternoon to go gunning. They were caught in a heavy squall of snow. They attempted to return, but the mast of the boat was blown away, and they were carried by the ice floes to Conklin's Point, just east of here, where they drifted around all night. This morning they hoisted a signal of distress, which was seen by Capt. Philip and Andrew Sammis, of this place, who rescued them and brought them ashore. Lapley was partially frozen from the cold, but Donley did not suffer to any extent.—New York Times.

### The Connecticut Trespass Law.

HIGHWOOD, Conn.—*Editor Forest and Stream*: I have not been afield with dog or gun once this year, but have managed to keep in touch with the success of some others. The indulging in three trips after big game in the Maine woods has undoubtedly weakened my taste for small game shooting; and desire in that line grows less and less.

Perhaps, on the whole, game has been less plentiful in this section of Connecticut than in some former years, yet the success of some sportsmen would not denote a scarcity. Woodcock unquestionably have been scarce, but grouse have held their own, and quail have more than done so. Rabbits and squirrels are not nearly so plentiful as in years gone by, though in the cities this cannot be said of squirrels. Here the law protects them the year around. The growing scarcity of small four-footed game in the country can undeniably be attributed to the work of Italians more than any other cause. Either ignorantly or intentionally they break the laws constantly.

During the past week three of them were captured shooting squirrels on East Rock, which is a city park. They were fined, thank heaven!

The new trespass law has caused but little friction between farmers and sportsmen. With one exception the law is an excellent one. It is generally conceded by sportsmen, and many farmers as well, that it would be better were there a warning clause. As the law now stands it innocently invites and puts a premium on blackmail. In putting the power to arrest without warning into the hands of the landowner, it makes it possible for civil-disposed persons who own no land to place unsuspecting persons under arrest, and then negotiate a private settlement on the spot. Perhaps this variety of fraud would not work in many instances, but there should be no chance for it to catch a single victim.

WILLIAM H. AVIS.

### A Matabi Club Gift.

OTTAWA, Dec. 25.—*Editor Forest and Stream*: Last October a party of members of the Matabi Fish and Game Club, Ottawa, Canada, visited their preserves on the upper Lièvre after deer. An expert from that city, Mr. E. R. Lafèche, captained the party, and gave such satisfaction that the visitors from Rochester, N. Y., presented him with a costly silver loving cup, after partaking of a sumptuous dinner.

Mr. F. C. Cutting came from Rochester to Ottawa for the occasion. He spoke of the happy times he had had with Canadians whose kind hospitality and sportsmanship he could vouch for. He was more than pleased, as well as his friends, with the excellent sport given to members of the Matabi association, and the accommodations available at the club house. He then handed the souvenir to Mr. Lafèche, who suitably replied, acknowledging he had fully recognized the amiable qualities of his comrades from across the lines.

Mr. Lemieux, secretary-treasurer of the club, proposed the health of Mr. Cutting and the other donors. He expressed his satisfaction at the fact that sportsmen from the United States had joined the association; they have proven themselves good men in the bush and pleasant company, and have helped for the success of the club.

Mr. Cutting's brother from Toronto, Mr. J. Duhamel, Mr. A. Pinard, and Mr. E. Huot were also present at this happy reunion.

All promised to renew the happy meeting in the Canadian hunting grounds when next fall comes around.

The cup bears the following inscription: "Presented to Eugène R. Lafèche, in commemoration of the hunt of 1903, as a token of esteem, by four who admire him for his tireless energy, his consummate knowledge of wood craft, and his unselfish good fellowship."

Then appear the donors' names: Thos. F. Adkin, Robert J. Shoemaker, Fred. C. Cutting, Charles S. Clark.

### Deer in Connecticut.

NORTH WESTCHESTER, Conn.—*Editor Forest and Stream*: There is some opposition from farmers and others to deer protection on the ground of damage to crops and danger in the shooting seasons from the long range rifle. According to newspaper and local reports we might presume that deer were becoming quite plenty, judging from the length of time that has passed since they were first seen here in Connecticut. So far as I know I reported the first deer that was seen in our vicinity. It was a buck and well I remember how astonished and pleased we all were when we recognized what it was. A buck was found dead in Salmon River Cove by Charles Murkett; the finding was reported to our game warden, and will be investigated.

F. J. W.

### North Carolina Quail.

PINEHURST, N. C., Dec. 25.—The shooting on the Pinehurst preserves is fast reaching that point known as prime, and a number of guests are enjoying excellent sport, not only close to the village, but at various other points as well. Dr. C. D. Jones, manager of the Pinehurst Preserves, says he has never seen the birds more plentiful. He says that the best sport of the year will be found during the next three months. The non-resident hunters' tax which imposes a fine of ten dollars, is meeting with approval among the sportsmen, owing to the fact that it permits taking birds from the State, and the generosity of the management in waiving charges for shooting privileges is eliciting much favorable comment.

J.

### Maine Licenses.

Maine licenses have been sold to non-resident sportsmen by the eighty-three agents of the Maine Commission according to figures just given out at Augusta. The total receipts of the department amounted to \$33,000, derived from the sale of licenses, the fees of 2,004 registered guides, and the fines for illegal hunting.

Interesting facts concerning the products of the lobster fishing in Maine the past year are at hand, but must be deferred till my next letter.

CENTRAL.

There has been discovered a highly favored and exceptionally happy man. That is an angler whose wife helps him out with his fishing stories. A few nights ago a neighbor called to see him, and in course of conversation asked if he had caught any big sea trout lately. "Yes," was the reply. "What weight?" asked the caller. Turning to his wife, the angler asked: "What weight was that big 'un, Mary?" "Nay," replied Mary, "hoo can I tell which thoo means, thoo's been catchin' sea meany big 'uns leatley."—London Fishing Gazette.

There have been several controversies over such questions as "Can fishes hear?" "Can fishes smell?" and so on. These matters could have been easily settled by the poet who wrote the following lines on the funeral of Queen Elizabeth:

The Queen was brought by water to Whitehall,  
At every stroke the oars did tears let fall;  
More 'clung about' the barge, Fish under water  
Wept out their eyes of pearly, and swome blind after.

## Sea and River Fishing.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

### The Game Laws in Brief.

is the standard authority of fish and game laws of the United States and Canada. It tells everything and gives it correctly. See in advertising pages list of some of the dealers who handle the Brief.

## Lake Champlain Pollution Refuted.

Editor Forest and Stream:

Your letter received asking my opinion regarding the published statements of the pollution of Lake Champlain by the pulp mills.

I would say emphatically that as regards our section of the lake near Essex, the statements are absolutely false, and, as far as my observation goes, grossly exaggerated and misleading as applied to any part of the lake. There is sufficient evidence to show, at least for residents of this section, that the matter is prompted by personal spite. As a property owner and a lover of our beautiful lake, I feel that an irreparable personal injury has been done me, and while hesitating to express myself as opposed to any action, however mistakenly taken with an honest view of abating an evil, my patience has at last come to an end, and I can no longer keep silent in the face of a wilful perversion of facts.

Mr. Hatch's press bureau has circulated duplicate newspaper reports all over the country to the effect that Lake Champlain is a cesspool filled with dead fish and exhaling miasmatic vapors. In the current FOREST AND STREAM he goes so far as to say that fears are entertained of an epidemic of typhoid fever, and the reporter he has paid to furnish his material gives this statement as a result of Mr. Hatch's personal observation.

It is a difficult matter to disprove a lie of the character which Mr. Hatch and an associate who is not named in the dispatches have originated. In a general way I will say that while the shallower extremities of Lake Champlain are bordered by clay banks and muddy when the water is agitated by winds, the central portion is very deep and clear. The shores near Essex are sandy or rocky, and the water is so clear that objects may be seen upon the bottom at any depth which a man may reach by diving.

The shores are not covered with slime, and I never saw a cleaner body of water. Virgin wilderness lakes have a great deal more vegetable matter on the shores than Lake Champlain in the vicinity of Essex or Willsboro, where the pulp mill which interests Mr. Hatch in particular is located. I say "in particular" (to digress a moment) for he has only brought in the Au Sable mills in an effort to give strength to his arraignment. Of the Au Sable section I have no personal knowledge. The mills there are sulphide mills, while the mill at Willsboro is a soda mill using only lime and soda in its process.

Not only is the lake water pure, but it is particularly palatable, and it is used by many of the residents of the lake shore and of Essex village in preference to other water as drinking water. Dr. Sweat, our local physician, told me once that in all his practice, which has covered a period of years, he had never had a case of typhoid among families taking their water from the lake. He considers it the safest general source of supply, and in this his opinion has been corroborated by Dr. Benjamin Lee, President of the State Board of Health of Pennsylvania.

Mr. Hatch has stated that the lake was covered with dead fish. I asked the Rev. Dr. Richardson, a summer visitor who was on the lake fishing every day last summer, if he had seen any dead fish, and he told me he had not seen one. Dr. Barton, of Willsboro, a man of character and a good sportsman, tells me there are bass in the Boquet River directly below the pulp mill, and I am told pickerel are speared contrary to law each spring at this point. Dr. Barton's son made some remarkably good catches last summer trolling near the mouth of the Boquet.

Mr. Hatch says the fishing in Lake Champlain has been ruined, but the facts of the case are that last summer was the best angling season we have had in recent years. Illegal seining is not common in our section now, and when the Missisquoi Bay netting of spawning pike is stopped the lake will be one of the best fresh water fishing grounds available anywhere. Anyone who knows anything about the fishing in the lake will bear me out when I say that the fishing is steadily improving.

If the pulp mill at Willsboro is committing a nuisance, I should be heartily in favor of any intelligent action to abate it, but the observable facts do not indicate that such is the case. I have never visited the pulp mill in question, and I have no love for pulp mills in general, and no desire to pose as a champion of their cause, but my honest indignation has been aroused by the malicious falsehoods circulated in the above referred to reports, and as a man would resent an insult to the good name of a woman, so I register my emphatic protest against the false and defamatory attack on our fair lake.

JOHN B. BURNHAM.

THE press bureau conducted by Edward Hatch, Jr., and another in the interest of their warfare on the pulp mill at Willsboro, has hesitated at no extreme in what has become a defamation of Lake Champlain and a personal insult to every resident of this section. Not only has their bureau misrepresented actual conditions and suppressed material proffered in the interests of common honesty, but it has mischievously tampered with statements given in interviews and twisted them to suit its personal ends.

The history of the case is remarkable, as illustrating the way in which a good cause may be perverted. Several years ago the sympathy of many persons would have been with the contestants. The pulp mill was then discharging its entire waste product into the Boquet River, and no lover of the lake and no sportsman could view the matter with complaisance.

Even then, however, there was not a tenth part of the nuisance which Hatch and his associate have pictured as existing at the present time.

The mill is situated some little distance up the Boquet River from Lake Champlain, and the lake is here three or four miles in width and upward of 400 feet in depth. A little to the north, in which direction the current runs, the lake attains a width of fifteen miles. It is a large body of water aerated by the winds and purified by the sunlight, and as the mill at Willsboro was not a large one, the discharge was not of much consequence, aside from driving the fish out of the river itself.

At this time I remember driving on one occasion to Noble's Park at the mouth of the Boquet. An odor from the river water was noticeable, but the sand beach there was and is one of the prettiest and cleanest beaches on the lake, and it has been and is a favorite bathing place. At this time, I am told, the mill had an agreement with the Forest, Fish and Game Commission to keep its waste out of the river for sixty days each spring at the time the fish were running. The Boquet is about forty miles in length, but owing to the high dams and falls along its course, has not of recent years been much of a spawning stream for lake fish—and this statement applies previous to the coming of the pulp mill. No fish at any time ever ran above the high falls at Wadham's mills, where a 47-foot power is now being developed for electrical purposes, and only trout are found on the principal length of the river.

The facts of the case appear to have been that the damage done by the pulp mill at its most objectionable period, as far as the fish were concerned, applied only to about two miles of stream, and not at all to the lake.

One other fact, however, deserves attention. At times there were large amounts of slaked lime, or the water from the slaked lime emptied into the river at once, and this undoubtedly resulted in a considerable fish mortality. I have been told that at such times the shore of the lake near the mouth of the river was covered with dead fish, but this fact, and the odor from the water of the river itself are the only facts, so far as I have been able to ascertain, that ever obtained to substantiate the case of Mr. Hatch and his associate. And it must be borne in mind that all this occurred several years previously to their giving publicity to their statements regarding the so-called contamination of Lake Champlain; also that it is not shown that the fish were killed in the lake itself. No dead fish, as far as I can find out, were ever found in the neighborhood of Essex.

Within the past two years the pulp mill has taken energetic steps to stop the nuisance which I have described. This may have been due to pressure brought by the State Forest, Fish and Game Commissioners, or to other sources. The late State Fish Culturist, Mr. A. Nelson Cheney, visited the mill at various times. Also there was a sentiment aroused that the mill should keep its waste out of the river. Moreover, the gentleman, who is, I believe, president of the mill, has a summer camp near the mouth of Boquet. Whatever the reasons may have been and whether they were public spirited or selfish, the fact remains that in the summer of 1901 a reservoir was begun to contain all the waste product of the mill. This reservoir has since been enlarged and improved.

I was acquainted with these facts when FOREST AND STREAM wrote last week, asking for particulars regarding the purported pollution, but as I had never visited the pulp mill, and had no specific information with regard to it, I determined to make an investigation on the ground, and with this object in view I visited the mill yesterday. The following is the result of my observation and of the statement given me by Mr. R. L. P. Mason, superintendent of the mill:

The mill is a soda mill and the waste not of the same offensive nature of the sulphide mills. The chemicals used are carbonate of soda, which is the same substance (though not so highly refined) as used in baking powders, unslaked (or caustic) lime, and (for bleaching) chloride of lime. Alum is also used for purifying the water to be mixed with the pulp.

According to the statement of Mr. Mason, which, as far as I could ascertain, was verified by facts, the bleaching element and the soda were entirely recovered, and the sole waste of the mill, in addition to the charred gummy part of the wood, consisted of a small amount of lime water. This waste was run into the reservoir, of which I shall have more to say later on.

The process used in the mill is briefly as follows: The basis used for making the pulp stock is peeled cordwood, sticks of popple and basswood, fed into a machine which slices them up into chips with the required length of fiber. These chips are boiled in large boiler iron digesters in a liquor composed of soda and lime, and known as caustic soda. The effect of the process is to disintegrate the gummy, sappy and coloring parts of the wood called lignin, and to leave the fiber, or cellulose, which is the part wanted for paper making. The lignin, together with the caustic soda, which has taken it up in solution, is washed from the cellulose and drained off through the perforated bottoms of vats, and so perfect is the process that one may take the cellulose, or pulp, in the mouth and chew it without being able to detect a trace of the soda.

The caustic soda, with the lignin in solution, is immediately treated to recover the soda, as the same soda is used many times in extracting the undesirable elements of the wood. It is first evaporated to drive off the excess of water, and when reduced to the consistency of molasses on a cold day, the tarry product is fed into huge revolving drums, through which currents of flame are projected by drafts forced from furnaces, till the material is charred and falls on endless chains in the form of cinders, technically known as black ash.

The lignin has been carbonized and is in this condition insoluble in water. As the soda is readily soluble, it is now a simple process to separate and recover it, and this is accomplished by washing in hot water. The lime, which remains after the burning process, cannot be saved, and this and the lignin passes

away as waste from the mill, borne along by a small stream of hot water.

When the pulp is mixed with the bleaching agent in another building, a process similar in its result is effected, and here also the only waste is the lime.

The entire waste from the mill passes over the Boquet River in a steel trough to the dumping ground on the island, where William Gilliland, the patentee and a colonizer of Essex county, made his first settlement.

The place is no longer an island, as it has been dammed and connected with the mainland on the south side. An area of ten acres has been inclosed with an earth and planked dike, and the black ash and accompanying lime water are directed in tortuous channels over the surface by means of weirs, which deflect the direction of the stream, with the object of permitting the solid particles to settle and make land.

The chief constituent in this land-making process is naturally the black ash. This material resembles quite closely in a general way, coke cinders. It is hard, tasteless and odorless, and has been used in other mills for making arc light carbons. It resembles in no way the slimy miasmatic deposits described by Mr. Hatch, and which, as a matter of fact, do not exist.

After running over the extent of the island, the liquid passes off into the river from any one of several gates. Only one of these gates was open at the time of our visit, and from it was issuing a stream of clear water, slightly brownish in color, eight inches wide and three and a half in depth. This, we were informed, was the sole waste from the mill now entering the Boquet. Everything else had either been used, evaporated, deposited or recovered.

Mr. Mason stated that the flow at that time was about at its maximum, and had I doubted his word the evidence of the snow, which had lain on the ground for the past two weeks, furnished a strong argument in support of his words, as there was nothing to show that the water had in that time attained a higher level. The size of the stream passing away seemed in general to correspond with the size of the stream entering the island, and it did not appear likely that any considerable amount had backed away. Also, the snow was thawing a little, and probably a portion of the stream, 3½ by 8 inches, which is said to be contaminating a lake 120 miles in length, was formed by snow water.

Mr. Mason dipped up a glass full of the water and gave it to me to taste. It smelled and tasted like lime water, and as a practical chemist he stated that it was lime water and nothing more. The water was much clearer than the water in the neighboring river, and it seems incredible that it could have any deleterious effect on the volume of the stream, which, I should say on that day, was a thousand times as great. The trees and bushes on the tract were vigorous and had not apparently suffered from the water running by their roots. There was a whitish deposit in places on the island, and, of course, a considerable accumulation of the black ash, none of which, however, had entered the river.

Mr. Mason told me that last spring, during the high water, a portion of the bulkhead had been torn out by an ice jam, and at this time some of the black ash was carried into the river, but no one can question the sincerity of the company in their present endeavor, and it does not appear likely that such an event will again occur.

From the standpoint of the general observer, I should say that of its class, the Willsboro mill is a model to-day in the care of its waste.

As far as human consumption is concerned no one can accuse lime water of being unwholesome, and I have evidence to show that in the immediate neighborhood of the mouth of the river its taste is not noticeable.

The wife of the owner of the nearest important camp to the mouth of the river, less than half a mile away by water and probably not more than half that distance in an air line, told me that her family has used the water for drinking and cooking purposes for a long time, and that she has never noticed anything unpleasant about the water.

Others of Mr. Hatch's neighbors on Willsboro Point will make similar statements. The wilfully misleading character of the published articles of Mr. Hatch and his associate can, perhaps, better be realized when it is stated that of the interviews they have given out purporting to substantiate the pollution of Lake Champlain, near Willsboro, not one is from any of these two men's neighbors or from any one living in the locality condemned. Summer visitors at a distance sojourning near clay banks, who have seen the water of the lake in their neighborhood roiled by high winds, have had their utterances rushed into print as material against the pulp mill. The grist that has come to their mill has all been turned out in one long string of perversions. Under the circumstances it is not strange that residents in the neighborhood have lost faith in the sincerity of the contestants, while their latest canard of a possible typhoid epidemic has aroused universal indignation.

I am told that Mr. Hatch was asked to visit the pulp mill and ascertain the facts for himself, and the assurance was given him that any feasible suggestions he might make toward improving the situation would be followed. Mr. Hatch did not accept the invitation. Neither did he publish the following straightforward letter from Dr. Milford H. Smith, pastor of the First Methodist Episcopal Church of Ballston Spa, written Oct. 15, and given me by Mr. Mason, to whom it was addressed.

JOHN B. BURNHAM.

[COPY.]

The Superintendent Champlain Fibre Co.,  
Willsborough, N. Y.

Dear Sir:

I am mailing you, under another cover, a marked copy of the New York Tribune, containing an interview with Mr. Ed. Hatch, relative to the contamination of the waters of Lake Champlain by the waste from the pulp mills.

While I have no desire to mix in the controversy, yet, as one who is interested in the industries of my native town, and in the interests of fair play, I make the following statement, which I am willing to declare under oath if necessary:

1. I have spent a portion of every summer on Willsboro Point, Lake Champlain, for more than forty years, last past, and I never found better fishing than during the present summer. One man with hook and line caught twenty-six wall-eyed pike within a short distance of my camp one day this summer, and we never failed to secure a good catch when the conditions were at all favorable.

2. I only saw one dead fish during the entire month I spent in my camp, and that was a perch. We were intent on finding dead fish, if they were to be found, as we had heard of the charges made by Mr. Hatch and others, and were looking for verification of them.

3. Like all fresh water lakes, Champlain purifies itself every summer. The natives call it "working." At that time the organic matter, held in solution in the water, rises to the surface in the form of scum and finally reaches the shore. I have never known a summer in the last forty years that this has not occurred, and I have seen no increase, either in the quantity or quality of this matter since the pulp mills were erected. In fact, I have seen a far larger accumulation of this scum on the shores of the lake some seasons years before there was a pulp mill in the State of New York.

4. From my personal knowledge, the charges made in the above referred to interview, that the waters of the lake about the shores of Willsboro Point were foul with the deposits from the pulp mills, or that there was a stench other than that which always arises from the organic matter when first thrown up on the shore, I know to be false. I own over eighty rods of water front on Willsboro Point, and was on the property for a full month during July and August last, and know that no such conditions existed as are affirmed in the interview above referred to.

I, as a property owner there, resent these false statements and believe they are calculated to depreciate the value of my property, hence my interest in the matter.

Yours truly,

MILFORD H. SMITH.

My dear Mr. Mason:

Your letter of Oct. 17 is received. You are at perfect liberty to make any use of the letter I wrote you that you please, and I am willing and will back up any and every statement in it when and wherever it is required.

I am entirely ignorant of Mr. Hatch's object in antagonizing every one with whom he comes in contact, but I know he possesses the ability to do so to a marked degree.

As far as the reported threats against his life, I presume they are quite as real as is his "Adirondack Preserve" on Willsboro Point. He has possession of about 200 acres, part of which he has no deed for, of farm land, not one acre of which is virgin forest, and most of which has been under cultivation for nearly a hundred years.

Yours truly,

MILFORD H. SMITH.

## Paper Mill Creek.

SAN FRANCISCO, Cal., Dec. 9.—*Editor Forest and Stream:* I have just returned from a day's outing on one of our local coast streams, the Paper Mill Creek, and the sport I had is worth chronicling.

This creek is a bonanza to our local fishermen, easy of access, it yearly restocks itself, thus yielding many a fine basket during the season. We are fortunate in having good fishing during the entire year. Troutling for seven months in the creek proper, salmon and steelhead during the greater portion of the winter months, in tide water.

A month or so previous to my outing, the salmon (Quinnat) were in the pools waiting for the annual freshets to enable them to ascend to their spawning grounds. During this time many were taken with rod and line, and afforded fair sport. The recent storms enabled them to move to the headwaters and at the same time brought in a few steelhead. I was in quest of this game fish, and cannot recall when I had such winter sport. I had a mile or so of tide water all to myself, and embraced the opportunity by landing fifteen young steelhead, ranging in weight from  $\frac{3}{4}$  of a pound to 2 pounds, and one 8-pounder.

When leaving home I had but a short time in which to catch the boat, and in the bustle of getting away picked up my  $\frac{5}{8}$ -ounce fly-rod, which had never been taken from its case, my intentions being to use it for the first time on my annual outing in 1904. I, however, had no other recourse, and I am now more convinced than ever that light tackle gives the greater sport in angling for game fishes, whether they weigh 1 pound or 20 pounds.

The small fish were taken on a No. 12 hook, with a salmon egg for bait, using no sinker. The 8-pounder, on a small La Forge spinner, was taken from a pool known as the Rock Hole, an ideal loafing place for steelhead on their way to the spawning beds. When within a short distance of this pool I observed a fish break water, the brush was quite dense and I could not tell whether it was a salmon or steelhead. My first cast brought a monster salmon half out of the water in his mad rush to get the spinner. Not wishing to hook on to this fish (my time then being limited), which might have taken an hour or two to land, and feeling certain that steelhead were in the pool, I jerked the spinner out from between his jaws, and he disappeared, leaving the water in a very disturbed state. Fresh run salmon in tide water put up a good fight, but, after being in brackish water for a month or six weeks they become weak and exhausted, and when hooked, hug the bottom and make a slow, tedious fight, and more especially would it have been the case on account of my light tackle. As it was nearing the noon hour I laid my rod to one side and passed an enjoyable hour eating my lunch and taking the proverbial smoke.

When the waters of this pool had subsided and resumed their natural condition, I again took up my rod, and after a few ineffectual casts succeeded in placing my spinner under the willows, allowing sufficient time for it to disappear, and when about to retrieve the line I had a strike, and in less time than it takes to write it had hooked the beauty. He was in the air in a second, and a fight was on with the king of game fishes in our California coast streams—a steelhead trout. His rushes were most exciting, the first one, fortunately for me, was away from the willows, where I had hooked him, up stream fifty yards or so, I then gave him the butt gently, he again went in the air and tore down past me to the shallow end of the pool and landed on terra firma. I was in a dilemma, thirty yards from my fish and he also on land. He floundered around a good deal in his endeavor to reach the deep water, which he eventually did with what little assistance I could give, much exhausted, but with considerable fight still left in him. I seldom use a gaff, and found some difficulty in landing him. The first attempt was a complete failure, as I pricked my finger on the hook when trying to grasp him by the gill. I immediately withdrew my hand, and he again started across the pool. On the second attempt he came along right side up with care, and I had him on the bank just twenty-five minutes after having hooked him.

JAMES WATT.

## Fish and Fishing.

### Poaching in Canadian Waters.

AMERICAN owners or lessees of Canadian fishing privileges cannot be too particular about the character of their guardians and the manner in which they perform their duty as protectors of fish life. It has only recently become the duty of the Sportsmen's Fish and Game Protective Association of the Province of Quebec to notify one of the fish and game clubs in the United States controlling fishing and hunting privileges along the route of the Quebec and Lake St. John Railway that their guardian has been convicted and fined at Roberval, at the instance of the Association, for selling partridges contrary to law. It is altogether likely that the Government will withdraw this man's commission as a fish and game guardian. I have no desire to insinuate anything against the general body of men employed by fish and game clubs in this country, but I do know that the warden of whom I have just spoken is one of the very last men whom I would have suspected of offending against the law. Not only a firm resolve to resist temptation, but the exercise of constant vigilance is essential to a proper fulfillment of the duties of warden, especially in a community where there is such a systematic contempt for fish and game laws as exists in many parts of the Dominion of Canada.

I have before me at the present moment a letter from a prominent public man in the district of Gaspé, a part of which reads as follows: "There is much to say in these parts about fish and game protection. The only protection there is here is that furnished by the guardians appointed by the different river owners or lessees. The Government guardians hereabouts don't count for anything, and are perfectly useless as far as fish and game protection is concerned. Our population does not hunt much, so there is not much game poaching, but for fish the owners' guardians have to keep a sharp lookout. In the unleased streams the fish disappear nearly as soon as they enter the river." The reference to fish in the above extract, as will immediately have been perceived by most readers, is to salmon, and I know from many sources that the picture is not overdrawn. The fish and game protective associations of Quebec and Montreal have far too much to do nearer home to be able to keep a watchman upon each of these unleased rivers so far away from their center of operations, and it is a lamentable fact that nothing in the way of protection need be looked for from the majority of the poorly paid guardians of the Government scattered throughout the country districts. Yet it would amply repay the Government to properly protect their unleased salmon rivers for a term of years until they become well stocked with fish, when there will be no difficulty in leasing them for a large rental. At present, as soon as one or more salmon make their appearance in one of these streams, they are scooped out of it, either with a spear or with a net.

### Shipments of Lake St. John Fish for New York.

It is very much to be regretted that while so much trouble and expense are being incurred to hatch and plant ouananiche and salmon fry in Lake St. John waters, the Government should continue to issue licenses for netting the waters of the lake. It is claimed by the netters that ouananiche are not taken by them, but it is pretty well known that all is fish that comes to the nets of this class of fishermen, and the protective association at Quebec has kept a pretty sharp lookout upon the consignments of fish from Lake St. John which reached that city since the close of the ouananiche season. In the boxes of fish which were expressed to New York after the close of the season it was confidently expected that ouananiche would be found. Several have been opened and examined in Quebec, but not one of those addressed to New York dealers contained ouananiche. The fish which have been shipped through from Lake St. John are principally pike, pike-perch or doré, and ling or burbot. Then certain boxes consigned to Canadian dealers were opened, and in them were found more of the ouananiche than of any other kind of fish. Of course they were all confiscated, and after two or three consignments had thus been seized, the export of the fish in question completely ceased. No doubt occasional ouananiche are still taken in the nets under the ice at Lake St. John, but if so they are all used for local consumption. Considerable surprise was expressed by some of the members of the Protective Association at the fact that the ouananiche shipped by dealers from Lake St. John, being the choicest of the fish exported by them, were all consigned to Canadian instead of to American dealers. Local dealers with whom I have talked upon the subject say that the ouananiche, despite the superior quality of its flesh, is not sought or wanted

by the trade in New York, because it is virtually unknown to consumers and to the market men there, and would be practically valueless, especially when shipped in small quantities mixed in with other varieties of fish. It is a blessing to anglers that this is so. It is also a comfort to them to know that there is a good demand in the United States for pike and doré and burbot, and that these are being taken in considerable numbers from the waters of Lake St. John, where they rank among the worst enemies of the ouananiche.

E. T. D. CHAMBERS.

### A Nebraska Fish Story.

OMAHA, Neb.—Captain Charles H. Townsend, the chief clerk in the Chief Quartermaster's office, Department of the Missouri, recently received by express a muskallonge caught by his niece, Miss Georgia D. Townsend, at Lake Ripley, Wisconsin, while fishing through a hole in the ice. The fish weighed  $29\frac{1}{4}$  pounds, and for two or three days was on exhibition in the window of the Townsend Gun Company, where it attracted a great deal of attention. Yesterday a colored man was engaged to clean the fish, and while engaged in the work remarked that it was the first fish he had ever seen or heard of that had a tongue. The "tongue" proved to be the tail of a large black bass, which had been swallowed by the big fish, and which weighed 3 pounds 5 ounces. While this may not be anything out of the ordinary, it certainly rattled the windows in this section. The question which now arises is, should Miss Townsend be given credit for having caught a fish that weighed  $29\frac{1}{4}$  pounds, or should the weight of the bass be deducted? If the latter, should a further deduction be made for the weight of a minnow found in the bass? While not wishing to deprive the young lady of the honor of having caught the largest fish exhibited in Omaha for a number of years, some are inclined to the belief that she should be credited with having caught three fish on one hook, instead of one. The writer will state that he saw the fish, and was present when the two were weighed.

JOHN DICKS HOWE.

### Big Fish of the Monocacy.

FREDERICK, Md.—One of the largest small-mouth black bass ever caught out of the Monocacy River, Maryland, was taken by Nicholas Brust. The length was  $21\frac{1}{2}$  inches, the girth  $14\frac{1}{4}$ , and its weight 6 pounds the day after it was caught. There have been caught also some very fine strings of bass from the Monocacy this year, running in size from  $1\frac{1}{2}$  pounds to over 4 pounds, and even to 6 pounds. The 6-pound bass is given credit as being the largest ever caught in the Monocacy.

August and Nicholas Brust also caught a very fine string of bass on the Potomac River, the largest weighing  $5\frac{1}{4}$ , the seven weighing  $17\frac{1}{2}$  pounds.

J. B.

## The Kennel.

### Westminster 'Kennel' Club's Show.

NEW YORK.—Appended is our list of judges for the next show, to be held February 10-13, 1904:

JAMES MORTIMER, Supt.  
Dudley E. Waters, Grand Rapids, Mich.—St. Bernards.  
J. Blackburn Miller, New York, N. Y.—Great Danes.  
John Brett, Fisher's Island, N. Y.—Greyhounds, foxhounds (American), Chesapeake Bay dogs, pointers, setters.  
Dr. S. J. Bradbury, Lynbrook, L. I.—Sporting spaniels.  
W. J. Pegg, London, England.—Bulldogs and bull-terriers.  
E. D. Faulkner, New York, N. Y.—French bulldogs.  
Alex. L. Goode, Boston, Mass.—Boston terriers.  
Chas. D. Bernheimer, New York, N. Y.—Poodles.  
E. Lester Jones, Madison, N. J.—Beagles.  
E. Powell, Jr., Shrewsbury, England.—Fox-terriers and Welsh terriers.  
O. W. Donner, Rye, N. Y.—Irish terriers.  
Dr. F. C. Ewing, St. Louis, Mo.—Scottish terriers.  
George Raper, Gomersal, England.—Bloodhounds, mastiffs, Newfoundlands, deerhounds, Russian wolfhounds, foxhounds (English), griffons, retrievers, collies, old English sheep dogs, Dalmatians, Chows, Airedales, Basset hounds, dachshunds, whippets, black and tan terriers, Skyes, Bedlington, Dandie Dinmonts, Schipperkes, pugs, all toys, miscellaneous classes and unclassified specials.

### Dr. Webb's Preserve Open.

UTICA, N. Y., Dec. 26.—The noted park of Dr. W. Seward Webb, which includes 8,000 acres of forests and lakes, and had confined several herds of moose, elk, caribou, black-tailed deer, English stags, and other game, has been thrown open to the public, Dr. Webb having demolished the fence which has for many years defined the margins of the preserve.

From the first Dr. Webb has been one of the largest owners of Adirondack lands. The park has been stocked systematically from year to year with game and fish, and several families of beavers have made their homes in it. Dr. Webb has from time to time granted hunting and fishing permits to reputable sportsmen who desired to visit his Adirondack lands, and in this manner has maintained friendly relations with the element which now opposes the reservation of private lands in the North Woods.

It is said that his decision to turn his carefully selected moose, elk, boars, etc., loose upon public lands was not brought about by the opposition to the plans of wealthy men in the woods, but is caused by forest fires, which necessitate the removal of the standing timber to the saw-mills. The water journey between Tupper Lake and Beaver River, which was interrupted by Dr. Webb's fence, will now be open to canoes, as will many other waterways.—New York Times.

# CANOEING

## Hector and Me.

BY C. S. HOWARD, TORONTO.

The Story which won the First Prize of \$50 in "Forest and Stream" Canoe Cruising Competition.

OUR craft was a light Peterboro model, rather shallower than the standard, and made of varnished cedar. It was very "easily paddling," and in rough weather, as dry as a canoe can be. In fact, her disposition under all conditions was such as to deserve the word

"Sweet Sixteen."

"sweet," and as her length was 16ft., we called her "Sweet Sixteen."

We took two cushions and three paddles.

We had a conical tent 6ft. square at the base. It was not supplied with poles nor pegs. These we cut wherever we were camped. In the day time it was made, with aid of a pack strap, into a kind of immense valise—as nearly like the regulation Hudson's Bay "pack" as we could get with only theory to work upon.

This held the "grub bag," our coats, several changes of socks, three or four extra sweaters, our hatchet, fishing tackle, matches, etc.

Our blankets and waterproof sheets we kept in an oiled bag by themselves.

Our list of provisions was: Five pounds hard tack, 5 pounds pork, 6 pounds beans, ½ stone rolled oats, 3 pounds rice, 2 pounds raisins, 3 pounds pure chocolate, 4 pounds white sugar, 2 pounds cheese, ½ pound tea, ½ pound cocoa, 1 can condensed milk, 4 soup tablets, salt and pepper. From time to time, as we needed them, and could get them, we supplemented this list by eggs, bread, milk and lemons. All the provisions were put into little canvas bags and the little bags into one large "turkey."

To cook with and eat from we took: Three tin pails of various sizes, 3 granite plates (one to act as frying-pan), 2 granite cups, 2 tin spoons (small), 2 tin spoons (large), 2 steel forks, 1 large hunting knife, 1 pot cleaner (made of metal rings). All these fitted into the largest tin pail, which, in turn, went nicely under the stern deck. Our tin lantern (for candles) occupied a corresponding position forward.

We were attired as Hector wrote, "in white sweaters with felt hats to match. Ninety-eight-cent trousers and moose hide shoe packs completed very charming toilets."

At the head of the Muskoka River, twenty miles from the boundary of the Algonquin National Park of Ontario, and forty, east from the railroad, there lies a lake dotted with hemlock-covered islands, and surrounded by hemlock-covered hills. Its name is Lake Kahweambeluwagmog, although as Hector says, you don't have to call it that unless you want to. He prefers the Indian name to the English himself, but for others, another and less striking title has been provided. Hollow Lake is the other name.

A fine spot is Hollow Lake. On the long winter evenings around the fire, when the pipes are going, it is of Hollow Lake they talk. The big salmon that grows at every telling, was originally caught in Hollow Lake, and the buck whose head and antlers adorn the wall was knocked over there. For Hollow Lake is near the National Reserves, and there is plenty to attract the man who can use a rifle and fishing-rod.

The visitors to Hollow Lake are few, but these few are of the best (and include Hector and me). The problem of carrying a canoe across the four-mile portage which separates the lake from the comparative civilization of Dorset, frightens the others, and, indeed, Hollow Lake is the better without them.

But I know Hector better than any other living soul, and he knows me. We have paddled together since we first overcame maternal prejudice to canoes, and, indeed (if the truth be told), long before that.

We know, or at least Hector knows, what we can do. Our ideas never conflict. They fit together like the cog wheels in a watch, and help each other.

Consequently, when Hector dropped in one evening with a valise filled with maps, and guides, and illustrated pamphlets of the most recent patent cooking stove (which we always look at, but never take), and said, "I guess we'll go up to Kahweambeluwagmog this year," I nodded my head and said, "All right."

And so, on Sunday, May 10, he knelt in a canoe at the dock at Muskoka wharf and prepared to depart. We had come from Toronto by train the day before, and it being too late to start then, and a sinful waste of time to wait until Monday, we were putting out on Sunday.

"Ready?" inquired Hector from the stern.

"Mhm," I replied.

"Put the time on it."

"Four minutes to nine."

Hector solemnly entered it in his note book, and then pushed off from the float with his paddle.

"We're off," he remarked, "and a better day for paddling I never saw."

We paddled up the bay with a fast, swinging stroke, for we were fresh and free, and the enthusiasm was strong in us. Soon we reached the narrows, and passed out into the big, black Lake Muskoka. Away off, on the other shore, we could see about where the mouth of the river should be, and we made toward it.

It was an ideal day for the beginning of a holiday. The sun shone "full and warm," as the novels say, and the surface of the lake was unruffled. There was not a breath of wind.

I felt that I must shout and sing, stand on my head and carry on in a generally foolish manner. So did Hector. We always do the first day. We had no work to do for two weeks, you see. For two weeks we might go where we liked, and do as we chose, and stop when we wanted to—like horses out at pasture. We did not have to climb on to our stools at nine in the morning and off at four in the afternoon. We did not have to add figures all day, and write things in books. We might forget all about that for two weeks. So with the consciousness of our freedom, our spirits rose, and our actions at times approached the idiotic.

Hector.

But it was the first day, and that justifies a multitude of things otherwise out of place, except in a nursery.

It was noon when we reached the mouth of the river, and we landed and sat in the shade and ate our lunch. This was a simple meal with us—but wholesome. It consisted of hard tack, cheese and chocolate. There was no time lost. There was neither cooking, nor dish washing. In an hour's time we had finished lunch, packed up, loaded the canoe and started up the river.

There are some very pretty spots on the Muskoka between the lake and Bracebridge, and Hector pointed them out to me and commented upon them in artistic language, as we passed. For Hector is extremely artistic. He knows at a glance whether or not a newspaper cartoon should be admired, and his bedroom walls are covered with Gibson heads. What is a mere clump of pines to a less endowed person, is "a great little bit" to him, and he describes a starved-looking farm with its tumble down buildings, as being "fine composition." I have no knowledge of art myself, but I have ability to conceal the lack of it which is the next best thing, and in reply to Hector's remarks I agreed most heartily, and to give added

realism, suggested in an offhand way that the sunshine on the green cabbages and red beets, made a "splendid piece of color."

Hector thought I knew as much about art as he did, and after thinking it over, I believe I do.

All the afternoon we paddled. The river was "dead," and paddling easy. The enthusiasm had not as yet worn off, and we paddled hard and smoothly. At five o'clock we were within two miles of Bracebridge. So we swung in to the bank and stopped for the day. Soon we had the tent up and a fire going, and proceeded to get tea. We tried one of the patent soup tablets for tea. They were so easily prepared, according to the label. They would, "when mixed with a pint of boiling water, produce a strong, nutritious soup." We were careful to comply with the directions,

Jammed.

but the result was not all we had a right to expect. It reminded Hector of the gravy that used to be served at a boarding establishment where he once stayed. According to him, this gravy was made from the following recipe: Put some water in a pan, in a room where meat has been cooking. If too strong add more water.

So we threw the soup in the river and after it the remaining tablets, and ate pork and beans for tea. After tea Hector and I carried the dishes to the river and washed them. Dish washing with us is a simple matter, although our process is distinctively masculine, and might give offense to the ultra-fastidious of the opposite sex. We pour cold water upon them, rub them with sand, immerse them again in water, and the thing is done. The dishes are then ready for another meal as soon as we are.

When the dishes were finished we carried the canoe up on the bank and turned her upside down. Then we collected all our belongings and placed them inside the tent. Then, fearing that it might rain, we gathered a little dry fire wood and put it inside. It was just dusk when we crawled inside and rolled ourselves in our blankets to sleep (We always go to bed early when we are camping. This is one of the things that Hector insists upon). For five minutes all was quiet. At the expiration of that time I awoke with a violent pain in the region of my floating ribs, and saw Hector sitting up, and preparing to administer a second blow with his elbow.

"Half past five," he yelled in my ear. "Get up!" Then I knew what the matter was. It was morning.

In two minutes we had our fire lighted and soon the water in our tin pail boiled merrily. Then, while Hector pulled the tent down and made up the pack, I cooked the porridge and fried the bacon. It was the first time I had ever tried to cook bacon, and I burnt it to a cinder. Hector regarded the mess in silence for a moment, and then announced that my first attempt would prove to be my last—and it did. Hector cooked it himself after that.

By eight o'clock breakfast was disposed of, the dishes were washed, and we had loaded the canoe ready to start. We paddled up the river toward Bracebridge. The river divides just below the town into the North and South branches. Our course lay along the North, and took us through the town. We made a portage past the falls, and reached the river again at nine o'clock. Then it was that the trip began.

All that day we struggled against saw logs. (Logging is, without doubt, a very fine industry, and the country could not get on without it. But one prefers to acquire one's knowledge of it from books and newspapers, and not mix it with a canoe trip.) Although the pine has long ago disappeared from that immediate neighborhood, the timber is still taken out by that route from as far back as Algonquin Park. The drives had gone down the river several weeks before, leaving behind, like Napoleon on his retreat from Moscow, large numbers of stragglers, whose chief mission, it would seem, was to inconvenience us. The stop-gates in the timber slides were closed, and above each fall had gathered a jam, extending up stream for sometimes half a mile. I went north with a feverish

anxiety to see a raw, right-angled log-jam at a bend. I came south, breathing a fervent vow never, while in full possession of my senses, to seek further acquaintance with one. It has puzzled me to see what possible beauty or poetry the sight of one contained for Mr. Kipling, the time the Red Gods called him out with his rods and lines and traces. Once, as with the canoe on our heads, we staggered through the overgrown bush to pass a jam, I asked Hector his opinion about it. His answer was short but to the point.

"He had the silent, smoky Indian that he knew to do the portaging," he replied.

We passed four falls that day. We camped just above High Falls, and there, as usual, was a jam ready for us to commence work upon the next day.

On Tuesday morning we were at it bright and early, and had carried past the jam before the sun was hot. This jam proved to be the last we were to encounter. We still continued to meet logs, but in a different and less troublesome form. They floated down stream with the current, in twos, and threes, and dozens, and constant care was required to avoid collisions. Sometimes, where the river was shallow, we came upon stranded logs, and now and then we narrowly escaped disaster upon snags. The Muskoka is an interesting river to travel by in the logging season! But we paddled without mishap, and by noon had covered half the distance between Port Sydney and our camping spot of the previous evening.

We met a gang of river drivers that day. They were working down stream, freeing all the stranded logs and cleaning up the river generally. After reading "The Blazed Trail," Hector and I had come to look upon the river-driver as an almost supernatural being. There was a charm, a romance about his calling, which existed in no other occupation that a man could follow. We had never hoped to meet him elsewhere than in the books, and when the opportunity presented itself, we eagerly seized upon it. But the reality we found to be sadly different to the driver of fiction. There is nothing romantic about him. He is merely a laborer, working for his \$2, or whatever it is, a day.

They left their work as we drew near, and strolled toward us, their clothes dripping water as they walked,

Fall on the North Branch.

for they had been working waist-deep. Sociable fellows, they were, and required no introduction.

"H' are you?" they said.

"H' are you?" we replied.

"You aren't very busy," I added.

"We ain't what you call workin' overtime," one of them answered. "The boss has gone down the river a ways."

Then, as we showed no inclination to go, they sat down upon the bank and lit their pipes and talked to us. Presently the cook left his half-washed dishes and joined them. Apparently the boss was making a prolonged stay "down the river a ways."

"H' are you?" he said.

"H' are you?" we answered.

A dull, lazy kind of man the cook was. He regarded us out of half-closed eyes, and didn't speak after his first greeting, except when spoken to.

"What do you feed them on?" we asked him.

"Oh, eggs, and potatoes, and canned goods. Bread, maybe, and sometimes some pie, or somethin' like that."

We were surprised and somewhat hurt. "Don't you give them pork and beans?" I demanded.

The men looked offended. "Pork!" said one. "Pork!" remarked another. "Pork, did ye say?" inquired a third.

"Not much!" replied the cook, with emphasis.

"Does a lumberman kick about his food much?" Hector put in.

"No one quicker!"

We drew attention to their wet appearance.

"Yes," replied one man. "Yes, sir. You've got to be quite a bit spaniel for this job. Quite a bit spaniel, and what ain't spaniel ought to be bulldog. You'd better get back on the job, boys. Harry'll be back any minute, now."

We paddled away, completely disillusioned. Evidently there were two kinds of river-driver: the one of fiction who floats grandly down stream, standing on a saw-log; and the other of real life, who spends his days—when the boss is watching—up to his waist in ice cold water, starting logs on their way with peevy and pike-pole.

I would rather drive a coal wagon in the city than be one of the latter kind.

We had currents to contend with all that afternoon.

It was early in the season, and the river was high. Sometimes we had to keep close to the bank, and creep up in the back water. We were always glad to do a little poling when the water was shallow enough to permit of it. But sometimes we came to places where the river came down in great swirling rings—almost in rapids. Then we steadied ourselves on the bottom, ground our teeth, braced our backs, and shoved on our paddles with every ounce of strength we had. And then, after five minutes' killing work I would hear Hector coolly remark, "We aren't going at what could be called break neck pace," and looking up, I would see the spot on the bank, opposite which we had started, half a dozen canoe lengths behind. Then we would land and tow for a while, until we had regained our breath, and the current had slackened.

There were but five portages to be made that day. There are in all nine "regular" portages on the North Branch. Several of these are half a mile long, and

Did a little bush-ranging.

all are more or less difficult to the novice. But by making two trips—one with the canoe, and the other with the baggage—and using pack straps, the work is lightened wonderfully. But no one should go up the Muskoka unprepared to work, and to work hard.

We reached Port Sydney on Tuesday at six o'clock and camped there.

We were now at the head of the river, and the route lay through a string of little lakes—Mary, Fairy and Peninsular. There were no logs to pass and no currents to paddle against. So we had an easy day on Wednesday. We started early and paddled slowly. It was early in the afternoon when we reached the one-mile portage from Peninsular Lake to Lake of Bays, and there we met a young fellow who was driving an empty wagon across. He asked me for a match, so I gave him four, and then he expressed an earnest wish to carry us and our stuff across the portage, without charge. This seemed a laudable desire on his part, and deserving of encouragement, so we lifted the baggage and canoe on to the wagon, and climbed up ourselves, and he drove us over to Lake of Bays.

It was while on that wagon that we saw an Indian. He was, to all appearance, a white man, except that he was a little dirtier, a great deal drunker, and displayed an infinitely greater degree of stupidity when spoken to than the average white of his class. I pointed him out to Hector, thinking that he might like to see him, but he did not enthuse at all. He shook his head sadly and didn't say anything.

That night we camped upon a little island near a little portage—forty rods to be exact—the crossing of which, we were told by the man on the wagon, would

Where the deep, cold water was.

"save quite a bit o' paddlin'." To one bound for Dorset, as we were, taking this portage, will save five miles.

We took life easily on Thursday. We paddled down to within a mile of Dorset, and there we stayed for the rest of the day. We traveled only seven miles all day. But the sun was hot and we felt lazy, and the next day we had the four-mile portage to cross into Hollow Lake.

On Friday morning we paddled into Dorset and up the creek to the beginning of the portage. But we were reluctant to begin it for some reason. The path begins at a slope of forty-five degrees, and, they told us in the village, went up hill until in sight of the lake. So I looked at Hector, and shook my head, and Hec-

tor looked back at me and grinned. So we sat down in the shade to talk and think over it.

And there it was that we met old Tommy Harper, the famous old Tommy, the best guide in the province, and the strongest man in six townships. It is something to be proud of, to have held conversation with old Tommy, for he is a silent man and rarely speaks unnecessarily. The fact that he should have stopped and talked to us I cannot explain, except he thought he was performing a charitable act. But after old Tommy had addressed us, I felt as years ago, when the teacher patted me on the head, because I alone, of sixty boys, could stand upon the floor and instruct the class in the correct way of spelling "scissors," I think the word was.

"Goin' acrost, boys?" inquired old Tommy.

Yes, we were going across.

"Wagon?"

No, we intended to carry.

"You'll do good if you carry acrost—boys like you," continued he, "I'm in the business, boys, and I'm tellin' you, she's a stiff old portage. Now, you take your turkeys, and carry them in for a quarter of a mile. Then you come back and carry your canoe a quarter of a mile past your turkeys. Then carry them so far past the canoe and so on, do ye see? All the time you're comin' back, you're restin', and there ain't no time lost. I'm in the business, boys, and I'm tellin' you."

This was a long speech for old Tommy. We thanked him, and determined to use his advice. I believe all guides portage this way when forced to make two trips.

So we carried the bags first, for a quarter of a mile. We walked slowly, for it was up hill. Then we carried the canoe, according to directions. It seemed much heavier than the bags, we found, but the next time the bags seemed heavier than the canoe. Curiously enough they each increased in weight, the farther we went. When we dropped the bags at the end of the carry, it was with a sigh of relief as the sharp ache in the shoulders suddenly lessened, but when we had carried the canoe for fifty yards, anything seemed more endurable than the "telescope" sensation in the head and neck. It was an exceedingly hot day, and there was no drinking water en route. With our heads en-

On Lake of Bays.

veloped in the canoe, we could see nothing but the path for foot ahead. Soon we began to carry for greater distances. We began to count 1,000 steps to a carry. Nine ninety-eight, nine ninety-nine, one thousand," we would say, and the bags would drop to the ground.

It took three hours and forty minutes to cross that portage, and then we had our first sight of Hollow Lake.

Loon Bay was a beautiful sight. The water was black and transparent, the bay is surrounded by hemlock and is connected by a narrow inlet to Hollow Lake. But the inlet is hidden, and to all appearances Loon Bay is a complete, perfect little lake about a quarter of a mile in diameter. It is a magnificent place for echoes. I dropped my paddle on the gunwale, and the sound of it came back to us three times, as distinct as could be.

But it was getting late, and we felt that we required pork and beans more urgently than beauty, so we paddled out of Loon Bay into the calm, quiet lake.

Hollow Lake is large (it is ten miles from end to end) and here and there and everywhere are islands. There are big islands and little islands. But all are covered with green hemlock.

Near the lower end we came upon a small one. A little cabin stood upon it. We paddled toward it and found it to be uninhabited, so we landed upon the island and made an exploration. It was a curious place to build a house. Why should a man want a house built on Hollow Lake, and why, having built it, didn't he live in it? We were puzzled. But under the verandah we found fourteen empty bottles, and then we understood. A fishing club owned the place.

We put the tent up on that island, and determined to stay there. There was no one to tell us we mightn't. No one was within miles. We were alone. The clear, black water of Kahweabeluwagamog lapped a gentle welcome on the granite shore of our island. There was no other sound.

But we weren't quite alone.

I was awakened by a peculiar long, mournful cry, and then a dog barked, miles away. Hector heard, too, and chuckled. "Humph!" he said.

"Wolves," I remarked briefly.

"Wolves," he responded sleepily.

PARKER NEPTON

TOWARD THE CLOSE OF DAY.

"Just as glad we're on an island."

"They wouldn't attack you," and Hector fell asleep again. The subject had exhausted all interest for him. But I lay awake and heard it several times. There is something uncanny and "shivery" about a wolf howl, and I mentally included the beast among wild animals I do not want to know.

Five days we were on Hollow Lake; five days that stand out in bold relief from the seven thousand odd days I have seen come and go; five days to draw a ring around upon memory's calendar, and to mark, "The five I would rather live over again."

And this is what we did.

Long before sunrise Hector would waken. He would begin the day by stretching his arms and remarking, "Humph!" in a tone of voice loud enough to rouse me. Then Hector would open the slit in the tent, put his head out, pull it in again, lay back in his blanket and say "Humph!" again. Then I would put my head outside and hastily draw it back again, for everything looked gray, and damp, and raw, and miserable. The mist would be rising from the lake, and the grass around would glisten with dew. But with the first faint ray of sun Hector and I threw aside the warm blankets and crawled out into the chilly air of the new morning. For there are but twenty-four hours in a day and a night, and we had a great many things to do.

Everything was still and calm at that time in the morning, and the smoke from our fire curled lazily high in the air. And while we ate our breakfast of porridge, pork and beans, and hard tack, the silence would be broken by a splash. "There's a salmon," Hector would observe, and after we had washed up we would put the canoe in the water and paddle gently past the high rocks, where the deep, cold water was, our trawling spoon spinning invitingly toft. astern. Presently we would feel a jar and the canoe stop for a second, and then the man who held the line would grunt and say: "Caught on bottom, I think. Back up!" We would paddle slowly back, taking in line hand over hand until it went down; perpendicularly into the water. We would haul up on it—a dull, dead mass—until just as we got it to the surface, a great gray thing would leap out, and kick about most vigorously, which is the way of salmon. Quickly he would be pulled aboard, resisting always, until after repeated blows upon the head with the edge of a paddle, his spirit was broken, and he lay quiet upon the bottom, except for an occasional convulsive shake. We would take him ashore, and while I mixed some lemonade as refreshment, Hector would clean him in some quaint Indian way he had read about in a book—splitting him up the back and removing the backbone intact—after which we concealed him under water until supper time.

Then the evening meal having been provided and all care upon that score removed, we paddled around the lake, exploring bays and inlets, and testing the echoes. Sometimes we landed, and did a little bush ranging or inspected one or other of the deserted lumber camps. Once we climbed to the summit of a high, rocky island and beheld the lake, as a little pond, away beneath us. We rolled a rock over the edge and heard it tearing and crashing down the side, and at last fall into the lake with a mighty splash.

I remarked to Hector what a fortunate thing it was

Deserted Lumber Camp—Hollow Lake.

that his head had not been in the way of that rock, and he replied pleasantly that it was rather unfortunate than otherwise, that mine had not.

But about noon the strong west wind, which has been getting ready all morning, would burst forth, and as it swept down the lake, the calm, lily-pond appearance would speedily be replaced by that of a very angry little ocean, which is a noted characteristic of Hollow Lake. Then it was that we paddled for the shelter of our island, and very wet indeed we were before reaching it, for no canoe could struggle against those seas without taking some of them in over the gunwale.

It was time for lunch then, and we would get out the hard tack, cheese and chocolate and make some more lemonade—good, strong stuff; two lemons to the pint, and two pints each!

All afternoon the storms kept up, making paddling for pleasure an impossibility. So, always after lunch, we selected a grassy spot in the shade, and carried the bags and blankets there, and lay upon them and talked about things. We looked over the lake and spoke of the great amount of good the fresh air was doing us and of how much the other fellows, with their ledgers and high collars, and civilized ways of eating, were to be pitied.

And then we talked of all the books we had read, and all the songs we had heard, and all the "shows":

we had seen, and all the fellows we knew. Then we talked French for a while, until we had talked all we knew, which didn't take very long. Hector asked me if it was that I had "seen the infants of the butcher in the carriage of our brother's three rosy daughters, monsieur?" to which I replied, "No monsieur, but when I was in London I talked often with monsieur, your father's friend, and his charming red dog. I always enjoyed the French immensely. Hector said that a little knowledge of the language would hurt no one, and certainly ours has never injured us!

Often, when we grew tired of conversation, we shot with a catapult. It is impossible to hit anything with a catapult. I know that it is impossible, because I tried and couldn't do it. Once, after repeated unsuccessful attempts to hit something, Hector drew the elastic to his head and sunk a heavy buck shot deeply into the frame of the door, and then drew a small circle around it, and around the small circle, larger ones. Hector said he did not so much mind being a bad shot, but he had a deeply rooted objection to other people's finding it out.

All this seems very ridiculous and silly, no doubt, but as I say to such of my friends who take it upon themselves to tell me of it, after all it was our canoe trip and our holidays, and we acted according to our ideas. Our ideas are not necessarily inferior to theirs (or to yours), because of any difference that may exist. I don't suppose there ever was another trip like this one.

About four o'clock the wind would have ceased and the lake gone down, so we would take our milk pail and a canvas bag and go up the lake to where Mrs. Hank lived in her one-roomed log shanty, with her little boy. Her husband lived there, too, but he was a rather less important part of the establishment than the cow, which dwelt in a lean-to hard by. Mrs. Hank was the management. She used to sell us milk and eggs, and bread, too, when she had any. Once she produced a slab of curious green-tinted flesh and assured us that it was pork. I looked at Hector, raising my eyebrows inquiringly, but he shook his head, so I said I guessed we had enough to do us. It required to be cooked in some complicated way, and as we did not understand it, we let it alone, which is an excellent rule to follow.

The first time we called Mrs. Hank was not expecting visitors, and when we stood grinning in the doorway, and looking into the room, asked "we could buy some things, she looked bewildered, as though the idea of anyone's requiring food on Hollow Lake was an impossible one, and not to be seriously considered.

An overpowering sense of the amusing side of it had swept over the dull intelligence of Hank, in his chair at the opposite side of the room, and manifested itself in an ear-to-ear grin. But Mrs. Hank speedily recovered and her natural hospitality asserted itself. "Hank!" she said, and accompanied it with a frown and a wink.

Hank saw what the matter was instantly. (So did we. Mrs. Hank had but two chairs.)

He jumped to his feet at his wife's command, as a man and a husband ought.

"A fella' gets tired o' sittin' all day," he observed.

Then Mrs. Hank gave her chair to Hector and Hank's to me, and whenever we came for supplies afterward the chairs were ready waiting for us. There we would sit while Mrs. Hank got the things together and talk to the little boy—a bullet-headed youth who, seated upon the floor thumb in mouth, used to gaze at us with a fixedness of stare that was highly flattering.

"How old are you?" demanded Hector once.

"Five," responded the youth.

"No, you aren't. You're only four."

"I betcha!"

"I betcha!"

"No, I aint; I'm five."

"Humph!" Hector reflected. (He was shaken but not yet convinced.) "You used to be only four," he argued.

The boy was beaten. Hector was too astute for him.

"How did you know?" he asked.

Hector shook his head and smiled knowingly.

"Oh, I knew."

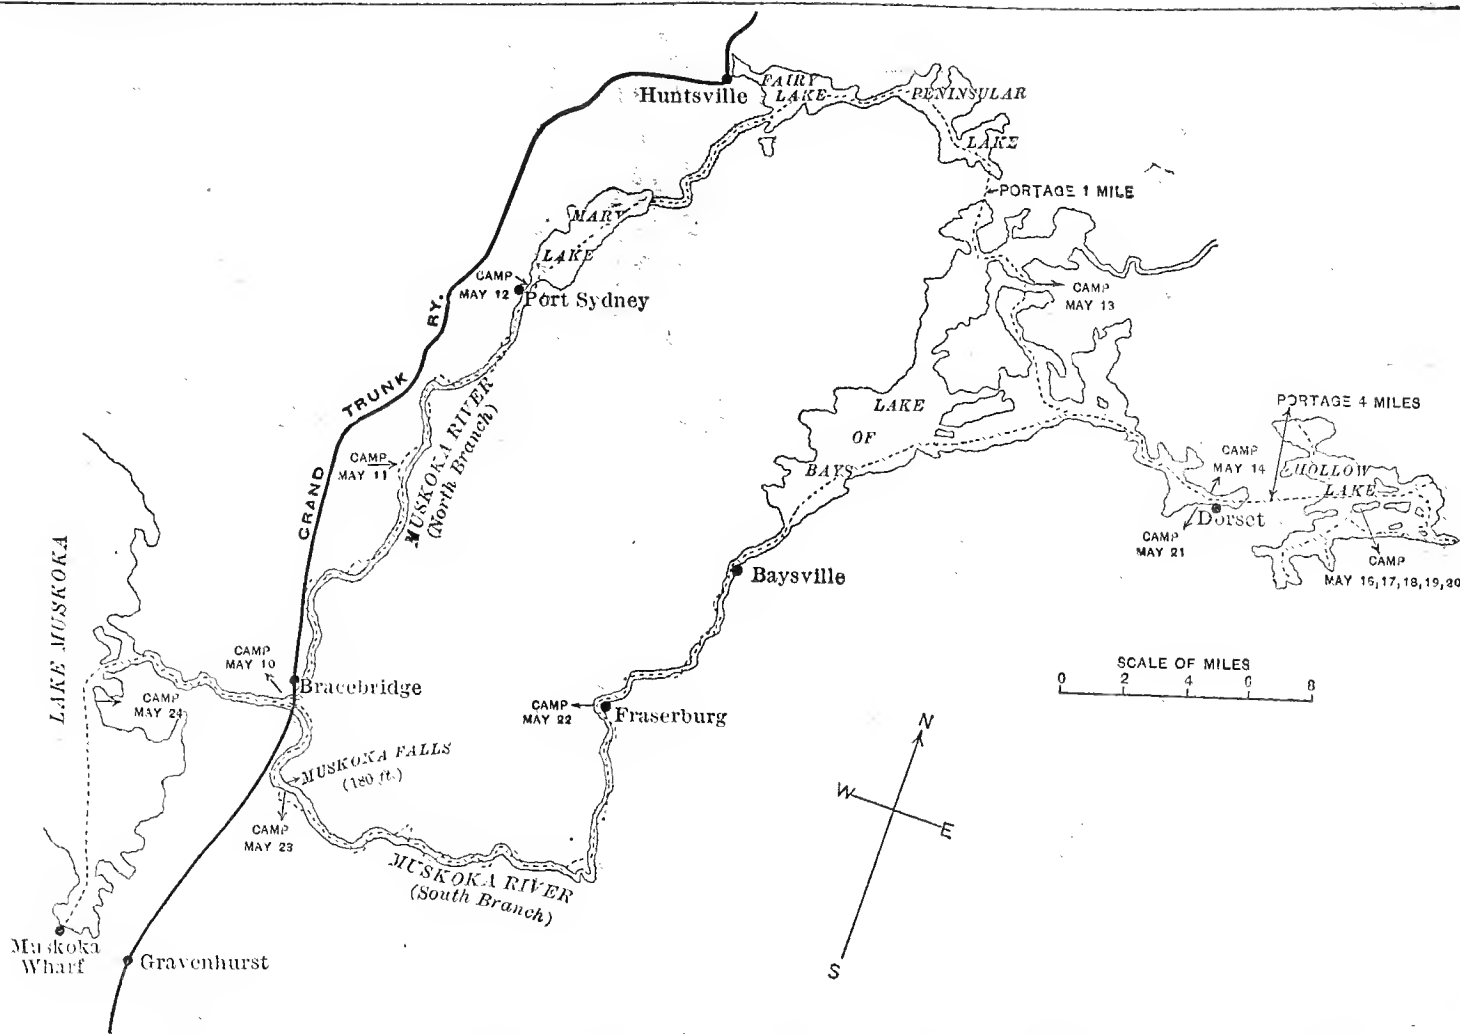

CHART OF COURSE TAKEN BY C. S. HOWARD—CANOE CRUISE "HECTOR AND ME."

"Somebody musta told you," persisted the child. He felt injured. Hector had inside information and it wasn't fair.

Mrs. Hank was a very nice person, but in common with every other mother that I ever knew, could not refrain from boasting about her child.

"Maybe you'll be tellin' a story," she used to say, "or singin' a song, and he won't go to bed till the story's told or the song's sung, and maybe next day he'll be tellin' you somethin' about it."

This indication of dawning genius in her offspring was clearly too much for her limited comprehension, and she would look at the boy proudly, and then shake her head and sigh.

"Five, he is. Six next birthday, if all's well. I put him into pants to-day," she announced. "Stand up and show the gentlemen your pants, Dave." And Dave, shy at this allusion to the but recent acquirement of his garments, slowly rose to his feet, revolved before us several times, drew attention to the pockets and then resumed his place upon the floor, thumb in mouth as before.

"Sugar, ses you!" Mrs. Hank continued in mock disgust. "Did ever you see such a boy for sugar? Here, then! Now don't you let me hear 'sugar' out of you for a month or I'll sugar you!" And Dave

The Picturesque Person.

took his thumb from his mouth and replaced it with the sugar.

The child's accomplishments were so many, that Mrs. Hank's recital of them took some time, and it was generally after six when we began our four-mile paddle to camp.

We cooked our supper as soon as we reached the island. Hector used always to attend to the fish himself. (He used to say that he wouldn't trust his twin brother with it.) It was a most interesting spectacle to see him prepare it. He would build one of his little Indian fires between two stones, and would place the plate upon it, with some bacon fat, and when the latter had dissolved, would lay the fish in it with some oat meal. Then he would kneel close to the fire, gazing earnestly at the fish as it lay frizzling, from time to time prodding it with a stick and occasionally blowing the fire furiously.

"How is she?" I would ask.

Hector would place his nose close to the plate and inhale vigorously.

"Oh, she's coming along all right."

In a few moments he would pull the plate from the fire with his felt hat.

"I guess she'll do now. Pass up the plates."

[TO BE CONCLUDED.]

## Hull to Bristol.

BY WILLIAM LAMBERT BARNARD, BOSTON, MASS.

The Story which won the First Prize of \$75 in "Forest and Stream" Cruising Competition.

WHEN a fellow has a decided fondness for cruising, and no boat of his own with which to gratify his love of the sea, he cannot be particular in regard to such cruising invitations as are extended to him. Accordingly I accepted with alacrity the chance offered me to take the 18ft. knockabout, Ayaya, from Hull to Bristol.

I was thoroughly familiar with the boat, having seen her designed and built, having helped to launch and rig her and having not only been on her first sail, but having frequently raced on her in every capacity from that of helmsman to that of spinnaker man. I could not have been much better acquainted with a boat of my own.

She was designed by F. H. Keyes (an amateur) for the use of himself and his brother, W. P. Keyes, and was built by "Ed" Knights at Hull, Massachusetts, in the early part of 1901, in conformity with the restriction of the Eighteen Foot Knockabout Association. Her principal dimensions were as follows:

Length—	
Over all .....	30ft. 11in.
On waterline .....	17ft. 10in.
Breadth—	
On deck .....	6ft. 11in.
At waterline .....	6ft. 6in.
Draft—	
(Board up) .....	3ft. 0in.
Freeboard—	
At bow .....	2ft. 3in.
Least freeboard .....	1ft. 6in.
Area—	
Of mainsail .....	354 sq. ft.
Of jib .....	90 sq. ft.
Total sail area .....	444 sq. ft.
Displacement .....	4,196 lbs.
Outside ballast .....	1,300 lbs.

She was of the strictly knockabout rig, having no bowsprit. Her centerboard box was not in sight, the board being inside the iron keel and the deadwood—entirely below the hull. Her beam was the minimum allowed by the restrictions, and, incidentally, it was not enough. In form she was a decided scow with very full sections, a long straight side and a flat floor; she was very flat under her ends and had a deep, wide transom.

She had water-tight bulkheads forward and aft, and when built had a large, deep cockpit, but in 1902 this was changed to one of the bath tub variety, and the deck carried in to form seats. At the same time the skeg, on which her rudder had been hung, was removed and the deadwood filled in aft to allow of giving her a stern post rudder. She had no cabin house—only a mahogany slide and companionway hatch opening into a low space under the deck. This cuddy was not floored, save for two spaces, each six by two feet, one on each side, with an open space between. There was not sufficient room to sit upright beneath the deck. There were absolutely no cabin fittings and no lockers, save for two "wing" lockers formed by the sides of the boat, the walls, or staving of

"Made a long starboard tack."

the cockpit and the cockpit floor beams which were carried clean across her. Although built a shade heavier than the restrictions demanded, she had no truss beams at the mast—now considered a necessary adjunct to every boat in the class.

She was intended for racing and afternoon sailing, and not for cruising, but I figured that with a little luck I should be able to get to Bristol without any trouble. I did not have the luck, as will be seen.

Monday, July 13, was rainy and calm. My friend Albert and I went down to Hull on the late afternoon boat, and, immediately after dinner, went aboard the Ayaya at her moorings in Hog Hole. Both the Keyes brothers went aboard with us to assist in the stowage of our duffle and to bid a fond farewell to their old boat. The sky had cleared and a light west wind ruffled the waters of Hull Bay. We tied down one reef in the main-

sail as I looked for more wind before day break and did not care to reef during the night.

At 9:25 P. M. we cast off the moorings, and with Prescott Keyes at the stick beat slowly out of Hog Hole and down to the Hull station of the Boston Y. C., where Keyes jumped into his skiff and left us. It was a slow pull through Hull Gut, close around Windmill Point and out the ship channel against a strong flood tide. On the way out we passed a mud-dredger hard at work, although it was then 10:30.

We slowly reached out of the channel, and just as we passed Harding's Ledge gas buoy at 11:40 we set the log and made our course S. E. by E. for the whistler on Peaked Hill bar. Albert turned in at 12:05 A. M. on

"She staggered even under double-reefed mainsail."

Tuesday, July 14, but was out again half an hour later, just before we brought Minot's Light abeam at 12:40. The log then read 3.2 knots. By this time we were fairly well out of the Boston tide. The wind was still west, the sea was smooth and the moon shone through the clouds.

At 1:40 A. M. the log read 8.2 knots—five knots for the hour. I was still steering and sat on the floor of the cockpit to leeward, my back against the staving and my legs crossed under me Turkish fashion. This was a splendid seat, as I could see ahead under the boom and jib as well as over the weather side. The lighted binnacle, placed against the companionway threshold, was close at hand, and a slight weather helm kept the tiller to starboard of the center line of the boat, giving me plenty of room, which would not have been the case had I tried to sit on the weather side of the cockpit floor. (The cockpit is 5ft. 9in. long by 2ft. 3in. wide by 15in. deep.) A lighted lantern (not our regulation fresnel lens anchor light) was carried in a bucket on the stern overhang, where it was ready to be displayed to any approaching vessel or for use in reading the log. The latter at 2:40 showed 13.4 knots, or 5.2 for the last hour. By this time the wind had pricked on a bit, so that our single reef was very comfortable. The sea was very smooth, but there were no stars or moon to be seen. The first streak of the approaching daylight was visible upon a cloud high in the eastern sky.

During the next hour the wind, while remaining true in its direction, increased steadily, and the sea began to get up. At this reading the log showed 17.9 knots. At five minutes after four o'clock we sighted Race Point's white light with its white flash one point on our weather bow. We counted eighteen fishermen, all schooners, bound in and showing only lower sails. The wind and the sea now arose rapidly until we were staggering along from one wave to another. I did not like that, nor did I like the look of the sky, so gave the stick to Albert, after having had it for four hours, and set about shortening sail.

I lowered the mainsail with some difficulty, and put the boom in the crotch. And then my troubles began.

The sails (cross-cut of 4½ ounce duck) were an old suit, cut down to a total area of 400 sq. ft. for use in the early spring and late fall, and had become so soft that although still setting perfectly they were almost worn out, and were beginning to go in several places. Before reefing I had to get out my palm, needle, thread and wax and darn a rip at the upper batten pocket and two reef points in the mainsail. This done, I found that the mast hoop seizings were all on the point of dissolution, so I cut them adrift and seized the hoops on again with some stout marlin, greased with lard oil to make it pliable. This done, I bent on a stout vang, or downhaul, to the outboard end of the gaff, and having put in the third (and last) reef, hoisted sail. Care had to be taken in tying the knittles not to get them too tight or they might have torn the mainsail.

We had been running along under the jib all this time, but when I hoisted away, Albert luffed her so that I might peak up the mainsail. When he did this she drove right through several seas, taking solid water over her bows and putting me through them knee deep. The Ayaya's halliards do not lead aft, but are made fast to belaying pins in galvanized iron arms that are part of the goose-neck casting. None of this water that came aboard found its way into the cockpit.

By the time I had reset the mainsail it was 5:05 A. M. Under shortened sail we tore down the wind, now jumping from wave crest to wave crest, now coasting down a long roller with a furrow of foam swirling high above each bow, only to pause and then with bow lifted high above the sky-line soar over the next sea.

We passed close aboard of several big fishermen, who, on being hailed, predicted much more wind, and each of them advised us to get into Provincetown. As this was all in accord with my own opinion of the weather, we hauled more nearly abeam of the wind so as to leave Wood End to port. By this time we were quite close to the beach—close enough to see it with the utmost distinctness. The sea here ran very high (we were practically in the Race) but the Ayaya took it nicely and ran along like a frightened deer. The mainboom buckled until it resembled a scythe, which was not to be wondered at, for with three reefs tied down the mainsheet bridle was well aft of the leach of the sail.

Just before reaching Long Point I went forward and substituted the storm jib for our big one. We then tacked ship and passed the Long Point buoy at 6:55, when we took in our log, reading 33.61 knots.

We beat up the harbor through some heavy gusts and anchored S. W. of the railroad wharf at 7:20—ten hours out. We had quite a circus when anchoring, as Albert neglected to cast off a runner and the mainsail filled against it, causing us to overrun our anchor, so that I weighed and cast it again to be sure that it was not fouled. As Albert had never before sailed in a boat with backstays he was not to be blamed for forgetting them.

After cleaning up our ship we were glad to have a hot breakfast, and our Primus stove accomplished wonders. Anchored in the harbor were the auxiliary brigantine Aloha, the 25ft. sloop Golden Rod and nearly all the fishing schooners we had seen off Race Point.

The wind blew hard all day and a severe squall passed down the back of the Cape during the afternoon, so that we were well satisfied to be inside of Provincetown harbor.

Wednesday, July 15, we were up early and ate a hearty hot breakfast before getting under way. There was a nice whole sail west wind and a beautiful clear sky. We broke out the anchor at 5:15 A. M., and twelve minutes later passed out by Long Point Light, and, pinning in our sheets, made a long starboard tack out into Cape Cod Bay. There was quite a bobble to the sea, but she slammed through it at a good rate, passing all the small fishermen with ease. We held this tack until 5:58, when we saw that we could fetch by Race Point, so flung her about. The fair tide now struck us square on the lee quarter and helped us along in gallant style. When passing the black spar buoy N. W. off Wood End Light at 6:17 we set the log.

We were off Race Point Light at 6:42, wind still west

Off Race Point, July 14.

and whole sail. The sun was shining brightly, but there were dark clouds in the south.

After passing Race Point our course became N. E. by E. for two miles, and as this brought the wind well aft we winged out the jib to port with the aid of the spinnaker boom. Soon after this we had to gybe the mainsail as we were constantly holding more and more to the eastward, following the curve of the beach until our course became E. by S., when we set the spinnaker. To do this we had to douse the jib and use its halliard, as the spinnaker halliards were not rove (in fact, the spinnaker halliard block was not aloft). The wind was now very light and the sea smooth.

We passed well inside of the Peaked Hill bar whistler at 7:47, and began to edge out from the beach so as not to be too close in the lee of the land when we reached the bluffs.

Shortly after bringing Cape Cod Light abeam at 9:09 we took in the spinnaker and set the jib once more. The wind had backed a point to W. by S., but was still very faint. The sky had cleared completely and the day was fair to look upon. When passing the light we blew our horn vigorously in the hope of being reported. We also read the log, and found that it had only registered 3.7 knots since set, when it should have given 15.5 knots. Of course the fair tide would partially account for the error, but not for all of it, so when examination disclosed no seaweed on the blades, I voted the log a delusion and hauled it in for good.

As we reached along to the southward we caught numerous hot puffs off the land. First one would head us off a couple of points and then the next would let us up as much. Albert was taking a nap, so I tried holding the sheets while I steered—flattening in when a flaw came ahead or easing off if favored by a puff. This, however, grew wearisome, so I simply kept her going with a good full, gaining when I could and losing when obliged to; it averaged up pretty well, and the course made good was the proper one.

These flaws were invariably encountered wherever there was a break in the height of the cliffs, as at the Pamet River and Cahoons Hollow life saving stations, and to a lesser degree at numerous other points.

Long before we reached them we saw the four huge

peak down) and tied in the third reef. Then I substituted the baby jib for the large one, again wore ship and set sail once more. This, however, did not produce the needed relief, for while I had been reefing the wind had continued to increase. The sky became overcast with low, scurrying clouds, and the sea grew hilly. The tide was fair, making the waves short and steep. It was easy to see the current undercut the seas, causing a nasty chop that proved a difficult proposition for the Ayaya's long, flat bow. She slammed away to windward in a series of shocks that not only jarred us but tested her rigging severely. Owing to the reefs the mainboom buckled badly. With this shortened sail the throat halliards refused to take up any strain, leaving it all to the peak halliards. The gaff, of course, tried to swing away from the mast, and when she hit one sea with unusual viciousness the lanyard on the jaws of the gaff parted and off swung the gaff, starting rips in the luff of the sail at the two upper mast hoops. I jumped forward with a bit of light line and rove a new lanyard at once.

Meanwhile, the boat, though going ahead, did not get out to weather at all well. I tried dowsing the baby jib—a very diminutive sail—but this not only did not ease her, but its absence made her steer so hard that I had to reset it.

We bucked away for some time, jumping through one sea to fetch up on the next with a bang that jarred her

I had intended, as the night was so dark I did not care to risk standing in too far. Neither of us slept when off watch, owing to the motion, but we got some rest.

Thursday, July 16.—During the night the wind continued to increase, and when the tide turned against it the sea was nasty, indeed. The current held us quartering to the

Ayaya "drying out" at Provincetown.

wind, a position which, while it eased the strain on the ground tackle, made us much more uncomfortable. The seas were, of course, very steep, and they banged under the counter and slopped aboard with annoying persistency. This gave me a chance to try the effect of oil, so I took a ball of rope yarns about the size of my head and soaked it in lard oil. Then I took the mainsail battens for a float and made the whole affair fast to a long piece of marlin. I threw the oiled yarn overboard and let the current carry it about fifty yards to windward of us. By making the marlin fast at the stem I was able to keep the ball dead to windward of the cockpit. The effect was magical, and just as the books describe it—the waves ceased to break aboard, and she seemed to ride them the least bit better.

At sunrise the wind was still increasing instead of letting up as we had hoped it would. We managed, however, to cook some beans and to make some cocoa. The hot food cheered us up, and I repaired the tears in the mainsail. As the morning wore on several coasting schooners bound to the westward anchored about a mile outside of us. When the tide turned once more and we swung around to face the sea, we were no longer able to use our oil. The Ayaya seemed determined to hammer the life out of every wave that came along, and she did it, too! But it was a good deal like the man who insisted on butting his head against the stone wall. Spray flew over us in sheets, no matter where we sat. There was so much water flying that a cigarette would become wet through before you could smoke an inch of it.

We hung on as long as we could, but the wind gradu-

Ayaya "drying out" at Provincetown.

towers of the Marconi Wireless Telegraph Company at South Wellfleet. They dwarf the surrounding landscape in surprising fashion, and make fine landmarks. I should think the chart would show them, since it frequently shows much less noticeable church spires. We finally had the towers abeam at 11:19 A. M.

Our course was now due south. The wind, except in the puffs, continued light, and was W. by N. The sky was absolutely cloudless and the sun hot.

Just before noon I got out my quadrant, and after a little fussing secured a very good sight. Albert declared that I did it only to impress him, but, as a matter of fact, I was simply seizing upon one of my few opportunities to practice up on real navigation.

At 12:30, when off the entrance to Nausett Harbor, we passed inside of a small yawl bound north. We had a good look at the entrance of this so-called harbor. Even then with a smooth sea and offshore wind the rollers were breaking heavily on the bar.

As our jib sheets looked very much the worse for wear. I brought out some new rope and rove new ones. Before I had finished splicing the standing end of the first one to an eye bolt in the deck the wind began to gather weight, and by the time I had finished the job we had our lee rail awash and were tearing along like a good one.

At half after one o'clock the wind backed suddenly to the S. S. W., and piped up at once. This was a decided shock to our dreams of a fast run. Putting the Ayaya on the port (inshore) tack, I lowered the mainsail, put the boom into the crotch and secured it with quarter straps. The wind blew fiercely out of a clear sky, and I had to fight the sail to get stops around it before I began tying down the reefs. I put in two as quickly as I could, then wore ship and hoisted away.

I had no sooner filled her away under this reduced sail than I saw that she had too much canvas set, but drove her to weather on her ear for awhile, hoping to see the wind go down as quickly as it had risen. But this was not to be, so once more I took the mainsail off of her (the vang was here of great assistance in getting the

all over and made the mast do contortions despite the weather runner. (Give me a boat whose mast needs only shrouds—a runner is a fearful nuisance when beating to windward in a blow.) Meantime I had the pleasure of seeing the rips—two had started at reef points in addition to those on the luff of the sail—grow, and speculated on whether or not others would appear.

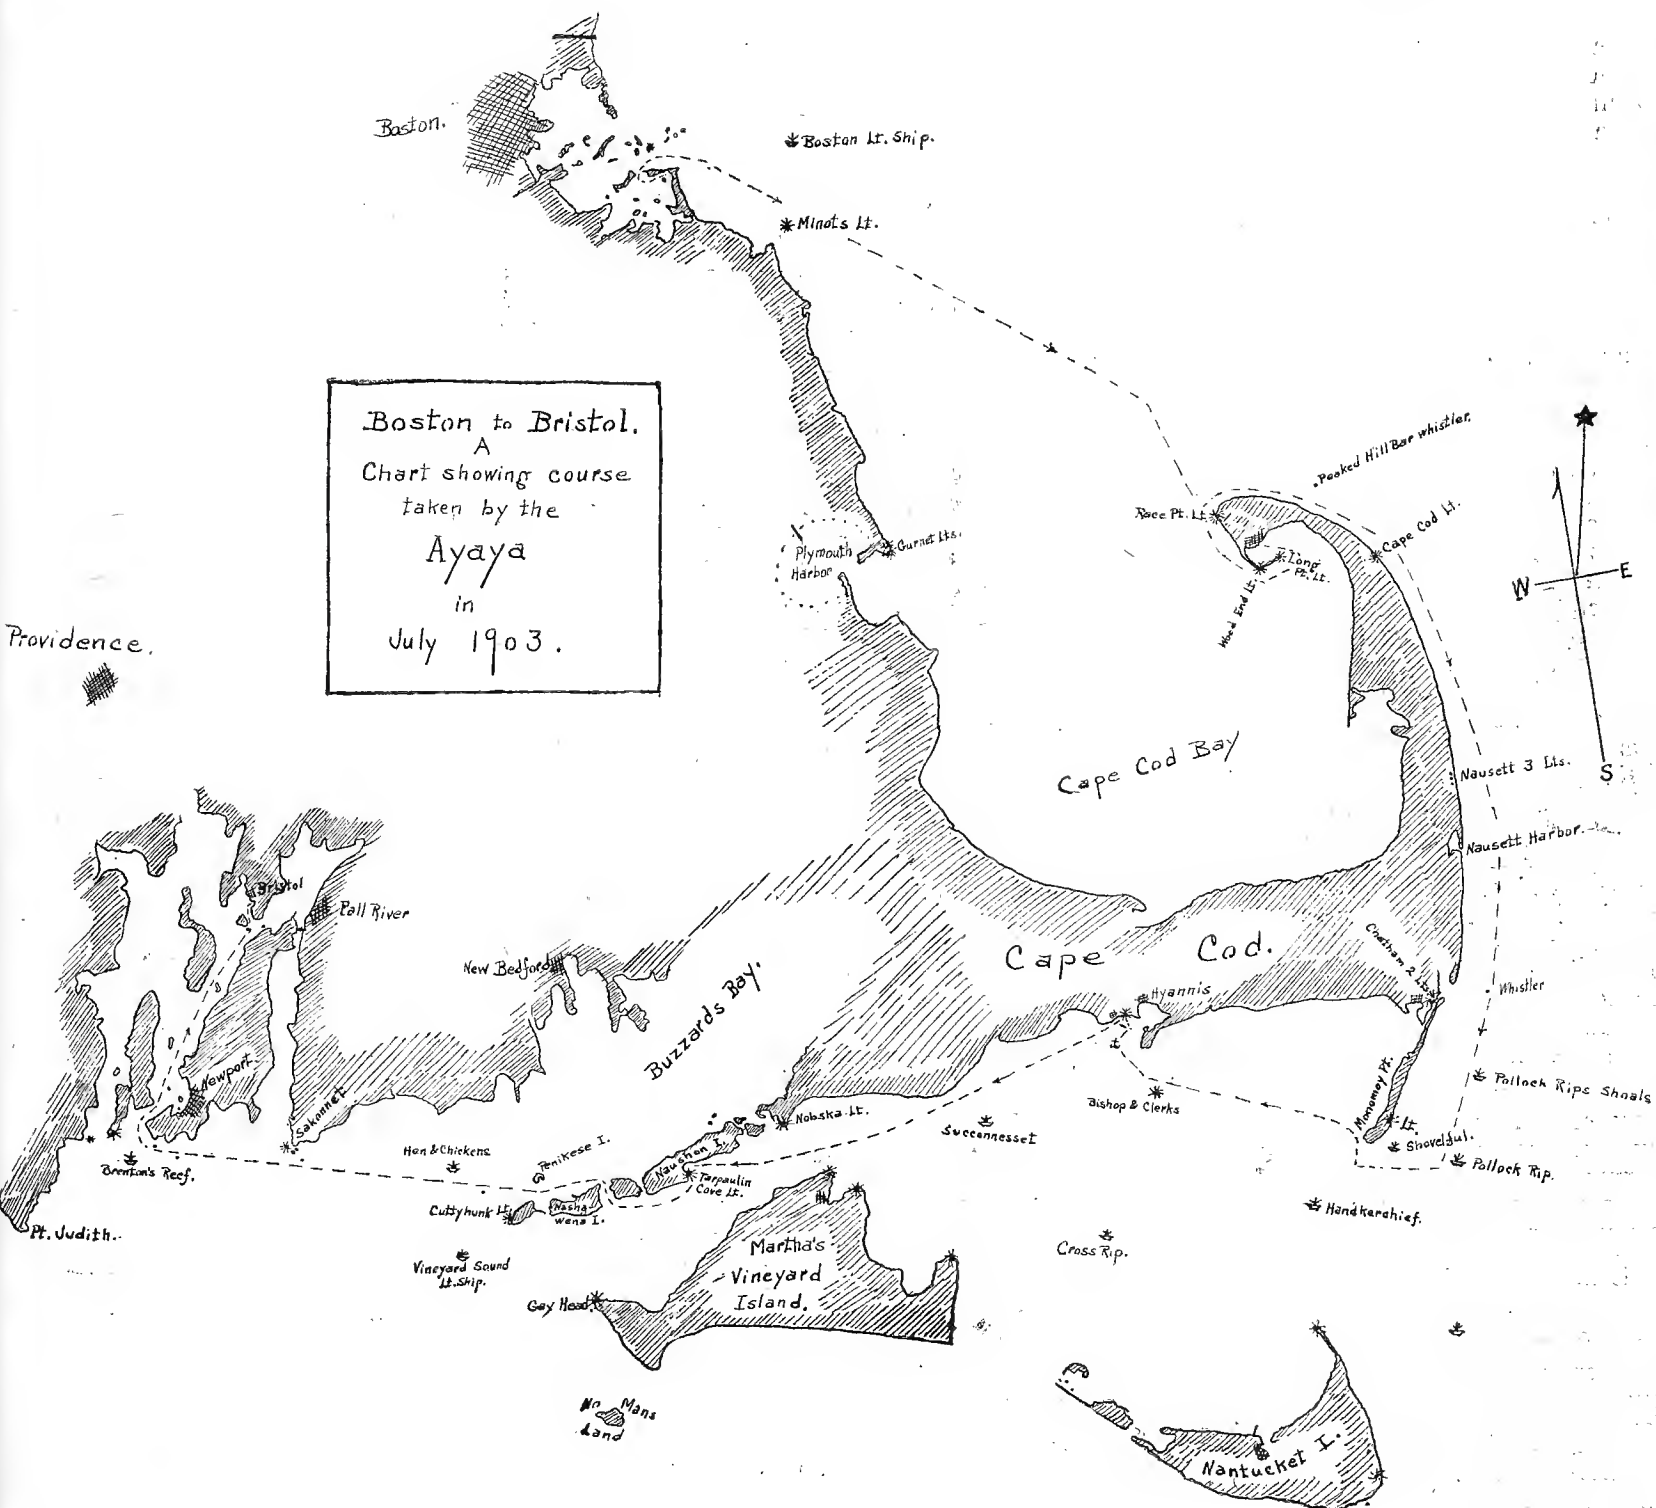

We finally decided to call it off, so turned tail and ran back under jib alone. This was principally to slow her down, so that we might not get very far if the wind should go down with the sun. We dug out our dress suit cases, changed into dry clothes, and took things leisurely as we retreated northward.

When we reached the Marconi towers we saw a couple of fishing schooners anchor, and were thinking of doing so ourselves as soon as the curve of the beach should promise a little shelter. Then, all of a sudden, the wind veered to N. W. at 4:20 P. M. and moderated. We immediately swung around again, hoisted our mainsail, set the big jib and began retracing our weary steps. The sea fell with amazing rapidity, and on the last of the south-going tide we made very good speed. As the wind continued to lighten we shook out the third reef when off Nausett.

At 8:30 P. M. we passed just inside the whistler on Chatham bar and laid our course S. W. by W., to pass inside of Bearse and Shoveloff shoals and close around the tip of Monomoy Point. The wind continued light and was west. I had hard work to resist the impulse to set all sail.

At nine o'clock the wind backed to S. W. once more and blew hard—so hard that she staggered, even under the double reefed mainsail, and laid her lee deck under up to the coaming. The tide had now turned against us, so I soon tacked, stood inshore, and anchored at 9:45 in the lee of the beach about half way between the Monomoy and Chatham lights.

We decided to stand hourly watches, so as to be able to take advantage of any shifts of the wind, as well as to see the anchor held. We did not get as near the beach as

to up helm and follow them, but Albert had to be back in Boston on Saturday morning and did not wish to take any chances.

The calm was followed by a strong W. by S. breeze, so we set the three reefed mainsail. We had Cape Cod Light abeam at 7:35 P. M., and made our course N. W. for the Peaked Hill bar whistler. We never heard it and at 9:15 on seeing the lights of a tow well inside of us we hauled on the wind. Soon after doing so we saw Race Point Light on our port bow. The wind had lightened somewhat, so Albert took the tiller while I shook out one reef and shifted jibs. We beat up to Race Point rather slowly, despite the fair tide, standing inshore until the curve of the beach hid the light, and then out for twenty minutes or more. I put the lighted lantern out on the stern overhang, thus lighting up the luff of the sail and giving something to steer by. I was extremely sleepy and had to change my position frequently to keep awake.

Friday, July 17. It was just 1:10 A. M. when we rounded Race Point. Shortly before that, while making a hitch close inshore we nearly ran into a big fish weir. On rounding the point we squared away and ran down the beach. Wood End's red flash was in plain sight, so I steered to leave it close to port. We passed close aboard one of the two black spar buoys, but did not see the other. After passing Wood End at 2:07 A. M. we tacked ship and ran for Long Point Light, but at once found that we were running a bit by the wind, so, not caring to get too close in, tacked ship again and stood along until we could safely carry our boom to starboard.

Once in by Long Point we hauled on the wind and slowly beat up to our old anchorage, where we let go the mud-hook at 3:17 A. M. I was good for an immediate and long sleep, but as Albert said he was hungry, I scrambled half a dozen eggs and made some chocolate

Wood End Light abeam at 6:02 A. M.

while he bailed out the cuddy. On finishing our meal we turned in without waiting to change into dry clothes. It was then just the right kind of a morning to be starting for Hyannis, but I had to wait for a new crew.

Albert left at 2 P. M., and I spent the afternoon gathering up the things which had been dried out during the afternoon (practically everything on board), and in taking a nap. Among the boats in the harbor was the 46-footer, Wasp, which had tried to round the Cape the morning before, but after getting down to Pollock Rip had been forced to give it up and return—"Even as you and I."

Saturday, July 18. My new crew, in the person of Capt. Benjamin F. Sparks, came aboard at 4:50 A. M. He is a retired whaling captain, and a good small boatman. He now makes a business of taking small boats around the Cape, or of assisting owners to do so. I found him invaluable and a good companion to boot, so cheerfully recommend him to anyone needing such services. We got away at 5:10 with a nice wholesail W. S. W. breeze and a fair tide.

We worked up the beach from Long Point in short tacks close inshore—the water is deep right up to the beach. We had Wood End Light abeam at 6:02 A. M., and easing our sheets reached away for Race Point. We kept very close in to the beach (close enough to see the bottom and at times in less than six feet of water) all the way around to High Head Life Saving Station. Cape Cod Light came abeam at 8:50. The sky was then clear and the W. S. W. wind moderate.

By half past ten the wind had backed to due south and breezed so much that we put two reefs in the mainsail. We plugged away at it in long boards, going about four miles offshore on one hitch. We did better away from the land as the wind was less puffy there than close in by the beach where we caught some hot flaws that laid us out flat. On one of our offshore hitches we passed a soft schooner simply flying under her spinnaker.

At five minutes before two o'clock in the afternoon we passed the Nausett Lights and continued our monotonous task of turning to windward with lee rail awash and spray flying. It was interesting to see how much pleasure Sparks derived from steering a "knockabout boat." He marveled at her delicacy of helm and her ability to lie within four points of the wind.

At 4:15 we caught the fair tide which turns off Chatham an hour before it does at Pollock Rip. Fifteen minutes later we shook out our reefs as the wind was more moderate. The sky looked bad to me, but Sparks "allowed it did not bother him, as he did not believe in mackerel-skies anyway." Perhaps he said so to reassure me.

We passed the Chatham bar whistler at 4:45 P. M. It had a familiar look to me. The tide began to set us to windward in great shape. It certainly does run over the shoals with great velocity. Pollock Rip Shoals Lightship bore east at 5:58, and at 6:40 we cut well inside of Pollock Rip Lightship. It seems to me that they might have given the newer ship a name less similar to that of the old vessel. Why not the "Chatham Shoals," or the "Slue Lightship?"

At first we could just barely lay for Shovelful Lightship, but, thanks to the tide, were soon able to ease our sheets, and even then we passed through the rips on Stone Horse Shoal and a mile to windward of Shovelful.

In the fast gathering dusk we had some trouble in locating the buoys that mark the narrow channel between Handkerchief and Shovelful Shoals, but finally picked

them up and whisked in by Monomoy at 7:25. We thus saved going way around the Handkerchief.

Our course was now W. N. W., and as we ran along we congratulated ourselves upon the fact that we would soon be at anchor in Hyannis harbor. I lighted the binnacle lamp so as to be able to steer the compass course. It was not long before we raised Bishop and Clerks' Light. Soon after this the wind began to prick on and at once backed to S. S. E. The direction was favorable, but the amount was not, so we jumped around and tied in two reefs. On hoisting away again we found this too much—even off the wind—so we once more slackened away and tied in the third reef. This set she behaved better for a short time, but the wind was settling down to blow hard and it was not long before I decided to shift jibs. I accomplished this with much difficulty, as the Ayaya was jumping, rolling and diving as if mad. Coleman hooks are hard to handle under such conditions; when you add intense darkness and furious rain you may appreciate my task. It was easy enough to unhook them, getting the leather thong back through the eye was my difficulty, but I finally succeeded in hooking the halliards and sheets to the storm jib, hoisted it and tumbled aft.

[TO BE CONCLUDED.]

## Atlantic Y. C. Rating Rule.

At a recent meeting of the Atlantic Y. C. held in New York, amendments to the racing rules were adopted which show radical changes in the method of obtaining rating measurement. The innovations come as the result of a series of meetings held since early fall, in which the New York and Atlantic Y. C. have sought to come to some agreement for a uniform method of rating.

The work of the Atlantic Y. C. has been in charge of a committee consisting of Henry J. Gielow, chairman; Henry J. Robert and Charles E. Schuyler. Mr. Gielow, however, is responsible for the rule. The success of the new regulations has held his close attention for some time past. He has gone about the work in the same energetic and expert manner which characterized the creation of the rating rules adopted by the American Power Boat Association last year. These have since been considered good enough to be accepted as a standard by a number of leading power boat organizations abroad.

Having in mind the great need of uniformity in rating rules, the Atlantic Y. C. amendments were made akin to those adopted last year by the New York Y. C., the principal difference being the method of obtaining "L," or length used in the formula.

The New York Y. C. obtains it by taking the quarter breadth length on deck and at the load waterline and dividing the sum by two. The Atlantic Y. C. obtains "L" by a single measurement, 10 per cent. of the greatest beam at the load waterline above the load waterline plane. Both methods give substantially the same "L" on existing yachts. On new boats, however, the New York Y. C. rule can be evaded to a considerable extent, which is guarded against in that adopted by the Sea Gate organization. It is asserted by sponsors of the latter that the new method of obtaining L measures more accurately the line on which the boat really sails when heeled to her best work.

The intent of the rule is to foster the building of boats of good displacement, moderate overhangs, and liberal accommodations, which can take a sea without pounding and yet possess a good burst of speed. The complete formula of the Atlantic Y. C. rating rule is as follows:

Racing measurement equals length multiplied by the square root of the sail area divided by 5.5 times the cube root of the displacement. Length (L) is obtained as follows:

L is measured on a line parallel with the middle fore and aft vertical plane at a distance from it equal to one-quarter of the greatest beam at the load waterline and one-tenth of the beam above it. Any unfairness of form for the apparent purpose of shortening the length shall be trued up and the yacht measured between fair lines.

Another slight difference between the New York Y. C. rule and that of the Atlantic Y. C. is the divisor. In the first mentioned, five times the cube root of the displacement is taken, while in that of the Sea Gate Club the divisor is made 5.5 times the cube root of the displacement. The latter change was recommended by "Nat" Herreshoff, among other well-known designers. Increase in the divisor in most cases brings about a lower rating than in the New York Y. C. rule.

The new regulations replace the old Atlantic Y. C. rule, in which rating measurement was equal to one-half the load waterline length multiplied by the square root of the sail area. It is interesting to note the comparative ratings under the old and new Atlantic Y. C. rules. Examples figured accurately enough to well illustrate the point are published herewith.

It will be seen that craft of healthy type rate low. Approach toward the scow is severely taxed. It should also be noted how greatly L, the waterline on which a boat sails when heeled to her best work, differs in extreme craft from the load waterline length which was taken in the old Atlantic Y. C. rule. A few ratings of existing boats are given below for the purpose of comparison:

SCHOONERS.				
	L.W.L.	L.	Old Rating.	New Rating.
Lasca	89.8	77.8	93.3	90.0
Emerald	85.9	78.5	90.7	85.5
Corona	85.5	80.0	93.1	90.0
Iroquois	79.0	65.5	82.3	76.8
Amorita	69.0	67.0	73.2	73.5
Elmina	68.0	66.2	73.2	72.7
Muriel	68.0	66.2	73.2	72.7
SLOOPS.				
Weetamoe	51.0	56.2	60.0	66.5
Neola	51.0	56.2	60.0	66.5
Isolde	59.7	55.0	60.5	52.7
Effort	36.6	40.0	43.0	46.5
Dorwina	35.0	38.0	43.0	46.0
Umbrina	34.8	34.8	39.2	35.2
Naiad	22.6	25.8	24.1	25.0
Ogeemah	20.0	18.7	22.0	18.0
Spots	18.0	21.5	20.9	22.1
Wraith	18.0	21.5	20.9	22.1
Bronco	18.0	21.5	20.9	22.1

When the New York Y. C. rule was first made public it called forth a storm of objection and illustrations of its lack of merit. All of these, however, referred to boats of 40ft. racing measurement or over, the smallest class considered by the New York Y. C. The Atlantic

Y. C. is the first to apply the principles to smaller boats, of which the great bulk of the racing force of the country is composed.

The Atlantic Y. C. rules place the same limitations on load waterline, draft and sail area as do those of the New York Y. C. One-half of any excess of the load waterline over 115 per cent. of L is added to the rating measurement. The limit of draft in feet is equal .133 times the rating measurement at the top of the class, plus 2.66.

Excess of draft, exclusive of centerboard, obtained by the latter formula, is multiplied by 5 and added to the rating measurement. The draft of any boat, exclusive of centerboard, cannot exceed 18ft. Any excess of the square root of the sail area over 135 per cent. of L is added to the rating measurement.

A new classification has been made up in which existing boats are placed as near as possible in the same classes in which they have heretofore sailed, and at the same time have them rate as near the top as a logical arrangement would permit. The classification as adopted is uniform. A difference of one foot occurs between the limits of the respective classes for sloops and yawls as they increase in size. A difference of three feet occurs in that for schooners.

The Y. R. A. of Gravesend Bay has practically pledged itself to adopt the new rule. Final action will be taken at a meeting to be held in the near future. The complete classification in the new Atlantic Y. C. rating rules follows:

### SCHOONERS.

Class A—All over 90ft., racing measurement; crew, 48 persons.

Class B—Over 75ft., not over 90ft., racing measurement; crew, 35 persons.

Class C—Over 63ft., not over 75ft., racing measurement; crew, 25 persons.

Class D—Over 54ft., not over 63ft., racing measurement; crew, 20 persons.

Class E—54ft. or less, racing measurement; crew, 15 persons.

### SLOOPS AND YAWLS.

Class F—All over 90ft., racing measurement; crew, 48 persons.

Class G—Over 78ft., not over 90ft., racing measurement; crew, 35 persons.

Class H—Over 67ft., not over 78 ft., racing measurement; crew, 20 persons.

Class J—Over 57ft., not over 67ft., racing measurement; crew, 15 persons.

Class K—Over 48ft., not over 57ft., racing measurement; crew, 12 persons.

Class L—Over 40ft., not over 48ft., racing measurement; crew, 9 persons.

Class M—Over 33ft., not over 40ft., racing measurement; crew, 7 persons.

Class N—Over 27ft., not over 33ft., racing measurement; crew, 5 persons.

Class P—Over 22ft., not over 27ft., racing measurement; crew, 4 persons.

Class Q—Over 18ft., not over 22ft., racing measurement; crew, 3 persons.

Class R—18ft. or less, racing measurement; crew, 2 persons.

### CATBOATS.

Class S—Over 27ft., not over 33ft., racing measurement; crew, 5 persons.

Class T—Over 22ft., not over 27ft., racing measurement; crew, 4 persons.

Class V—Over 18ft., not over 22ft., racing measurement; crew, 3 persons.

Class W—18ft. or less, racing measurement; crew, 2 persons.

## Boston Letter.

BOSTON, Dec. 27.—Arrangements are being made for a match race between two one-design classes of 18ft. knockabouts. One class will be of the keel type, designed by Mr. E. A. Boardman, of Boston. The other class will be composed of centerboard boats designed by Capt. N. G. Herreshoff, of Bristol. The keel boats were designed especially for Marblehead yachtsmen, and the conditions of those waters have been considered. While this is essentially a one-design class, the boats in every way conform to the restrictions of the Eighteen-foot Knockabout Association. On account of the shoaling waters of Buzzard's Bay the centerboard type has been selected for the yachtsmen of those waters. It is understood that this class will also conform to the same restrictions as the boats from the North Shore, with the exception that they will carry a little more sail.

There are three of the Boardman boats already ordered by Vice-Commodore C. H. Foster, of the Eastern Y. C., Hon. Charles Francis Adams 2d, of the Boston and Eastern Y. C., and Mr. R. de B. Boardman, of the Corinthian and Manchester Y. C. The class of 18-footers for Buzzard's Bay was organized by Mr. R. W. Emmons 2d, of the Beverly Y. C. Four of these boats have been ordered from Herreshoff, but the names of the owners have not yet been announced.

When the Eighteen-foot Knockabout Association was organized by ex-Commodore C. C. Clapp, of the Duxbury Y. C., its rules and restrictions were mainly taken from those governing a like class of the Beverly Y. C. The principal difference was that in the Buzzard's Bay class 1,500 pounds of outside ballast were required, while the Knockabout Association placed no restrictions on ballast, but stipulated that the boats should weigh 4,000 pounds. Other necessary restrictions have since been made by the Knockabout Association. Although this 18ft. class was practically founded by the Beverly Y. C., there has been little or no activity shown by the yachtsmen of Buzzard's Bay in building boats for it, while, on the other hand, in Massachusetts Bay the class has turned out to be the most popular one.

A series of races between the representative types of both sections will undoubtedly prove of much benefit. It will increase the interest that has already been shown in Massachusetts Bay, and it is likely to put the class on a practical working basis in Buzzard's Bay. The series proposed can hardly be classified as an inter-club one, for in Massachusetts Bay, particularly, the yachts will be

owned by members of different clubs. Considerable interest is being manifested in the proposed match, and it is possible that by the time the races are called there will be as many as six boats on each side.

It has been suggested that the series be sailed in neutral waters for the first race, and Provincetown has been mentioned as a possible meeting place. If this place were selected the Buzzard's Bay boats would have further to sail than the North Shore boats, and also in more trying waters. Provincetown appears to be the only place between Marblehead and Buzzard's Bay, however, where these little boats could be reasonably tried. It may be possible that the first series will be sailed in the waters of one of the contesting group, a return series to be sailed in the waters of the other contestants another season.

During the winter a nautical school has been established at the Boston Young Men's Christian Association for the benefit of yachtsmen. The subject matter taken up is along the lines of the school established by Capt. Howard Patterson in New York. There are courses in naval architecture, alongshore and deep sea navigation, seamanship, and the study of gasoline engines. It is not a money-making affair, but is established for the benefit of those who wish to seek knowledge on the subjects. The instructors are men who stand very high in their professions, coming from the U. S. Navy and from the Massachusetts Institute of Technology. The assessment levied is only sufficient to pay the instructors as nearly as possible, and the amount is very small.

The school has really been established for some time, but it was not until this winter that sufficient confidence was felt to take up all of the main branches of the science. The school has been of great benefit to those who have attended it in the past, and some nice work has been shown in designing and seamanship by some of the veriest amateurs. There is no doubt that it will prove of immense value to amateur yachtsmen of Boston and vicinity in coming years.

The Regatta Committee of the Eastern Y. C. has issued, in pamphlet form, a complete record of races given by the club during the season of 1903, including the squadron runs on the annual cruise and the special race off Newport. By the records it is shown that in the special open races given for smaller classes during the season, the championship cups, offered by Commodore Laurence Minot have been won by Sally VII. in Class D, Medric, in class E, and Question in class I. These boats are 25-footers, 22-footers, and 18-footers respectively.

Much interest is being shown in the new 30ft. class, but at present only three boats are in sight. For a brand new proposition even this number gives encouragement, and it is likely that the class will be a go. The designers are receiving queries all around, and it is expected that a few more orders will be forthcoming before long.

Messrs. Murray & Tregurtha have an order for a 47ft. torpedo stern, cabin launch for Mr. George P. Prior, of Winthrop. The yacht is now under construction. She will be equipped with a 16 horse-power engine. They are also building a 22ft. launch, with a 3 horse-power engine for a Halifax yachtsman.

JOHN B. KILLEEN.

### YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

There is building at the yard of the Greenport Basin and Construction Company, a 25ft. waterline cruiser for Mr. Benjamin Atha, who spends his summers at Shelter Island. The boat was designed by Mr. Theodore Brigham.

A meeting of the South Coast Y. C. was held at Los Angeles, Cal., on the evening of Dec. 14, and the following officers were elected: Com., J. J. Jenkins; Vice-Com., Hays Rice; Rear-Com., Eugene Overton; Post-Captain, George Rice, Jr.; Regatta Committee, E. F. Doran, Chairman; Blake Gregory and Edward Hyans; Board of Directors, J. J. Jenkins, Hays Rice, Eugene Overton, W. S. Morse and Victor Stewart. It is probable the club will accept the informal offer of the Salt Lake Railroad, which has tendered them the use of the old Catalina Club House on Terminal Island as temporary quarters for the club.

There is building at the yard of the Herreshoff Mfg. Co., at Bristol, a 43ft. speed launch for a New York yachtsman. The boat was designed by Mr. C. F. Herreshoff. She will have oak frames and mahogany planking, will be 43ft. long and 5ft. breadth. Two 20 horse-power engines are expected to drive the boat at about 20 miles an hour.

The formation of a yacht racing association among the clubs on the south side of Long Island was agitated last summer and, while permanent organization has not yet been effected, the various clubs have manifested so much interest in the proposition that such organization will shortly be made.

South side yachtsmen are interested in one-design class racing, and a committee representing the several clubs has adopted the plan of boat which will appeal to every yachtsman, and which will enable all to take part in a purposed annual regatta for a trophy. The several clubs have elected representatives to a committee, which closely examined a number of plans and drawings of boats adapted to the uses in south side bays. The committee is composed of Vice-Com. Frank K. Walsh, of the Keystone Y. C.; Com. Miller, of Freeport; former Com. Charles Southard, of the Hempstead Bay Y. C., and William Titus, of Hempstead.

The plan for a one-design class boat, decided upon by this committee, is a 25ft. catboat, having a breadth of 7ft. 8in., a draft of 15in., with 12in. least freeboard, and the choice of the committee has been adopted by the various yacht clubs.

It is purposed to build five of these boats before next season, one for each club on the south side, and a series of races will be held each season, with a re-

gatta at the close to determine the championship. It is thought that the one-design class will give an impetus to yachting in these waters, and that in another year many more boats will be built.

The Philadelphia Y. C. has made a change in the club burgee. The new pennant is a pointed flag around the edge of which is a blue band. In the center of the burgee is a red keystone. The club's old pennant was exactly the same except for the blue border.

Mr. Cyrus Curtis, of Philadelphia, is to have a steel steam yacht built at Morris Heights, N. Y. Mr. Curtis formerly owned a small wood steam yacht named Philomena. Mr. Curtis' new yacht will be 115ft. over all, 95ft. waterline, 16ft. 6in. breadth and 7ft. 6in. draft. She is to be a flush deck vessel with a single funnel and two pole masts. There will be a large deck house forward, which will be used as a dining saloon. In the after part of the deck house will be the pantry, which will connect with the galley by dumb waiter. Aft of the machinery space are to be the owner's and guests' cabins and bath rooms. Forward of the engine room will be the galley, staterooms for the officers and the forecabin. The deckhouse, companionways, deck fittings and owner's and guests' rooms will be finished in mahogany.

The yacht will be fitted with a Seabury triple expansion engine, with cylinders 8½in., 14in. and 23in. in diameter by 12in. stroke. Steam will be supplied by a Seabury water tube boiler. The speed of the yacht will be at least fourteen miles an hour. She will have a complete electric light equipment. The owner proposes to name the yacht Machigonne, after the original Indian name for Portland, Me., his birthplace.

The following regulations have been forwarded to us by the Club Nautique de Nice relating to King Edward VII.'s Mediterranean cup:

"In accordance with His Majesty's desires, this trophy, to be called King Edward VII.'s Mediterranean Cup, is to constitute the prize of an international race from Gibraltar to Nice, which will take place under the following conditions:

"1. All yachts, irrespective of nationality or rig, measuring at least forty tons, according to Thames measurement, will be admitted to participate in the race.

"2. The course will be divided into three heats: (1) Gibraltar-Palma (Majorca Island); (2) Palma-Marseilles; (3) Marseilles-Nice.

"3. The start will take place at Gibraltar on Monday, Feb. 8, 1904. Full instructions concerning the departure from Gibraltar, the arrival and departure from Palma and Marseilles and the arrival at Nice will be issued to yachts participating in this race.

"4. The final classification will be decided by the computation of the relative duration of each heat.

"5. The prizes are as follows: First prize, a challenge cup presented by His Majesty the King, and called King Edward VII.'s Mediterranean Cup, with 2,500f. in specie added by the Club Nautique de Nice; second prize, a Sèvres vase, offered by the President of the French Republic, and 1,250f. added by La Société Nautique de Marseilles; third prize, 750f., offered by the Club Nautique de Nice; fourth prize, 500f., offered by the Club Nautique de Nice.

"6. Entries for the race will be received by the secretary of the Club Nautique de Nice, 93, Quai du Midi, up to Dec. 31, 1903, either by letter or telegram. Such entries, however, will not be accepted unless accompanied by the entrance fee of 250f., said sum to be returned in case the race does not take place.

"7. The race, by special agreement, will not take place unless there are at least five competitors at the start.

"Mr. Andrew Thomson has kindly consented to act as handicapper."

Mr. A. D. Proctor Smith, owner of the speed launch Vingt-et-Un, has accepted the challenge made by Mr. C. H. Tangeman for a motor boat race. Mr. Tangeman is of the firm of Hollander & Tangeman, the American agents of the Fiat automobile, which is manufactured in Turin, Italy. Mr. Tangeman has ordered the Electric Launch Co., of Bayonne, N. J., to build a hull for him, and one of his own motors will be installed in it.

The performances of Mr. Smith's remarkable little boat vingt-et-Un, have been recorded in these columns.

The match will be held under the auspices of the American Power Boat Association at a date between March 15 and May 15, 1904. The race is for \$500 a side, and it is probable that the money will go toward purchasing a cup that will be a perpetual challenge trophy.

Favorable editorial comment was made in a recent number of our British contemporary, the Yachtsman, in regard to an employment bureau, which has been established at Southampton, England, for the purpose of supplying owners of both power and sail yachts with capable and reliable men to fill all positions on these vessels. The editor said in part:

"It seems to us that a great future is in store for this firm, for in the absence of any competition at the start, it has the chance of securing the hearty cooperation of owners, and can afford to pick the best men and discard any of inferior clay. So long as such a policy is continued the bureau must be of great advantage to employers and men alike. At present, we know it to be a fact that a large number of men of the best sort in various parts of the country would gladly take up yacht service, but that they do not know how to set about it."

A very similar bureau has been established in New York City, and as it is to be conducted on sound lines and by one who has had considerable experience in this work, the idea ought to commend itself to owners, and they should in the future be free from the annoyance of securing capable hands. The bureau ought to be the means of giving employment to reliable sailors, and there are many to be had. Owners have never known just where to look for them, and in many cases the crews are

picked up by the officers at the ship yards and along the water front.

The American yacht intelligence bureau, which we refer to, is to be conducted by Mr. Herman Irving Loewy, who has been with Messrs. Tams, Lemoine & Crane for eight years, and during that time looked after that firm's employment department. The references of all men furnished will be carefully and rigidly investigated, and as only steady and reliable men will be furnished, these will be of such a character as to obviate the unpleasant necessity of constant changes. The charges made for furnishing heads of departments and assistants are moderate, and owners will gladly pay these fees in order to get trustworthy men, who are qualified to do the work.

Mr. W. Starling Burgess, senior member of the Boston firm of Messrs. Burgess & Packard, has opened an office in London at 20 Endsleigh street, Gordon Square. Mr. Burgess is to make a specialty of designing racing yachts for the British Y. R. A. classes.

### Designing Competition.

\$225 in Prizes.

Two designing competitions have been given in FOREST AND STREAM. The first was for a 25ft. waterline cruiser; the second was for a 15ft. one-design class. Both competitions were very successful. The great interest taken in those competitions has prompted us to give a third one, open to amateurs and professionals. The prizes which will be given are as follows:

First prize—\$100.  
Second prize—\$60.  
Third prize—\$40.  
Fourth prize—\$25, offered by Mr. Theodore Zerega for the best interior plan.

The designs are for a yacht conforming to the following conditions:

I. Centerboard cruiser, 40ft. l. w. l.  
II. Boat must not draw over 6ft with centerboard up.  
III. The lowest freeboard to covering board must be 3ft.

The design must be modern in every particular, without containing any extreme or abnormal features. The conditions have been made as simple as possible, that competitors might have all latitude and scope in working out their ideas. We wish to produce an able and comfortable cruising boat, one that shall have ample accommodation for two or three men living aboard for a period of several months, and one that can be easily managed at all times by two or three paid hands. The draft is restricted to 6ft. in order that the boat may have access to nearly all the desirable harbors, and may, thereby, widely increase her cruising field.

#### Drawings Required.

I. Sheer plan, scale ¾in.=1ft.—showing center of buoyancy, center of lateral resistance and center of effort of both rigs.  
II. Half breadth, scale ¾in.=1ft.  
III. Body plan, scale ¾in.=1ft.  
IV. Cabin plan, inboard profile and at least one cross section, scale ¾in.=1ft.  
V. Two sail plans, scale ¾in.=1ft.; one as a yawl; one as a pole mast sloop.

In the case of the yawl rig the position and height of the mast and length of gaff are to be the same as in the cutter rig. Plans must show working topsail, and size of light sails.

VI. All ballast outside on keel except amount necessary for trimming.

An outline specification must accompany each design. The drawings should be carefully made and lettered. All drawings should be on white paper or tracing cloth in black ink. No colored inks or pigments should be used. The designs must bear a non-de-plume only, and no indication must be given of the author. In a sealed envelope, however, the designer must inclose his own name and address, together with his non-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 340 Broadway, New York City, not later than March 1, 1904. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all of the designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, who passed upon the designs submitted for the 25ft. with great care, has again consented to judge the designs and make the awards.

### Rifle Range and Gallery.

#### Hudson Rifle Club.

NEW YORK.—The Hudson Rifle Club, of Jersey City, N. J., at its annual meeting a few days since elected the following board of officers: W. A. Barker, President; Wm. Gannon, Captain; H. J. McCartney, Lieutenant; J. Thompson, Secretary; Wm. O'Keefe, Treasurer. Captain Gannon is a lieutenant in Company C, Fourth Regiment, N. J. N. G.; he is a first-class shot and an enthusiastic rifleman.

The Hudson club has of late been in a condition of innocuous desuetude, but under the leadership of Capt. Gannon the club will probably take a new lease of activity in rifle shooting. It has the best club house in the State, and its gallery ranges are first class and up-to-date.

#### Cincinnati Rifle Association.

CINCINNATI, O.—On Dec. 20 the following scores were shot at 200yds., offhand, 25-ring target. Nestler led with 221:

Nestler	221	218	217	215	206	Honor.
Gindele	220	212	207	207	207	61
Hasenzahl	218	218	212	209	206	64
Payne	215	215	214	213	213	63
Hofman	209	206	199	195	186	58
Bruns	203	197	196	194	191	57
Freitag	202	200	189	187	180	54
Lux	200	200	198	195	195	62
Hofer	200	196	191	189	187	54

There were sixteen entries. The cup was won by David Longnecker, of Philadelphia. He shot at 30 birds, scoring 25, which, with his handicap of 2 birds, gave him 27. L. L. Biddle was second. He had a handicap of one miss as a kill and one miss as a "no bird," giving him a total of 31 to shoot at. He finished with 26.

# U.S. AMMUNITION

## ALWAYS RELIABLE AND SUPERIOR.

Agencies: { 497-503 Pearl Street, 35-43 Park Street, New York.  
114-116 Market Street, San Francisco.

## ON LONG ISLAND.

### Crescent Athletic Club.

Bay Ridge, L. I., Dec. 25.—The Christmas Day shoot of the Crescent Athletic Club was an active event, there being seven contests for trophies, besides other contests. The weather was as uncomfortable as it possibly could be consistently with shooting at all. It was dark, rainy and raw. Some good scores were made notwithstanding the unfavorable weather conditions.

The competition commenced between 10 and 11 o'clock.

The holiday cup was the main event. It was a handicap at 25 targets, and with an allowance of 3, made a full score, as follows: D. V. B. Hegeman (4) 25, H. M. Brigham (0) 23, F. B. Stephenson (1) 20, A. G. Southworth (3) 22, G. Stephenson (2) 19, L. C. Hopkins (4) 18, F. T. Bedford, Jr. (2) 18, H. B. Vanderveer (3) 16, H. L. Meyer (8) 14, E. G. Babcock (8) 8.

The Stake trophy at 25 targets had seven contestants. It also was a handicap at 25 targets, and was won by Mr. A. G. Southworth, who, with his allowance of 3, made a full score, as follows: A. G. Southworth (3) 25, F. B. Stephenson (1) 23, H. M. Brigham (0) 21, G. G. Stephenson (2) 19, L. C. Hopkins (4) 17, F. T. Bedford, Jr. (2) 18, W. W. Marshall (4) 18.

Other contests were as follows:

Team shoot, 15 targets: L. C. Hopkins 12, G. G. Stephenson 11, F. B. Stephenson 10, A. G. Southworth 9; total 42. F. T. Bedford, Jr., 12, H. M. Brigham 11, H. L. Meyer 11, H. B. Vanderveer 5; total 39.

Trophy shoot, 15 targets: F. T. Bedford, Jr., (1) 14, A. G. Southworth (1) 14, G. G. Stephenson (1) 13, F. B. Stephenson (0) 12, H. M. Brigham (0) 12, L. C. Hopkins (2) 12, H. B. Vanderveer (1) 11, D. V. B. Hegeman (2) 11, H. L. Meyer (5) 10.

Shoot-off: F. T. Bedford, Jr., 14, A. G. Southworth 13.

Trophy shoot, 15 targets: H. B. Vanderveer (1) 15, F. B. Stephenson (0) 13, L. C. Hopkins (2) 13, H. M. Brigham (0) 12, F. T. Bedford, Jr., (1) 12, G. G. Stephenson (1) 12, A. G. Southworth (1) 9, E. G. Babcock (5) 7.

Trophy shoot, 15 targets: H. M. Brigham (0) 13, A. G. Southworth (1) 13, F. B. Stephenson (0) 13, G. G. Stephenson (1) 13, H. Marshall (0) 10, L. C. Hopkins (2) 9, W. W. Marshall (2) 9, F. T. Bedford, Jr., (0) 11.

Shoot-off: H. M. Brigham 14, A. G. Southworth 14, G. G. Stephenson 13, F. B. Stephenson 11.

Second shoot-off: H. M. Brigham 14, A. G. Southworth 13.

Trophy shoot, 15 targets: F. B. Stephenson (0) 13, H. M. Brigham (0) 12, H. Marshall (0) 12, W. W. Marshall (2) 12, F. T. Bedford, Jr. (0) 10, G. G. Stephenson (1) 10, A. G. Southworth (1) 9.

English shoot, 15 targets, was an illustration of the use of both barrels, after the manner in which the English team shot in the match with the Americans, when the latter visited England. The second barrel was seldom used. H. M. Brigham was the winner with a score of 12 out of a possible 15, as follows: H. M. Brigham 12, F. T. Bedford, Jr., 11, A. G. Southworth 11, W. W. Marshall 10.

Trophy shoot, 25 targets: W. W. Marshall (4) 24, H. M. Brigham (0) 22, A. G. Southworth (3) 22, F. T. Bedford, Jr. (2) 22, H. Marshall (0) 21.

Bay Ridge, L. I., Dec. 26.—There was a good attendance of the Crescent Athletic Club shooters, notwithstanding the sharp cold and the penetrating northwest wind.

The Remsen prize contest was at 25 targets, and it had twelve entries. Mr. D. V. B. Hegeman and H. M. Brigham tied with a score of 23. Two shoot-offs resulted in ties. Then on the toss of a coin Hegeman won the prize.

Two shooters, F. T. Bedford and A. G. Southworth, entered for the December cup.

Three teams competed for the Sykes trophy. F. T. Bedford and J. J. Keyes won with a total of 37 to 36.

Twelve men shot for the Palmer trophy. E. H. Lott beat J. J. Keyes by one target.

Remsen prize, 25 targets, handicap allowance: A. G. Southworth (3) 8, D. V. B. Hegeman (4) 23, E. H. Lott (2) 17, H. Werleman (8) 14, G. G. Stephenson (2) 19, L. C. Hopkins (4) 14, H. M. Brigham (0) 23, H. B. Vanderveer (3) 16, C. H. Chapman (8) 15, F. B. Stephenson (1) 15, O. C. Grinnell (5) 8, J. J. Keyes (2) 21.

First shoot-off: Brigham 20, Hegeman 20.

Second shoot-off: Brigham 22, Hegeman 22.

Hegeman won on toss of coin.

Sykes team shoot, 25 targets, handicap: F. B. Stephenson (1) 14, G. G. Stephenson (2) 21; total 35. E. H. Lott (2) 19, H. B. Vanderveer (3) 17; total 36. F. T. Bedford (2) 15, J. J. Keyes (2) 22; total 37.

December cup, 25 targets, handicap allowance: A. G. Southworth (3) 16; F. T. Bedford (3) 22.

Palmer trophy shoot, 25 targets, handicap: O. C. Grinnell (5) 12,

A. G. Southworth (3) 17, H. Werleman (8) 11, F. C. Raynor (6) 21, H. M. Brigham (0) 20, F. T. Bedford (2) 20, F. B. Stephenson (1) 19, L. C. Hopkins (4) 16, E. H. Lott (2) 23, H. B. Vanderveer (3) 14, J. J. Keyes (2) 22, G. G. Stephenson (2) 16. Won by Lott.

Trophy shoot, 15 targets, handicap allowance: H. M. Brigham (0) 10, G. G. Stephenson (1) 13, F. T. Bedford (1) 13, A. G. Southworth (1) 10, F. B. Stephenson (0) 11, D. C. Bennett (2) 10, H. B. Vanderveer (1) 10.

Shoot-off: Stephenson 9, Bedford 10.

Trophy match, 15 targets, handicap allowance: H. M. Brigham (0) 12, S. S. Stephenson (1) 10, F. T. Bedford (1) 12, A. G. Southworth (1) 7, D. C. Bennett (2) 8, F. B. Stephenson (0) 10, H. B. Vanderveer (1) 8, L. C. Hopkins (2) 10, H. Werleman (5) 7, E. H. Lott (1) 15, O. C. Grinnell (3) 8, D. V. B. Hegeman (2) 15.

This was won by E. H. Lott in the shoot-off.

## A New Shooting School.

OF shooting schools around London there would seem to be a steady increase, and the fact that they are all well patronized by the best class of sportsmen affords evidence of the appreciation in which they are held. Another has just been opened.

A short journey by the Baker street line takes us to Finchley road station, whence a two-mile drive along the Finchley road brings us to the Regents shooting ground, lying well back from the highway on agricultural land. Having been invited to visit it, we lately made a tour of inspection, and upon arrival were met by the manager, Mr. P. A. Stockbridge, whose experience in this class of work is considerable. In order to gauge the efficacy of the methods of tuition and gun fitting practiced there, we adopted the role of an ordinary customer anxious to acquire improvement of form in the shooting of driven birds. A move was accordingly made to a firing point within convenient reach of a group of willows of a density of foliage that was explained by the presence of a small pond at their roots. Entirely concealed by this appropriate piece of natural covert was a platform some 10ft. high, carrying four clay bird traps. Birds were soon coming over the tops of the willows with a diversity of elevation and angle that thoroughly reproduced the conditions of sport afforded by driven partridges. Selecting a gun that fitted the shooter, a succession of kills followed at suitable sporting ranges. Suddenly one was thrown from the willows offering just such a shot as is presented when a bird breaks sideways on coming into view of the shooter. This was missed with both barrels, and the good form displayed in previous shots gave place to a bad swing of the gun and an undue dwelling on the object just as the trigger should have been pulled. A similar "bird" was thrown several times, and although it may have been broken once or twice, the timing and swing was still bad. It had then become apparent to Mr. Stockbridge where the fault lay. There was a tendency to align on the track of the bird where first seen, and to swing the gun over too many points of the compass in the act of overtaking it preparatory to shooting. The advice offered was to swing the body round in the act of bringing the gun to the shoulder, thus getting into the track of the bird's flight nearer the point at which it should be shot. Although obstinately adhering for a time to the fault that had unconsciously been developed, the wrong tendency was gradually overcome, dummy cartridges being meanwhile used so as to avoid such distraction of the mind as might arise from recoil. In due course the lesson was learned, as was proved by a run of successes at what had previously been found a very difficult shot to negotiate.

The advantage of bringing the gun into alignment at the most favorable spot became at once apparent when birds were simultaneously released. After they had left the traps they were kept well in view until the first shot was fired, following upon which the alignment was rapidly changed to the second bird, whose position and flight had been mentally registered. The tuition thus gained was obtained amid the perfectly natural surroundings that are a feature of this ground, the traps being in all cases operated from spots carefully selected to provide for the concealment of all that is artificial.

The method of treatment commonly adopted at this ground is first of all to observe any tricks or peculiarities exhibited by a shooter when off his guard. Many will adopt a correct method of alignment when firing at marks on an iron plate, but when firing spontaneously at birds that come unexpectedly into range mannerisms are displayed that must be corrected either in the shooter or in the gun. If a set habit results in repeated error for most shots, the gun must be adapted to the peculiar conditions, this involving a question of expert gun fitting. Suffice it to say, that the shape of a gun can be so adapted that the charge shall be centered on the bird in the case of most of the shots that are taken in an average way. Tuition at the school or practice in the field then enables the shooter gradually to master the shots which gun fitting alone cannot be expected to control. The system of working, as above explained in gen-

eral terms, is thus specially adapted to detect and remedy the weak points of a shooter, and it is through the skill of the instructor that these are first of all explained, then corrected, and finally eliminated. Similarly the flight of the rocketing pheasant can be closely imitated by means of birds thrown from the high tower, while in addition, many of the peculiar features of grouse shooting can be reproduced by the various contrivances at the Regent's shooting ground. The work undertaken by the proprietor is divided between gun fitting and shooting tuition or practice. The try-gun used is one which was worked out some years ago by Messrs. Boss & Co., the well-known gun makers, of St. James's street, a special feature being its remarkable resemblance in outline and balance to a finished gun, whatever may be the shape to which it is adjusted; while in the case of a shooter requiring single-trigger guns, the tests and practice shooting are conducted by means of a try-gun similarly fitted. Thus, the new shooting school seems well equipped to carry out the object in view.—London Field.

## Riverside of Utica.

UTICA, N. Y.—The Christmas Day competition at the all-day handicap shoot given by the Riverside Gun Club on its grounds, was a decided success. The stormy weather made the shooting conditions very hard. More than thirty competed. Visitors were present from Norwich, Sherburne, Ilion, Newport and Frankfort.

Shooting commenced at 10:30. Nine 15-bird events, with prizes to the winners, and allowance handicaps ranging from one to five birds was the programme.

Messrs. E. D. Fulford, Mayhew, E. Loughlin, Borden, Parmenter shot from scratch.

In the final qualifying event for the club's gold medal, Maine and Smith tied, the latter winning out on the shoot-off. Messrs. F. E. Stephens, George W. Jones and D. and E. Loughlin were the shooting committee.

The next shoot is fixed to take place on New Year's Day. The main event will be for the final possession of the gold medal.

The scores:

Events:	1	2	3	4	5	6	7	8	9
Mayhew	14	14	13	13	13	13	11	13	12

## Baden—Lick Gun Club.

WEST BADEN, Ind.—On Christmas Day our local gun club held two nice handicaps at targets and pigeons. The prize in each event was a turkey. Mr. Fisher, of West Baden, won in the target event after an exciting shoot-off with Messrs. George and Logan Ballard. Mr. Bailey, the manager of the hotel, won in the live-bird event, on a clean score.

On New Year's Day we hold a 50-target handicap for the championship of Orange county, and the winner takes a very handsome loving cup. Things are booming.

Twenty-five target handicap:

Braxtaw, 25	000010111111111111111111	—20
Fisher, 30	1001010001111111011101111111	—22
Hughes, 30	00101010101010111111010101011	—19
Apple, 30	0110010101010101010101010101	—18
G. Ballard, 25	111111100111111111111111	—22

### Target Shooting in England.

WASHINGTON, D. C.—*Editor Forest and Stream:* I append a cutting taken from the West Somerset Free Press, Somerset, England, thinking it may be of interest to many readers of FOREST AND STREAM, as Mr. H. Thorne is known to many subscribers.

I can well remember the old traps they used away back in the '70s. Now the American trap has been introduced. It will soon become popular.

J. BENDIRE.

A clay pigeon match possessing features of considerable novelty for this part of the country was held on Thursday, the shoot being got up by Mr. J. Clatworthy, of the Blue Anchor Hotel. Mr. Alfred J. Thorne, son of the late Mr. Henry Thorne, of Watchet, who has spent a good many years in the United States, had taken up the shoot and introduced into it special, up-to-date features—common practice in the States—that add more than the usual sport to the shooting at inanimate targets, and which were for the first time introduced in this district. The traps were such that they could be arranged at any angle, which might or might not, according to the regulations of the match, be known to the shooter, giving therefore more zest to the event and proving more certainly the marksman's skill. All the arrangements for the shoot were excellently carried out; but unfortunately the meeting was by no means so well patronized as the promoters expected it to be, this being in great part due to the fact that another shoot took place on the same day at Weston-super-Mare, which drew away some who had intended to come from the Taunton side of the country. As far, however, as the shooting went, the novelty of the thing was pronounced a decided success, it being superior to the usual style and affording more variety. The traps supplied by Mr. Hinton, of Taunton, were of the American style, and of Elcy make, as were also the "birds," one feature about the traps being that they did not throw so high as is usual in the English style, but the "birds" flew uniformly, presenting themselves as a rule edgewise to the marksman. A rather high wind and bad light throughout the day was, however, to a certain extent against good scoring. Mr. A. Thorne was unable to take as active a part in the shoot as he otherwise would have done, owing to a family bereavement; but he consented to supervise the arrangements, for the simple reason that he was the only one who thoroughly understood the system, and could hardly have been done without. That he was unable to take a more active part in the shoot itself was perhaps a matter on which the rest were to be congratulated, as he won considerable renown as a very smart shot, and would have probably made the results look very different from what they did appear. A good programme of sweepstake events had been provided, in which from 15 to 20 took part, but it was decided at the commencement, as the number competing was less than had been expected, that a portion only of the programme as advertised should be carried out. The sweepstakes in each event were divided as prizes in the proportion of 50, 30 and 20 per cent. of the net value of each sweepstake, the price of the "birds" being deducted. Mr. J. Broom, of Watchet, acted as referee, and Mr. J. Pinchin as trapper. In the first event—known traps and angles—for 7 birds, Mr. F. Wickstead and Mr. G. Hayward tied with 4 birds each. In the shoot-off Mr. Wickstead beat Mr. Hayward, who thus took second prize, and Mr. Battersby stood third with 2 birds. The second event was with known traps and unknown angles, 7 birds. Mr. Hayward came first with 4, Mr. H. Miles being second with 3, and Mr. J. Cockram and Mr. J. Clatworthy divided for third. The third event was with unknown traps and angles, 7 birds, and in this Mr. G. Hayward, Mr. H. Miles, Mr. J. Cockram and Mr. J. Clatworthy tied for first money with 3 birds each. On the shoot-off Mr. Miles took first, Mr. Cockram second, and Mr. J. Clatworthy third.

The next event—a walking match, 5 birds—was a decided novelty and was highly appreciated and caused much amusement. The competitors had to walk at a natural field gait from the shooting point toward the trap, the pulling of the trap being at the discretion of the puller, the competitor not knowing which trap the bird would spring from or when it would rise, in some cases having to walk almost to the trap before he could fire. After a good competition, Mr. F. Wickstead took first with 3 birds. Mr. G. Hayward and Mr. C. H. Battersby tied for second with 2 birds each. On the shoot-off Mr. Hayward won second. Mr. Battersby taking third money.

The last of the programme events was with known traps and angles, 10 birds. In this Mr. Wickstead won first with 8, Mr. Battersby coming second with 6, while Mr. Hayward and Mr. Miles tied for third money with 5, on which followed an interesting race of 18 bids before the tie was finally settled. Mr. Hayward winning.

In addition to the above events a number of private sweepstakes were shot. It only remains to say that Mr. J. Clatworthy carried out everything in capital style, and it was to be regretted that he was not better supported. An ordinary lunch provided at the hotel during the progress of the shoot was fairly well patronized, considering the circumstances, about fifteen sitting down.

### Concerning a Misrepresentation.

SOME months ago, the daily press of many large cities published a report, false in every particular, so far as it concerned Mrs. F. E. Butler (Annie Oakley), which set forth that Annie Oakley had been arrested in Chicago, etc. By way of vindication Mr. F. E. Butler instituted a number of libel suits. Several of the offenders have made full and gratifying retraction. The following is presented for the double purpose to show how groundless were the offensive articles published at first, and to show a purpose to make an amende in good faith:

"In the issue of the Evening Star, of Aug. 11, 1903, there appeared an article in the news columns relating to Annie Oakley, daughter-in-law of Buffalo Bill, and the most famous rifle shot in the world." This article gave in detail certain very unfortunate and discreditable circumstances concerning the Annie Oakley of the article, who then resided in Chicago, where these circumstances occurred.

"At one time Mrs. Annie Butler, now of Nutley, N. J., where she was living last August, gave exhibitions in the troupe of Buffalo Bill as a champion shot with the shotgun at glass balls and artificial targets. Her professional name was Annie Oakley. She was not the daughter-in-law of Buffalo Bill, nor was she famous as a rifle shot. No one acquainted with her could have read the article in question as a whole and have associated Mrs. Butler with the Annie Oakley of the article; for it continued as follows: 'The prisoner's husband, Samuel Cody, died in England. Their son, Vivien, is now with Colonel Cody at the latter's ranch on the North Platte. The mother left Buffalo Bill two years ago, and has since been drifting around the country with stray shows.' None of these things was true of Mrs. Annie Butler. But certain features of the article, when entirely isolated from the context, might have been read as re-

ferring to Mrs. Butler, and she conceives that she has been thereby injured.

"The Evening Star now takes occasion to say (what it has been anxious to say ever since Mrs. Butler's representatives first called its attention to her complaint) that Mrs. Annie Butler, of Nutley, N. J., was not referred to in the article in question; that the article was not true with respect to her; that, so far as the Star is informed, she is a lady of unimpeached and unimpeachable character, and that the Star knows of nothing to her discredit in any way.

"The Star expresses its sincere regrets if through any assumption of similar names there appeared to be in its publication even the slightest shadow of a suggestion that Mrs. Butler was referred to in the article, and that she should have been in any way disturbed and annoyed thereby."

### Haverhill Gun Club.

HAVERHILL, Mass., Dec. 26.—The lowly weather Christmas didn't interfere greatly with the shoot of the Haverhill Gun Club yesterday, although the cloudiness affected target sighting somewhat. Despite the darkness, excellent scores were made, and the all-day event proved an attraction to many members. Guests were present to participate, among them being Mayor Eugene E. Reed and Elmer S. Reed, of Manchester, N. H.; W. E. Allison, of South Weymouth; J. P. Sanborn, of Norwood; Dr. Gerrish, of Exeter, and some other good shots of nearby cities. The scores as a general feature, were good, and a fine showing was made by the local club members. The prize feature of the day, a handicap, was won by Elmer Reed, of Manchester, he scoring 45 targets out of a possible 50, with Allison, Allen and Lovering sharing the honors for second and third, with 40 targets each. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
Targets:	10	15	10	15	10	15	10	15	10	15	10	15	10	15	10	15	10	15	10

Follansbee .....	...	...	...	...	...	...	7	7	8	7	6	6	...	...	...	...	...	...	...
Thompson .....	...	...	...	...	...	...	3	4	2	...	8	8	...	...	...	...	...	...	...
Blackburn .....	...	...	...	...	...	...	...	...	...	...	...	5	8	5	...	...	...	...	...

Events 1, 4, 7, 9 and 13, regular; events 2, 5, 8, 10, 12, 14, 15, 16, 17 and 18, unknown; events 3, 6, and 11, reverse; events 9 to 13, inclusive, constitute prize handicap of 50 targets.

### Aquidneck Gun Club.

NEWPORT, R. I.—The usual holiday shoot was held on Christmas despite the unfavorable weather conditions. Fifteen of the faithful reported—as good an attendance as that of Thanksgiving Day. No regular programme had been prepared, so an impromptu one was arranged—100 targets in 10s and 15s, some events as optional sweepstakes.

A cold penetrating rain set in shortly after 10 o'clock, which rendered shooting uncomfortable, to say the least. This, and a dark sky line, were against good scores; still, some fair totals were recorded, H. A. Peckham being high with 75, topping Bowler one target. These two made the only straights of the day.

Event No. 6, at reversed order, (something new to most of the boys), brought disaster to many scores, the remarks as target after target landed on the sod in its pristine form being varied and expressive.

The traps worked beautifully, and over 1,300 targets were disposed of.

Events 1, 2, 3, 4, 7 and 8, unknown; No. 5, 5 pairs; No. 6, reverse.

Targets:	10	15	10	15	10	15	Broke.
H. A. Peckham .....	10	10	8	12	6	12	9 11
Bowler .....	9	13	7	13	4	10	10 11

H. M. Manchester .....	...	...	9	...	2	...	...

### Riverside Gun Club.

TOPSHAM, Me., Dec. 26.—Christmas afternoon a few members of the Riverside Gun Club met for a practice shoot, the last for 1903. The weather conditions were good for the time of year. With a good fire in the club house, it proved a very enjoyable afternoon. Scribner and Maxwell, of the Brunswick Gun Club, were among the participants, being the only visitors.

Shooting at the traps in this section practically stops by Aug. 15, so scores made in December are bound to be of the amateur class. The largest possible score on 25 targets was made by Maxwell, breaking 23, A. E. Hall followed with 22.

Herewith is given the total:

	Shot at.	Broke.		Shot at.	Broke.
Maxwell	75	61	Atkinson	50	35
Scribner	75	47	E. Hall	50	35
C. Strout	75	41	Norcross	25	12
A. E. Hall	60	51	B. Goud	25	10
A. O. Goud	60	35	Burkett	20	9
S. Strout	60	25	Vannah	15	9
Curtis	60	30			

### Richmond Gun Club.

RICHMOND, S. I., Dec. 25.—The Christmas Day shoot of the Richmond Gun Club had fifteen events. Messrs. A. A. Schoverling and L. H. Schortemeier were easily in the lead as to totals, with Mr. George Bechtel a good third. The address of the secretary is New Brighton, S. I. The next shoot is fixed to take place on New Year's Day. All are welcome. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	15	15	15	15	15	15	15	25	20	20
L. H. Schortemeier .....	9	10	9	10	9	8	14	13	13	14	8	...	24	17	20

F. Crystal .....	...	...	...	...	...	...	...	...	...	...	...	16	10	...	...

A. A. SCHOVERLING, Sec'y.

### Cincinnati Gun Club.

CINCINNATI, O.—Christmas Day was clear and cool, with not very much wind. A few of the Cincinnati Gun Club members went to the grounds and indulged in a little sport. Five events at 20, and two at 15 targets were shot, A. Sunderbruch being the only one to make a straight score in any event. Williams broke 19 out of 20 in his first event. The scores follow:

Events:	1	2	3	4	5	6	7	Shot at.	Broke.
Targets:	20	20	20	20	15	20	15	...	...
Gambell .....	17	15	14	14	...	15	...	100	75
Ahlers .....	15	12	15	18	10	...	11	110	81
A. Sunderbruch .....	14	20	18	...	...	...	...	60	52
C. Dreilich .....	13	15	16	...	11	...	...	75	60
Williams .....	19	13	15	...	...	...	...	60	47
Willie .....	13	18	13	...	...	...	...	60	44
H. Sunderbruch .....	7	9	13	8	...	...	8	95	45
James .....	7	4	...	...	...	...	...	40	11
Jay Bee .....	8	8	...	9	...	...	...	55	25
Ackley .....	...	...	6	...	2	...	...	30	8

Saturday, Dec. 26, was very cold, the thermometer registering only about 6 above zero. To add to the comfort of the shooters a strong wind was blowing, and the targets were very erratic in their flight. The contest to-day was the seventh in the Parker gun series, twelve shooters taking part. Medico and Gambell tied on actual breaks, each scoring 88. The nearest competitor, Don Minto, broke 76. Medico and Pohlar each made perfect scores of 100, including their handicaps. Gambell was second high, with a total of 98.

The club will hold its annual tournament July 19 to 22, giving four days of good sport, and will offer \$2,200 in added money and guaranteed purses. There will be some new features introduced at this tournament, which will be announced later. It is safe to say that they will please the boys—amateurs as well as professionals.

Rolla O. Heikes was in the city last week on his way south. Before joining the U. M. C. squad in their southern pilgrimage he will spend a couple of weeks at San Antonio, Tex., with Col. Guessaz, and they will do a little duck shooting on their preserve, about six miles from that place.

Following are the scores made to-day in the Parker prize gun shoot, 100 targets, handicap added:

Targets:	20	20	20	20	20	Brk.	Hdcp.	Total.
Medico .....	19	18	17	17	17	88	12	100
Gambell .....	10	18	16	17	18	83	10	98
Pfeiffer .....	8	9	8	9	14	48	40	88
Pohlar .....	9	13	17	13	16	68	35	100
Don Minto .....	16	18	17	14	11	76	12	88
Herman .....	11	11	11	11	10	54	30	84
Block .....	15	13	15	11	12	66	18	84
Williams .....	12	13	12	16	13	62	18	84
Bullerick .....	14	10	12	11	15	62	30	92
See .....	14	15	13	14	11	67	10	77
Ahlers .....	14	14	...	...	...	56	...	...
Jay Bee .....	15	10	13	11	7	56	25	81

BONASA.

### Cresson Gun Club.

ALTOONA, Pa., December, 1903.—Trapshooting in this vicinity awoke from its hunting season slumber to-day, when the Cresson (Pa.) Gun Club held its annual midwinter live-bird shoot.

The weather was as good as could have been expected on the mountain top at this season of the year, although the threatening aspect of several days in advance doubtless kept some of the tender ones from turning out.

The attendance was not as large as at some former meetings of this popular organization, but those present enjoyed the sport immensely. The birds were the "real thing," and this accounts for the low scores of some of the old-timers.

The club sustained its reputation for complete arrangements and quality and quantity of birds, and all participants complimented the management on the success of the shoot. The scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR, 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 9, 1904.

VOL. LXII.—No. 2.  
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### CIRCUMSTANTIAL EVIDENCE.

We find in the New York Law Journal record of an extraordinary phase of circumstantial evidence, involved in an appealed case growing out of a tragedy in the Maine woods. It appears that the defendant, one Terreo, had been convicted of the murder of Mathias Pare, whose death had been caused by shooting, and whose remains were discovered in a remote forest district of the State of Maine, about a month after his disappearance, after the melting of snows which had concealed the body. Lying on the snow within two or three inches from the body was found an exploded cartridge shell, which played a most important part in the trial by connecting the defendant with the crime. This shell was of a size to fit the bore of defendant's rifle, and the State produced evidence of an eminent expert tending to show that, under microscopic observation the pin of the hammer of any rifle left a characteristic and unmistakable mark upon the priming or shell of a cartridge fired therein, and that the mark found upon the shell in question had been made by the pin of the defendant's rifle, because it corresponded reversely as to right and left with appearances on the pin and corresponded directly with appearances on the shells of other cartridges fired by the witness from the defendant's rifle. It was claimed in the application for the new trial that the defendant was taken by surprise by the scientific evidence offered by the State, and therefore was unprepared to meet it by a scientific rebuttal. Another expert in microscopy, after a system of experiments, now says: First, that it is probable that because of the long exposure to the snow the original indentation or mark upon the shell would have disappeared through corrosion; and, second, that, from the comparatively light or shallow indentation on the shell, it is probable that the mark was made thereon by defendant's rifle not when the cartridge was loaded, but subsequently and during the course of experimentation by the expert for the prosecution. The Supreme Judicial Court of Maine grants a new trial, saying that the evidence of the prosecution's expert in all probability exerted much influence upon the jury's verdict of conviction.

If all the circumstantial evidence in the case is fairly summarized in the foregoing statement, it is truly astonishing that a man's life was placed in jeopardy upon evidence so fragmentary and so remote. And it is still more astonishing that, on such evidence, he was convicted. It is, on the face of it, absurd to maintain that any given firing pin will make exactly the same indentation in any primer every time it strikes such primer. It is equally absurd, as a proposition, that any given firing pin will make an indentation differing from all those indentations of the millions of other firing pins.

When it comes to a consideration of the microscopic effects in this connection, no general law can be formulated from a few, or even many, particulars. To secure results microscopically alike, the conditions would need to be immutably constant and unvarying. In this matter they are not so. The micrometer will show that the diameters of the primers vary measurably; that they are seated variably. The metal is not always of the same density. The firing pin has an appreciably loose play which would cause it to vary microscopically when the gun is tilted one way or another in firing. The main-spring and lubricant act differently under different temperatures. In fact, there is such an infinite possibility and probability of minute variation in the working of a firing pin under different conditions that no microscopic, judicial, general law can be justly formulated. If it were one of many strong links in a chain of circumstantial evidence connecting the defendant with the offense, it would have a corroborative value, but as a total of testimony, it seems to us to be almost frivolous when accepted as legal justification for imposing capital punishment.

### QUEBEC GUIDES.

THE attempt to formulate a set of laws governing guide service in the Province of Quebec, which was mentioned in our issue of January 17, 1903, is still being pushed. There is no doubt that by concerted action on the part of the various clubs in that superb game district some improvements can be made, either by the action of the clubs without the intervention of the Government, or else through the direct aid of the Government by the passing of laws based on the same ideas as our laws in Maine. It would not be practicable for that district to make laws exactly similar to the Maine laws, but it is hoped that some set of simple rules covering licensing may be acted upon. The idea had its origin with the Triton Fish and Game Club, and a committee was appointed to take the matter up. Andrew Gray Weeks, of Boston, is the chairman, and has spent the past year in corresponding with the various clubs and seeking general information from resident sportsmen of Quebec who are in a position to give advice. At the recent meeting of the Triton Club it was voted to continue the work, and since then the committee has been in correspondence with the Commissioners of Lands, Mines and Fisheries, with a view to informing themselves as to the possibility of a bill going through should one be presented. A similar attempt was made some years ago, but owing to the action of the opposition it came to naught.

Should the Government refuse to take an interest in the welfare of visiting sportsmen in this respect, there seems little doubt that the clubs will formulate a set of rules for their own benefit. Among the clubs interested are the Triton, the Tourilli, the Little Saguenay, the River Noire, the Laurentides, the Stadacona, the Orleans, the Press, the Metabetchouan, the Penn, the Bostonais, the Quakquakanaksis, the Nomantum, the Ouitchouan, the Amabelish, and others. These clubs control a large portion of the tract between Quebec and Lake St. John.

### WINTER.

JACK FROST has placed an intensely wintry grip on the country at large. In New York the thermometer registered several degrees below zero on the morning of January 5, the lowest temperature recorded by the Weather Bureau for January since 1896. On that morning, in sections contiguous to New York, the thermometer registered between 20 and 30 degrees below zero. However, the present intense cold is near the record limit of New York city, which was registered on January 10, 1875, when the thermometer went to 6 degrees below zero. Other records of extreme cold are January 29, 1873, which had a zero temperature; January 11 and 16, 1893, when 1 degree below was recorded, and January 6, 1896, when the temperature was 3 degrees below zero. The heavy snow fall of last Saturday and Sunday completed every essential for full wintry conditions. In New York city, consequent to the clogging of the streets, incalculable hardships and suffering were imposed on men and horses alike. The labors of traction were many times multiplied. Heavily loaded teams were to be seen stalled in all sections of the city, while others made headway only by the extremes of straining and tugging. The thousands of men who are engaged in removing the snow are an index of the extreme of suffering which the poor must endure in the inclement wintry weather. One man, a foreman of a gang, froze in his snow cart. Many of the snow shovelers were badly frostbitten or entirely prostrated by the extreme cold, and many more were forced to quit work for hours to avoid freezing. A majority of the shovelers are poor, insufficiently clothed and fed, therefore far from being properly equipped for the exposure and labor imposed by their work. Commissioner Woodbury is quoted on this point as follows: "The temperature has been something frightful for the men. Many of them have been completely prostrated by the terrific cold. Some of them have been at work with their toes actually out of their shoes, and have been without gloves. You can imagine what work for these poor fellows means along the river front at midnight with the temperature around zero. Why, early this morning (January 5) it was so cold that I sent one man to the New York Hospital from Broadway and Fourteenth street. He was badly frostbitten. And there were plenty more men who suffered in the same way."

Those who have the necessities of life in abundance, yet who are disposed to repine over their hard lot, will find that with the temperature at zero they have much for which to be thankful.

### FATE.

THIS is a story of fate.

The death of W. G. Fargo Squiers, son of United States Minister Squiers, at Havana, has recalled to public attention the record of young Squiers in the Chinese war, and in particular his heroism at the siege of Peking. As told by the New York Times, after the entire European population and a number of Chinese converts—some seven or eight hundred all told—had taken refuge in the British Legation, there was a dangerous shortage of food, especially for the Chinese part of the refugees. The broad streets about the legation were swept by the fire from barricades which the "Boxers" had erected to command, and though there as abundant supplies in the native and foreign shops opposite the legation, access to these could only be had across this fire-swept zone. Several attempts had been made to reach them, but had failed because the mules drawing the provision carts could not be made to face the fire, when young Squiers, remarking quietly, "I think I can make that mule go," climbed into a cart, put the mule into a run, and dashed across the street in safety. The cart loaded with provisions, he returned with the same success. The perilous journey was repeated many times in the next few days until the legation was amply provisioned, and though the boy (he was not yet seventeen years of age) had holes shot through his hat and his clothes, and more than one of the coolies accompanying him were killed, he escaped without a wound.

Other exploits of daring and danger followed, and young Squiers was mentioned with honor in the dispatches of the British and American ministers, and President McKinley promised him, and President Roosevelt afterward tendered him, an appointment to West Point.

Such is the first chapter of this story of fate—a story of war peril encountered from which the hero emerged safe and unscathed.

The second chapter consists of a press dispatch from Havana, on the last day of the year, which announced: "Fargo Squiers, the eldest son of United States Minister Squiers, was accidentally shot and killed to-day by Gaston Michaud, a French chauffeur employed by his father. Young Squiers and some servants were shooting with rifles at a target in the coach house of the Minister's residence in the suburb of Marianao. One of the rifles apparently got out of order. Michaud was examining the weapon and recocking it, when it was suddenly discharged in the direction of Squiers, who was between Michaud and the target. The ball penetrated the young man's left lung, and in half an hour he died."

THE merits and demerits of owls and hawks came up again at the recent meeting of the New York League, and a recommendation that the birds should be destroyed was referred to a committee for more mature consideration. The charge against the species is that they destroy great numbers of game birds. On the other hand, they destroy also great numbers of noxious creatures; and the opinion of economic ornithologists is on the whole favorable to hawk and owl. Notwithstanding this, we have in different States conflicting laws on the subject, some making the killing of hawks and owls a misdemeanor, and others giving a bounty for their destruction.

WE hear often of the unexpected performances of the random shot, as well as of the Hibernian accident of throwing at the pigeon and hitting the crow. The accidental shots are perhaps less frequent than they seem to be, for it is only those which hit some mark that are noticed, while nothing is heard of the ones that go astray.

In the correspondence received by FOREST AND STREAM these accidental shots hit a mark with what seems extraordinary frequency. A few years ago a mother discovered the whereabouts of a long lost son through correspondence published in these columns, and on another occasion a lost man was found in the same way.

# THE SPORTSMAN TOURIST

## Floating Down the Mississippi.

### IV.—Concerning a River Warehouse.

ONE does not go far down the Great River from St. Louis, even in a skiff that demands attention, before the mere names of places on the map bring to mind those old days when Europe was wondering what to do with various portions of the American Continent—almost, but not quite undreaming that the conditions would be exactly reversed after a while. I came down along the west side of the river, because most of the wind storms throw their waves on the east shore, it was said, besides the husky bluffs are better company for a man than flapping, wind-tossed willows—my eyes not very seeing, if open.

I didn't pay much attention to where I was going, but after passing Brickey's Mill dropped down a chute behind an island looking for a place to land and camp, but there was too much mud, and I ran into what I thought was a red clay slough, at the head of which there was hissing and pumping, due to Government works, as I guessed, not energetically. I tied my skiff to a willow tree, stretched my hammock in the boat after a bite of grub, and went to sleep—if I hadn't been all the while. The wind was blowing next morning (Oct. 6, Tuesday), but I pulled out and went on down the chutes till I was in the main stream again, hugging the bluffs of necessity, for the wind was severe. A few miles below were the real Government works, and I learned there that I had been behind Bruce's Island, and likely enough within sixty rods of Horace Kephart's camp, of which I had heard at St. Louis. Right opposite and two miles from the yon side of the river, is what is left of Fort Chartres, which Major Pierre Dugue Boisbriant and 100 men built in 1720. I passed the real Government Works (Little Rock Landing), talking the while to the engineer of pile driver No. 13, and followed the bank into a chute and soon arrived at St. Genevieve, of pretty name and interesting history.

It may shock the reader to know it, but about all I got there was some potted ham. for one afloat in narrow quarters needs something on which to make a noonday lunch, in order not to be obliged to stop and cook. The storekeeper, however, was a little man, just reveling in prosperity—just bursting with joy and rubbing his hands. "Now what else can I do for the gentleman?" he asked. "No? But you will come again? So? A stranjar? It is so—from the rivare? Ah—but you may come some day, and if you do, come in and see us. Good day, sir"—joyous, polite, although his tribe was almost exterminated.

An individual of impolite appearance—muddy clothes, unshaven face and tattered, said there is lots of money in St. Genevieve these days. "You see the railroad folks pays whenever you wants it, and cash, so every one has money." St. Genevieve has become a railroad town, with new buildings and bad whiskey, and enterprise and other things, therefore it isn't a pleasant place for dreamers and poets to go to, but that little old man with the dry face, its very polite, prosperous smile, and that tall girl in black in the bakery across the street, with oval face, colorless, of slow motion and redeeming eyes—whatever it may be now, St. Genevieve is certainly a place with a past that appeals, and so of all the French settlements in the valley.

By the time I was at the foot of the St. Genevieve slough, the wind was too strong for me to venture on to the river, therefore I tied to a willow till nearly sundown, when I crossed to the opposite side in spite of the waves that were still running, and in a bayou of Moro Island went to sleep in my boat for the night. Once I was awakened by the pater of rain drops on the painted canvas overhead, but soon slept again. After daybreak on the following morning, I came to my senses with a start. My canvas hammock was sagging in water three inches deep—the rain had come down in the uncovered bow and flooding aft, wet through the heavy canvas to all my bedding and clothes, more or less. With the sponge, recommended by Mr. Kephart, I bailed the boat, and then when the sun came out went down the bayou a few rods, rigged a clothes line and dried everything in the wind and sun.

It was two o'clock or later when I started on, and so lovely was the day that I left my boat to its own speed mostly, and ran down into Kaskaskia Bend—the one of to-day, not of the steamboat days. Here were wide sand bars, with warning ripples indicating shallow water; the caving banks were far to the southwest and northeast. Everything was far away, except a flock of wild geese, that were surprised when my boat shot out from behind an insignificant bank of caving sand. They walked sideways for a rod, then turned square away on the run, and up they went and off toward the sun, now unaccountably near the horizon. Everything was still far away. Just as a chill breath from the coming night struck me, I seized the oars and pulled for the bank on the Illinois side, hoping for a sheltered place to sleep. I saw the mouth of a slough, but to reach it was too hard a task, so I went on down,

while the sun touched, then dipped below the horizon, leaving a blaze of orange in the sky and along the water. But this faded rapidly. As far as I could see on both sides were caving banks, save on my left, where were dense willows and no inlet or outlet. A steamer came to the landing ahead, her lights a-flaring, and when she pulled out I went in—it was Menard's, just above Fort Gage, and looking out upon the site of Kaskaskia—"Old Kaskaskia," where now the Mississippi flows unresisted. The old town is gone, and I thought not worth stopping at—would not have save the suddenness of the sunset. As it was, Pierre Menard said I might find a place to stay, and old Jack Stevenson helped me carry my stuff up the bank to the warehouse—without a doubt the most interesting warehouse on the river.

A warehouse is a ramshackle building built on the bank of the river for the temporary shelter of goods landed from steamers. It may stand for years on the verge of destruction from floods, and is expected to go soon, but whether it stands years or days, it is still on the verge. Most of them are mere sheds roofed over, but some towns, boasting a paved levee landing, have, pretentious, painted affairs, with dapper steamboat agents presiding. Menard's has two rooms that will lock, and a shed open to the winds, all in a row. The two rooms and their contents make the place interesting beyond any that can be found on the river.

There have been three Pierre Menards, the original having come from the Province of Quebec to "Post Vinsenne" with a letter of introduction to the famous merchant Vigo, and rose to so important position as that of the first lieutenant-governor of Illinois. It was this man's grandson I met at the landing—and whose treasures are stored chiefly in the warehouse, but many of which have gone to the library of the Chicago Historical Society.

There were seven or eight boxes full of papers and documents dating back to the years of the last century but one; the school books of the Ursuline Nun Convent of Old Kaskaskia; a few dusty bureaus and other furniture brought from France when Kaskaskia was young and gay—especially gay; some flint-lock pistols, with labels put on them by the Chicago World's Fair authorities; saddle bags, steel traps, barrels, old iron chests, boxes, old stone seals. Almost the first thing I saw was:

Excha., 1452 Dollars. Kaskaskia, 30th Jany., 1779.  
Sire At Thirty Days sight of this my first Exchange second of same Tenor and Date not paid. Pay to M. Vigo or his Order the Sum of One Thousand four Hundred and Fifty-two Dollars for sundry furnishings to the State of Virginia and charge the same as per former advise from—  
Sire  
Your very old and Hum-  
Servant,  
Ge. Clark.

To Oliver Pollock, Esq.,  
New Orleans.

And to this was added another document dated Dec. 24, 1834, signed Pierre Menard, reading:

Inclose you have a Draft favor of M. Vigo for \$1452 to please in Caise I should not overtake you to presint to proper office for approval.

More than fifty years after Clark had captured Kaskaskia and the northwest territory, an effort was still being made to collect on a note, by which Clark was helped to clinch his hold on that land, and this note may now be seen by the curious in a warehouse at a Mississippi River landing. It is only just to say that "it couldn't be found when the society was looking for documents here," else it had long since been framed and removed far from the diary of Trapper Davis, where it now rests, if it hasn't fallen out, keeping company with a note and photograph that the present Pierre picked up in a bottle in June, 1902. This note reads:

Centralia, Illinois, Jan. 28, 1902.  
The Finder of this bottle and letter will please write me a letter if convenient.

I am a young lady, 18 years and a half old, 5½ feet high, weigh 130 pounds; am fair skinned and have dark curly hair and some means.

Enclosed find my latest picture. I would like to correspond with the finder if a young gentleman of some means.

Yours Resp.

MINNIE M. DUNCAN.

This at Kaskaskia! But, as said, the old town is gone. In 1844 the great flood began the destruction of the place. Then came 1851 and 1857, each with phenomenal high water. Finally, in 1882, the Mississippi discovered that the bed of the Kaskaskia was lower than its own and came across to it bodily—clear to the bluffs on the Illinois side. Kaskaskia, right in the way, was finally swept out of existence.

A new Kaskaskia is there, but I did not see it. The Kaskaskia River is gone—they call it Okaw now, and this was the "slough" I saw when out among the sand bars with the geese.

Kaskaskia became a parish in 1721—was the center of power and fashion in the upper valley for a hundred years. St. Genevieve was established in 1755. The floods swept one out of existence and a railroad the other.

The mania for collecting something seems to have

afflicted most individuals of the human race. With some it shows itself to be a rational, sedate practice of securing and holding "uncut editions." Any one can appreciate the joy felt by a collector in a book which no one has ever read, and never can read without detracting from its value in his own and other similar collectors' eyes. But why the various Pierre Menards should have kept newspapers which had been read and might be read again, and no one know the difference, is a question. The fact remains that there are some hundreds of pounds of accessible facts in that old warehouse, but which are not to be removed in bulk simply because Pierre III. enjoys collecting them himself—in a haphazard sort of way. The hunter there is likely to flush game of startling varieties, and if he has the proper sporting blood will bring away trophies according with his nature and mania for collecting.

Of course each collector thinks that his particular hobby is better than another's. He who shoots game and mounts heads for his dining-room and covers his floors with peltry, may well say that these are the height of interest, for each thing in it is a story of skill in woodcraft or of nature, well worth telling always. I am quite certain that these people will sympathize with me, even if my trophies are stored away in note books, and were found in such places as the thickets of a warehouse. It seems to me that Thoreau was the prince of sportsmen, for he could stand without his neighbor's preserve, and, harming no man's feelings, bring down a vast collection of trophies, useful to this day to every man who loves the trees, the flowers common in nature and wonders of the wayside. He saw at first hand and gathered where no other man had seen before—a pioneer.

About the most interesting things to me in the Menard landing warehouse, were some old store account books. Pierre I. was a storekeeper, and a few extracts from one of the Kaskaskia store books compared to some steamer freight bills of seventy years later concerning the shipments from this warehouse, will tell a story of its own.

On April 18 twenty-five cents was "paid Indian for venison," on the 20th "Paid Seneca for 17 Raccons—\$4.00," "Paid Gen. Harrison 1 (raccoon)— & 5 Rabets .50." This was not the Tippecanoe Harrison who became President of the United States later, but a nephew of his, who came to Kaskaskia to look up a tract of land which William Henry Harrison had given him, as a letter in the warehouse by the latter of 1833 shows. "Bees wax to Merchdz—Paid for 14 lbs to Absolon Cox @ 25. \$3.50." "1 Deer skin...\$1.00." "Beef Hides to Merchdz—paid for 1 Hide 1½. @ 10. \$1.95." "Paid John Dowling for one Keg of Pitch del'd to Jannet Menard at the Mth. of White River...\$2.00." "Menard & Valle, Paid a Seneca woman for shaving skins. @ 10. \$17.50; Ditto an other woman for shaving 60 skins @ 10. 6.00. Ditto 57 skins to an other. 10 5.70."

April 25. "Menard & Valle to peltry"—some trapper's account:

186 shaved skins, 332lbs., @ 30	99.60
125 Raccoons, 1st quality, 25	31.25
3 wild cats, 1st quality 25	.75
12 racoons, 2d quality, 16 2-3	2.00
9 racoons, 3d quality 12½	1.12½
2 otter skins, 2.50	5.00
2 Muskrats and 1 mink, .25	.75
1 Fox inferior, .16	16.23
4 Prime Bear, 2.00	8.00
3 Prime cubs, 1.00	3.00
	\$151.64

It is plain from this that the spring exports from that store were furs, beeswax, pitch for boats, dressed deer skins. But my collection of facts is imperfect as regards the fall trade. I did not take details about the corn, wheat, salted and smoked meats that probably made up the bulk of the fall products of the locality. Nor can I say that steamers, and not barges, or keel boats, carried the most of the freight for this store at that time—sad omissions for my collection! But it is recorded that Old Pierre Menard though the first steamer he saw going up the Mississippi was a saw-mill, although he had been lieutenant-governor of the State and was a subscriber of the Washington Intelligencer at this time—as the papers show.

If I had some old steamboat bills of lading, they would be better for comparison with receipts, some of which I have, that were given by the steamers at East Kaskaskia Landing—Menard's of to-day.

On April 25, 1893, the steamer Belle Memphis took on at this landing three cases of eggs, 1 tub of butter, 1 sack of fur—shade of the past! and 3 calves. One gathers that the steamer trade is now wool, chix (chickens), scrap iron, eggs, hogs, sheep, money packages, "said to contain"—ducks, household goods—some people were moving away—horned cattle, green hides, wheat (in June this begins), whiskey, potatoes—that's about all, from Menard's. But across "1 calf" is written in blue, "Dead or alive. Except." This occurs in regard to several calves bound to commission merchants in various places. Being a land where rewards are offered for desperadoes "dead or alive," it is a startling entry. Dead or alive, and of calves in August!

At old Kaskaskia such sales as there were recorded at the store: Tin cups, chocolate, sugar, silk handkerchiefs, indigo and Spanish brown, rum and whiskey, wine, flour, saddles, holsters, bridles (plated), blue beads, blue calico, pink silk, straw bonnets, fur hats, fiddle strings by the dozen, fine toothed—tucking—and side-combs, shaving soap, wide plaids, gingham, looms, ribbons—these sold to such as Louis Lemieux, Antoine Lachapelle, Nathaniel Pope (per daughter), etc.—put together all that has been said of Old Kaskaskia, the storekeeper at St. Genevieve, dapper and polite, the tall girl whose soft eyes redeemed a colorless, oval face, the Indian woman who dressed skins, the Indian who killed deer, the trapper with his year's furs, fur hats, silk handkerchiefs and fiddle strings. They say the artist has his picture in mind when he lays the paint on the canvas; he has conceived his picture and then draws it—there at the foot of a willow-grown sand bar, on top a caving bank, in a river warehouse one may build his picture from account books, even though he be not an artist.

Bluffs, wide waters and green willows, liar, despot and corporation—it's a good, big, lovable, picturesque Mississippi after all. RAYMOND S. SPEARS.

## Two Years' Outing Across Siberia.

### The Wolves and Wolf Dogs of Cibiria.

NONE of the wolves we read about were seen by the writer at large during the couple of years' tournée over Zardom, but all the same they exist in packs in isolated parts of the regions passed through. Wolf-dogs are domesticated in all the towns and villages, but are usually unfriendly to strangers.

In the yard or natio of the house where I stayed some six weeks at the town of Irkutsk, central Cibiria, a real wolf of the giant Cibirian type was kept to guard the place. He was locked up in a big hutch all day, in almost dismal solitude, but let loose nights. Consequently he was brutalized to savagery of the most unpleasant type.

The first night I stayed in that house was my first experience with him. I had gone out momentarily on to the stoop balcony overlooking the natio, to look at the krisanthemums. He espied me! With a roar he dashed for the stoop steps. Quick as thought I seized a heavy chunk of timber from the wood-pile built up on one side of the balcony, and hurled it at the brute. This gave him something to think about—but only for a flash of a moment; for pluckily, with a savage howl, did he rush for the stoop steps again, was half way up—the low gate only interposed between me and his leap—when another log went crashing at him. It missed! Now thoroughly enraged, and probably thinking I was trying to steal the firewood instead of trying to brain him, he returned to the charge—all the time keeping up a pandemonium wolfish howl. But, as all this was going on, I had backed across the balcony to the door, and, as he made his final lunge and spring at the low gate, I had slipped within and closed the door in a twinkling. Probably I never acted so nimbly before in my life. "Discretion is the better part of valor," etc.

Of course all this happened in a few seconds—in much less time than I can take to tell it to you here; but as I recall and write the incident, the pen even now slightly quivers at the recollection of what was a "close shave" with a Cibirian wolf, and "what might have been."

### Why Does the Indian Sleep on his Stomach?

Nomadic tribes all over the globe have certain habits in common. While among the Apaché and Yaqui Indians (friendly) of northwestern Mexico, the Gauchos and Guaranis of the Plata, the Kanakas of the old Port-Philip district, meridional Australia, the Maoris of Zealandia, the Celonés in the Kolombo hill country, the Butans and Cikimés of the Himalayas and headwaters of the sporting Bramaputra, the Gulis of the Ycypí, extreme eastern Cibiria; the Lakys and Bypiat of the Baikal, central Cibiria, etc., etc.: among all these tribes did I notice a habit in common of, when bivouacking on the ground for the night, finally turning round on to their stomachs for the night's sleep.

Why? It took me a long time to find out, because the replies varied—"Habit," "Used to it," "Our fathers did it," and so on; in fact, a deal more of explanation that I did not grasp, for the simple reason that I did not understand their language. Finally a Cibirian mediko with much experience among the Asiatic tribes solved the problem for me.

"The Indian sleeps on his stomach," said he, "to prevent catching cold." He thus protects himself unconsciously—without even knowing that it is nature's hint for his self-preservation. Only some of the old tribal chiefs can give a rational explanation for the practice—that it is to escape "ills," i. e., maladies. In short, it is to escape chills, or malaria, the concomitant evils—or, if you will, to prevent catching cold.

"It stands to reason," he went on, "that this, nature's hint to the tribes, is a wise one. For, if sleeping on the back, are not the vital parts more exposed to attack from the insidious influences of damp ground than if sleeping on the front, or chest, where a breastwork of bone and tissue are a natural protection against sudden chill?"

### Shaved Himself with his Revolver.

The Russian bayonet-revolver is not seen in this country; but travelers and officers use it in Cibiria, as a last resort, in case of need. The tiny bayonet lies edgewise on top of the barrel, and is sprung into position by withdrawing a spring-catch. Supposing a traveler has expended all his bullets over a pack of wolves, or has not time to reload: here the razor-like bayonet comes in handy, and a dexterous plunge of it into, and the ripping up of, the stomach of a leaping wolf, would probably have a salutary effect on the others. But I never saw it used in this capacity; but one day caught the military engineer, Lapomichief, at his house on the river Xop, about mid-distance between Bladiboctok and Kabapofek, actually shaving himself with that .38 caliber revolver! My first impression was that he was carefully surveying himself in the glass preparatory to lodging a bullet in his brain—

or his gullet. But, looking further, I perceived he was rapidly shaving himself with the razor-edge of that projecting blued steel miniature bayonet. The reader can judge what superb cutting steel this must be, when I mention that the shave was entirely and quickly performed without soap or water—a dry shave, pure and simple.

### Automatic Butter Making.

The Cibirian mujik has to be a man of resources, for he lacks the conveniences known to the American farming community. Thus, the Asiatic tiller of the soil has no churn for making butter, so he makes it automatically—saves his cream till market day, then fills the tubs half full, covers them tight, and goes jogging off on his telega the score verst or so to market. Arrived there, the jolting has converted half the cream into pure, hard, well flavored butter. I used to notice the butter formed not into one mass chunk, nor into many nodules, but into seven or eight fist-sized approximately spherical balls, weighing about a pound apiece. The acidulous buttermilk is either sold at market or taken home again and coagulated for cheese.

For making small family use chunks of butter, the mujik rigs up a small box affair pocket churn, holding

of an aluminum cup, for instance, is turned over and in against the edge. This is always a mistake, for the dirt and grease collects thereunder in time, and is quite a task to remove. The cup should be, in manufacture, left with its edge perfectly flush—as also should be all other aluminum items, like plates, saucers, mugs, pans, trays, etc. It may look "prettier" to have your aluminum service articles "finished" with turn-over edges, but it is not conducive to cleanliness. Of course I am writing here for the benefit of those out-campers who do—or take their turn at doing—the "washing up" when outing; these remarks will indeed be unappreciable by those who always delegate the task to others.

With flush-finished aluminum goods you can always be quickly through and thoroughly clean in your ablution of the aluminum kit; but this is next to impossible with the ordinary turned-over edges characteristic of the general run of aluminum articles on the market, except at the expenditure of a deal of unnecessary labor. And no camper-out wants unnecessary work. It is always work enough for him to be on the shift every day, with the monotony of the daily packing-up to get through, and the constant vigilance to prevent anything being forgotten and left behind. And, despite this care, things will be, here and there, left behind; and when many miles off be-

SIBERIAN TYPES.

about (half filled) one pound of thick cream. This he either places in one of his capacious pockets and walks around with it, while doing farm work, for a couple of hours, or places it on the handle bar of his working plow. In either case a half-pound pat of butter results.

### How Many Words of Russian Need a Traveler Know?

By keeping "tally" in my pocket lexicon of all Russian words referred to during the twenty-four months' journeying hither and thither over Cibiradom, I can say just how many words a tourist should know if traveling through the domain of Tolstoi. My practice was to lead-pencil under every word looked up, so to help mentalize it. In this way, after a couple of years, it was found that turning a couple of thousands words, it was found lined. This is not many, considering with that number a

fore the loss is discovered, often deemed not worth while returning for.

### Leaving Things Behind.

But sometimes an article is left which *must* be sent back for. For instance, one of a party of three left the hatchet behind. He had suspended it momentarily on a tree-fork, and quite forgot all about it. When seven miles off the loss was noted. So the responsible delinquent had to go back for it seven miles, then cover that seven miles again getting back to his waiting companions, thus doing twenty-one miles of hard tramping himself that day, yet delaying the progress of the whole party, who had counted on making about a score of miles on the day in question, but only made seven. For when B. came in with the needed hatchet he was too tired and

SIBERIAN TYPES.

By courtesy of the Photographic Times Bulletin.

person can converse freely in Russian, including engineering, mechanical, and other technical terms.

But, in ordinary travel and speech, it is not necessary to know 2,000 words. By no means. A knowledge of 400 words suffices for all general intercourse.

A pocket dictionary is the best. Phrase-books, seemingly useful in theory, are worthless in practice.

### Prolonged Experience with Aluminum Travel Kits.

Fortunately, aluminum cannot be successfully soldered, and the result is we have seamless aluminum travel articles. A seam is always a fault; for if a weak point develops it is at the seam. (In this world there is only one good seam—a gold seam.) So aluminum manufacturers now fulfil a long-felt want in supplying camping-outers with seamless cooking utensils.

Aluminum traveling outfits are now fairly common in the Cibirian towns. They are mostly imported from Teutonic burghs. The writer had a couple of years' daily traveling outing experience with aluminum rigouts in Asia, and knows some of the light metal's disadvantages—as its liability to itself ineradicably stain and tarnish, and "pin-holing" by exposure in salt marsh regions, or by contact with limes and acids, or even table condiments like salt and (perhaps most destructive of all) vinegar.

But, unfortunately, most of the light metal cuisine articles are "finished off" a little too ornately. The top rim

hungry to proceed further that day, so the party made camp *in situ*, and "rested till the following day."

So all aluminum goods that are quickly cleanable, that save work—in fact, all improvements that (if you will) promote laziness—are blessings to the camper-out, who, however, often does harder work in the woods than many a day laborer.

To clean aluminum, common wood ashes are better than ordinary soap. All ashes contain a certain amount of salts and potash, and, combined with the grit in the ash, serve as a better scouring agent than soap for removing dirt and grease.

Aluminum goods into which the hand cannot be inserted for cleaning—as water canteens—are best avoided. They become coated inside with slime before you are aware of it, except by a foul odor; and then you have a lively dancing time trying with sand or shot or pebbles to scour it clean!

Aluminum camping-out outfits have been a great deal "cracked up" by parties interested in selling. It is unblushingly asserted "food does not burn in them," whereas, if not narrowly watched, your dinner will be quicker burned and spoiled in them than in any other utensil. Again, when new, they stain the hands for a few days almost like lead.

Still, aluminum is the best metal for the outing man, solely on account of its lightness, L. LODIAN.

## Bred in Old Kentucky.

"AMONG a big batch of recruits assigned to my company a while ago," said a captain of infantry stationed at a far Western post, who was here recently, "was a gaunt, gawky Kentucky lad of the mountaineer class, and not much above twenty years of age. He was growing so fast that he was as clumsy as a St. Bernard pup, and he fell all over himself in drill. Notwithstanding his perfect willingness, he was so inapt a soldier that I attached him to my quarters in the capacity of dog robber or striker. Soon afterward my company was sent out for target practice on the ranges. My striker for Kentucky beat out every man in my company, some of them veterans wearing the 'distinguished marksman' medals, in a common canter. He was as crackerjack a rifle shot as I ever saw in the army, and I'd be willing to bet that there's not a shootist in that team that lately won the Palma trophy in England that could outshoot him. The gawky Kentucky boy's performance on the range filled me with amazement, as it did everybody else who watched his marvelous shooting, and when he was through I said to him:

"Look here, boy, where did you ever get a chance to practice such fine shooting?"

"Pinkin' rev'noo offichs, suh," he replied with a grin. "Yo' all fuhgits, suh, that Ah'm f'om Kentucky."

### Editor Forest and Stream:

The above story from the Washington Post has been going the rounds of the papers, and it reminds me of another Kentucky recruit that I had something to do with.

We were in camp near New Braunfels, Texas, on our way to San Antonio, and I had gone up the road a mile or two hunting, when I met a young fellow who still wore his butternut clothes; he was hunting "you un's camps," he told me. He wanted to join "that ar critter company of mine." Critter company is the southern white's designation for a cavalry troop.

He was twenty years old, nearly six feet high, and looked as if he had just let go of the plow lines to join the "critter company."

He had been born in Harlan county, Kentucky—Kaintuck he called it—and had come out here with his uncle and a string of horses.

The War of the Rebellion had only been closed a year or two, and I wondered why he had not been a volunteer before on one side or the other. Kentucky had about an equal number of men in each army. "I belong with you uns," he told me. He was a Union man, not a Confederate, and he had never had a chance to join. "But I have fit," he said. "The Confed Cavalry came to our neighborhood to conscript we uns, and I got into the mountains and bushwhacked them; then they let us alone."

I took him to the Captain and had him enlisted. Our men began to make a butt of him right off. I told them to be a little careful how they tried that on this boy. "He comes from a part of the country where they would as soon fight as eat, and he probably has forgotten more about his pistol than the most of you know about yours. If he puts a ball into one of you, there won't be much fun in that except for the doctor."

He was given to me to be drilled, and I began by teaching him his facings. Nowadays he would have to commence with the setting up drill; we did not have it then. It reminds me every time I see it of a lot of school boys going through some play that they have invented themselves. He was quick to learn, and we soon got through the Manual of Arms. When I came to the pistol I found, as I had expected, that there was nothing about it that I could teach him. All I had to show him was how to hold the pistol for inspection. The hardest task I had with him was to get him to stop saying "sir" to me. "Say 'sir' to no one except officers here," I told him, "but don't forget to say 'sir' to them; if you do they won't forget to tell you of it."

The first time we went out on target practice Kaintuck went with us. We were going to fire at 300 yards, but the lieutenant thought that Kaintuck had better begin at 100 yards first.

"I can hit that thar thing from heah, suh," he told the lieutenant, and was let try it. In his first five shots he made three bullseyes, a 4 and a 3; 22 out of a possible 25, a sharpshooter's score. Some of the men who had been rigging him found it hard work to make a qualifying score of 16; but they would have to make it or else keep shooting at "that thar thing" all day.

He turned out to be a first-class soldier, never was a "dog robber;" they don't use men like him to dog rob; and although he had come from Kentucky he never could be got to touch whisky.

When I left the "critter company" eighteen years after this, he was still in one of them, and was a sergeant, too. He had learned to read and write, he could do neither when we first got him, and had dropped his southern dialect; he spoke the same kind of English that we did, but he always made it a point to inform everyone he came in contact with that he was from Kaintuck.

CABIA BLANCO.

## December Bluebirds in Ohio.

AKRON, O., Dec. 22.—*Editor Forest and Stream:* For the last month a flock of seven bluebirds have been feeding about my house. Is it not very much out of the order of things for this bird to remain north during the winter? They were very plentiful this year, and were about in numbers as late as November 1, but as the weather was fine up to that date I thought nothing strange about their remaining.

R. S. IREDELL.

## The Next Best Thing.

A PENNSYLVANIA correspondent writes: In this year of scarcity of game the FOREST AND STREAM is the next thing to carrying my favorite arm in its pursuit. Your Christmas number was a work of art, the finest yet coming to my table. I missed Fred Mather, but now can enjoy Mr. Spears, who writes differently but interestingly.

J. W. GREENFIELD.

## Natural History.

### Concerning Cats.

PARIS, France.—*Editor Forest and Stream:* As a catalogue—please do not print catalogue—I was much interested in Von W.'s contribution in FOREST AND STREAM of Nov. 14, page 375, concerning a cat, which seems to have a strong tendency toward vegetarianism. I had never heard of a cat eating corn, but, from my experience I am inclined to think that Von W.'s cat's "tastes for a vegetable diet" are more frequent than is generally recognized, and can even be said to make a part of the "ordinary cat instinct."

It is often said, in France, at least, that cats are partial to melons. I never had a cat of this sort; but I had melons, and sometimes noticed that they had been gnawed and opened, and considerably reduced. The gardener assured that the wicked deed had certainly been done by some neighboring cat. Of course it might have been the work of some other quadruped. But tradition has it that cats like melons, and it may be so. However, this is tradition, not history.

As a historical fact, I may observe, having often been a witness to it, that many cats take very kindly to some carrot, now and then. It is even recommended by French veterinarians for cats who live in cities, in apartments, and have no garden at their disposal wherein to cull some vegetable food, such as grass, leaves, etc. Of course no cat goes to dig the carrot out of the earth; but many, being offered some boiled carrot, swallow it with relish.

One of my departed pets—Plucky—a big, glossy, black cat with golden eyes—was a great lover of beet root. Of course, he was no such fool as to consider the red vegetable as a piece of meat; he took it as beet root, and liked it as such. In fact, he very much enjoyed a treat of boiled beet root now and then.

Most cats are quite willing to eat green peas—cooked, of course—and some beans. Lentils are also very much appreciated by most of them. Another vegetable, or, rather, fruit—but it is eaten in France as a vegetable and as a fruit as well—is much liked by my present friend Thoth. I refer to the chestnut. Roasted chestnuts, boiled chestnuts, chestnuts *en purée*, to accompany venison, or sweetened with sugar, and surrounded with cream, chestnuts under all forms, and under all methods of cooking, are always most willingly accepted. And if not offered, he knows how to say he wants some. And he always gets them, of course. Cats cannot be refused. They are always obeyed. And it is proper it should be so. They are of superior essence. But I digress. *Revenons à nos... chats.* Most cats accept some potato now and then: boiled, roasted, mashed, especially if there is some gravy added—but even without this adjunct. Chocolate they generally like; not only liquid, with milk, but solid also. Thoth greatly enjoys a good piece of chocolate. He always comes back to ask for more, and gets it generally; though, of course, there is a limit. There must be one, somewhere, even for a catalogue and catophile.

Lastly, I have known no cat who was not very much excited over asparagus, and ready to swallow that which was left to him by a loving master, chopped in small pieces to help matters (the asparagus; not the master, you must understand). All cats, I think, eat asparagus most willingly; they seem to enjoy the smell, and the taste as well. Here is an end to my experience. I have offered bananas, and most fruits—apples, pears, plums, cherries, apricots, strawberries and so on, but no cat of mine seemed to appreciate the offer. Some other reader may have been luckier; if so, he would increase the knowledge of catalogues by describing the results of his experiments and observations. Of course, Mark Twain has—in a very amusing anecdote of his—referred to the liking of a cat for cocoanut: but—as some grave English reviewer observed, with much sadness—"as an historian, that man is unreliable." So, the cocoanut matter remains undecided. It would, though, be very easy to settle the matter. I would immediately; I have the cat, but I lack the cocoanut.

HENRY DE VARIGNY.

### Editor Forest and Stream:

In an article copied from FOREST AND STREAM we read of a vegetarian cat, which is not so remarkable as the owner seems to think, many house cats being extremely fond of cooked sweet corn, as well as various other foods, such as people partake of, especially summer and winter squash, sweet potatoes and creamed white potatoes, some felines even devouring cooked onions with avidity.

A large black cat we once owned had an odd way of placing one great paw against the head of a companion cat and holding her off from eating her share of some dainty bit he was particularly fond of, and when reprimanded he would sit back with a scowling face and wait until the other cat had finished. As a kitten Tinker became greatly attached to grandfather, climbing up into his lap and hiding inside his coat for a quiet nap; indeed, both of them dozing together in the big armchair. Tinker seemed to have an idea that he could assist in taking off the old gentleman's boots, for when the cat heard the bootjack placed on the floor he would quickly get down from his particular chair and place one big paw on the toe of the boot while it was being drawn off. One day, soon after grandfather died, seeing the cat go to the door of his room, we said: "Yes, you may go in, but you will not find him," then with tearful eyes we watched the cat go pattering around the room, looking up at the place where the bed once stood, and then, as though to tell us his search was in vain, with a "mew, mew," ran hastily out of the open door.

There is a cat aristocracy as well as a high class breed of dogs, and if people will talk to cats as they do to other four-footed creatures, will find them intelligent and capable of understanding what is right or wrong, such as living in the same house with caged birds without attempting to harm them; while dogs and cats often form a strong friendship.

M. L.  
BRIGHTON, N. Y.

## Song of the British Robin.

A BIRD does not deserve much credit for singing when skies are clear and winds are soft and earth is decked in all the fresh beauty of spring and early summer. But what shall be said of the bird which sings all through the dreary decline of autumn and the cold desolation of winter? Surely nothing were too good to say of it. The poets realized this, and hence they have celebrated the British robin with a special celebration; not, indeed, with the lavish enthusiasm of admiration they have showered upon the nightingale and the lark, but with an intimate love and regard such as is bestowed upon some cherished pet.

And the people, though lacking the expression of the poets, have not been backward in showing that they, too, can appreciate the spiritual, the unselfish, the devoted, even among birds, for they have taken the robin under their special protection. Throughout the British Isles it is unmolested; the predatory schoolboy stays his hand when the robin or the robin's nest is concerned, for it is an injunction laid solemnly upon him by his mother. And then, when frost or snow prevails and food is scarce, the window sill or the doorstep will not fail to be strewn with crumbs for poor redbreast's comfort.

For those who have not had the good fortune to see the bird, it may be noted that it bears but little resemblance to our American robin (which, indeed, is no robin at all, but a thrush). It is half the size of the latter, and instead of being brown above is olive green, speaking by way of general description. Only in the coloring of its breast does it resemble *Turdus migratorius*. And the songs of the two are as different as possible.

Perhaps the chief characteristic of the song of *Erythacus rubecula* is its sweet subdued sentiment. It is delivered in a series of bars with measured pauses, which have a most telling effect. Occasionally a bar is prolonged or lingered upon as if the bird were carried away by the intensity of its emotion. There is in this something so sincere that it appeals irresistibly to the sympathy.

It were useless, and indeed somewhat absurd, to try to give any imitation of the song in words or syllables. After all, the music is everything. I have an idea that Mendelssohn wrote his "Songs Without Words" after listening to the robin. Certainly many of those chaste and exquisite strains echo the outpourings of redbreast.

While the latter are of course always instantly recognizable, they vary more or less in tone with the season. In the spring they speak of tender joy; in the autumn they breathe a plaintive regret, with an undertone of consolation, as it were, while in winter they ring out with a distinct note of fortitude and hope. It may be that these variations are but imaginary, or echoes of the human mood; yet a bird must have its moods as well as man, and feel the influences of the seasons. If there were more perennial songsters we might be able to resolve this question better, but the redbreast in its constant devotion stands practically alone.

In this country, at least in this northern latitude, we hear an occasional lilt of the song sparrow on a bright autumn day, but that is all. And the winter passes in sombre silence. If only the British robin had been imported here instead of the British sparrow and had thriven as well, how blessed instead of cursed we should be!

To those who have visited the British Isles during the autumn and winter, there is something at once novel and delightful in the song of the robin. You get up on a morning when perhaps the rain is beating against your window and the wind is wailing in the chimney or sighing in the trees outside; there is a momentary lull in the storm and you hear a sweet pipe or thrill. You look out and lo! there is redbreast seated on a wind-swept branch rapt in his musical devotions. Or again it is evening—blue-black, sodden, dreary—and you are walking along a country road. Where is the living thing that could feel a spark of enthusiasm on such an evening as this? you ask yourself. "Here!" answers redbreast from a dripping hedge, lifting up his mellow voice like a true poet of philosophy. Or again it is midwinter; a black frost has taken the earth in its iron clutch, and shivering cattle huddle beneath hedges, and the birds of the air are nowhere to be seen—none, that is, but our ruby-breasted friend, who, perched high upon a tree, prophecies sweetly, bravely, hopefully of spring.

Is it any wonder that a bird so musical, so brave, so constant, should have endeared itself to the heart of the British people? Wherever one of these may wander he bears with him the memory of his native songsters. The nightingale or the lark perhaps he associates with the idea of his motherland: they are imperial songsters. But when he thinks or dreams of home—that particular spot where he first saw the light and around which the associations of his childhood cluster—then the bird above all others that is apt to rise to his imagination is the robin—the homely, familiar, pleasant little robin.

FRANCIS MOONAN.

## A Horse's Homing Sense.

### Editor Forest and Stream:

Speaking of back-trailing horses reminds me of a story that is told in Cleveland, New York, and its truth is vouched for by nearly every one who was a resident of that beautiful village a dozen years ago. A horse bred and raised in or near Cleveland and kept by the same man for a number of years, was finally sold to another party on the opposite side of the lake, which is exactly seven miles wide at this point.

One morning the first owner, on going to his barn, was very much surprised to find the animal there and seemingly very glad to get home.

It is claimed by those who should know that it was impossible for the horse to travel around the lake in one night, therefore it must have swam the seven miles to its old home. Of course that can't be called back-trailing, as there was no trail, but if the story is true, it shows intelligence and reasoning in the animal far greater than most people imagine.

FRANK H. BOUCK.

CHADWICKS, New York.

The hunter was home again. "Any luck?" they asked. "Splendid!" he exclaimed, radiantly. "I didn't kill a single person."—Puck.

## Wellington Field Naturalists.

GUELPH, Ont., Dec. 20.—At the meeting of the Wellington Field Naturalists' Club held December 17, fourteen short papers were read; each paper was limited to five minutes in length, and three minutes were allowed for discussion. As will be seen, the observations cover a wide field, discussing plants, insects, reptiles, birds, and mammals, and the interest shown by the members gives evidence of the activity of the club and the good work it is doing.

The first paper was by Mr. A. Davidson on "The Cottontail," and treated of the animal's biological position, its habits and food. In the discussion Mr. Hunt observed that he had noticed that rabbits preferred the bark of pear trees to those of the apple.

A paper on the "Snow Flake," by Mr. F. N. Beattie, gave an interesting account of the habits and food of the bird.

"The Screech Owl" was discussed by Mr. Hotson, with some suggestions as to the two color phases, the red and the gray; and in the remarks which followed it appeared that in the neighborhood of Guelph the more common phase is the gray, while at Elora the red is the more ordinary color.

In the writer's absence, Dr. Muldrew's paper on the "Loon" was read by Mr. Buchanan. It was illustrated by specimens of the bird and eggs.

Mr. Wm. Goldie read a paper on the "Flying Squirrel," treating of its habits and its abundance. While the species does not appear common in the locality under consideration, its crepuscular or nocturnal habits tend to conceal it, and it may be more abundant than appears. While all tree squirrels seem to possess the property of making themselves into a parachute so as to break a fall or a leap from a great height, the flying squirrel is the one which does this with the greatest ease and most commonly. In the discussion, Mr. Davidson told much that was interesting concerning his experience in raising these mammals, and Mr. Barlow stated that he had once met with a great band of these squirrels moving through a wood in one direction, as if a migration were in progress.

Mr. A. B. Klugh read a paper on the "Christmas Fern" (*Polystichum acrostichoides*), illustrated by a specimen and a photographic proof showing the veins.

Mr. T. D. Jarvis read a paper on the "Snapping Turtle," Mr. Barlow one on "Butterflies in Winter," and Mr. Peart one on the "Canadian Holly." Mr. L. Beattie's paper on the "Chickadee" was interesting, and Mr. R. Cull read one on the "Ruffed Grouse," in the course of which he emphasized the need of proper protection for this splendid bird. He said that the Guelph Trap and Game Club had offered a standing reward of \$5 for information leading to the conviction of any one breaking the game laws. The club was petitioning Parliament to put a close season on ruffed grouse for a term of years. The club, by its president, Mr. Jarvis, expressed its readiness to do anything that it could to help in the movement.

A paper on the "Club Moss" was read by Mr. Buchanan, and one on the "Smilax" by E. J. Colgate. Finally Mr. Armstrong read one on the "Brown Creeper," which was very interesting.

At the close of this paper the secretary called attention to the fact that the 1903 spring migration list compiled by the club had taken first place at Washington, being most highly regarded for its fullness of data and the way in which the migration had been recorded.

## Bear Coloration.

*Editor Forest and Stream:*

Just now I am interested in the matter of the hybridizing of the different species of bear. In your note of explanation to the query of Cabia Blanco in December 26 issue, as to the crossing of grizzly bears and others, you say, "There is no reason for supposing that the different species of bears hybridize, any more than do the different species of deer. The belief is more or less common, but is shared by no competent biologist, so far as we know." I once saw a female black bear which had been caught in a trap, and with her were two cubs; one of them was a beautiful dark brown color, and the other was a very light cinnamon. It was early in the fall, and there could be no question as to the bear in the trap being the parent

of the cubs; and as all know, black bear when they are cubs are just as black as when they are grown up, so that these certainly never would have been black bear. I accepted this as evidence that they do hybridize, and was resting content in that belief until reading the above. From whence came these "off" colors?

EMERSON CARNEY.

[The cubs of the black bear are sometimes black and sometimes brown and black. In other words, there are believed to be two color phases in this species, just as there are in some birds—e. g., the little screech owl (*Scops* or *Megascops*). It must be acknowledged, however, that we have much to learn about the bears.]

## Wild Pigeons in the Indian Territory.

*Editor Forest and Stream:*

A small Territory paper says that a hunting party from the Osage Reservation saw several small flights of what they knew were wild pigeons in the hills just north of the Arkansas River. These men claim to be familiar with the pigeons, having hunted them years ago.

The same paper says that a small number of these pigeons were also seen in an Illinois marsh east of St. Louis this past fall.

The pigeons were not in that Osage country twenty years ago, that I am sure of. I knew the country well then, and hunted over a great part of it, but never saw any, and I know them when I do see them. The pigeons may have come up from Mexico or South America, where our pigeons are sometimes supposed to have gone.

There is a pigeon in the northern Mexican States; I have seen him in several of them, but he is not our wild pigeon.

CABIA BLANCO.

[Passenger pigeons in very small numbers are occasionally seen in Illinois, Michigan, Wisconsin, and Minnesota. The bird is not absolutely extinct, any more than is the buffalo, but it is practically so. There are no passenger pigeons in South America, so far as known. The large southwestern pigeon is the familiar west coast band-tailed pigeon.]

## Antlers of New Brunswick Moose.

DURING the latter part of September I spent ten days in the New Brunswick woods. Only those who have visited them appreciate their fragrance and beauty; the delicious odors of the balsams and other conifers, the rich reds of the maples, and the yellows of the birches and poplars, cannot be adequately described. For my part I can imagine no more restful vacation under more delightful surroundings. Add the excitement of the quest for the Monarch of the Forest, and the sportsman's cup of enjoyment is full.

I went in from Doaktown on the Canada Eastern R. R. with Jas. O. McDonald, and camped on Cain's River. Although I was accompanied by my family, I did some hunting, and one day at noon time, when "Jimmie" and I were walking over a high ridge in very open forest, we came quite unexpectedly upon the big bull of my dreams. He was a magnificent animal, and I greatly prize the mental picture I have of him as he shambled directly away from us, at first not more than 30 yards distant, his great antlers—their tips more than 8 feet from the ground—extending on either side far out beyond and above his big, wide body. The vision was only momentary, for naturally I did not wait long before shooting, and, according to the code, I kept on shooting until he fell, which was at the fifth shot, he having gone in the meantime from 30 to 40 yards. I am satisfied, however, that the first shot would have proved fatal.

When I examined him on the ground I thanked my lucky stars that I was using a moose gun and not a deer gun, such as the .30-30. Last year I used a .50-110, and my moose was killed with a single shot, but he stood side on. This time I used the .35 because of the probability, on account of the nature of the ground, of having to shoot at greater distances. Theoretically, I should prefer the new .405, but I will have to admit that my experience in this instance, under very difficult conditions, indicates that the .35 is sufficiently powerful.

The head of this moose has a spread of 56 inches and the very even three-pointed brow antlers, and the merely scalloped ends of the palms, show him to have been an old moose. The antlers stand up remarkably, and if they lay as flat as in the majority of cases, they would easily have a spread of more than 60 inches.

When I came out of the woods I heard many reports of large heads having been taken. A gentleman from Brooklyn, who went in at the same time as myself, brought out a beautiful head of about 50 inches' spread. Two gentlemen from Amsterdam obtained heads of 52 and 53 inches' spread, respectively. A party of six gentlemen from Trenton, N. J., brought out six heads, three of them measuring over 50 inches, viz., 57, 56 3/4 and 53 inches. A gentleman living in Doaktown shot a head measuring 56 3/4 inches. I heard of several 60-

inch heads. These, with other facts, convinced me that the percentage of large heads obtained this year is greater than usual. I therefore wrote to various taxidermists, who receive the greater number of New Brunswick heads for mounting, asking them how many heads had been received having a spread of 50 or more inches, and whether the proportion of such heads was greater than in previous years, and whether the antlers were better developed and more symmetrical than heretofore. These gentlemen have very courteously answered my inquiries in detail. While they have placed no restriction upon the publication of the information given, to avoid any possibility of its improper use, I shall give only totals and percentages. There are reported to me 71 heads taken out of New Brunswick between Sept. 15 and Oct. 20, 1903, having a spread of 50 or more inches. This is approximately 50 per cent. of all the heads received. Messrs. Crosby & Co., Bangor, say: "We think the heads are larger on the whole and much better than for years past, and for massiveness and symmetry they are distinctly superior to those which we received last year." Stillman Armstrong, of Vanceboro, says: "The heads which I have received, as a whole, are much better this year than last." He also states, that out of the total number of heads received only 8 per cent. have a spread of less than 40 inches or have less than 14 points each. Messrs. Emack Bros., of Fredericton, say that last year they received less than half as many heads of 50 or more inches' spread, as during the like period this year, and also that they have received this season four of 60 inches, and one of 61 1/4-inch spread. They say: "We are positive that the heads are better this year than last."

One of these firms write that they have no record of the exact measurements of the heads which were received and mounted last year. If the taxidermists would keep a table showing the name of the consignors of all moose heads received, with the spread of antler, number of points, width and length of palm, etc., such information would certainly be interesting and valuable for comparison from year to year.

It is reasonable to suppose that there is some general cause for the remarkable growth and symmetry of the antlers of the moose this season. It appears to me that we should look to the conditions which existed during the time of the antler growth. It is true that the last winter was an open one, and that the animals came out in the spring in excellent condition. On the other hand, one who is familiar with the New Brunswick woods and the yards wherein the moose have spent the winters in previous years, can hardly doubt that they would have obtained abundant food at all times and in general would pass the winters comfortably. It therefore appears to me that probably the explanation lies in the weather conditions which existed during the period of the growth of the antlers. This period we know to have been coincident with that of

the unexampled drouth. The superabundance of food under any circumstances is so great that the moose would not lack for an ample supply.

It is clear that if the circulation in the growing antler were stopped, its growth would cease. May we not infer that anything which would impede the circulation would retard the growth and so prevent the full development. Is it not fair to assume, therefore, that rain and cold, which would lower the temperature of the antler and so impede the circulation, would retard the development, and that the absence of rain and conditions resulting therefrom as during the present season, have permitted this very unusual development of the antlers? It will certainly be interesting to know how this suggestion appeals to naturalists, and intelligent guide like Henry Braithwaite and Adam Moore.

We have not at this time the data necessary for a scientific treatment of the subject, but we shall only get the data by such discussion as will excite interest and lead to careful observations and records.

From Mr. Thomas J. Regan I recently received replies to inquiries made by him at my request concerning the size of antlers on deer and elk in Mr. Whitney's preserves in the Adirondacks and at Lenox, Mass.

From Sabattis, N. Y., Mr. Ernest H. Johnson writes: "The antlers of the deer, elk and what few moose I have seen, are much larger as regards size and more symmetrical. In fact, the elk antlers are far ahead of what they were last year. I have noticed some of the finest deer heads I have ever seen anywhere."

From Lenox, Mass., Mr. Thomas Post writes: "After consultation with Mr. Parsons and others I will report that the antlers of the elk and deer seem to have made an unusually fine growth this year. We cannot get near enough to the moose to form any opinion as to the growth of their antlers."

## Mongaup Valley Grouse Decimation.

MONGAUP VALLEY, N. Y., Dec. 28.—*Editor Forest and Stream:* It is very evident that partridges need about three years' protection in this section, but I am surprised to see in last week's issue Mr. Howard Tillotson wailing over their disappearance. He must surely forget the years he had twelve to sixteen hunters strung out in line going through the woods with four to six dogs, and this for weeks at a time, killing everything that came along. It was not an uncommon thing to see fifty partridges and about the same number of rabbits hanging on his piazza for these sports to return with. One fall a crack shot stayed with him all the season, his only pleasure being to prove how many more he could kill than the sport that came for a week, and many of them would have returned empty-handed had not this sport given them his all. There is just as much food in this section for birds as formerly, but they have never been so plentiful since those years of slaughter.

MONTICELLO.

## Washington Geese.

SEATTLE, Wash., Dec. 25.—Johnny Wheeler, formerly known as John F. Wheeler, came staggering up the street one day last week with eighteen geese. The load was so heavy Johnny did not have a chance to appreciate the sensation his attractive appearance caused. Men, women and even the all-absorbed messenger boys, stopped and took a mental inventory of the magnificent birds. Meanwhile Johnny struggled on, his back humping more and more as the load grew heavier. About every ten paces the lucky hunter was stopped by inquisitive friends.

"Great bag," was the almost universal expression of greeting, followed by the natural question: "Where did you get 'em?"

"Horse Heaven country, over in eastern Washington," replied Johnny. Before he finally took the car for home Johnny thought in a rather bewildered way that he had more friends than ever before. "I guess I must be the most popular man in Seattle," said Johnny to himself. Three geese finally reached the Wheeler house, but Johnny consoled himself with the fact that many a good dinner would be eaten in Seattle as a result of his clever manipulation of the shotgun on the breaks of the Horse Heaven shooting grounds.

County Commissioner Lou Smith, John Wooding, Walt Lund, Charles Potsky and Walter Mess, all of whom are well known in King county, were in the Horse Heaven country at the same time as Wheeler. They shot at Goose Gap, through which the geese fly in reaching the Horse Heaven feeding grounds, after they leave the sand bars in the Columbia River. Their bag was sixty-five, which included both common geese and the big honkers. Wheeler shot alone on the breaks at Long Cañon, getting practically all of his birds last Sunday between 7:30 o'clock in the morning and 2 in the afternoon. He made a mistake in leaving so soon, as the birds flew all day. The day following, Monday, there was not enough wind to keep the geese low down, consequently few birds fell to the guns.

Wheeler left Seattle Thursday evening, Dec. 17, and on the way to eastern Washington was joined unexpectedly by Smith, Wooding, Lund, Potsky and Mess. All of them left the train at Kiona, where they were met by teams and driven nine miles to the hunting grounds. Friday and Saturday there was a dense fog, which made it impossible to do any shooting. Big bands of geese were in the air, and their querulous calling and swishing wings sent shivers up and down the spines of the unlucky hunters. How they did pray for a wind to sweep away the enshrouding veil, but all in vain. Two days had passed, and it looked as if the trip was to be a failure; then came the storm, which made things sing all along the Oregon and Washington coast. It was a sou'wester, starting at Astoria and sweeping up the big Columbia River with a fury that kept the geese on the sandbars until they were so hungry that they smashed into its face in their determination to reach the feeding places in the Horse Heaven grain fields.

To reach the fields, which are approximately 1,400 feet above the level of the sea, the geese must pass through what is known as Goose Gap, and here it was that Smith, Wooding, Lund, Potsky, and Mess caught them coming. Magnificent is the word that describes the sport they had with the long-necked, keen-eyed and ever-suspicious monarchs of the web-footers. Wheeler was having his sport on what are called the breaks. To those who have never been in that particular goose hunting country this term may require explanation. The Columbia River makes a bend, and in that bend is the Horse Heaven district. A storm working up the river passes over the hunting ground instead of following the river in its bending course. The best hunting is always had when the wind comes from the southwest, because the birds have to fly against it and fly low. Between the sandbars of the river and the level fields are high ridges or hills with depressions or valleys between. Now, the geese do not like to face the wind any more than a human being does. They naturally seek for some method to make their trip to the feeding grounds as easy as possible, and this explains why a flock will, after crossing a ridge, drop down. When they come to the next ridge, they rise just enough to pass over it, and immediately drop into the comparatively quiet air again. If the wind is light they will go high up in the air when they cross a ridge; instinct, combined with experience, has taught them that there is danger in the little tufts of sage brush which dot the otherwise barren hills.

Man has figured out all these little peculiarities of the flight of the geese, and he takes advantage of the situation. In a little hole, the dirt from which has been removed to a far distance—it is no use to dig a hole and throw the dirt around—the hunter conceals himself and waits for the flight. If he can get a sage brush screen he does so gladly, but as a rule the cover is not sufficient to protect him from the ever watchful eye of the leader of the band.

An old goose hunter has no difficulty judging the range, but the novice, and even the old-time duck hunters, get fooled badly. A goose is so much larger than a duck that the eye gets all mixed up with itself in trying to figure out where the bird is.

"You think," said Wheeler, "that the old goose is right on top of you; up you jump and give him both barrels, only to find that he is 100 yards up in the air."

How easy it is to get fooled may be judged from the following dimensions of a goose that weighed four pounds: Length from bill to tail feathers, 28 inches; spread of wings, 53 inches; around breast, 19 inches. Wings that spread out 53 inches loom up big in the air when there is no background. Another thing one must remember in this connection, and that is, when you look up at a goose you have no other object to help you out in making comparisons of size and distance. The average hunter does not turn his gun loose on geese more than two or three times a season, consequently he has to use all his faculties to keep from being pulled off center. I have had a flock of sprigtail ducks circle and circle around just out of range until they had me going.

C. B. Yandell was hunting quail on Whidby Island; his dog had just come to a point, and Yandell was approaching to shoot when he suddenly heard wings in the air and observed that a band of geese were circling over him. Quick as thought he dropped to the ground and remained motionless. Apparently the birds did not notice him, for they kept circling and coming closer to the ground. It was an exciting time for the quail hunter. There stood his dog, rigid and wondering why there was nothing doing. In the air the big birds were cutting circles and gradually approaching. "I thought I'd bust," said Yandell; "the tension was something awful. Finally it seemed to me that if I did not shoot my gun barrel would stick up into the air beyond the old king goose. Up I jumped and whanged away. Then I saw what I had done. The birds were still high up in the air."

Yandell's eye had the gauge for quail, but when a quick transition was made to geese, he lost his sense of proportion and distance.

One of the honkers that Wheeler brought home with him weighed 14½ pounds. When he was over on the same ground earlier in the season he brought down two which weighed 15 pounds each. "At this time of the year," continued Wheeler, "it is almost necessary to have a strong sou'west wind in order to get any shooting. Earlier in the season, before the birds get wise and look with suspicion on everything, one can shoot them in the grain fields, but as the season advances, the bands fly higher and higher, and move at the slightest sign of danger. Under such conditions, a strong wind is required to keep them down close to the points of land from which the shooting is done. And in shooting from the ridges, when the geese are flying from the sandbars to the fields, that is called brake shooting."

Judge Arthur E. Griffin and Fred Mess have probably made the best kills in the Horse Heaven country this year. On one trip lasting several days they got ninety-five birds.

Mayor Humes is another hunter who has had good luck in the same fields. He has usually been early on the ground and shot from holes in the grain fields. Profile decoys are used. There is no chance for motion among the decoys, such as there is in duck shooting. The decoys are nothing but thin sheets of metal cut out to resemble a goose and painted to conform as nearly as possible to its colors. Skill is required in placing the decoys because of their flat surface.

Western Washington does not compare well with the eastern part of the State in this particular sport, although it is recorded that a goose was killed on the Seattle golf links a few weeks ago. At least that is the story told without any effort to have it appear in print.

PORTUS BAXTER.

## Days at Grindstone.

"There comes a month in the weary year,  
A month of leisure and peaceful rest,  
When the ripe leaves fall and the air is clear—  
October, the brown, the crisp, the best.  
My lot has little enough of bliss;  
I drag the days of the odd eleven—  
Counting the time that shall lead to this,  
The month that opens the hunter's heaven."

THAT grand old man of the woods, Nessmuk, has gone where all good hunters go, but his sweet and simple songs of the forest have found a resting place in many a heart.

October was upon us with its gorgeous display of woodland tints. The morning air was crisp and redolent of earthly fragrance wafted from unseen groves, and life indeed was good. We wanted to fly; but realizing the danger of trying it, we decided to go to Maine.

But there was that pestiferous tax staring at us, we could not escape it by going around it, arbitration would not avail; for Mr. Carleton said so.

We magnanimously decided to forgive the commissioners for giving our pockets such a jolt, and with the "call of the wild" in our hearts we decided to visit again our old hunting grounds by the tranquil Penobscot.

Frank came from New York. Schofield and his wife were on hand also, as were Ed and Allie. Harvey of the "big market" appeared two days later. He had to walk six miles to reach us, but that is only a trifle to a man who has climbed to the summit of Katahdin. The East Branch was in sight most of the time, and its music made his heart glad. The snow-crowned peaks of Katahdin also lent inspiration, and he arrived in camp in a jubilant mood, and struggling with a most eloquent appetite.

Our little band of capitalists contributed \$105 toward game protection, but up to the time of going to press we had not received a vote of thanks from any of the game commissioners.

G. J. Brann, of Revere, is the "Nessmuk" of our little company of sure-shots, having preceded us by a few seasons into the woods. He has hunted the caribou on Katahdin's dangerous slopes and has secured many fine heads. He is a native of the Pine Tree State and owns property there, but he refuses to be imposed upon by a tax, and will hunt this season in Canada.

The B. & A. Railroad managers afforded us a most agreeable surprise this season by doing away with the tiresome hold-up at Bangor, and dropping us at our backwoods station of Grindstone fully three hours earlier than in previous seasons.

The woods were white with snow when we stepped from the train, and considering the date, Oct. 26, it agreeably surprised us. It did not last long enough to make good tracking, but served to dampen the leaves.

Al and Seth were at the station with buckboard and wagon, and after hearty greetings were exchanged, trunks and bags made fast, we piled in for the six-mile drive through the woods. The roads in Maine are not macadamized; the drive, though a short one, gave us appetites as sharp as tacks, and we surprised Aunt Augustie by the manner in which we dispatched the leg

of venison and other good things she had prepared for us.

At 4 next morning Frank aroused the entire party by executing a double shuffle, accompanied by a song. Seth and Al not taking kindly to such a rude method of awakening people, protested most vigorously, but Frank said he was in Maine for business and did not intend to waste any time in sleeping.

After breakfast each one was ready to take his separate trail over the ridges or through the swamps. Frank struck out for Salmon stream, where he found bear signs in the snow, and followed the tracks until they led into a swamp. Darkness sets in very quickly in the woods, so he gave up until next day.

This is the second year that the beechnuts have been a failure, and in consequence we were unable to find any deer working on the ridges. Hard frosts all through the early summer months nipped the buds and deprived the deer of many fattening morsels. Persistent hunting for the past seven or eight years has greatly diminished the deer in our territory, and it certainly has taken away most of the big ones.

Only two big deer were seen by us during our stay. On Nov. 7 we had about 10 inches of snow, and over a road five miles long we found many tracks, but only one or two large ones among them. The traveling of human beings over a given space frequently will cause deer to forsake that immediate locality and find new ground.

About the only time any of us could catch a glimpse of a deer was in the early morning, in some sunny bit of second growth. Nothing but young fawns ventured to stroll about during the day, and even those little fellows had a big advantage over the mad man trying to tiptoe up to them.

With their mule-like ears constantly listening, they are well fortified against an enemy. Owing to the bad habit that deer possess of going about chiefly in the night time, it was difficult for our very new members to catch a glimpse of more than a white tail. In fact, one of the party looked up in time to see what he thought was a white owl about to fly into a tree, while in reality it was the white flag of a deer as it was bounding away through a thicket. Things look very queer to a new man during his first trip to Maine.

One of the hunters was waiting on the edge of a swamp near the ridge one evening, hoping to catch a deer working out. He had been waiting for about an hour, while his teeth were chattering and his knees knocking each other. Suddenly he heard a commotion in the thickly piled leaves on the ridge behind him. A cold sweat began to break out on his forehead, his heart tried to get out of his mouth, and gripping his rifle tightly he got ready to kill something, when the terrible strain was broken by the chattering of two red squirrels chasing each other. And from experience I also know that the nimble little red brother makes enough noise to warrant one in thinking that a whole flock of deer are about to rush at him. The solemn silence of the forest intensifies the slightest sound.

Frank was the first one to bring in game. He fired at a doe as she whistled and broke into a run. He followed on her tracks for over an hour, the blood spots finally failing to show on the leaves. He dislikes to wound a deer and not secure it, for it means a lingering death for the graceful animal. Crossing over to Hinch's camp, he found Al and Young eating lunch, and after hearing his story, Al said he could find the doe. They returned to Wadley brook and took up the track again, when Al succeeded in finding the doe, where she had dropped, right near the brook. Those backwoods fellows know their book thoroughly. Wadley brook is three miles from the camp, but Frank carried the deer without assistance, stopping twice to breathe straight. It is no child's play to tote a deer over a rough road.

Ed, the youngster, by the aid of a field glass, located a small bunch of deer way down river feeding in the old field. He dropped into the canoe with Allie in the stern, and they drifted down quite handy to the deer. By carefully working along to the shelter of some alders, they were able to get within shooting distance. The boys fired together, dropping two of the deer, the fawn did not run, when one more well placed shot ended its career. A small spikehorn and his doe, with the fawn, made a good load for the trip up river. Thus does luck run at times.

Schofield has been accompanied by his wife on his trips for some years, and she has become skillful with the rifle, always killing her own game. She does not go very deep into the woods, confining her trips to the river banks and edges of the swamps, but she rarely returns home without her complement of deer. She shot a fine spikehorn handy to the camp, and also one of the best does taken out this season. She is an enthusiast when talking of life in the woods, for she has built up her constitution wonderfully since she first began to accompany her husband on his hunting trips. The air of the Maine woods has done more for her than the skill of the practitioner.

Young was the luckiest of the party. He started out early on the new snow Nov. 7, and following a good-sized track, soon had in the snow a buck that weighed 155 pounds dressed. Not very big as bucks go, but we were all envious just the same. We noticed, when on the train for Boston, that Young occasionally emitted a low, amused chuckle, as though he was tickled over something.

We all had a jolly good time and were loath to leave. We had lots of partridge stews and roasts, and heaps of fun climbing trees for spruce gum. Many pleasant hours were spent in exploring old logging roads and visiting deserted camps; or finding fox tracks in the snow and following them for hours, finally coming back near where we started in. It is remarkable what the snow shows to an observer in the line of tracks. Here, right ahead of us, a hedge hog took the straight road over the ridge. His is the most curious track of all. There are two distinct furrows reaching out on both sides, one flowing into the snow far beyond the line of the other. He must have had a hard time forging through the drifts before he finally reached his old tree. We failed to bring cameras this year, and thus lost a fund of much future pleasure.

We all had our amount of game, and in consequence were happy.

Moose signs were more numerous this year than on any of our previous trips. We saw a cow moose and her calf at different times, but failed to get a peep at the bull. Young and I also heard a cow moose while we were in the woods near Schoodic, but failed to get a view of her. As the time draws nigh for us to pack up for home, a sensation of loneliness steals over us, but with an effort we shake it off, and after saying our farewells to Aunt Augustie and dear old Seth, we pile into the wagon as of yore and vow to return again next year.

"When autumn frosts have clothed the woods  
In hues of gold and crimson red,  
Again I'll seek these solitudes,  
The moss-grown spring and forest bed.  
Again I'll breathe the mountain air,  
Then give me but my forest home,  
My rifle, rod and buoyant health,  
With freedom where I please to roam;  
And take who will the banker's wealth,  
His sleepless nights of anxious care."

—Nessmuk.

JAY PEE.

MASSACHUSETTS.

## Capercaillie Shooting in the Snow.

THEY who only know the Scotch shooting lodge in August when the purple of heather is on the hills and valleys are yellow with barley or rye, when guests come and go incessantly, and posts and papers abound to the heart's content of the summer tourists, can hardly imagine those same lodges with a northern winter upon them. Then, when a white screen of snow shuts off all the outer world, when the mountain streams run between icy barriers of their own making, and the lonely mountain roads are as formidable in places as Alpine passes, he who chances to find himself in such a house may taste all the joys of a desolation the more impressive by reason of the gaiety associated with it in the past.

The writer lately happened to be alone in an outlying lodge attached to a highland shooting when winter descended with dramatic suddenness, and a visit intended for a couple of days was prolonged to a week by the sheer impossibility of leaving. The fare, too, grew monotonous after the first few days, and the imprisonment worse still, thus casting round for amusement and scanning the immensities of snow-covered landscapes from the billiard room windows I noticed that a good deal of forest about a mile away was clear; in fact, there was an almost continuous strip of several miles running up one side of a deep glen over which the storm seemed to have passed to wreak its spite on the opposite slope. Could I and Tam, most faithful of dogs, reach that oasis surely we might find something to vary the eternal muton of the evening meal. Even if we died on the way it would be more heroic, I felt, than a lingering demise from ennui between four walls, and as Tam was obviously all for the adventure "fall fair, fall foul," and with a leader was got out, the cartridge bag filled, and with a modest luncheon safely packed we started soon after breakfast in a glint of sunshine which made the snow-fields perfectly dazzling to look upon.

The day more than fulfilled our expectations in the way of hard work and sport. We began by tumbling into an old pit just outside "the policy," which snow had filled to the very brim, and Tam had there and then perished had I not hauled him out by the tail, a wiser and more careful dog. This made us both cautious, and we eschewed patches of unbroken snow henceforth with amusing care. By going along the crests wherever a few blades of grass showed through we found we could get on safely enough, and soon became expert in snow craft, while the glorious crispness of the air made the hard walking a pleasure.

The first shot was at a mountain hare. He had been lying among some weather-stained rocks, and when I stopped him among some ground of the same kind it was marvelous to see how his blue winter fur assimilated with the surroundings. Even though knowing exactly where the hare lay it was difficult to identify him among the lichens and blue snow shadows; his winter suit, in fact, was as good a protection in that frost-swept region as his russet summer clothing in a pleasanter equinox.

Then on again into the glen, over the frozen brook at bottom, where the ice crackling musically under foot but just upheld us, and so into the pine barren beyond. Here, as I had expected, the storm had swept over the near ridge to spend its strength upon the further; on that side it was like a well iced Twelfth cake with five or six feet of snow everywhere; on this it was comparatively clear. All game still faithful to the hills had come into this sanctuary, and it was not long before Tam was working vigorously ahead upon a trail which ended in a dense mass of fallen timber, and as I came up and hid him in, four capercaillie got out on the further side. As big as brush turkeys, the gunner who can hear unmoved the silence of a frozen forest may boast of nerves not to be lightly shaken. My own were pretty sound, and I brought down a cock, who sent the dry white powder smoking into the air as he fell like a rock through the pine trees. For half a mile there was nothing more but a blue wood pigeon, who was fairly killed far overhead, but unhappily fell on the opposite side of the glen and disappeared from sight in a ten-foot snow drift. Four more pigeons and a couple of rabbits, almost as gray, by the way, as the mountain hare, made the game-bag uncomfortably heavy, so about mid-day we turned to the crags above, and had our sandwiches and a cigar—the latter joy, of course, being confined to the biped section of the company—under a rock in the full glare of the sun. A prettier little parlor there could not have been, and a light breeze blowing over the frozen ripples of the snow-fields drew the most varied and elfin music from them.

Afterwards we plunged back into the shadows, and almost immediately a startling incident occurred. Tam and I had lunched as described, wisely but not too well, and were heating along in the gloom of the dense pine-

covered hillside a long way from home, the dog, as usual, in advance and out of sight for the moment over a little crest, when a most unearthly outcry arose from the direction taken by that sagacious beast, accompanied by a dreadful screaming very awesome in the surrounding silence. As it chanced I had just been recalling the fact that this glen was said to be haunted by a ghoul in female form with an uncomfortable partiality for raw flesh of any kind, and here was a most blood-curdling row, a perfect medley of shrieks, barks, and howls going on behind the larches. Had Tam dropped in unexpectedly on this winsome but unholy female as the noise suggested? He was not a dog to be lightly perturbed by ordinary game, and I blush to own I hesitated for a moment, until a sudden and piercing yell, unmistakably from the poor brute, settled the matter; ghoul or no ghoul I must take his part; so running forward I burst through the screen of trees and came suddenly out into a little snow-covered clearing.

The scene which met my view was both tragic and funny. In the middle of the arena was no banshee, but a fine golden eagle, such as occasionally haunt our forests in the winter, caught by one foot in a strong iron trap some misguided keeper had set against the standing orders of the forest for ravens. But that was not all. A second trap had been placed close by the other, and into this poor Tam had blundered in the first enthusiasm of his "find." There they were, dog and bird, gladiators tethered by one leg each, tugging, howling, and screeching; the eagle flapping his enormous wings over the blood-stained snow, and waltzing round and round, the while he snapped his beak with a noise like pistol shots, and screamed till the forest rang, and the retriever tugging and howling with equal energy between rage and pain, while he kept at a respectful distance from his enemy with laughable care.

Him I released first, of course, finding to my satisfaction no great harm was done, and then came the question of the bird. I had no mind to shoot a prisoner, while on the other hand I had no means of assuring him of my pacific intentions. He was in a fine frenzy, and fearing he would break his leg—which he had not done so far—unless prompt measures were taken, I put down gun and game-bag, and taking off my strong shooting coat, advanced on the captive, and after a minute's waiting ran in. The struggle which ensued was Homeric, and a very charming lady now wears the feathers which Tam gallantly pulled out of the eagle's tail while I was getting his great wings safely down to his side. I got hold of the cruel trap presently, however, released the spring, and then very promptly got out of the way of those terrible talons! When the splendid bird found himself free he cast my coat from him as though it were a rag. Never shall I forget the haughty stare that came from those fierce black eyes as he looked for a moment with supreme contempt on us. Well they chose who made him the imperial bird, the arbiter of battles, the emblem of pride and mastery; then suddenly he turned away, took two steps down the slope, and, unfurling those steel-gray pennons again, rose in a bold curve round the amphitheatre, and with a parting screech went away to join his mate under the snow clouds overhead.

It was some little time before Tam and I could settle down to work again, so contemptible did all game seem after that great bird, but a few shots put us in mood again. We beat northward until the pines thinned out in the deep snow where the valley ended in a mountain pass. Then we turned back, picking up a brace of black game on the way, a duck or two, and a couple of woodcock from a holly thicket. We recovered the capercaillies and hare—the latter, by the way, frozen as stiff as a board—which we had earned on the way out, and arrived home just as the sun was setting in crimson splendor behind the hills, tired out but nevertheless well content with our rough day's sport in the snow.

## Deer Hunting in Wisconsin.

I have seen the "blackened timber,"  
I have camped beside the stream,  
Resting on a couch of "feathers,"  
Listened to the wild, weird scream  
Of the night bird. Watched the eagle  
Soaring over lake and heath,  
Walked the "log-jam at right angles  
To the current" far beneath.  
But no rhyme can paint the picture,  
Neither can the learned in art;  
It must be transferred from Nature  
By the soul unto the heart.

ON Nov. 5 Dr. C. W. Mackey, J. E. Spahr and George Hedrick started with our camp outfit for Vilas county, Wisconsin, with the understanding that I was to join them on or about the 10th. The faith within me was so strong that I permitted them to carry off my trunk with its camp wardrobe, gun, etc., and also my good \$25—which is the price of admission to deer hunting sportsmen in that State.

During the summer we had talked about a camp site and virtually selected one some three miles out from Gayner Station, on the Chicago, Milwaukee & St. Paul Railroad, which runs through a fine hunting range and terminates at Star Lake, near the Wisconsin and U. P. Michigan State line. Deer hunting is good all along this railroad north of Heafford Junction, also for quite a distance south of that point, except, of course, in the immediate vicinity of the cities and towns. Much has been said in these columns about hunting and fishing in Wisconsin, but nothing has been exaggerated that I have read, judging from personal observations and experience. The Chicago, Milwaukee & St. Paul Railroad has three divisions passing through this comparatively wild country; the Wisconsin Valley and the North Star especially offering the finest of deer, grouse, rabbit and pine squirrel shooting, also a possible chance at varmints, like the bear, wolf, lynx, wildcat, fox, etc. The fishing and possible camp sites and hotel accommodations are everywhere and of the best. Knowing all this, it was no difficult matter to write Mr. Sayner, who owns the Plumb Lake summer resort, to reserve for us the territory between Lost Lake and Big St. Germain Lake; practically the ground

we hunted over last year. Mr. Sayner was in a position to grant our request, for he is postmaster and mail carrier, has two good teams and being in attendance on the arrival of trains, is usually engaged to haul parties out to camping grounds.

We found out a couple of days before our boys left that a daily mail had been discontinued above Minocqua, and we were unable to advise Mr. Sayner of the date of our arrival. So when the boys got off at the station at 1:06 P. M. they had to wait for Mr. Sayner to make certain arrangements to handle their camp duffle, and by the time they had selected a spot for the tent it was almost dark. They finished setting their house in order by lantern, and when I walked in on them the following Tuesday evening I found the Doctor busy with the kitchen work, and Spahr reading the Sunday school lesson. Hedrick, of course, was rambling. Hedrick is always rambling or doing something. We have camped together nine seasons, and I never saw the man when one could say he was doing nothing. Presently I detected his step coming around the tent, and rushed out, caught his hand, and incidentally cut a few fantastics, like some school boy. As for Hedrick, he was happy as a lark.

Though I had, while walking out, noticed but few tracks, I knew by intuition that game had been sighted and settled myself down to rest, await supper, and talk of the outlook for the following day, which was to be the first of the open season. The boys told me of their doings, and in return I related my observations at the Sportsman's Show at Chicago on Monday, and all in all it was a pleasant evening—that first one of the season—as it usually is.

The boys, in making our feathery bed, had aimed at economizing space, and the night was rather uncomfortably warm for me, but aside from this it was much preferable to a berth on a sleeper, and I woke all too soon, chargeable to Hedrick's propensity for being up and doing. But as it was the first morning of the open season, I could scarcely expect to be allowed to lie abed; however inviting the springy boughs and warm blankets. We were not a little delighted to find a tracking snow on the ground, though the cutting western wind filled with particles of icy snow, made hunting in the teeth of the wind rather unpleasant.

The boys had set our tent on an old timber railroad a few steps from where the Eagle River and Sayner wagon road crosses Lost creek, with the back of the tent to the west and had protected it from winds by setting a quantity of evergreens against a pole on two forks driven in the ground. The evergreens almost hid the tent from view to any person or animal approaching from the west; especially in the day time when there was no light inside. But deer came near at night, and rabbits hopped among the brush in every direction. There was a heavy growth of cedar and tamarack northwest of the tent, with brush intervening, and in this patch of swamp timber a small stream formed, which the timber company had bridged for a distance of perhaps 100 feet. West of that was a timbered hill through which a deep cut had been made, the hill and cut extending near one-eighth of a mile and ending at the edge of a marsh bordering a small lake. Feeling much like a boy out of school, I went back through this cut, then south and explored the ground where I got my two bucks last year. I crossed the elevated flat, looked down on Big St. Germain Lake, turned to the left and visited, from the opposite side of the creek, our last year's camp; scared a buck, but saw no game, and had come back to the bridge, when I was tempted to draw my little Smith & Wesson from my hip pocket and take a shot at a pine squirrel sitting on the end of a tie at the west end of the bridge. There was a streak of squirrel, some flying rotten wood and a crash in the brush back of me, and I turned to see three deer going up the hill as fast as they could scramble. They had come into the swamp in the night before the snow fell and remained there within hearing and sight of our camp, and were as near as we could estimate the distance over the tops of the swamp brush, 200 yards distant, when I opened fire on them. They were near the top of the hill when my second shot caught one through the head, and it was down and up a couple of times before the other two were out of sight.

Not knowing but that the deer was only creased or temporarily disabled, for the distance had been hard to estimate, besides the wind and driving, icy snow had been hitting me in the eyes, I hallooed to camp for some one to come and watch it while I went up through the cut and over the hill to it. The Doctor came out of the tent bareheaded and coatless, asked me if I had run out of ammunition, and went back. I am yet undecided as to whether the Doctor meant to poke fun at me or was actually rattled over his failure to make his .38 Winchester manipulate some revolver cartridges, with which he had filled the magazine by mistake. It did, no doubt, cause the Doctor to think of ammunition, but shooting against a driving sleet that struck me square in the eyes, and across a brushy swamp, full 200 yards at three small deer running up a steep hill, was about as hard a proposition as I have ever met in deer hunting, and though under more favorable weather conditions I might have done better, I was satisfied with one deer nicely shot in return for the eight shots fired.

The air was filled with fine dry snow all night, and on Wednesday morning I started down the wagon road which passed our last year's camp and Brown's cabin. Poor Misery! What had become of her? The cabin door was open, and the place deserted. The wind blew a gale from across old St. Germain, making the waves lash the eastern shore and pile up a breakwater of snow, ice, and sand. Climbing a hill to the left, I struck into the timber-sheltered hazelbrush, and was soon lost, to all intents and purposes, except the stalking of two large deer that had left their trail fresh in the snow. But these particular deer seemed to be moving faster than I cared to, and I soon left their trail, and circled toward camp, arriving there at 10 A. M.

Snow continued to fall, and by morning of the thirteenth the brush was bending with damp snow that clung to each branch to the depth of an inch or more. The Doc-

tor went out northwest from camp to watch, while I went a mile west, then turned north and east in the hope that I could drive a deer to him, but we both got back to camp without sighting game. Spahr staid in camp, and after dinner went out to Sayner for our mail. Hedrick came in at noon much disgusted. He had gone east to a deer runway, and was sitting on the top of a hill when a fine large doe stuck her head out from behind the snow-laden brush. He took a careful bead on her head and pulled the trigger, but the gun only clicked. He had filled the magazine but neglected throwing a cartridge into the barrel, and before he could do so the doe had whirled about and was out of sight.

The timber and undergrowth was so laden with snow that while the scenery was fine hunting was not, and we ended the week with four deer hung up. On the fifteenth Hedrick and I took a walk around the east end of Big St. Germain Lake, following the Eagle River road. While resting on a log before turning campward, a young man driving a pony hitched to a large buck stopped in front of us, accompanied by an old woodsman and a youthful looking person. We had heard the shooting an hour before. The younger looking of the three seemed restless and anxious to proceed, seeing which the driver introduced the male attired personage as his wife, explaining that skirts were an impossibility in the surrounding woods, to all of which we were not slow to agree.

The following day Hedrick had an experience out of the ordinary, and one that reflected no credit on a camp of hunters from Grand Rapids, Wisconsin, that were located some two miles west from us. He and Spahr started out, but separated, and as Hedrick was nearing the last cut in the hill west of camp, he saw a large buck and a doe in the road ahead of him a distance that proved to be 310 steps. He shot the buck through the body, but it ran away westward, followed a distance by the doe. He trailed some distance, then went for Spahr, and together they followed the trail on west beyond Plumb Creek and into a swamp. Before reaching the swamp they heard shooting, and after trailing through it ran into the Grand Rapids parties. One of the men asked Hedrick if they were looking for a wounded buck, and was told of the circumstance and their search. He replied that the buck was not badly hurt, and that they were shooting rabbits. They had shot a rabbit and dragged the carcass in the buck's trail, obliterating it, making false trails off in various directions, then threw the rabbit down. Two days later we were told by a settler that the Grand Rapids parties got a buck on Monday.

The Doctor went out to Sayner to the post-office, and I kept house. The boys were tired a plenty that night, for they had made a big drive in the forenoon, and the tramps just referred to were after dinner, not a dinner in any sense, but a midday meal in camp, where we had in our larder venison, smoked ham, potatoes, beans, canned goods, dried peaches, bread, crackers, meal, flour, butter, lard, coffee, tea, sugar, pepper, Sault evaporated cream, a few eggs, etc., which latter, of course, may or may not call for a liberal construction. After supper Hedrick was not too tired to make a pot of mush.

The following day was too cold to hunt with any degree of comfort; in fact, one's face would freeze in a short time if exposed to the cutting wind. Nevertheless Hedrick and Spahr hustled out and an hour later Spahr came back and called me, stating that three deer had passed over the hill just north of camp. I got my shooting iron and took up the trail, while Spahr went out the wagon road about a mile to watch a crossing. But these deer knew their ground and did not approach a crossing, neither would they let me approach them. Their trail was as crooked as that of a politician, and as never-ending. At one place they crossed a chopping that had been burned, but not until they zigzagged to the right and left a number of times, and I was almost in despair from the icy wind when I reached a jack pine flat on the other side. I stuck to the trail until nearly noon, and left it over two miles from camp without seeing a tail. Just before turning homeward, as I was standing in a patch of pine timber between the last chopping and a wagon road, I heard either a dog or fox bark, and saw something make one long jump, as though coming my way, but I saw and heard nothing move. But after dinner I had a happier experience. I went over toward Big St. Germain Lake, the wind blowing cold from the west. While going southward I espied a deer over near the lake, and beyond the east end of an extensive tamarack swamp. I stood and watched it several minutes, hoping it would come my way. Concluding it had no intention of so doing, I crept off to the east into a hollow, then up a hill, and worked my way around to the northeast of where I had seen the deer. Then I worked my way toward it, the wind blowing such a fierce cold gale into my eyes that they filled constantly with water and blinded me. The high flat hill I was on was covered with shrubs and stumps, and while I was anxious to see the deer, I was yet afraid it would see me; so I crawled as carefully as I could through the snow to a bunch of leaf-covered oak scrub and straightening up found myself looking at a fine tall, slender buck. At the crack of my gun he fell, got up, fell again, got up, then walked a few steps and deliberately laid down with his head toward me. I stood watching him for some time, when, to my surprise, a doe ran out from the foot of the hill going westward. I shot twice at her, but she went on with tail in air, the buck lying there now attracted by the smoke and flash from my gun. I stood still, expecting the buck to get up and go, but he lay there looking up toward me, and then a fawn sprung a surprise by leaving its shelter at the foot of the hill and going like a streak off to the north, but it fell with a second bullet through the body. Now, here was a problem. The buck lay there looking at me, the fawn struggling to get up, and I had one deer in camp. I had not violated the law, for neither of these deer was killed, and both might get away. The situation was not changed for several seconds, and the chill wind was putting me in a bad way for shooting, but something must be done; so I took another shot at the buck, and like a flash he was up and off for the woods. Then going down to the fawn I put it out of its misery and hung it up. Curiosity prompted me to look at the bloody bed the buck had just left, and follow his trail back to the woods. I saw where he had lain down in the shelter of the timber, then got up and walked off. Here I left his trail, turned

to the north around the swamp and reached the open ground, then the old railroad just as darkness fell upon the scene. The next morning I went back with the boys to put them on the trail of the wounded buck, and after some snap shooting among the hazel brush the Doctor ended the chase with a shot through the shoulders.

Spahr had an experience out of the ordinary. One forenoon he walked to the trunk of a tree that had broken down and was standing some fifteen feet above ground watching. After a long wait in the biting wind, he saw what he thought was a large buck in the edge of a strip of timber. He shot, as he thought, at its shoulder, and it went down a hill out of sight. He got off his perch and went to where the deer had stood, saw blood, and picked up a piece of bone from the deer's leg. He trailed some distance, then remembering his and Hedrick's experience, left that trail and came to camp. We dragged that deer to camp from a point two miles from where Spahr wounded it, but it was a doe, and its fore leg was shot off below the knee.

The ridiculous things one does on these hunting trips, I take it, seldom appear in print. For instance, on one occasion, instead of facing the wind by making a circuitous route to our regular crossing on Lost Creek, I went straight for the stream, determined to bridge it if I could find no log or other means of spanning the twenty-foot current. After tramping the bank some distance and finding no means of crossing, I pulled my big hunting knife and hacked a road through the thick alders to a point where the stream narrowed, but ran all the swifter on that account. Then I sheathed my knife, drew my little tomahawk, which weighs only a few ounces, and tackled a dead tamarack some six inches in diameter. It took a good bit of hacking, but we brought it down, cut the top out, then selected another. I knew that I was going to cross that stream right there if the tomahawk held out; and cross I did, but not until those long poles had grained my shoulder and ruffled my temper by entangling themselves in the brush at the sides of the crooked path. But it was all forgotten in a moment, for a grouse got up from the opposite bank and sailed off the direction I meant to go.

We finished our hunt on Saturday the 21st, rested on following day, pulled into the station Monday afternoon through a snowstorm, took the 4:45 train for Chicago, and arrived home at 10 P. M., November 24, with two deer to the credit of each.

G. W. CUNNINGHAM.

PORTLAND, Indiana.

## Adirondack Deer Hunting.

GANSEVOORT, N. Y., Jan. 2.—*Editor Forest and Stream:* I note that the New York Fish, Game and Forest League recommend that "The last fifteen days of the open season for shooting deer be cut off."

It no doubt would be of interest to a large number of the readers of *FOREST AND STREAM*, to know the reasons which led this organization of intelligent men to recommend this change in the law.

I confess that I am unable to see any good reason for it. This shortening of the open season at the wrong end cannot be urged as necessary to lessen the number of deer which would be killed under the existing law, as this can be accomplished by greater restrictions on the number of deer which a person may legally kill, and by adopting the coupon system to make the law effective.

On the other hand it is doubtful if the cutting off the last fifteen days of the open season would lessen the number of deer which would be killed in the least, while it needs no prophet to foretell that it would greatly augment the amount of stinking meat which has to be thrown away each year.

This curtailing the open season at the wrong end should not be urged to prevent deer being killed on the early snows of winter, as this is the time of all other times when deer should be killed. They are then in the best condition, the sport is at its best, and the meat can all be saved and utilized in the best possible condition. I believe in preserving deer after they are killed as well as before they are killed, and the only way I have found to do this satisfactorily is to kill them when the weather is cool.

A law which permits them to be killed when much of the meat is sure to spoil is bad enough. What then should be said of a law which would make it impossible to kill them at any other time?

Does the New York State Fish, Game and Forest League really wish to go on record as favoring such a law?

JOS. W. SHURTER.

MR. PETER FLINT writes to the Post and Gazette of Elizabethtown, N. Y.:

Is not the recently expressed intention of the Essex County Board of Supervisors to favor a deer hounding law a step backward in the progress of game preservation in the Adirondacks?

These gentlemen are supposed to represent the citizens and taxpayers of the county, and must, therefore, have some very strong reasons for such proposed change. Their arguments, if made public, would be most interesting.

On the other hand, those residents who are opposed to hounding and a return to the former order of things, are surely entitled to a hearing.

Hunters, old and young, who for various reasons have chafed under the restraint of the law against hounding deer, can now come "out of the bresh" and give their views and experience to those who have been laboring under the impression that deer in the Adirondacks have been rapidly increasing lately owing to a more or less strict enforcement of the present anti-hounding law.

All citizens, whether hunters or not, may have views on the question, and I believe that everyone would be unwilling to advocate any measure that looked unfavorable to an increase in the future number of deer. A system enabling the largest number of our brethren to engage in deer hunting with the most successful results is the one that should prevail.

The city men owning or leasing farms or cottages in Essex county are usually much interested in game

preservation, and their views might also appear along with the expressions of those who live in the country the entire year.

This is a most vital and important question, relating as it does to the future of our section as a hunting ground, and the action of the board will not be without effect on the deliberations of similar bodies throughout the State of New York upon this point. The hounding of deer should not be adopted by mere whim or caprice, but final decision should only be made after the people have had a fair chance to be heard on both sides. It is always safe to trust the American country folks when they know the facts.

## British Columbia Notes.

CUMBERLAND, Vancouver Island, B. C.—Grouse have not been so plentiful this year as usual, owing, it is said, to the extremely wet spring last past, in which it is thought many broods perished when in the down. The season for English pheasants opened October 19, and some good bags were made. The Bob Whites released two years ago are said to be doing well, and have spread over a large area. They will be a welcome addition to our game birds should they succeed.

Deer have been abundant this fall, and have been extremely fat. A few wapiti have been killed about the headwaters of the Campbell, and from that region to the north of the island, a favorite ground being the country back of Quatsino Sound, on the northwest end. A number of panthers have been killed also during the fall, and bears have been fairly numerous. Wolves, however, have long since disappeared from this immediate vicinity.

This island has reaped a heavy crop of shooting casualties this year, two exceptionally sad. The first of these was a shocking tragedy at Comox Bay. The father with several children was in some maples near the house shooting grouse; his little boy was in the brush looking for a bird that had dropped, and to avoid pointing the gun in that direction as he was reloading, he swung the gun muzzle to one side, at the same time closing the breech. Probably from some defect in one of the locks, the shell in the left barrel exploded as he did this, and from behind some small bushes, where she had been standing unperceived and unsuspected, fell one of his little girls dead. The charge had struck her in the breast and neck, and death was almost instantaneous. But a few weeks had elapsed when a man from this town went out with his son, and a neighbor, and when about a mile from home some grouse got up. The youth, a fine young fellow about seventeen, was walking a few steps in advance of the grown people, and called their attention to the birds. The neighbor raised his gun hurriedly, and as he did so the piece discharged, the charge striking the boy in the back of the head and killing him instantly. It was the boy's first hunt, and his father, himself an experienced hunter, had long promised him a trip out. It was a sorrowful party who carried the remains home, the father hastily summoning help and medical attendance. It need scarcely be said the grief of the parents in both these cases, as well as the agony of the unfortunate who did the shooting in the last, was too pitiful for words. Besides these horrors other accidents of a similar nature have occurred in other parts of the island and mainland, and it is safe to say the death rate from firearms while hunting has been far larger this year than ever before in the history of the Province, and the press and public are agitating the Government to enact some law which will tend to lessen the danger to innocent persons in the forest.

MAZAMA.

## Wisconsin Venison Seizures.

MILWAUKEE, Dec. 27.—*Editor Forest and Stream:* About a week ago I seized a box with venison shipped from Eagle River, Wis., to Chicago, and reported the seizure to the local warden at said place. From inclosed clipping you will see that he was successful and found the shipper of the venison and got him convicted.

Eagle River, Wis., Dec. 25.—A. Radcliff, of Eagle River, was arrested yesterday by Deputy Game Warden James Oberholzer for shipping venison to Chicago, and which was seized last week in Milwaukee at the Northwestern depot by Deputy Warden Valentine Raeth. Radcliff pleaded guilty before Judge Coleman and was fined \$25 and costs. Oberholzer was notified by Deputy Warden Raeth, of Milwaukee of the seizure from Eagle River and furnished with evidence.

On the 22d of December I seized a telescope with venison shipped as baggage from Crystal Falls, Mich., to Milwaukee, Wis., from the baggage car of the C. M. & St. P. R. R. On the meat I found tags with the names of two high railroad officials. The venison was sent them for a Christmas dinner; but I sent it to the State School for Deaf for their Christmas dinner, according to our law, and notified the Michigan warden. The two railroad officials had to go to the butcher and buy a roast beef or something else as other people do.

VALENTINE RAETH.

## Fatalities in Ontario Deer Woods.

TORONTO, Dec. 31.—*Editor Forest and Stream:* A recent published report declares that twenty-seven persons were killed and fifty wounded in Ontario deer woods in 1903. This estimate is exaggerated. I only heard of five men being killed in the Province, and very few wounded. Only two of the five were hunters. Two of those killed were working on a road, and one, a farmer, was shot while working in his field. I presume the fatalities during the hunting season would be as numerous in Ontario as in Wisconsin and Maine if still-hunting prevailed.

E. TINSLEY.

## American Connoisseur.

THE American Connoisseur, of which announcement is made in our advertising columns, is a new art magazine projected on a more elaborate scale than any publication in its field ever undertaken in America. It is to be edited by Mr. Charles de Kay, and the list of contributors gives promise of its unusual worth. The plan of the American Connoisseur should appeal strongly to all lovers of art.

All communications for *FOREST AND STREAM* must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Pollock with Rod and Reel.

BY EDWARD A. SAMUELS.

I WONDER how many anglers have taken the pollock, and by anglers I mean those who use the rod and not the hand-line fishermen, for to the latter the fish is by no means a stranger. Possibly many of my brothers of the angle know all about the fish and its peculiarities, but probably very few have made its acquaintance, or if they have, I have never seen anything on record relating to what they have done.

Although the pollock is own cousin to the cod, being included by ichthyologists in the same family with the better known species, it is very much more gamy, not only in general appearance, but in habits also. Everyone who is familiar with it, either in the flesh or in the illustrations that have been made of it, has noticed its trim, game fish form and has undoubtedly come to the opinion that it is endowed with great strength and activity; and such is the case; without the element contours of the salmon it has much of the speed and strength of that fish; in fact, in the far north it is often called the sea salmon, in consequence of possessing the qualities I have named.

Now, although my experience with this fish has not been very extensive, it may perhaps be of interest and may furnish a pointer to those anglers who enjoy a vacation at the sea coast where the pollock is found.

This fish is pretty widely distributed, and occurs at a great number of points on our shores, ranging from the latitude of New York to the Gulf of St. Lawrence.

Some idea of the abundance of this fish may be formed when I state that in the Report of the Fish Commissioners of Massachusetts for 1902, the latest, I believe, of the series that has yet been printed, the catch in that State in the seines, weirs, pounds, etc., is given as having been 1,149,416 pounds, in which the catch by hand-line fishermen on the coast, of course, is not included. Its abundance continues as latitude increases, for in a recent number of the Canadian Fisheries Report, the catch for the Dominion was about 9,940,000 pounds for the year.

Though, as before stated, closely related to the cod and haddock, its feeding habits are in general quite different from theirs, for it seeks its food mostly at or near the surface of the water, and when in pursuit of schools of herring, mackerel, alewives, etc., it darts about with much of the activity of the bluefish, often jumping above the surface of the water, showing its whole length in the air.

An account by Prof. Sars, of the curious manner in which they surround a school of young cod, printed in George Brown Goode's book on the "Fishes of the United States," will be of interest here, he says: "I was much interested to see how the pollock caught the young codfish. It looked like a systematic chase, and it certainly looked as if the pollock were acting with a common and well defined purpose. As far as I could observe the schools of pollock surrounded the little codfish on all sides, making the circle constantly narrower until all the codfish were gathered in one lump, which they then, by a quick movement, chased up to the surface of the water. The poor little fish now found themselves attacked on all sides; below the voracious pollock, which, in their eagerness, often leaped above the water, and above, hundreds of screeching sea gulls, which with wonderful voracity and precision, pounced down upon the places where the pollock showed themselves, to share the spoils with them. The whole chase is carried on so rapidly and the young fish stay only so short a time at the surface of the water before they are scattered in all directions with lightning-like rapidity that it was not even possible for me to see any, much less to catch any with my insufficient implements."

Now, a fish possessing among its characteristics rapidity of motion, strength, stubbornness in resisting capture, one may readily see is worthy the attention of the angler, and that the pollock possesses these qualities I have proved on more than one occasion. While it has not the intense ferocity of the bluefish, it is aggressive in a high degree, as is plainly indicated by its prolonged under jaw, and although it has not the lightning-like and graceful movements of the salmon, it gives a battle royal to the angler, which he will not soon forget; the average weight of the fish being from 8 to 10 pounds, and 20 and even 30-pounders being not uncommon.

My first acquaintance with the pollock was made years ago. I had been on an outing on a salmon river in New Brunswick, and was on my return to Boston from St. John on one of the steamers which plied between those ports.

My success on the salmon stream had been indifferent in consequence of the water being very low and clear, and I had planned to leave the steamer at Eastport, take the river steamer thence to Calais, where I would pass the night, calling, of course, on my old friend George A. Boardman, a gentleman of the old school and an ornithologist of repute, his private collection being one of the finest I have ever seen, and on the following morning take the train to Princeton, at the foot

of Big Lake, one of the Schoodic chain of lakes, where I would secure my Indian guide and supplies and proceed in canoe to the outlet of Grand Lake stream in which the landlocked salmon, or as we used to call them, the white trout, abounded. When our boat reached Eastport I had my trunk, rod case and other impedimenta taken ashore, where I soon followed them.

Considerable freight was taken aboard the boat, and she lay at her dock for nearly an hour, and as the river boat was not in sight, and was not likely to arrive for another hour at least, I spent a portion of the time on a visit to a large sardine factory that was located not a great distance from the steamer's wharf, where many millions were annually packed as American sardines. That late lamented comedian, William Warren, in his celebrated play, The Member from Cranberry Center, described sardines as "Little fishes biled in ile," and that well illustrates the manner in which the posterior halves of the herrings were prepared.

The magnitude of this sardine packing industry may be appreciated when I state that sometimes many hundred bushels of the little herrings are (or were) handled by the packers in a week, the little fish having been taken in seines and weirs along that portion of the Maine coast.

On my return to the steamer landing the Calais boat had not arrived, and sitting on my trunk awaiting her coming, I gazed on the stretch of waters before me. Presently I saw a large fish jump clear from the water, and then another, and another, and many more; they were scurrying about in every direction, evidently in sport or in pursuit of smaller fish; they were so large and so active in their movements my interest was awakened; they were a decided novelty to me, for I had never seen anything like them before; presently I asked one of the men employed on the wharf concerning the identity of the fish, and his reply was: "Them's pollock, sir; they're feeding on minnows (minnows) and little herrin'; they are great feeders and mighty spry; it's great sport catchin' 'em with hook and line."

The idea at once occurred to me that fish of such size and activity might give good sport with the rod, for I was always looking for new experiences, and acting on this idea I had my trunk, etc., carried to an hotel with the view of stopping over a day or two and making their acquaintance.

It was then quite late in the afternoon, but I secured a boat and oarsman and a good supply of the little herring at the factory for bait, and on the following morning, provided with a heavy salmon rod and reel, on which was a hundred and fifty yards of line, fly-book, and some heavy bait hooks and the supply of little herrings, I embarked; the boatman, as he pushed away from the wharf, remarked, "The tide is not just right here now, sir, for pollock; we'll be more likely to find them out toward Lubee." I told him to go where the spirit moved, and he pushed leisurely out along the shore, I, in the meantime, affixing a hook to my line and baiting it. We had not proceeded more than a half mile from the wharf before we discovered a number of the fish in action, and it was not long before I was casting my bait among them and skittering it on the surface, after the manner of the pickerel fishermen; it was a good sized herring nearly six inches in length, and when it struck the water and moved along on the surface it made quite a little ripple. It was at once discovered by several of the fish, who simultaneously made a dash for it, and it was seized by one of the larger ones and swallowed.

As soon as the pollock took the hook I lifted the rod, striking the hook well home in the tough mouth of the fish, and it was then I discovered I was fast to something that was going to give me considerable work before I succeeded in landing it, for a 20-pound salmon could not have offered much more resistance; at first the fish darted about in every direction with almost the activity that the bluefish or striped bass displays; it then took several quite long runs, causing my big reel to sing right merrily; and once or twice appeared above the surface of the water, its three dorsal fins standing erect as if to show its anger at the restraint put upon it. After a while it descended in the deep water, evidently determined to reach the rocks at the bottom, and it was only by putting the most severe strain upon my heavy rod that I dared to give it when I succeeded in turning it and gradually lifting it toward the surface.

It was a stubborn fish, and a strong one withal, and for nearly ten minutes it gave as gamy a fight as I could ask for; but the strain of the rod at last brought it to terms, its struggles grew weaker, and finally I was enabled to reel it in close to the boat. At this juncture I found to my dismay that I had neglected to bring my gaff, and if the boatman had not reached over and thrust his fingers in the gills of the fish as it lay exhausted in the water beside us, and lifted it with one quick motion into the boat, I could not possibly have landed it, for it was a good 12-pounder.

The school of pollock had left us during the struggle, but we succeeded in finding it later, and I was soon fast to another large fish which we saved; the fight he gave was not of as long duration as that of the first one, and the school kept with us.

As an experiment I then removed my bait hook, and

to my double gut leader attached a large bass fly with light wings and put it out on the water, and at the second or third cast it was seized. Whether I was too eager and struck the fish too sharply, or the hook was defective I cannot say, but when I lifted the rod the fly came back to me with its point broken off, and the fish went on its way rejoicing. I substituted for the bass fly a large and strong Prince William of Orange salmon fly which I chanced to have in my book and threw that out; this lure was quickly accepted, and another lively tussle ensued before this fish was secured.

Now, I have no doubt I might have filled the boat if I had desired, but I was satisfied with what I had done and returned to Eastport.

On the next day I procured a small yacht and made a cruise across to Grand Manan, where in the "rips" near that island the pollock at that season were to be found in abundance. Back and forth in those lively waters we moved, a light breeze giving us all the speed we desired. A hand-line baited with a herring six inches in length, and my own line running from my rod and reel and similarly baited were trolled astern, after the manner of blue-fishing, and in a short time both baits were seized, and we had quite a lively time in getting the fish aboard.

During that tide we captured with the troll eight or ten more good sized fish which the boatman said he could use to good advantage, and we then headed the yacht back to Eastport, well pleased with our day's sport. Now, whether or not the pollock is to prove a desirable acquisition to our anglers remains to be seen; my experience with it has been all I could ask, and that it is often taken with fly is recorded in literature relating to the fish. Goode states that at the Orkney Islands great numbers eight or ten inches in length are thus captured, and in Chambers's Encyclopædia we find that "No fish more readily rises to the artificial fly, and in this way great numbers are caught on the British coasts."

As a table fish, if cooked when freshly caught, the pollock is, in my estimation, superior to the cod; although the meat is not so white, it has more of a gamy flavor. Like all other fishes it deteriorates rapidly after leaving the water. The weakfish or squeteague, if cooked soon after being killed, is really very palatable, but after it has been out of the water a day or two it becomes quite insipid.

A grilse or a young salmon five or six pounds in weight, taken from the river, dressed, and at once broiled over a good bed of live coals or before a roasting fire, is delicious in the highest degree, immeasurably superior to one that has been kept in the market for several days, or perhaps weeks.

When salted the pollock is not, generally, in as high favor as cod; there is no reason, however, for the prejudice against it, for its flavor is certainly as good, in the estimation of some, better, than that of its cousin; its flesh when cured, however, is considerably darker than that of the cod, and this, perhaps, may account for the disfavor in which it is often held.

## A Big Brown Trout of the Beaverkill.

MIDDLETOWN, N. Y.—*Editor Forest and Stream:* About election time a squib went the rounds of the papers hereabouts that a large trout had been found dead in the Beaverkill at Cook's Falls, Sullivan county, which measured thirty-eight inches long and weighed fifteen pounds, and that it had died from fatty degeneration of the heart or starvation, or probably old age, nobody knew which. A whopping lie I said to myself, and let it go at that. On the 16th of November the Daily Press of this city again published another big trout found dead at Rockland. That made two big 'uns, and I thought I would investigate; so I wrote to my friend "Bill" Keener, the genial proprietor of the Roscoe House at Rockland, and, as luck would have it, I struck the right man and the same fish, as you will see by the inclosed letter. Friend Keener is an all-round sportsman, and is authority on fishing, particularly in the Beaverkill and Willowemoc country. I am glad this big fellow has gone to the happy hereafter, the place where all big ones ought to go.

JOHN WILKIN.

Mr. Keener wrote: I can tell you all about the big trout. I am the first one who saw it after the two small boys found it. On November 1 I was down the track about three miles below here and met the boys coming down with the trout strung on a cane, carrying it between them. I measured it, and it was plumb 3 feet 2 inches long. They took it on down to Cook's Falls and it weighed 14¾ pounds. It was very poor; if it had been fat it would have weighed 20 pounds at least. This is no fish story. Lots of people saw it. It was a German brown trout. It was found down by the old stone mill between here and Cook's Falls. The time of the high water last month it ran up a little spring brook between the track and river; when the water went down it could not get back, and I suppose starved to death. I don't think it was dead when the boys found it, but the boys were afraid of the law and said they found it dead. I had a hound dog with me and the trout's head was as large as the dog's. It does not appear possible that there could have been such a fish in the river, but it is true.

WM. KEENER.

## Fish and Fishing.

### Tomcod Fishing Through the Ice.

THE tomcod has made its appearance in the St. Lawrence at Quebec, as usual at this season of the year, and a number of the ordinary wooden fishing shanties or huts are being erected upon the ice at the mouth of the St. Charles for the accommodation of the anglers who enjoy the fun of catching the little fish through the ice of the river. The sport, if such it can be called from the standpoint of the scientific angler, lasts usually for a month or six weeks. It is much enjoyed by holiday visitors to Canada who come here to participate in our winter sports and pastimes. Considering that it is only offered in the depth of the Canadian winter, and upon the surface of the frozen water, it is attended with very little discomfort. The interior of the fishing hut or shanty is partially floored with wood, and fur rugs are supplied for preserving the feet from cold. There is also a stove for heating purposes, and sometimes for cooking as well. Chairs and tables necessarily form a part of the furnishings. Most of these fishing parties are held at night, when the guardian of the establishment, who is also the *chef de cuisine*, seldom misses the opportunity of serving up a savory boiled dish, formed of alternate layers of sliced potatoes, salt pork, sliced onions and tomcods, spiced with a variety of herbs or condiments. It is essentially a Canadian dish, and, like the *ragout* of boiled or stewed partridge, hare, salt pork and onions, with which hunters in the northern woods are so familiar, makes quite an appetizing meal.

The fishing is of course done through the floor of the fishing shanty. Holes are cut through the thick ice for the different anglers of the party. Fishing rods are dispensed with. The lines are fastened to bars laid across the fishing holes, and if the biting is not very brisk they are left to take care of themselves and only visited at certain intervals, various other forms of entertainment varying the sport. Several hooks are attached to each line, the usual bait being small pieces of pork or beef. The fish are usually from six to twelve inches in length, and offer very little resistance when hooked. Their flavor is delicious when freshly caught, being but very little inferior to that of the cod, which means a great deal more than those readers may suppose who have never tasted the broiled steak of a codfish fresh from the sea.

The true Atlantic tomcod with which we are now dealing, must not be confounded with the fish which is known by the same name off the coast of Connecticut. The so-called Connecticut tomcod is the true kingfish, an altogether different species and a much larger and more gamey fish. The delicious little *Microgadus tomcod* possesses three dorsal fins, and in the country parts surrounding the Bay of Fundy is often called frost fish, presumably because it is most abundant there in the early part of the winter. Here, however, there is room for more confusion in nomenclature, since "frost fish" is the name commonly applied in the Adirondacks to the delicately shaped *Coregonus quadrilateralis*, or round whitefish. Of course there is nothing whatever in common between these two fish, unless it be that both of them make their appearance in greatest numbers after the coming of the first frost of the season.

The Pacific namesake of the Atlantic tomcod is a much more graceful fish in appearance than the other. Not only is it slimmer in shape, but its body is semitranslucent, and in San Francisco it is served as smelt. Upon parts of the British Columbian coast it is known as whiting.

In the St. Lawrence smelt are often caught by those fishing for tomcod.

### A Legend of the Whitefish.

The Chippeway Indians have a legend concerning the origin of the whitefish which does not seem to be generally known. It relates that this fish first sprang into existence at the outlet of Lake Superior, being produced from the scattered brains of a woman, whose head, for some very guilty conduct, was doomed to wander through the country, but coming in its travels to the falls of St. Mary, was dashed in pieces. A crane, by virtue of that inherent power so frequently attributed to birds and beasts by the aborigines of America, instantly transformed the particles of brain into the roe of a whitefish, to the widespread benefit of the Indian nations.

This fish is considered by some of the northern tribes of Indians as second only in importance, as an article of food, to the reindeer; hence in their language it has been given the figurative name of "reindeer of the waters," or *Adikumaig*; from *adik*, a reindeer, and *guma*, a generic name for water, in composition. The populous Chippeway tribe which originally frequented the Sault Ste Marie to feed on the whitefish of the lakes, were called, from this circumstance, "Cascade People," or Sauteurs, which has since been corrupted into Saulteaux.

### A New Food Fish.

The fishery department of the Canadian Government at Ottawa has been informed of the springing into existence of a new industry on the Pacific Coast in the shape of the canning of the little fish known as the oolachan or enlachon. This fish seems to find its proper place between the smelt and the capelin of Atlantic waters. Its scales are much smaller and more closely adherent than those of the smelt, but larger than those of the capelin. Its body is rather elongate and slender, and is less compressed than that of the smelt. Its length is from nine to twelve inches. It runs in enormous quantities up all the rivers and creeks from the Fraser River northward, and is an excellent pan-fish, being unsurpassed, according to Dr. Jordan, by any fish whatsoever in the delicacy of its flesh, which is claimed to be far superior to that of the trout. It is remarkable for its extreme oiliness, but the oil is of a very delicate and attractive flavor. The fish is locally known as candlefish, because when its body has been dried it may be used as a candle. As its flesh is too delicate and tender for carriage, it has only a local market, but now that it is reported that a successful means of preserving it has been discovered, the fishery authorities believe that the venture will broaden out into a flourishing branch of the canning industry. The scientific name of the oolachan is *Thaleichthys pacificus*.

### The Greenland Shark.

A large increase in the number of Greenland sharks is reported from the Gulf of St. Lawrence. For some years past they have proved a menace to the fishermen of some localities, but this season they appear to be more numerous than ever. The *Squalus borealis*, as the Greenland whale is called, is from twelve to fourteen feet in length, and even more. It is very common in the northern seas. It is six to eight feet in circumference and often weighs as much as six hundred pounds. In color it is a kind of gray. The opening of the mouth, which extends nearly across the lower part of the head, is from twenty-one to twenty-five inches in width. The teeth are serrated in one jaw and lancet-shaped and denticulated in the other.

In addition to its work of destruction among the various food fishes, this shark is one of the biggest foes of the whale. It bites and annoys it while living, and feeds on it when dead. It scoops hemispherical pieces out of its body, nearly as big as a human head; and continues scooping and gorging lump after lump until the whole cavity of its belly is filled. It is so insensible to pain that though it has been run through the body with a knife and escaped, it has been seen to return after a while to banquet again on the carcass of the whale at the very spot where it received its wounds. The heart is very small, only performing six or eight pulsations in a minute, but continues its beating for some hours after having been taken out of the body. The latter, though separated into any number of parts, gives evidence of life for a similar length of time. It is therefore extremely difficult to kill, and even for some time after the head has been separated from the body, it is positively unsafe to trust the hand in its mouth. Yet there is no record of one of these sharks having attacked a man, even though whale hunters have frequently slipped into the water alongside of them. Nor do they appear at all afraid of a man. On the contrary, they will often continue to feed upon a whale in full view of the hunters. On account of their abundance in the Gulf of St. Lawrence it is now proposed to establish an industry somewhere below the Saguenay River on the north shore, for the killing of these animals and for the manufacture from their carcasses of oil, leather, glue, and fertilizers. They are easily captured, the fishermen in one part of the Gulf having caught twenty-two of them during the past autumn in the ordinary course of their operations.

E. T. D. CHAMBERS.

## Lake Champlain Pollution.

Editor Forest and Stream:

My attention has been called to communications published in FOREST AND STREAM from Mr. J. B. Burnham and another anent the much discussed and written about pollution of Lake Champlain by pulp mills.

It is plain from the character of the letters that the two persons to whom I allude have been misled as to the facts, or are acting under the influence of an adverse spirit.

With an introductory of silly denial of facts which can easily be substantiated by any school boy living in the region in question, the remainder of the letters is taken up with an absurd and libelous vilification of myself and the belittlement of a cause which in the end will result in as great a benefit to them as it will to others and myself.

In many ways it is truly amusing to read their labored efforts to make black assume the virginal color of white, that the sludge and noxious waste acids discharged by the mills tend to purify and clarify the waters of the lake, that the fish thrive in it, and that all is for the best. Mr. Payne, proprietor of the mill on the Boquet River, was quoted in the papers not long ago to the effect that he should be well paid for performing the noble task in which he is engaged. As far as I know, however, subscription blanks for the fund have not as yet been circulated.

As a matter of fact I was not aware that the lake shore at Essex was so bad until one of Mr. Burnham's tenants called my attention to it one day last summer. He told me the other tenants had called Mr. Burnham's attention to it, and I understood he was about to supply his cottages with water from a well. I investigated the matter and was surprised to find the conditions as named, but not as bad as at Willsboro Point. At about the same time Mr. S. P. Avery, several miles further south on the Vermont shore, called my attention to the conditions existing there. I told him that I thought it must be impossible, but he assured me that the shores were in a very bad condition, and requested that he be allowed to co-operate in the movement. There are very few people in the village of Essex who use the lake water. The late Mr. Anthony Ross had often argued with me as to the unfitness of the lake water for potable purposes, and Dr. Swett's remarks are meaningless in this connection.

As for the dead fish, there are only a few left to die, and occasionally one wanders from the depths of Willsboro Bay where the pollution is at a minimum, and probably the "lone perch" alluded to was one of these unfortunates. Whether it were better to die poisoned to death by impure water or be impinged on the hook of a ministerial sport was the question this poor perch decided by his death.

The "twenty-four wall-eyed pike" that have figured in so many newspaper articles were probably caught a short distance from the "Smith Sanitarium." The greatest depth of Lake Champlain (402 feet) is in this bay, and the fish naturally seek it as a refuge from the mill refuse, only, like the perch, to fall victims to anglers. It is a remarkable coincidence that the owner of the aforesaid Smith Sanitarium up to last summer had always used the waters of the lake. This year he has put in 800 feet of pipe to connect with the spring of his neighbor, while the "palatable waters" of the lake are within a stone's throw of his cottage. It is another singular coincidence that Mr. Payne, the mill owner, has his water brought to his camp, at the mouth of the Boquet River, in large carboys from Westport. Several years ago, when he first occupied his cottage on the lake near the mouth of the Boquet River, he was taken seriously ill with typhoid fever. A chemist was employed, and after a will-o'-the-wisp chase he finally located the typhoid bac-

teria in a remote well, where some cow had gone to drink in quest of pure water.

It is true that I was invited to visit the mill, and the invitation was supplemented by one from Dr. Lewis and Prof. Landreth. When we started for the mill I did not go direct with the health officers. I took a circuitous route which led me by the so-called disposal beds, and there I met the assistant superintendent of the New York and Pennsylvania Mills, industriously at work arranging the refuse for a proper inspection by the Albany party. I was ordered to leave the premises, and my demurrer came very near being the occasion for a medicinal bath in this solution of calcium à la lignin, à la soda carbano. However, apologies followed, and the work of investigation went merrily on. Dr. Landreth's report will some day tell the story.

As for a few facts. When appeal was made to Attorney-General Cunnene on behalf of the citizens of Keeseville and certain New Yorkers who own property on the lake shore, an effort was made to satisfy Keeseville by furnishing a supply of water as a substitute for the lake supply, which the pulp mill men acknowledged they polluted. A glance at the twentieth annual report of the State Board of Health will show wherein it describes the Au Sable River as polluted by refuse and discharges from the pulp mills located on its banks. Any fair minded person can tell that existing conditions are even worse now than they were then. Anyone at all conversant with the facts knows that the mill on the Boquet River is daily dumping into it many tons of impurities which eventually find their way into the waters of the lake. I have ample evidence to prove that large quantities of fish have been found dead, and that the rocks along the shore for miles in the vicinity of the mills are coated with a white slime which makes it a public nuisance as well as a destroyer of life.

As the two mills are daily dumping scores of tons of impurities into the waters of the lake, it is a self-evident proposition that in a few years, unless something is done, the whole body of water will become a cesspool. As a result, quick action should be taken to preserve the waters that history and nature have made famous throughout the world.

The mill owners say they wish to abide by the law, but claim that although having spent enormous sums of money for the purpose, they cannot dispose of the residue. I have talked with the leading citizens of Keeseville, and they are in great distress over the destruction of the Au Sable River, and the personal inconvenience the nuisance is causing them. They cannot drink the water, and the plumbing is so choked with refuse that it necessitates frequent overhauling. The marshes and lowlands about the mouth of the river are covered with a glue-like substance, and the action of the sun makes the place a stench.

As I have said before, there is no disposition on my part to throttle the mill industry or impair the value of any investment, or to work a hardship on those whose livelihood depends on the operation of the mills. There is no effort to oppress anybody, but there is a very lively and active disposition to bring about an abatement of the trouble. And the trouble will be abated.

EDWARD HATCH, JR.

### Sullivan County Hatchery.

MIDDLETOWN, N. Y., Dec. 26.—The New York State fish hatchery at Rockland, Sullivan county, will probably be abandoned, and it is extremely unlikely that anything more will be attempted toward the propagation of fish in this locality. The Sullivan county hatchery has been a failure from the start, every season's work, it is said, having been nearly a total loss. The Beaverkill River, which was the inducement for locating the hatchery at Rockland, proved treacherous, flooded the hatchery several times a year, and remained muddy for so long a time after a freshet that young trout could not be grown successfully.

Although the Beaverkill River is one of the finest trout streams in the State, and is fished annually by thousands of New York city sportsmen, the trout fry have to be brought from other State hatcheries to supply this stream. The failure of this hatchery is a great disappointment to its promoters.—New York Times.

### Maslinonge.

MONTREAL, Dec. 28.—Editor Forest and Stream: In full agreement with Mr. Chambers and Mr. Cabot, I think FOREST AND STREAM should state authoritatively that maskinongé is the right way to spell the name of this fish. Or it might be spelled maskenonzha, as Mr. Longfellow spells it, and the Indians pronounce it. It is Ojibway-Algonquin, with just about the same pronunciation as maskinongé—maskeenojay. Mr. Longfellow took his pronunciation from an old friend and Ojibway Indian chief, and from Mr. Schoolcraft, who lived among them the best part of his life.

L. O. ARMSTRONG.

## The Kennel.

### Points and Flushes.

THE American Kennel Club of New York was incorporated at Albany, N. Y., December 30. The directors are Messrs. August Belmont, of Hempstead, N. Y.; Hollis H. Hunnewell, of Wellesley, Mass.; Hildreth K. Bloodgood, James W. Appleton, William G. Rockefeller, of New York city; Marcel A. Viti, of Philadelphia; Gouverneur M. Carnochan, of Riverdale-on-Hudson, N. Y., and William B. Emery, of Boston.

The premium list of the Westminster Kennel Club's 28th annual dog show, Madison Square Garden, New York, February 10-13, can be obtained of the superintendent, Mr. James Mortimer, 1123 Broadway. Entries close January 25. The special prize list is long and valuable.

## Hull to Bristol.

BY WILLIAM LAMBERT BARNARD, BOSTON, MASS.

The Story which won the First Prize of \$75 in "Forest and Stream" Crisping Competition.

(Concluded from page 16.)

By this time the wind was blowing a gale, and Ayaya reared and plunged so that the compass was useless. We could not steer her even under the reduced sail, so lowered the mainsail away until just a bit of the peak remained hoisted and the rest bellied away to leeward against the lazyjacks.

The night was as dark as it well could be, and all that we could see through the rain squalls was the Bishop and Clerks' flash. We flew for that like a shot out of a gun, and passing, as nearly as we could judge, half a mile inshore of it, held on N. W. for the Hyannis bell buoy. We ought to have raised some lights on shore soon after this, but were unable to see a thing. I cannot find words to do justice to the darkness; the water was positively black, save for the crests of the seas and smoking foam in our lee. It rained incessantly, and rain squall after rain squall passed over us, seeming like blacker streaks in an intensely black sky. Standing at the tiller I could just make out the stem head.

We ran dead before it for some time. Sparks wanted to anchor, but I feared the results when our long scow overhang should be turned to face the seas, so held along. But the Hyannis Lights are very weak, and, deprived of the use of our compass, we might get so close in before seeing anything as to pile up on the beach. Three feet is considerable draft around Hyannis, and the Ayaya's form is not such as to make beaching pleasant. So I finally decided to heed Sparks' requests and anchor. If she did not hold it would be easy to reset the jib, when we would be no worse off than before.

So at ten o'clock we rounded up and let go the anchor (we had but one, a thirty-pounder), there was no trouble in paying out the slack. I gave her the whole of the road—about forty fathoms—and made fast with two half hitches on the bits; the very end of the warp was made fast to the mast. I furled the jib while Sparks did as much for the mainsail. To our great relief the anchor held finely, and the seas were just long enough for her to take them without pounding. I have never known the seas in the Sound to be as long as they were then, although they are always longer in easterly than in westerly weather, and they ran fully six feet from trough to crest. In fact, I think I might say seven feet without fear of exaggeration. The tide held us on a bit of a slant to the wind, so that we rolled to such an extent that we could not stand or sit without holding on to something, and every other sea broke aboard—the cockpit was about half full all the time. I was thankful that it was self-bailing (you could hardly call it water-tight), and that the companionway sill was high above the cockpit floor. As it was, the water found its way below in a constant stream around the mast and through the slide to the cuddy.

Sparks braced himself in the cockpit, with his arms wrapped around the main-boom, where he swung to and fro like the pendulum of a perpetual motion machine. I could not stand still, so went below and bailed. Before I left Hull, Keyes told me the pump was no good. He was quite right. I would bail out five buckets full and then go forward to examine the chafing gear. I had used a stout piece of canvas for that purpose, but after an hour and a half it had chafed clean through and had to be renewed. I renewed it twice more during the night. As I knelt on her bow she would dive straight through every sea, so that I went, or seemed to go, entirely under water. It was pleasant rather than otherwise, for the water was several degrees warmer than the air. After a trip forward I would begin bailing again.

Sunday, July 19. About 2 A. M. the gale reached its maximum strength. By that time I had wearied of bailing, so stretched out at full length in the water in the cuddy for a short rest. Sleep was out of the question in so lively a cradle. But the water got to washing over my face, so I resumed bailing.

Just before daybreak a steamer passed in very close aboard—so close that we were afraid they did not see our anchor light, which was made fast to the peak halliard, so we got out our other lantern and waved that until she sheered off.

At 4:30 it was still dark, owing to the low clouds and the rain, but we decided that the wind was moderating, so decided to get under way. I went forward to cast the lashings off of the jib. While I knelt there she dove through a sea and swept me overboard as neat as a pin. I managed to get a grip on the rail as I went, and so was able to grasp the forestay with my other hand. I then had an unsought for, and unwelcome chance to measure the height of the seas. First the solid water went over my head and then, as she lifted through the wave, she would pick me up until my feet came out of the water, although I was hanging full length from the stem head. I can reach eight feet eight inches, so that, allowing for her freeboard, it is fair to say that the seas were well over six feet high. My water-soaked clothing was heavy and it took four attempts before I was able to pull myself aboard again. Sparks did not hear, but missed me and

came stumbling forward just as I regained the deck. My misadventure occupied but a few minutes, although it seemed somewhat longer.

As soon as I got back aboard we set about getting the anchor under foot. This was no easy task; we simply could not hold her when she dove into a sea. The warp would burn through our fingers like a streak of lightning, and but for the fact that the end was belayed to the mast, we should have lost it more than once. So, finally, I sat down on the deck with my feet braced against the bits, and hove in on the road as she ranged down a sea, while Sparks held her with a turn around the mast when she fetched up on the next one. Even this method proved so strenuous that we had to take several breathing spells. It

Ayaya anchored off Hyannis.

was forty minutes from the time we started heaving in to the time when we broke out the anchor. The moment I felt it come clear I yanked it aboard and gave her the storm jib as quickly as I could. Her head paid off at once, and, with one bad roll in the trough of the sea, she began scooting down the wind. We hoisted the peak about four feet to give her some after sail, but did not take the boom out of the crotch.

Soon after we got under way the rain held up a bit, and we sighted the tip end of Great Island about one mile distant E. by S., showing that we had approximated our

Carina at Hyannisport.

position fairly well. Under our reduced sail we boiled away toward shore, passed in by the east end of Hyannis breakwater, and anchored in the midst of the small boat fleet off the Hyannisport pier at 5:55 A. M. A scene of desolation confronted us. Two small boats had filled and sunk at their moorings, four had gone ashore, several were afoul of each other, and others had booms or rigging adrift. We subsequently learned that the wind had blown sixty miles an hour during the greater part of the night. Sparks said that in thirty-seven years' experience at sea he had never passed a more uncomfortable night. A 50ft. fishing schooner that came in at mid-night reported being boarded by a sea just outside Bishop and Clerks' Light that smashed two dories to pieces and washed one of her anchors overboard.

Just after we had anchored I saw my uncle putting off to his yawl and repeated hailing brought him over to us, although he did not know who we were until he was close

alongside. To say that he was astonished to hear that we had been out in the blow all night and had just come in, is putting it mildly. We did not keep him waiting long, but putting a hasty furl in the mainsail, grabbed our grips and went ashore. When we opened our bags Sparks found his entire outfit wringing wet, while the only dry articles of which I could boast were a handkerchief and an undershirt. Borrowed clothing, a good rub down and some hot tea soon put us to rights, and we passed most of the day in the land of nod.

Monday, July 20, was the finest day of the whole trip as far as weather went. The sea was smooth, the sun warm, and a gentle S. W. was blowing when we hoisted our sails at 8:45 A. M. My uncle in his yawl, the Carina, was to accompany us as far as Newport. Just as we were about to break out the anchor we discovered that our centerboard rope had parted. Just what caused it to give way at that moment I do not know. The Carina had just slipped her moorings, so I hailed her and told them to go on without us. There were only two ways to remedy our mishap. One was to swim underneath her and tie a new fall to the centerboard, and the other was to haul out. I tried the first without success, and another fellow tried and he failed. There were no facilities for hauling out and it would not do any good to beach her, as it was necessary to have her keel three feet above the ground before the matter could be fixed. That is the great trouble with boats whose centerboards are all in the keel. If they get a few miles from a marine railway they are helpless in times of trouble.

We finally got the board back into the box and held it there by means of a sling. By that time, the afternoon was well started, the tide in the sound had turned against us and the wind (dead ahead) had breezed to a double reef extent, so we delayed our departure to the following day.

Tuesday, July 21, the weather was most disagreeable. A strong S. E. wind was blowing and a series of hard rain squalls swept in from the sea. It was not a day to leave port in such a boat as the centerboardless Ayaya, but I had already been longer on the trip than I had expected, so was anxious to get the boat to Bristol and be rid of her. Accordingly I decided to make a start, weather or no weather. We accordingly donned our oilskins once more, and under double reefed mainsail alone got under way at 9 A. M.

Once out of the harbor we could lay the course with eased sheets, and as she did not have quite life enough to suit me, we cracked on the big jib soon after passing out by the west end of the breakwater. This was a big help. We had not gone far before we lost sight of the land, owing to the rain.

At ten o'clock we caught a nasty rain squall which brought more wind with it. This was just as we were nearing Collier's Ledge beacon. We dowsed the jib during the squall. The rain fell furiously in big drops that bounced off of the sea when they struck it. The wind hauled to S., so that, with the leeway we made owing to the lack of centerboard, we were barely able to make good our course even with our sheets pinned in hard. When the squall let up we reset the jib. For a while the wind was very light. As it continued southerly we essayed a lurch offshore because the prevailing wind in the Sound is S. W., and I thought that I might as well climb out to weather before it absolutely headed us. But going offshore in the light air under reduced canvas and straight into the S. E. swell was an almost impossible task—the shock on meeting each sea spilling all the wind out of our sails. We consequently went back on to the port tack.

At eleven o'clock another rain squall passed over us, bringing little wind, but what there was of it was S. W.—nearly dead ahead. We slatted through it somehow, and when it let up the weather began to clear off for good, so that we shook out our reefs.

By this time we were fairly well down toward Succunnesset Point. The S. W. wind fell off to a mere series of chills in which we managed to out-drift a large catboat which had come out of Cotuit and was apparently bound for the Vineyard. The west going tide kept us moving forward all the time despite the lack of wind. We worked to weather quite close in by the Point and between it and Succunnesset Shoal, the water being deeper near the Point than further out.

Finally the wind came east about one o'clock, and we slowly drew down Vineyard Sound, striking across L'Homme Dieu Shoal and just west of Hedge Fence Shoal, crossing the Sound on a slant in order to go outside of the Elizabeth Islands which run out about W. S. W. from Woods Hole.

The tide turned against us at two o'clock, and the rest of the afternoon was a slow drag. At times the wind would take on enough strength to drive us through the water at a very good rate of speed, and at other times it would let up to such an extent that we made little or no progress over the bottom. But so long as the wind was fair and we were able to stem the tide I wanted to keep her going, so passed Vineyard Haven and its marine railways without stopping. We met a number of steam yachts which were evidently the vanguard of the New York Y. C. fleet which was due to run from Newport to Vineyard Haven that day. We also met quite a fleet of Buzzard's Bay 21ft. and 15ft. knockabouts, bound over to see the fleet, I suppose.

NOBSKA LIGHT.  
Photo by J. M. B., Jr.

At 3:13 we had Nobska Light abeam (N.  $\frac{1}{2}$  W.), distant about two miles. The wind was then so light that we were barely holding our own against the tide. A bunch of eight steam yachts passed us at this point. Astern of us we could see fog rolling in, and there was a good deal of it in Buzzard's Bay back of Naushon Island. We decided that if we could reach Tarpaulin Cove we would call it a day, so gybed our boom over to port and stood across the Sound.

At 5:30 P. M. we were quite close to the Naushon shore, and just west of Lackey's Bay. Here the wind grew very faint and the tide began to sweep us back, but by dint of perseverance we worked right in to the beach and caught the back current. With the aid of this we went ahead, though slowly. Tarpaulin Cove began to look so far away that we had supper while working past the Forbes' houses on Naushon, and just before a light S. W. wind brought in a thick fog at 7:30 P. M.

We now heard a great amount of whistling in addition to the fog bell at Tarpaulin Cove. One steamer in particular seemed to be getting in very close. Suddenly her lights loomed up through the fog and we thought she would pile up on top of us until we saw that she was at a standstill. We could not imagine what she was until we saw that she had a big sloop in tow. Then we heard a voice from the steamer call to someone on the sloop, "Capt. Rhodes!" That, of course, identified the two as the Constitution and her steam tender the Satellite. We stood right inshore to pass ahead of them, and finally anchored in three fathoms of water at 8:35.

There was a prodigious amount of bell ringing going on, showing that several other yachts were anchored near us, and before long some more drifted in and anchored. I was amused by a conversation on one fairly large cutter that ranged in not far outside of us. As she shot up into the wind someone aft called out, "Let go the anchor." A voice forward replied, "What, now?"

"Yes, now!" from aft brought the ready response, "Ali right, in a minute!"

How is that for yacht discipline à la the N. Y. Y. C.? Wednesday, July 22. In the early morning there was a flat calm and thick haze. Anchored near us were the cutters, Senta and Isolde, the sloop Volunteer, and the 18ft. knockabout Broncho. The owner of the latter kindly loaned me his tender in which to go ashore. There is but one house at Tarpaulin Cove, but one can buy almost anything there except fresh meat and vegetables. There is a well of excellent water behind the house, so I filled our water jugs, which was my principal errand.

At 8:22 we got under way. The wind at that time was light S. S. E., observation five miles. As soon as we started the wind fell flat, but a favoring eddy swept us out into the Sound, where we caught the first of the west-going tide.

Shortly before nine o'clock the wind came in from the S. S. W. For an hour it was light and baffling. We passed the entrance to Robinson's Hole at 9:45, and continued along the shore of Pasque Island.

We decided to go through Quick's Hole, both because that route is the shorter one, and because we hoped to find more wind in the lee of the islands. We entered the Hole at 10:15 and passed close aboard of the yawl Petrel, which was anchored just south of the red nun buoy.

Quick's Hole is a wide passage with no obstructions. It was the favorite approach of the whaling fleet to New Bedford. The only difficulty is the tide, which, while not so strong as in Woods and Robinson's Holes, runs with strength—rather more swiftly than Hull Gut, for instance. We had a fair tide. I may be wrong, but it is my impression that that very useful work, "Eldredge's Tide Book," is not right about the Quick's Hole current. I think it turns *three hours* before the current does off Gay Head.

While passing through the Hole I smashed my smoked glasses, much to my sorrow. They are a great saving on the eyes, especially during calm weather, when the water reflects the sun's rays to such an extent that one's eyeballs are apt to become bloodshot unless protected.

We found a fine south wind in the lee of Nashawena Island, as we had expected, and the Ayaya began to step along at a four knot clip. We kept close in to the beach, and obtained a fine look at Nashawena harbor when we passed it. Our course (W.  $\frac{1}{2}$  N.) was between Cuttyhunk and Penikese Islands, thus crossing the edge of Cuttyhunk Roads (a fine place in which to lie in any kind of a southerly blow). The passage between the islands is plainly marked by four spar buoys, and carries a depth of seventeen feet. Going through this channel we met with a head tide, or, more properly, a back current. In the Sound and the Bay the tide was setting to the west-

ward, but it ran east between Cuttyhunk and Penikese Islands, as well as setting south up the Roads and out through Cantapitsit Channel, between Cuttyhunk and Nashawena. This back current was quite strong, although the moon was then only half way to the full.

We passed the last of the four spar buoys at 11:23 and made our course W. by N. for Schuyler's Ledge buoy. Inside of us the weather was quite clear, and we could see Meershaum and Barney's Joy Points distinctly, although they were five and a half miles away from us. Outside of us, however, it was quite thick, and the fog signal at Cuttyhunk Light was blowing strenuously. Some distance to the north and east of the lighthouse we could see another tower of about the same size. It looked like an abandoned lighthouse, but I knew that there was nothing of the kind on the island, and I was the more puzzled by it from the fact that it was not there when I last passed that side of Cuttyhunk in 1901. I learned subsequently that it is a monument erected in memory of Bartholomew Gosnold, who discovered the island in 1602, and who named the group of islands for Queen Elizabeth. The monument stands upon a little island in a pond and marks the spot where Gosnold erected a small fort or block-house.

Over a smooth sea we ran before the moderate S. S. E. breeze. At times we slipped along fast enough to make

the rope sling, which was holding up the centerboard, sing dismally, like an Æolian harp, and at other moments, when the breeze lightened, we would slow down to a three knot gait. Our course took us inside of the spar buoy on Ribbon Reef and outside of the Hen and Chickens Lightship. The haze gradually faded away and we began to see the New York Y. C. fleet far outside of us as it ran for the Brenton's Reef Lightship. We made out two of the 90-footers, but did not place the third for some time, until we saw a boat that looked to be large enough, but whose topmast was either housed or carried away—presumably the latter.

The Petrel, which we had seen in Quicks Hole, overhauled and passed to leeward of us at 12:43 P. M. We met a Buzzard's Bay 30-footer and one or two smaller craft on our run across to West Island. The sun came out quite bright.

We had the Elisha Ledge can abeam at 2 P. M., passed Schuyler's Ledge twenty-six minutes later, and had Sakonnet Light abeam at 2:29. The wind now let up considerably, so that for a while we feared a flat calm.

The speedy steam yacht Velthra (Mr. Bremer, of Manchester, Mass., owner), passed close under our lee at 3:15, and I could see a fellow on board of her pointing out the three red keys on our mainsail (emblematic of the Ayaya's first owners, the Keyes brothers) to a companion. I imagined he recognized the boat. This little episode seemed to bring us luck, for it was soon followed by renewed vigor to the breeze and our Æolian harp resumed its discordant dirge.

Passing inside of the Seal Rock buoy, we had the one on Brenton's Reef abeam at 3:58, and gybing over soon after that made for the bell on Butter Ball Rock (off Castle Hill). We passed this at 4:41, and, running in by the Dumplings continued on our way up the bay, despite the great temptation to run into Newport for a look at the fleet.

The S. S. E. breeze had considerable weight to it by this time, and with the aid of a fair tide we were up with Bishop Rock bell buoy at 4:52 P. M. Nineteen minutes later the wind had become too much for whole sail, so we slacked away the mainsail and tied in two reefs as we ran along. This was none too much, and when the flaws struck us I was glad, for once, to have a weather runner.

A black squall began to make up in the west, back of Prudence Island, and the rest of the way to Bristol was a race to get in before the squall broke. We left Dyer Island to starboard and made a bee-line for Siren Light (off Hog Island), which we left to port at four minutes past six o'clock. The home stretch into Bristol was so nearly dead before the wind that we had to watch her sharply to prevent an unexpected gybe, but drove her for all we were worth. I finally went forward and dowsed the jib preparatory to getting the anchor ready. We carried the latter on the bow with one arm curved around the bitts to which the anchor was secured by a lashing around the crown. Another strop from the ring to the stem head held the other end. The warp, which was always bent on, ready for use, was coiled just aft of the mast. A strop through the coil and around the mast prevented the former from sliding overboard. It was not a

AYAYA.

Photo by Willard B. Jackson, Marblehead.

particularly good place for the warp, but there was no room for it in the cockpit, and I was unwilling to have it unbent and stowed below.

By the time the anchor was ready we were close in to the Herreshoff yard, so ran into Walker's Cove and anchored in eight feet of water at 6:23 P. M. And that was the end of a cruise begun on the *thirteenth* of the month.

### Narragansett Bay 22ft. Sailabout Association.

TWENTY-FIVE Rhode Island yachtsmen met at the Crown Hotel in Providence on Dec. 29. Before the evening was over a new organization had been formed, which will be known as the Narragansett Bay Twenty-two Foot Sailabout Association. The following officers were elected: President, W. H. Thurber; Vice-President, C. F. H. Olney; Secretary and Treasurer, C. F. Tillinghast; Inspector, Scott C. Burlingame; Judges, F. A. Barnes, Wallis E. Howe, George E. Darling. The Association started with twenty-two charter members. Besides those already named, the members are Newton C. Arnold, Sumner H. Foster, A. A. Packard, R. W. Comstock, Jr., W. S. Almy, Howard E. Barlow, Walter D. Wood, E. H. Tingley, O. K. Thurston, A. E. Johnson, Charles K. Wheelwright, Allen H. Chase, Joseph C. Hartwell, Malcolm McNaught and Albert C. Davis.

It is the desire of those interested in the new association to establish a fast and seaworthy class of keel or centerboard boats suitable for day sailing, racing or cruising that will be very much of the same type but still of different design.

The by-laws provide for the usual executive officers, an inspector, who is practically a measurer, and a board of three judges, to whom all protests and disputes are to be referred. The judges are also to award the association championship pennant to the winning yacht for the season. The method of scoring in this class is shown in the following section of the by-laws:

The championship of the Association for a given season shall be awarded to the yacht winning the greatest number of points in the races sailed under the auspices of the Narragansett Bay Yacht Racing Association, and in all open races held by the clubs which are members of that Association, provided, in the opinion of the board of judges of this Association the course provided by the various yacht clubs give each yacht a reasonably even chance of winning so far as depth of water may affect the result.

Five points shall be allowed for a sailover, 4 points for winning first place, provided at least two yachts start; 2 points for second place; 1 point additional for every yacht defeated, and 2 points additional for sailing over the entire course.

Order of finishing, total number to start:

	1st	2d	3d	4th	5th	6th
One sailover.....	5					
Two .....	7	4				
Three .....	6	5	2			
Four .....	9	6	3	2		
Five .....	10	7	4	3	2	
Six .....	11	8	5	4	3	2

Any yacht that crosses the starting line after the starting signal has been given, shall be, for the purpose of determining points, considered to have raced. Any yacht which does not finish within 40 minutes of the yacht which has finished the next ahead and all that finish later shall be considered to have withdrawn, and shall not be entitled to any points. Yachts which do not belong to the Association which may race in this class shall not be considered in determining points.

The definition and limitations adopted by the meeting were as follows:

**Definition.**—A 22ft. cabin yacht is intended to be a seaworthy type of cruising and racing yacht, substantially constructed, properly ballasted, with moderate sail plan, and cabin accommodations below, and conforming to the limitations herein mentioned.

The length of the load waterline, with full equipment, but without crew aboard, shall not exceed 22ft. The measurer at the time of taking his measurements shall insert a round-headed brass screw not less than No. 14, as a distinctive permanent mark at each end of the load waterline.

The draft for keel boats shall not exceed 5ft. 6in. The beam and load waterline shall be at least 7ft. 10in. for keel boats and 8ft. 8in. for centerboard boats.

The over all length shall not exceed 35ft. Neither the forward nor after overhang shall exceed 7ft. 6in.

A square-ended, snub-nosed or square-sided bow shall not be allowed. The beam at a point half way between the waterline forward and the extreme bow shall not exceed 45 per cent. of the greatest waterline beam. The girth of the hull at said point shall not exceed the number of inches represented by the sum of the beam plus the depth of hull plus five, measured at the same point. The freeboard at same point shall not be less than 30in. If the freeboard at this point be more than 30in., the girth shall be measured at the 30in. point.

If the lengths taken above are shortened by any hollows, jogs or reverse curves, the measurement shall be taken to the straight lines bridling the same.

The freeboard shall not be less than 22in.

The sails shall consist of mainsail, jib, balloonjib and spinnaker. The measurer shall be provided with the correct sail plan of any boat to be measured, and shall cause distinguishing marks to be placed on the spars, as follows: On the masts at the tack and at the throat of the mainsail; on the boom at the clew of the mainsail, and on the gaff at peak of mainsail. There shall be only one mark at each point. These marks shall be black bands, not less than 1/2in. wide, painted around the spar, which shall be the official marks. The inner edges of the bands shall mark the limits to which the sails may stretch without exceeding the sail area allowed. No part of any sail shall extend beyond these marks, and the marks shall always be kept visible. In no case shall the area of the mainsail exceed 80 per cent. of the entire area allowed. No yacht when close-hauled shall carry any jib other than the working jibs, for which she has been measured. Spinnakers and all headsails, the actual area of which is not measured, shall be triangular. No spinnaker shall extend above the spinnaker halyard block, or beyond the end of the spinnaker boom. No jib shall extend above the highest jib halyard block, or beyond the end of the bowsprit.

The distance from the center of the mast to the jibstay at deck or bowsprit or balloonjib fastening multiplied by the height of a point not over 9in. below the fastening of the headstay on the mast above the deck shall not exceed 300 per cent. of the actual area of the working headsail.

The spinnaker boom, when placed horizontally against the foreside of the mast shall not extend beyond the forward point of measurement. Spinnaker boom must be carried against the mast when in use in all races.

The cockpit shall be watertight, self-bailing, with scuppers draining outboard.

The sides shall not be less than 10in. high, and the top shall have an area of not less than 40 sq.ft.

The cabin shall have suitable transoms, the tops of which shall have a combined area of not less than 30 sq.ft. The sides and tops of the transoms, and the cabin floor shall be not less than 1/2in. in thickness. The cabin shall be sheathed from top to transom to the deck for a space not less than 9ft. in wake of cabin house. Sheathing shall be not less than 1/4in. thick.

The equipment shall include an anchor not less than 35lbs. in weight; and a cable of not less than 30 fathoms of 1 1/2in. rope, also bucket, compass, fog horn, riding light and boat hook.

A metal centerboard shall not exceed 1/2in. in thickness, and wooden boards shall be weighted only just sufficiently to sink them.

Hollow spars, fins, hollow fins or deadwoods, more than one centerboard or rudder shall not be allowed.

The crew shall be limited to four persons.

The keel, stem, frame, house and deck beams shall be of oak or its equivalent in strength and solidity.

The minimum sectional area of frames shall be 1 1/4 sq.in. for a distance of 20ft. near the center of boat, and 1 1/2 sq.in. for the remaining length; of deck beams, not less than 1 1/2 sq.in.; of house beams, not less than 1 sq.in. The spacing of the frames and beams shall be not more than 10in., center to center. A proportional reduction in sectional areas shall be allowed for a closer spacing.

There shall be at least six floors, 9 sq.in. in sectional area in way of the keel, and two at mast step, at least 6 sq.in. in sectional area, with floors at all intervening frames, at least 2 1/2 sq.in. in sectional area.

The planking shall not be less than 7/8in. thick, finished, except if double planking is used, it may be 13-16-inch thick, finished.

Deck clamps shall run from stem to stern, with a minimum cross-section of 4in. for at least half the length. Clamps to be of yellow pine or its equivalent in strength.

The deck and sides of cabin trunk to be at least 7/8in. thick, finished.

The top of cabin trunk to be at least 3/4in. thick finished.

A reduction of 1/8in. in thickness of deck or top of cabin trunk allowed if canvas covered.

The original draft of the restrictions called for a total weight of 6,500 pounds, exclusive of inside ballast, and for a sail area not exceeding 600 sq. ft., but there was some doubt expressed on these points, and they were finally left to the further consideration of a committee, consisting of C. F. Tillinghast, C. F. H. Olney and George E. Darling.

### Massachusetts 30ft. Cruising Yacht Association.

There has been formed, with the object of projecting a class of 30-footers, an association, which is to be known as the Massachusetts Thirty-foot Cruising Yacht Association. Its officers are Frank Gair Macomber, President; T. K. Lothrop, Jr., Vice-President; C. Dexter Wainwright, Secretary and Treasurer, and Samuel N. Small, Measurer.

#### By-Laws.

I. Name.—The name of this Association shall be the Massachusetts Thirty-foot Cruising Yacht Association.

II. Object.—To establish a seaworthy type of boat suitable for racing in the waters of Massachusetts Bay, and for cruising outside of those waters, with substantial construction, moderate cost, and good accommodations.

To maintain that type of boat by making the rules, definitions and limitations of a Massachusetts 30ft. cruising yacht.

To allow as much latitude in design as is consistent with the production of a healthy type of boat in that class.

III. Officers.—There shall be a President, Vice-President, Secretary-Treasurer, Measurer, and Executive Committee. The first four officers shall be elected at the annual meeting until the next annual meeting, and shall continue to hold office until their successors are chosen. The Executive Committee shall consist of the President, Vice-President and Secretary-Treasurer, ex-officio, who may, at their discretion, elect two other members. Vacancies in any office may be filled temporarily by appointment from the Executive Committee.

IV. Meetings.—The annual meeting shall be held on the first Tuesday in April in each year. Special meetings shall be called by the President, or by the Secretary, at the request of any two members. Five members shall constitute a quorum. After July 1, 1904, only owners of Association boats shall be entitled to vote, and each Association boat shall be entitled to one vote. Voting by proxy shall not be allowed.

V. Membership.—A Membership Committee, consisting of the President and Secretary-Treasurer, ex-officio, shall act upon all applications for membership. Any person is eligible to membership. Each applicant must be proposed and seconded in writing to the Secretary.

VI. Dues.—Annual dues of \$1 each shall be charged to all the members to defray the current expenses of the Association. These dues shall be payable within sixty days after the annual meeting, and all members whose dues are not paid within that time may be suspended from membership and deprived of all the privileges of the Association by the Executive Committee. Members whose dues are still unpaid at the following annual meeting shall be dropped from the Association list, and may only be reinstated by paying all their dues to the date of reinstatement.

VII. Measurer.—The Measurer shall inspect and measure all boats when requested by the owner; and, when satisfied that they are within the definition and limitations of the Association, he shall report favorably to the Secretary. He shall issue a duplicate report to the owner. Any owner dissatisfied with the Measurer's report on his own or any other boat, may appeal to the Executive Committee, and the Measurer may also obtain its decision as to all matters on which he is in doubt.

VIII. Executive Committee.—The Executive Committee shall decide all questions relating to the rules of the Association and their observance. Its decision shall be final. It shall have the power to disqualify boats which do not comply with the spirit as well as the letter of the rules.

IX. Measuring Fee.—The fee for measuring shall be five dollars; in case of remeasurement the same season, four dollars. If the measurement is on protest, it shall be paid by the party in the wrong.

X. Amendments.—These by-laws and the definition and limitations of an Association boat may be amended at any meeting by a three-fifths vote of those present, provided notice of the proposed amendments is given in the call for the meeting.

#### Definition and Limitations.

1. Definition.—A Massachusetts 30ft. cruising yacht is a seaworthy type of cruising and racing yacht, substantially constructed, properly ballasted, with moderate sail plan and cabin trunk, good cabin accommodations, and conforming to the limitations hereinafter stated. Hollow spars shall not be allowed. Double rudders, centerboards, hulls and keels are prohibited, also hollow keels and fin-keels. An evasion of the spirit as well as of the letter of this definition and also any of the following limitations shall disqualify a boat from racing in this class. See By-Law VIII.

2. Length Over Oll.—The over all length shall not exceed 48ft.

3. Length Load Waterline.—The length on the load waterline, with full equipment, but no crew on board, shall not exceed 30ft. Centerboard boats must have the board up.

4. Overhang.—The overhang at either end shall not exceed 10ft.

5. Beam, L.W.W.—The beam at the load waterline shall not be less than 10ft. for keel boats, and for centerboard boats not less than 11ft.

6. Draft.—The draft for keel boats shall not be more than 7ft.; and for centerboard boats not less than 4ft. 3in., for at least 10ft. length of keel.

7. Freeboard.—The least freeboard shall not be less than 30in.

8. Bow.—A square-ended, snub-nosed, or square-sided bow shall not be allowed. The girth at a point half way between the forward end of the load waterline and the foreside of the stem shall not be more than 5 1/2in. plus depth plus beam at that point. The freeboard at that point shall not be less than 43in. The freeboard may be as much greater as desired, in which case the girth, beam and depth of the hull at that point shall be measured 43in. above the water; otherwise they shall be measured from the top side of the covering board. The width at that point shall not be more than 36 per cent. of the maximum waterline beam.

9. Sails.—Mainsail, jib, spinnaker and balloonjib may be carried. The mainsail shall not exceed 80 per cent. of the entire sail area allowed. No yacht, when close-hauled, shall carry any jib or staysail other than those working jibs or staysails which have been measured. Spinnakers and all head sails shall be triangular. No jib shall extend above the highest jib halyard block, or beyond the end of the bowsprit. No spinnaker shall extend above the spinnaker halyard block or beyond the end of the spinnaker boom.

10. Sail Area.—The actual sail area of the mainsail and jib or staysail shall not be more than 1,250 sq.ft. The measurer shall be provided with the correct sail plan of any boat to be measured, and shall cause distinguishing marks to be placed on the mast at the tack, and throat of the mainsail, on the boom at the clew of the mainsail, and on the gaff at the peak of the mainsail. These marks shall be black bands not less than 1in. wide, painted around the spar. The inner edge of the bands shall mark the limits to which the sail may stretch without exceeding the sail area allowed.

These marks shall always be kept visible. The actual area of the jib or staysail shall be measured. The number of square feet in each sail shall be stamped on each sail by the measurer, in full, round, black figures, not less than 3in. high. This number shall be known as the official number of the sail, and shall always be visible. Any yacht using a sail not bearing the official number shall be disqualified, any rules to the contrary notwithstanding. The distance from the center of the mast to the outer end of the spinnaker boom, when the latter is at right angles to the mast, multiplied by the height of the spinnaker halyard block above the deck, shall not exceed 430 per cent. of the actual area of the working head sail. The distance from the center of the mast to the forward end of the bowsprit, multiplied by the height of the highest jib halyard block above the deck, shall not exceed 300 per cent. of the actual area of the working head sail.

11. Cabin Finish.—There shall be a substantial partition at the after end of the cabin, two permanent lockers, and suitable berths or transoms for the accommodation of the crew. The cabin floor shall be 12ft. long, at least, by 3ft. wide. Further fixtures may be allowed as provided in paragraph 13.

12. Outside Ballast.—The outside ballast shall be at least 5,000lbs.

13. Inside Ballast.—The inside ballast shall be at least 500lbs., if there is no cabin finish except as required in paragraph 11. The estimated weight of any additional cabin fixtures to be included in the inside ballast; that is, if there are 200lbs., of additional fixtures, then only 300lbs. of inside ballast will be required, if there are 400lbs., then only 100lbs. of inside ballast will be required.

14. Equipment.—There shall be on board an anchor weighing not less than 60lbs. and a cable of 30 fathoms length, compass, riding light, foghorn, bucket, boat hook, five life-preservers, and five suits of oilskin. All fittings and equipment herein mentioned shall be suitable for cruising purposes, and shall not be removed or substituted by articles smaller or of lighter weight.

15. Cockpit.—The cockpit shall be water-tight and draining outboard.

16. House.—The sides of the house shall be at least 13in. high and 1 1/2in. thick, and the minimum area of the housetop shall be at least 75 sq.ft.

17. Stem.—The stem shall be sided at least 3 1/2in. where it joins the covering board. The siding shall be increased to meet that of the keel.

18. Keel.—The minimum sectional area of the keel, including keelson and deadwood, shall be 30 sq.in. for 5ft. each side of the mast, tapering to 30 sq.in. at the ends. The depth of the keel shall not be less than 4in. The keel shall run from the foot of the stem forward of the water line to the transom at stern.

19. Frames.—The frames shall be of oak, with a minimum sectional area of 3 sq.in. Ten inches shall be the maximum spacing, if the spacing is less, the area may be reduced in proportion.

20. Floors.—The floors shall be of oak. There shall be two floors at the mast and eight over the keel at least 10 sq.in. in sectional area.

21. Shelf or Clamp.—The shelf or clamp shall be 6 sq.in. in sectional area for half the length of the boat, tapering to 4 1/2 sq.in. at the ends. The shelf or clamp shall run the whole length of the boat.

22. Bilge Stringers.—There shall be two bilge stringers on each side of the boat running the whole length of the boat. The bilge stringers shall each be at least 4 sq.in. in sectional area for one-half their length, tapering to 3 sq.in. at the ends.

23. Deck Beams.—The sectional area of the main deck beams shall be 6 sq. in. at least. There shall be two main beams at the mast, and one at each end of the cabin house, and one at the aft end of the cockpit. The sectional area of the auxiliary beams shall be 3 1/2in. at least, the half-beams, 2 1/4in., and the house beams, 2 sq.in. The maximum spacing allowed for beams shall be 10in. The sectional area may be reduced in proportion to the spacing if the spacing is less than 10in.

24. Planking.—The planking shall be of white cedar or yellow pine. It shall be finished full at 1in. thickness at least.

25. Decking.—The deck, cabin trunk top and cockpit floor shall be 1in. thick at least, or 7/8in. if canvas-covered.

26. Crew.—The crew allowed during races shall not be more than five men.

#### Scantlings.

##### TABLE OF DIMENSIONS AND AREAS.

17—Stem—	Sided at head.....	3 1/2in.
18—Keel—	Minimum depth .....	4 in.
	Sectional area .....	36 in.
19—Frames—	Oak, sectional area .....	3 in.
	Spacing (maximum) .....	10 in.
20—Floors—	Oak, sectional area.....	10 in.
21—Shelf or Clamp—	Sectional area, middle.....	6 in.
	Sectional area, ends .....	4 1/2in.
22—Bilge Stringers—	Sectional area, middle.....	4 in.
	Sectional area, ends.....	3 in.
23—Deck Beams—	Sectional areas, main.....	6 in.
	Auxiliary .....	3 1/2in.
	Half-beams .....	2 1/4in.
	Spacing (maximum) .....	10 in.
23—Cabin trunk top—	Sectional area house beams.....	2 in.
	Spacing (maximum) .....	10 in.
24—Planking—	White cedar or yellow pine, to finish full.....	1 in.
25—Deck—	Cabin trunk top and cockpit floor.....	1 in.
	Cabin trunk sides.....	1 1/2in.

### YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Hollis Burgess has sold the 25ft. knockabout Opah, owned by Mr. W. L. Davis, of Berlin, Conn., to Mr. Walter C. Lewis, of Boston.

\*\*\*

In our last issue we made mention of a 43ft. launch that is being built from Mr. C. F. Herreshoff's designs for a New York yachtsman. This launch is now under construction at the plant of the Chase Pulley Company, at Providence, and is not being built by the Herreshoff Mfg. Co., at Bristol, R. I., as we stated.

\*\*\*

Commodore Fred A. Price, of the Columbia Y. C., of Chicago, has announced the following standing appointments for next season: House Committee—J. F. Adams, chairman; H. A. Aronson, Walter E. Davis, Samuel C. Stewart, C. J. Duggan. Regatta Committee—Chas. E. Soule, Jr., chairman; H. J. Furber, W. L. Shepard, N. G. Conybear, Edward T. Balcom. Regular Entertainment Committee—George Tramel, chairman; William Lorimer, Jr., Chas. E. Soule, Jr. Special Stag Entertainment Committee—U. J. Hermann, chairman; G. J. Martel, Robert L. Doran, D. E. Nelson. Finance Committee—James A. Davis, chairman; J. B. Palmer, W. Y. Perry. Delegates to L. M. Y. A.—Edward T. Balcom and Henry R. Davies. Delegates to I. L. Y. A.—William Lorimer, L. T. Brainin, and Wm. Cothroll. Fleet Surgeon, Edward H. Hayes; Judge Advocate, Edward E. Gray; Fleet Captain, Vernon C. Seaver; Measurer, William Cothroll; Historian, Le Roy Cook.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Designing Competition.

\$225 in Prizes.

Two designing competitions have been given in *FOREST AND STREAM*. The first was for a 25ft. water-line cruiser; the second was for a 15ft. one-design class. Both competitions were very successful. The great interest taken in those competitions has prompted us to give a third one, open to amateurs and professionals. The prizes which will be given are as follows:

First prize—\$100.

Second prize—\$60.

Third prize—\$40.

Fourth prize—\$25, offered by Mr. Theodore Zerega for the best interior plan.

The designs are for a yacht conforming to the following conditions:

I. Centerboard cruiser, 40ft. l. w. l.

II. Boat must not draw over 6ft with centerboard up.

III. The lowest freeboard to covering board must be 3ft.

The design must be modern in every particular, without containing any extreme or abnormal features. The conditions have been made as simple as possible, that competitors might have all latitude and scope in working out their ideas. We wish to produce an able and comfortable cruising boat, one that shall have ample accommodation for two or three men living aboard for a period of several months, and one that can be easily managed at all times by two or three paid hands. The draft is restricted to 6ft. in order that the boat may have access to nearly all the desirable harbors, and may, thereby, widely increase her cruising field.

### Drawings Required.

I. Sheer plan, scale  $\frac{3}{4}$ in.=1ft.—showing center of buoyancy, center of lateral resistance and center of effort of both rigs.

II. Half breadth, scale  $\frac{3}{4}$ in.=1ft.

III. Body plan, scale  $\frac{3}{4}$ in.=1ft.

IV. Cabin plan, inboard profile and at least one cross section, scale  $\frac{3}{4}$ in.=1ft.

V. Two sail plans, scale  $\frac{3}{4}$ in.=1ft.; one as a yawl; one as a pole mast sloop.

In the case of the yawl rig the position and height of the mast and length of gaff are to be the same as in the cutter rig. Plans must show working topsail, and size of light sails.

VI. All ballast outside on keel except amount necessary for trimming.

An outline specification must accompany each design. The drawings should be carefully made and lettered. All drawings should be on white paper or tracing cloth in black ink. No colored inks or pigments should be used. The designs must bear a non-de-plume only, and no indication must be given of the author. In a sealed envelope, however, the designer must inclose his own name and address, together with his non-de-plume. All designs must be received at the office of the *Forest and Stream* Publishing Company, 346 Broadway, New York City, not later than March 1, 1904. All drawings will be returned, but postage should accompany each.

The *FOREST AND STREAM* reserves the right to publish any or all of the designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, who passed upon the designs submitted for the 25ft. with great care, has again consented to judge the designs and make the awards.

## English Letter.

At a dinner given to Sir Thomas Lipton by the American residents in London on Dec. 18, the occasion being the presentation to Sir Thomas of a service of silver plate from the people of the United States, the recipient of this splendid gift in a humorous speech, made the welcome statement that if nobody else stepped in in the meantime he intended to have a fourth and last try for the America's Cup. He qualified his announcement by saying that he would challenge again if he saw a reasonable prospect of success. Under the new rule, which has been adopted by the New York Y. C., and according to which any future challengers or defenders will have to be measured, it is certain that no such extreme types as *Reliance* or even *Shamrock III.* could compete with any prospect of success, as the heavy tax is placed upon shallow-bodied vessels sufficient to destroy all their winning chances. Nobody will regret the severe blow thus dealt at the skimming dish type, which, although undoubtedly the fastest yet discovered, has so many grave drawbacks and has done so much toward killing first class racing and encouraging one-design classes. Sir Thomas Lipton did not give any definite date for his next challenge, but he mentioned the significant fact that he had sent a letter on the subject to the New York Y. C., though he had not had time to receive a reply. The Hon. Henry Clay Evans, United States Consul-General, who occupied the chair at this dinner, spoke in glowing terms of the popularity which Sir Thomas Lipton had achieved in America, and of his unfailing good sportsmanship in spite of his three unsuccessful attempts to win the Cup, and he also made pointed reference to the friendly relations which had been fostered between the two great English-speaking nations by these international contests, especially those in which the *Shamrocks* had taken part. Everybody seemed full of good humor and good fellowship, and the message on the menu card written in code signals, and interpreted, "Better luck next time," was one which will be echoed widely by sportsmen in the United States.

The rumor that was afloat some time back to the effect that a Clyde syndicate were going to send over a challenge for the America's Cup, appears, like many others, to have been entirely without foundation. There is but little doubt that Sir Thomas Lipton will be the next challenger, as nobody is likely to want to step in if he is willing to try his luck once more—this time, as he says, "with a four-leaved Shamrock."

The Council of the Yacht Racing Association have

under consideration the difficult and vexed question of improving—in fact, reviving—class racing among the bigger boats. This last season class racing in British waters stopped at the 52-footers. There was one 65-footer on the stocks at Fairlie, but as there was no likelihood of a competitor, she was not completed. The big class gave no sign of existence, and the question which the Yacht Racing Association have to face and settle is what measures should be taken to encourage owners to build. There can be no doubt that the first thing to go for is construction. It is not only highly desirable, but it is absolutely necessary that the flimsy construction of the present day rater should be made impossible by a judicious set of tables of scantlings. There is no question but that owners refuse to build under the existing conditions, because their band-boxes of boats, when done with as racers, will only sell for junk. Nobody would buy an ex-racer, built under conditions, after one or two seasons of hard racing, with the intention of turning her into a cruiser, and the natural consequence has been that racing in the large classes has gradually died out. It is to be hoped that the Council of the Yacht Racing Association will tackle the subject with determination, for many owners would be found willing to build if they could rest assured that their vessels would stand the stress and strain of racing without leaking like sieves or becoming pulled and twisted out of all fair shape. The present rating rule is by no means a bad one, its greatest fault, perhaps, being that it is inclined to limit draft, but a good, wholesome type of boat can be built under it which can compete with success, the most notable performer being the Fife 52-footer *Magdalen*, which had such a marvelous record two seasons ago, and which was a perfect little ship, fit to knock out any weather.

It is probable that the Mediterranean regattas will this spring receive a much needed fillip through the gift of King Edward of a cup to be called the Mediterranean Cup. This trophy is for an international race from Gibraltar to Nice, open to all yachts exceeding 40 tons, Thames measurement. It is rumored that the Scotch boats *Kariad* and *Bona* will both take part in the race, and, if that is the case, they will no doubt do the round of the Riviera races. It will be a handicap match, of course; as many different types of boat will be entered. The task of bringing the fleet together by time has been allotted to Mr. Andrew Thomson, who will find his task sufficiently difficult to satisfy even him. The race is to be run in three heats: (1) Gibraltar to Palma in the Majorca Island. (2) Palma to Marseilles, and (3) Marseilles to Nice. The President of the French Republic has given a Swiss vase as a second prize, and there are two other prizes. Five yachts are to start or no race. The date fixed is Feb. 8.

A new class of 30ft. restricted raters is to be formed on the Clyde, which has already met with a fair share of support, as five owners have intimated their intention of building. The Y. R. A. rules of rating will be followed with a few wholesome restrictions as to construction, etc. A minimum draft of water at 0.6 water-line has been fixed, as it is considered that the present rating rule taxes draft too severely. A minimum has also been fixed for beam and freeboard, and it is certain that the result will be a nice, moderate type of boat with rather full body and no excessive overhangs. Double skinned planking, balance rudders and hollow spars (with the exception of topsail yards and spinnaker booms) are barred. The object aimed at has been to follow out the Y. R. A. rules of measurement, with certain restrictions to suit local conditions, and the class should work out well.

E. H. KELLY.

## Lake Yachting.

COMPLICATIONS in yachting, like complications in business, are at best unpleasant, and when possible should be avoided. Sometimes, however, they are unavoidable, as in the present instance, which comes from Detroit. It was owing to the Country Club's enthusiasm in trying to lead all other fresh water organizations, that the present predicament, which, in reality, is one of the worst tangles with which any regatta committee was ever confronted, was brought about, and it will be many days, if not months, before the unfortunate committee succeeds in freeing itself from the dilemma into which it has been placed. The adoption of the 21ft. restricted cabin class of the Columbia Y. C., of Chicago, was a wise move by the Country Club of Detroit, and will eventually do more in promoting fresh water yachting interests than the combined efforts which have hitherto been brought into play. It is a wide-awake organization, and there is no doubt of its ultimate success; in fact, it is bound to become the greatest factor on fresh water provided its present policy is maintained. It has many things in its favor, of which other clubs are deprived, and the time is not very distant, when the Country Club will be the recognized head of all fresh water yachting organizations. That the club's next annual regatta will eclipse all previous attempts, there is no doubt, but in order to make it even more so, several of the members set about in an endeavor to have the Columbia Y. C., of Chicago, send its entire fleet of 21-footers to compete for the Walker trophy. Accordingly, negotiations were begun with the owners of *La Rita*, *Sprite*, *Hoosier* and also *Pilot*, of Milwaukee. *Little Shamrock's* appearance was assured, as she won the trophy last September. The Columbia Y. C. is full of enthusiastic members, and it required little persuasion to induce them to agree to send their boats. Then the trouble began. Mr. E. L. Ford, of the Country Club, has a 21-footer which is rapidly nearing completion, and with which he has great hopes of winning the trophy. Mr. Ford raised an objection to *La Rita*, affirming that she was 1½ft. longer on deck than allowed by the restrictions, and that if the club hoped to be successful with the class, it would have to live up to the very letter of the law, as well as the law itself. Mr. Ford referred to the evil results attained in the M. Y. R. A. boats, through not limiting over all length, and stated that the same conditions would exist in their club if infringements of

the rules were permitted. Several members argued that *La Rita* conformed in every particular to the rules, except in this one, and that in reality she was a smaller boat than his own, with this single exception. Mr. Ford was not easily convinced, however, claiming that his craft conformed with the restrictions, and that in the interest of the sport he believed in abiding by the rules. He went even farther and referred to rule No. 4, which reads, "A square or snub nose bow shall not be allowed. The beam measure on deck at a point equi-distant from the water line forward and the extreme bow, shall not exceed 45 per cent. of the greatest waterline beam, and the deck line shall not run at an angle with the center line greater than 30 degrees. Any evasion of the spirit as well as the letter of this rule shall disqualify a yacht from racing in this class."

By referring to this rule Mr. Ford had something else in mind, as later events proved. He was of the opinion that *Little Shamrock*, which boat won the cup last season, and *Hoosier*, were both ineligible to compete, owing to rule No. 4.

To determine this point, he sent his engineer to measure *Little Shamrock* and *Hoosier*, and found the latter 4 degrees in excess of the restriction, and the former one half a degree over the limit. This settled for the time being *La Rita's*, *Little Shamrock's* and *Hoosier's* chances of competing for the trophy. It also placed *Little Shamrock* in an embarrassing position, inasmuch as she was officially measured by the Columbia Y. C. measurer before entering in the Lipton series. Accordingly, she was permitted to enter the Country Club's races, the regatta committee accepting the yacht's measurement. The question arises, can *Little Shamrock* hold the cup, now that she has been found not to conform with the restrictions? It is true that the Detroit Club permitted the yacht to sail, but was the fault that of the club, the owners of the boat, or an error on the part of the measurer of the Chicago Club? On the whole, it is unfortunate business, and admits of technicalities, which can't help but be detrimental to the sport. Nor is this the extent of the club's difficulties. It now develops that Mr. Ford's boat, which is rapidly nearing completion, has also been measured, and the result shows her to be 2 degrees in excess of the deck width, as specified in Rule 4. The very objection Mr. Ford had discovered in the Chicago boats, or to speak more correctly, non-compliance with the rule, was also apparent in his own boat. Two degrees don't appear much, but, nevertheless, it is not conforming with the rule, and in order to race his boat next season in the class for which she is being built, he will have to pull her in that amount, or take off the bow and build on another that will conform to the rule.

The Country Club, practically a new organization, has made big strides since its formation, and is rapidly forging ahead. It has everything in its favor, a splendid location, a fine club house, and an abundance of influence and financial backing. The adoption of the 21ft. class has brought it prominently before the yachting public, but it now has a tangle to unravel that will require a bit of diplomacy, in order to protect the future interests of the club.

The Detroit Boat Club yachtsmen, of Detroit, held its annual election of officers at the Russel House, Tuesday, Dec. 22. Many of the members were desirous of having the retiring commodore, John H. Smedley, succeed himself, and had he said the word, his election would have been assured, but he respectfully declined the honor, explaining that his recent election as commodore of the Interlake Yachting Association, in connection with other arrangements made for next summer, precluded his serving the club as he deemed necessary in behalf of its best interests. After Mr. Smedley, Mr. John L. Dexter, one of the most widely known men on the chain of great lakes, was the choice, and was elected by a unanimous vote. Following is the list of officers that were elected: Com., John L. Dexter; Vice-Com., C. A. Newcomb, Jr.; Rear-Com., E. F. Lloyd, Secretary and Treasurer, Norman Warren; Fleet Captain, Dr. T. B. Aldrich. Directors at large, Messrs. John H. Smedley, John A. Rathbone, Philo Wright and Dr. E. M. Houghton.

In the fourth year of its existence the Lakewood Y. C., of Cleveland, stands preeminent, as one of the most successful clubs on fresh water. Three years is not a very long time, as the club is just entering on its fourth year, but a great deal has been accomplished during that time by this lively little organization. The year just ended has been a most successful one and is very gratifying. A goodly number of races were sailed, and the usual number of protests and kicks were omitted, which speaks well for the club. The club also scored an enviable victory, capturing more than its share of prizes. *Chloris*, one of the M. Y. R. A. 21-footers, purchased last spring by Messrs. A. J. Phelps and A. J. Primett, made a remarkably good showing, beating everything in her class whenever she was raced. Not satisfied with this, she went out of her class, and in this she was equally successful. The outlook for next season is very favorable. A number of new boats are well under way and several of the members are at present discussing the advisability of building for the 21ft. class, which, from all appearances, is going to be the popular boat for next season. It is quite likely that the club will build a boat for this class, and there is talk of a syndicate boat, also for the same class. It is strange to note the change that has taken place on the lakes during the last year. Formerly the 40, 35, and 30ft. classes were about all that was used, but the tendency seems to incline toward the smaller craft. The 25ft. yawl for Dr. N. W. Brown is rapidly nearing completion. While there is nothing of the freak about her, she is a likely looking craft, and may develop a good turn of speed. The work of planking has begun on the 18-footer, building for Mr. Harry Watterson at Maltby's yard.

Rev. W. A. Dietrick has plans from the board of Mr. W. H. Hand, Jr., for a 30ft. cruising yawl, but she has not as yet been laid down. It is understood, however, that she will be completed by next spring. Several boats will be purchased by club members during the winter and added to the already big fleet. Mr. Henry

D. Whiton is negotiating for a big yawl with Eastern parties, and the announcement of her purchase is expected at any time. Mr. Ralph W. Cobb will either buy or have built a large cruising launch. Mr. C. W. Schmidt, Jr., has purchased the Canadian Cup trial boat Hamilton, from Messrs. Maytham and Johnson, of Buffalo. She was a 35-footer under the old measurement, but under the waterline rule sails in the 30ft. class. While her showing in the trial races admitted of improvement, she has since developed good speed and has yet to lose a single race. A jib and mainsail rig of 1,550 sq. ft. will supplant the cutter rig which she formerly carried. It is believed that more speed can be obtained with this rig, and she will also be easier handled. The canvas will be made by Messrs. Cousens and Pratt, of Boston, and she will be raced from Toronto to Chicago next summer in every fresh water event of any importance. Hamilton will be renamed White Ribbon. A white band will encircle the hull, be-

ginning at the waterline, and extending upward 6in. Following is the official score for the season just ended:

35ft. Class.		
	No. of Races.	Percentage.
Grayling, G. Gerlach.....	5	252
Shamrock, E. Van Scott.....	6	240
Marietta, E. Hall.....	3	89
30ft. Class.		
Orinda, W. H. Fenny.....	5	323
Mona, Rackle.....	4	315
Commodore Gardner, Ahlardt.....	3	220
Undine, Watterson.....	1	100
25ft. Class.		
Chloris, Primmitt & Phelps.....	5	500
Dreamer, Brodie.....	4	228
Vinco, Cobb.....	2	80
Raven, Millard.....	1	40
21ft. Class.		
Suzanne, G. Hall.....	5	328
Unique III., Wakefield.....	3	291
Ceylox, Krauss.....	2	155
Growler, Peterson.....	3	52

Special Class.		
Daphne, Hives.....	5	425
Truant, Horrigan.....	5	312
Nadje, Power.....	4	215
Mist, Watkins.....	5	153
C. W. SCHMIDT, JR.		

In view of the closer relations of English and American yachting we have decided to publish every fortnight hereafter a letter on English yachting matters similar to our Boston letter, which has met with so much approval. The English letter will be written by Mr. E. H. Kelly, who is one of the editors of the London Field. Mr. Kelly is one of the ablest and best informed writers on the subject in Great Britain, and we feel confident that his contributions will prove unusually interesting. We will also publish letters sent in by our regular correspondents in Cleveland, St. Paul, Chicago, and New Orleans.

# CANOEING

## Hector and Me.

BY C. S. HOWARD, TORONTO.

The Story which won the First Prize of \$50 in "Forest and Stream" Canoe Cruising Competition.

(Concluded from page 13.)

He would regard the irregular mass before him with puckered brow and draw geometrical figures upon it with the knife, in the hopeless effort to divide the thing evenly.

"Is that fair?" he would demand, after cutting it.

"Which is mine?"

"Either."

"Well, I'll take this one, but that leaves you rather more."

"You be hanged!" Hector would reply.

That fish, as Hector cooked it, was magnificent. I used to tell him so, but he was modest about it, and said that if he had a little flour he would undertake to show me how a fish could be cooked.

We went to bed immediately after clearing up, while on Hollow Lake—all except one night. And what do you think we did that time. Well—we played Indians!

Fancy Hector, head junior in the bank, the coming financier of the next decade, playing Indians! It seems absurd to those who don't know him. But he was born with an enthusiasm for the red man and his ways that amounted almost to worship. Until he was ten it was a matter for deep regret that he was not born an Indian. But he made a glorious make-believe one, and has, I suppose, scalped as many people in his savage childhood as any white man living. "The Indians never wash their faces, mother," was his indisputable argument in favor of doing likewise. Hector is older now, but although he washes his face without urging, he is still an Indian. As for me, I hold that holidays

"They don't see us," murmured Hector.

They didn't appear to. They stood motionless and silent, their thin forms silhouetted against the sky.

We were almost there. Our shadows fell upon the tree trunks, black and grim. Presently they fell across the saplings, but they didn't move.

Then Hector suddenly yelled a blood-curdling Indian war cry. It echoed about the hills and came back

Another on the South Branch.

to us several times. Hank's dog heard it, away up the lake, and set up a responsive howl.

Hector had leaped from the canoe as it touched the shore and buried his hatchet deep into the heart of that innocent, unsuspecting sapling. It fell without a groan and never knew its fate. It was the most realistic piece of burlesque acting I have ever seen.

A grin of satisfaction was on Hector's face as we paddled back to bed.

"You know," he remarked, as he spread his blanket, "if a fellow ever intended to write any poetry—Hiawatha or that sort of stuff—this would be the place to come to do it. Anybody could write poetry up here with this moonshine and that wolf howling, and so on. You ought to do it."

"I have too much sense," I objected, "why don't you?"

Hector has too much sense, perhaps. At all events he has never written the poetry.

And so the time passed. Saturday, Sunday, Monday, Tuesday and Wednesday, were all alike to us, but were unlike any other days I had ever seen before, or shall ever see again, I expect. It seemed months since we left the city.

But all things come to an end (though there are some that we think shouldn't), and on Thursday morning, May 21, we left Hollow Lake and paddled up Loon Bay to the four-mile portage.

The canoe trip was to begin again.

It was five minutes past ten when we began that portage, and at precisely one o'clock we emerged from the bush at the other end and dropped the bags, where we had already placed the canoe, and sat upon them, with our elbows on our knees and our chins in our hands, to rest.

We did a little thinking then, the result of which proves to my satisfaction, and equally to Hector's, that the Government map is wrong. That portage is not four miles long. For, although no one thinks more of our achievements and our capacity for achievement than I do—except it be Hector—walking twelve miles in three hours on that path, under weight for two-thirds of the distance, is more than we can accomplish. For there is a limit to our ability, though you may not believe it. Two miles and a half is about right, I think, but even at that it is a day's work quite heavy enough

for anyone. So we paddled across the bay and camped for the rest of the day.

It is sixteen miles from Dorset to Baysville, where the South Branch of the Muskoka begins. We paddled it the next day—Friday, May 22—before dinner. The wind blew strongly from the east, and as we were going toward the west, and had the wind behind us, as a consequence, we made good time. We followed the shore all the way.

It was eleven o'clock when we carried over the dam at Baysville. We had covered the distance in three hours and a half. Then the down-river work commenced, and the best part of the trip, although the most dangerous. For going down a strange river is a vastly different thing from ascending it, as every canoe man knows.

So we did a little sober thinking, Hector and I, as we started down, and decided, among other things, that assuming that we were not as good canoe men as old Tommy Harper and others, and that it was desirable not to come to grief, we had better use extreme caution about running rapids, and to subject each and every one to careful scrutiny before running it at all.

There are, according to our count, twenty-five rapids and falls on the South Branch. Of these we ran nine and portaged the remainder. (The guides who, of course, will run rapids that others will not, consider the South Branch an easy river to go down. But it would be a herculean task to ascend. No sane person ever thinks of coming up that way.)

The first rapid is admirably suited to the initial venture of the novice, and, in fact, none but the novice would call it a "rapid." But I remember how carefully we scanned the twenty yards of broken water, and how grave we were at catching sight of a tiny rock timidly sticking its head above the ripples. We shook

"We didn't run that one."

our heads and said we would have to be "very careful." Then we steadied ourselves on the bottom of the canoe, gripped our paddles tightly and anxiously pushed out. The current seized us and bore us gently down, while we bent over, with paddles ready, and stared ahead of us, and when at last we reached the bottom, and looking back, could perceive a slight disturbance on the surface, which marked the location of the "rapid," we drew a long breath and decided that running rapids was good fun—which it is.

We gained confidence and experience by this, but

No. 7 on the South Branch.

like Christmas, come but once a year, and if one cannot act in a light-headed way then—when can one?

So one night when the moon shone full and the lake was flat and smooth, we slipped out in the canoe and made a night attack upon some saplings which stood on the corner of an island. The conditions were not favorable to a surprise by commonplace white men, but first class Indians can accomplish wonders in the way of concealing their approach. We paddled in the shadow of the foliage, quietly, like thieves in the night.

Nearer and nearer we crept.

did not lose caution. Often we would stop paddling and listen intently for a moment. If we heard nothing on we would go and presently we would notice that the current appeared to be swifter. Then we would listen again, and perhaps could detect a faint hum of falling water. We would proceed cautiously then, until we could see the white water ahead. Sometimes we ran them, after making an inspection. In fact, we ran everything in reason between Baysville and Bracebridge. But there was one we thought about for a long time. We didn't run that one. As Hector says, "we could have easily enough, but what was the use?" We heard afterward about a man who tried to do it. He left a widow and two little boys. One can't be too careful on a strange river—or anywhere else.

But sometimes we had to portage, and the portages on the South Branch are hard. The further down the river one gets the worse get the portages. The paths—after one finds them—prove to be overgrown with bushes, and obstructed with fallen logs. Sometimes they lead through the bush and often through low, swampy ground. Once we let the canoe down a rapid on a long rope fastened to the stern, and ran along the shore jumping from rock to rock, keeping her off with a long pole. We got "eleven portages" down that day. At various points on the river attempts have been made to clear the land and farm it. But the class of settlers who, attracted by the offer of free land, and knowing nothing of farming, made these attempts, has proven to be weak in the flesh, although, perhaps (in some cases), of willing enough mind. We passed several of these "farms" that had been deserted, and the buildings upon them were falling to pieces. We camped that night at Fraserburg—consisting of two houses and a store—and I went to buy some milk at a melancholy-looking farm close at hand. As I approached, I saw a man leaning in the doorway. In fact, the whole place had that lazy, uncared-for "leaning" appearance. A cow sleepily chewed her cud while leaning against the fence, and the fence, as though taking example from the living creatures, had half fallen upon the ground. The yard was strewn with a great variety of rubbish, and the fields looked barren and starved.

The man, himself, was a curious looking creature with a red face and an odd kind of side whisker. He wore a pair of gray flannel trousers, red flannel shirt and a felt hat with a feather in it.

He jerked his head in the direction of the kitchen at my request for milk.

"She ain't milked yet," he replied, "she's doin' it now. Lizzie, fetch a chair out here!"

"Oh, no thanks," I hastened to say. "I ———"

"It ain't fer you, stranger. It's fer me," he reassured me, and to prove it he took the chair from the tired looking woman who had left her milking to fetch it, and sat upon it.

"What time is it?" he asked suddenly.

I told him.

"I ain't seen the time fer three days," he continued. "Not since I was in Bracebridge. I got a watch in there, but she's broke. Has been since last fall. I got a good clock, too, but she's kind o' out o' kilter, and I ain't never bothered to have her fixed."

"How do you know when dinner's ready?" I inquired.

"Smell it cookin'," was the unhesitating reply.

"How does your wife know when to cook it?"

"Cooks it when she gets hungry."

"I come here," he said, "twelve years ago. From Campbellford I come. And I would a done better where I was. But you see, I was out of a job about then and I got a free grant up here, and a fella kind o' has a home, ye see."

I saw. Such as it was, he undoubtedly had a home.

A Bad One.

"But I kind o' let things go," he continued. "What's the good of a man's killin' himself upon a place like this?"

I admitted the imprudence of such a step.

"Yaas," he agreed. "Lizzie, have you got that milk? The young fella's waitin'."

"How are you rigged?" he asked, as I paid Lizzie and prepaid to depart.

"For fishin'. How are you rigged?"

I displayed the trawling line and spoon we had used on Hollow Lake, and the expert looked it over.

"That all you got?"

"That is all."

He handed it back to me. "No," he announced, "you ain't rigged."

I felt hurt.

"I was goin' to say," he called after me, "that there was lots of speckled trout in that river. A fella can ketch all he's a mind to. But, pshaw! You ain't rigged! I used to fish meself once, but I don't now. A fella don't get time."

And there I left him, sitting with his chair tilted against the house, his hat over his eyes. I caught sight of Lizzie, working at a piece of cord wood with a buck saw.

I don't know what he thought of me, but from him

I acquired a pretty keen insight into the cause of that country's desolateness.

From Fraserburg to Bracebridge is nine miles by road. By river it must, I think, be more than twice that, but it is impossible to gauge it accurately, and nobody you ask can tell you. Distance, like time, would seem to be of no consequence. That is the difficulty of traveling on a river. We never knew how far we had gone. The distance is measured by portages.

"Bill Jones lives four portages down," they told us, "and one, two—and eight more—that makes fourteen from here to the foot of the high falls."

On Saturday we worked down to Muskoka Falls—three miles from Bracebridge by road. We had a fine day. The portages are not so hard below Fraserburg, and they are pleasantly interspersed with rapids, which can be run.

In places the river was "choked" with logs. The cut had been unusually large and the river was exceeding-

A Case of Portage.

ly low. Even then all the logs were not in the river or our passage would have been helplessly blocked instead of occasionally inconvenienced. The great bulk of the timber was being held in the streams on the other side of Lake of Bays, awaiting an opportunity to be towed across. A "head of water" was being held at Baysville to take them down.

But here and there, where the river was shallow, the logs were stranded for nearly the entire width, and we carried over them to the free water.

We camped that night just at the beginning of the last portage—one mile long—which would take us to the foot of the 200-foot fall.

When we crawled out of the tent the next morning the sky was clouded and everything pointed to bad weather before long. It came in ten minutes. We ate our breakfast sitting in the tent while a drizzle went on outside, and as it showed no immediate signs of ceasing, we stayed where we were until it should. But, as this was the first and only bad weather we had experienced, we had very little to say about it.

During a temporary lull we pulled the tent down, made up the pack and started. It began again, presently, as it always does under such circumstances, but we couldn't help that. We had to be home the next day. We carried the bags to the foot of the fall by a long, circuitous path through a farm and past a church (it was Sunday, too), and then made our second trip with the canoe on our heads. By the time we started paddling, we were unpleasantly damp, and then the rain, having done all possible mischief, stopped.

The logs now filled one half of the river, but were confined by a boom. The other half was perfectly clear, and as we paddled swiftly down, our spirits gradually rose, and we began to take a more optimistic view of things then when portaging in the rain. We had carried that canoe for the last time, and there was clear water to the lake—or should have been.

"It is a fortunate thing for us," I began to say, "that these logs——"

I said no more. We had swung around a bend and the river ran straight before us.

"Look there!" said Hector.

I was looking.

The boom had come to an end, and the logs spread across the river in a brown mass, in even rows, like the teeth of a comb, and with as little proportionate intervening space.

"Humph!" remarked Hector. There is a world of meaning in that word as he uses it.

So we paddled to shore, pulled the canoe out and considered the situation. The case was this: It was impossible to go forward; we hadn't time to go back; being without a balloon we could not go up; lacking a submarine vessel, we could not go down. There was but one course left, and the absurdity of taking it seemed so apparent that we purposely left it to the last. This was to climb the hill and portage to Bracebridge. The hill rose goft. above us. It was very steep and covered with bushes and fallen dead pine. A kind of cattle path began at the bottom and seemed to lose itself in a tangle of foliage half way up.

"What shall we do?" I asked. "Sit here and die?"

"Sit here and have lunch," suggested Hector. So we sat in the mud and ate it.

I felt irritated and out of patience. Why should we be inconvenienced in this way? What had we done to deserve such treatment? What reason had the owners

of the logs for thinking they owned the river? And so on. I generally feel like this when at all put out. I can't explain it, and don't attempt to justify it.

Not so Hector. He never loses his head. He is always cool and collected. He delights in seeing the difficulties multiply and takes infinite enjoyment in overcoming them. While walking along the boom he slipped and fell into the river. He scrambled out, whistling all the time, and presently engaged in the heart-breaking task of lighting a fire with wet wood and without paper. He was only moderately successful in this, producing nothing but great volumes of smoke. But he didn't mind. He sat on the smoke and put on dry socks and sweaters and wrung out his trousers.

While Hector was drying himself, a man came down the cattle path. He had a fishing line set there, he told us, and had come to see to it.

We presented the problem to him. We gave him the hypothesis just as it had occurred to us, and left him to find a solution. He sat upon his heels and drew diagrams in the mud with his forefinger. He presently announced a flaw in the hypothesis.

"Yuz are goin' to have rough portagin' for a piece," he said. "There ain't any other way out of this except climbin' the hill to the road. There ain't no other way. Then keep down the road to the crick. You can paddle then, till you hit the flats along the river again. Keep on over the flats under the railroad bridge, and the tail o' the jam's right there. I know, because I went that way all last summer, carried my dinner there in a tin pail when I worked in the mill. I guess it's a mile. Perhaps a mile and perhaps more than a mile. Yuz have a Peterboro likely?"

Yes, we had a Peterboro. (No other make is ever seen in that country.)

"Oh, you're all right, then," he remarked cheerfully, and left us. "You're good and light."

"Do you think we'll ever come out of this mess?" I asked Hector.

"Sure!" responded Hector. "We'll live to laugh at it."

Whenever an acquaintance tells me of an impossible incident in which he has figured conspicuously and expects me to match it with an experience of my own, I tell him of the time Hector and I carried around a log-jam on the South Muskoka one Sunday in May. I describe the incident as it was, without additions—and with few deductions. I mention the height and steepness of the hill, allude to the long, weary stretch of sand road, and touch upon the wide expanse of common. I draw his attention to the weight of our packs and canoe. But I tell the truth, though I do not repeat a little of the language we used at times, or dwell upon how utterly exhausted we were, when we dropped the canoe in the river once more. He might believe the story, then.

"Weren't you tired?" he asks.

"I had rather an ache in the neck," I reply.

"I guess I'll be going," he announces after a pause. He doesn't believe me, and I am not troubled with him any more.

That is why I don't tell about it here.

But—don't go down the South Branch in the spring before the timber is out.

If you still doubt me—then go.

The river was now free beyond all doubt. There was a little current and we paddled swiftly down stream. We passed our camping spot of just two weeks before, and there on the bank was the label of the soup tablet. We reached the mouth of the river

A little romance about these fellows.

just at sundown and camped on the shore of the lake.

This was our last night out. For another year we would be tied down to civilization and must sleep in a wooden bed. It was a most depressing thought, so we went early to our bed of spruce and slept to forget it.

It was a glorious day the next morning when we paddled across the lake to the narrows. I felt rather blue, and even Hector didn't say much. If it had been raining I shouldn't have minded so much. We thought of the office next day and the rows of figures. We looked at three drivers working on a boom of timber. We stopped and watched them, and contrasted their wholesome, healthy labor to our own drudgery. They worked in that slow, deliberate way that becomes like second nature to a man who works by the day without regard to the amount he accomplishes. But they seemed different to the lazy lot of water-soaked rivermen of two weeks before, somehow. There did seem to be a little romance about these fellows as they balanced on the boom and worked at the logs with peevies.

Presently one of them began to sing a little thing I remember singing when I attended kindergarten:

"What is this the flowers say?"

"What is this the flowers say?"

("Hi! Got any chewin' tebacca?")

"No!" we shouted in reply.

"Aw! what good are ye —"

"What is this the flowers say?  
It is lovely May."

Then he told the story of the tramp, who, two years ago, used a particular brand of soap.

"Dear sir," he ses, "Since then I ain't used no other."

And they all three laughed heartily. But we didn't laugh. We paddled silently to the landing and pulled the canoe from the water for the last time. We looked back at the lake and the islands and the men on the timber. And then we looked at the railroad, which would take us back to town.

We checked our baggage for Toronto, exchanged a few weather platitudes with the baggageman and retired to the boat house to don city-going clothes.

We said nothing. Hector whistled, and I knew he was thinking. He always whistles when he thinks, and to do him justice, he thinks better than he whistles.

He didn't speak until we got aboard the train.

"Say," he said, "I've been thinking of a great trip for next year."

## Carried off by a Lion.

GAME RANGER WOLHUTER, of the Transvaal Government game reserves, had on August 26 an extraordinary adventure with a lion, in which he showed great bravery and presence of mind. He was returning to the Sabi from a patrol, and tells the story in these words:

"I was riding along a Kafir path about an hour after sunset; it had been a long march, and I had pushed on ahead of the 'boys.' My dog barked at something, and a moment later I saw a lion crouching close to me on the off side. I turned my horse sharply in the opposite direction, and this no doubt caused the lion to miss the spring.

"I was unseated, and simultaneously I saw another lion coming at me from the opposite direction. The horse rushed off with the first lion in pursuit, and the second, no doubt considering me the easier prey, picked me up almost before I touched the ground, and, gripping me by the right shoulder in such a position that I was face up, with my legs and body dragging underneath his belly, proceeded to trot off down the path, uttering all the time a loud, growling, purring noise, just like, on a small scale, a cat does when she walks off with a mouse.

"I have read Livingston's account of his being taken by a lion, but the state of apathy and absence of pain which he speaks of were not at all present in my case. I suffered terribly, both physically and mentally, especially the latter; my thoughts were horrible, as at that time I saw no possible way of escape. The lion took me nearly two hundred yards, my spurs all the time catching in the ground until the leathers broke. Suddenly I bethought me of my sheath knife, which I carry on my belt behind my right hip.

"On reaching a large tree with overhanging roots the lion stopped, and I then stabbed him twice in the right side with my left hand, near where I judged the heart to be. I found afterward that the first stab touched the bottom of the heart, and the second one slit it down for some distance. The lion immediately dropped me, and I again struck him in the throat with all my force, evidently severing some large artery or vein, as the blood poured over me.

"He jumped back, and stood two or three yards off facing me and growling. I scrambled to my feet, and having read of the influence the human voice is said to have, I shouted all the most opprobrious epithets I could think of at him. I expected him to come at me again, but after a few moments he turned and went slowly away, still growling; soon the growls turned to moans, and then ceased, and I felt sure he was dead.

"Before this, however, I had got up the tree as fast as my injured arm and shoulder would allow me, and I was hardly securely seated, some twelve feet from the ground, when the other lion coursed along on my blood spoor to the foot of the tree. He had been pursued throughout by my dog, a large, rough, and very courageous animal. By this time I was feeling faint, and tied myself to the tree for fear of losing consciousness and falling off."

He was finally rescued by his "boys," and carried to Barberton Hospital. The lion he had so pluckily fought was an old male, with his stomach absolutely empty. The knife used was an ordinary sheath knife.—London Field.

## Rifle Range and Gallery.

### Fixtures.

Feb. 27-March 5.—New York.—At Zettler's, championship rifle gallery tournament.  
June 12-20.—National Schuetzenbund Festival, Union Hill, Schuetzen Park, N. J.

### Rifle at Shell Mound.

SAN FRANCISCO, Cal., Dec. 28.—Yesterday closed the annual medal contests of the Golden Gate Club. The medals and trophies were distributed in the evening after a fine supper in the park dining room. Scores:

Winner expert rifle class, one entry each regular shoot, 10 shots, 25-ring target, 200yds.: F. E. Mason 2240, A. Gehret 2209.

First class: G. Tammeyer 2148, M. F. Blasse 2148.

Second class: M. Kolander 2064, E. Woenne 1954.

Re-entry, best ten scores of the year, expert, rifle: A. Gehret 2273, D. B. Faktor 2253, C. M. Henderson 2245.

First class, M. F. Blasse 2207, W. F. Blasse 2095.

Second class: M. Kolander 2100, E. Woenne 2004.

Pistol, 50yds., standard American target, best ten scores of the year, expert: J. E. Gorman 981, W. C. Prichard 954, W. R. Proll 946, P. A. Becker 946.

First class: J. R. Trego 934, G. E. Frahm 934, M. J. White 892, G. Armstrong 913, J. Kullmann 907.

Germania Schuetzen Club monthly bullseye shoot: F. E. Mason 272, A. Jungblut 356, O. Bremer 412, C. Thierbach 664, F. P. Schuster 677, A. Gehret 759, N. Ahrens 812, E. H. Goetze

280, D. B. Faktor 373, J. E. Klein 641, L. Bendel 693, W. Blasse 730, C. M. Henderson 779.

Competition shoot: F. E. Mason 223, M. Blasse 214, M. Kolander 208, A. Gehret 222, F. P. Schuster 210, N. Ahrens 204.

Norddeutscher Schuetzen Club monthly medal shoot: First champion class, F. P. Schuster 420; second champion class, H. Huber 433; first class, G. H. Bahrs 388; second class, W. C. Morken 393.

ROBEL.

### Zettler Rifle Club.

THE scores of the members of the Zettler Rifle Club at the weekly shoot last week are appended:

Ten-shot scores, 25-ring target, distance 75ft., 50 shots: E. Van Zandt 1224, R. Gute 1216, A. Kronsberg 1215, C. G. Zettler, Jr., 1211, H. C. Zettler 1201, L. Maurer 1196, C. G. Zettler, Sr., 1190, B. Zettler 1186, Geo. Ludwig 1181, W. A. Hicks 1175, Geo. J. Bernius 1163, Thos. H. Keller, Sr., 1154.

A call was made for a meeting of the members at the club at New Year's Day, for an individual match, but only four members were present to answer the call. The scores are as follows:

Match, 50 shots, 10-shot scores, 25-ring target, 75ft.: M. Dorrlor 1221, H. Fenwirth 1214, E. Van Zandt 1205, R. Gute 1203.

Second match: E. Van Zandt 1223, R. Gute 1214, M. Dorrlor 1203, H. Fenwirth 1190.

The next practice of the New York Central Corps will be held on Thursday, Jan. 14.

## Trapshooting.

If you want your shoot to be announced here send a notice like the following:

### Fixtures.

Jan. 12-15.—Hamilton, Ont. Gun Club tournament.  
Jan. 13.—Guttenburg, N. J.—Handicap for Knockabout gun; handicaps, distance and bird allowance; 15 birds; entrance, price of birds. Gus Greiff, Mgr.

Jan. 18-23.—Brenham, Tex.—Sunny South Handicap.  
June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 219 Coltart Square, Pittsburg, Pa.

Feb. 22.—Lexington, Ky.—Jefferson County Gun Club.  
Feb. 23-26.—West Baden, Ind.—Colonial Handicap. Targets and pigeons. Open. \$500 guaranteed. John L. Winston, Mgr.

June 27-July 2.—French Lick Springs, Ind.—Tournament of the National Gun Club. John M. Lilly, Pres., Indianapolis.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

Mr. W. R. Crosby, of O'Fallon, Ill., has challenged Mr. W. Heer, of Concordia, Kan., to contest for the Schmelzer reverse angle trophy.

At Glen Rock, Pa., Dec. 29, Mr. C. E. Humer won the York County live-bird championship with a score of 24 out of 25 live birds, from the 30yd. mark.

At the shoot of the South Side Gun Club, of Newark, N. J., Jan. 1, the Feigenspan cup was won by E. Gunther. Mr. Geo. Piercy captured a turkey by superior competition.

We are advised by Mr. John M. Lilly that the National Gun Club, of which he is president, will hold a tournament during the week commencing on June 27, at French Lick Springs, Ind.

Mr. H. C. Hirschy, famous as one of America's greatest shooters, was a visitor in New York during the holiday season. He departed for home on Saturday of last week. He met many old friends and made many new ones.

Mr. Elmer E. Shaner, with the amiability and earnestness for which he is famous and esteemed, was a visitor in New York during a few hours of last Saturday, while attending to his duties as secretary-manager of the Interstate Association.

In a contest for the English Hotel cup at Indianapolis, Ind., Jan. 1, between Mr. Fred Erb, of Lafayette, and Mr. Ed Voris, of Crawfordsville, 100 targets, Mr. Erb won by a score of 85 to 84. He was challenged by Mr. Joe Michaelis, of Indianapolis to contest for it.

Mr. James Wolstencroft died on Dec. 24, at his home in Frankford, Pa. His death was caused by typhoid fever. He was once an officer of the Pennsylvania State Sportsmen's Association, and well known in the trapshooting world. He was forty-four years old.

Mr. W. Sherer, the energetic representative of the Winchester Repeating Arms Co. in the antipodes, appeared in New York's gun district last week, and thereby made glad the hearts of his many friends. He had a beautiful purse made of kangaroo skin, which was much admired and excited intense envy on the part of a few who had the privilege of seeing it.

At Wilmington, Del., on Dec. 30, a nine-man team race took place between the Wawaset Gun Club and the Baltimore Shooting Association. Each contestant shot at 100 targets. Wawaset won by a total of 691 to 611. A return match has been agreed upon to take place in the near future. The Wawaset club entertained the Baltimore team at a supper in the evening, about twenty-five being present at the hospitable event.

The secretary-manager, Mr. Elmer E. Shaner, writes us as follows: "Kindly announce to the readers of FOREST AND STREAM that the Interstate Association has arranged to hold the fifth Grand American Handicap target tournament at Indianapolis, Ind., June 21, 22, 23 and 24, 1904, on the grounds of the Indianapolis Gun Club. One thousand dollars will be added to the purses, and programmes containing detailed information will be ready May 16."

On the grounds of the Cincinnati Gun Club, a six-man team of that club contested with a like team of the Urbana Gun Club for the Phellis trophy, Dec. 30. Each man shot at 50 targets. The Cincinnati team won by a score of 250 to 236. The Urbana team issued a challenge for a return match to be held on a day of next week.

Mr. L. J. Goetter was the winner in the special prize contest at the shoot of the Brooklyn Gun Club, John S. Wright manager, on Jan. 1. The prize was a cut-glass punch bowl. It was an allowance handicap event. Three made the possible, 100. In the shoot-off at 25 targets, the scores were: G. Hatfield 18, L. J. Goetter 19, Winter 10.

The Hamilton Gun Club programme of the fourteenth annual Grand Canadian Handicap, Hamilton, Canada, Jan. 12-15, announces that \$1,200 in prizes are guaranteed. On the first day events 1 and 2 are handicaps at live birds. No. 1 is at 10 birds, \$5 entrance, Rose system, 5, 3, and 2; \$100 guaranteed. No. 2 is at 25 birds, \$15 entrance, \$500 guaranteed; \$100 to high gun; \$400, Rose system, 5, 4, 3 and 2. Surplus added. Events 3 to 10 inclusive are at 20 targets, \$2 entrance; six of these events have \$20 guaranteed. On the second day there is a handicap at 10 birds, \$100 guaranteed, surplus added, \$5 entrance, high guns. The target programme is similar to that of the first day. The programme of the third day is similar to that of the second day. On the fourth day there is an event at 10 birds, \$5 entrance, high guns. Shooting commences at 10 o'clock each day. A sliding handicap, 16 to 22yds., 3yd. limit, will be used in target events. Live bird handicaps, 26 to 33yds. Targets 2 cents. Free entry of guns may be obtained by shipping them to the president of the club, Mr. Thos. Upton, Hamilton, Can. Mr. H. Graham is the secretary.

The programme of the third annual Sunny South Handicap, Jan. 16-23, Brenham, Texas, can be obtained on application to the manager, Mr. Alf Gardener. On the first day there are two live-bird events, one at 8, \$5 entrance, high guns, 40, 30, 20 and 10, and one at 12 birds, \$8 entrance, high guns. Miss-and-outs will be shot if time permits. Live birds, 25 cents. On the second day the first event is at 8 live birds, \$5. The next event is the Sunny South Handicap, 25 live birds, \$30 entrance; handicaps 26 to 31yds.; moneys divided 40, 30, 20 and 10 per cent., class shooting. In addition to first money, the winner will receive a silver cup, value \$100. Entries must be made by Jan. 9, with \$5 forfeit. Penalty entries \$5 extra. Ties for trophy will be shot off miss-and-out. This event is also the programme of the third day. The event of the fourth day is the Houston Chronicle trophy, 100 targets, \$10 entrance. On the fourth day there also is the amateur ten-man team race, 100 targets, \$10 entrance. On the fifth day there is a preliminary handicap, 25 targets, \$2.50, and the Sunny South Handicap at 100 targets, \$100 added, \$10 entrance; silver trophy in addition to first money to the winner. On the last day there are twelve 20-target events, \$2 entrance, \$20 added in ten events. Targets, 2½ cents. Send guns, etc., prepaid to the manager. Shooters from a distance can obtain winter tourist, colonist or homeseekers' rate. One and one-third fare round trip as far as Purcell, Denison, and Shreveport.

BERNARD WATERS.

## Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Jan. 1.—The second annual tournament of the Poughkeepsie Gun Club, held to-day, was certainly the biggest shoot ever held in the Hudson Valley, and it was probably the biggest one-day shoot ever held in the State. Fifty-two men took part in the shooting, which is more than was shooting at one time at the State shoot last June.

That this shoot would be a big success, the management felt certain several weeks ago, but no such attendance was anticipated as that present to-day.

The management worked hard to make this shoot a success, and that their efforts were well rewarded, a glance at the long list of prominent names will attest. Owing to the large number of entries, but eight of the eleven events regularly scheduled were run off, darkness interfering with balance of programme. Had we anticipated so large a number of contestants, we would have had another set of traps ready, but such was not the case; therefore, we did the best we could with the one trap, and in the six hours threw 4,580 targets, which is an average better than one in every five seconds.

The trade was represented by Messrs. J. A. R. Elliott, Geo. R. Ginn, J. H. Briggs, Neaf Apgar, E. D. Fulford, Jack Fanning, and last but not least, Sim Glover. Mr. Herrington was looking after the interests of his paper, and when opportunity offered took part in the shooting. Although among us but a short time, these gentlemen made many friends.

The amateur talent consisted of the best from several States, and various clubs were represented; in this respect the Ossining club led, having eleven men present.

The Schenectady Gun Club was well represented, and to them fell the honor of winning first and second high averages, while to Ossining went third honors in this class. Ossining also scored a victory, and won the cup for good, by defeating the home team in the team match. The margin, 3 points, was small, but decisive nevertheless.

The Dutchess county championship went to Capt. Traver, who scored 91 out of his 100. Isaac Tallman was a close second with 90 to his credit.

J. A. R. Elliott captured the professional high average money with 95 5-13. Sim Glover was a close second with an average of 94 8-13.

The amateur average money (\$5, \$3, \$2) went to the following three respectively: J. Q. Adams, 88 6-13; J. B. Sanders, 87 9-13; Amos Bedell, 85 5-13.

Had darkness held off a little longer a different story of the amateur average might be told.

In this last event there were still four squads shooting. Unfortunately for Capt. Traver, of the home club, who up to this time was a strong factor in the average game, darkness had settled before his squad, which was the last, was called to shoot. This squad actually shot by moonlight, and naturally the scores of those shooting materially suffered. This will probably never happen again at a tournament held by this club, as it is their intention to build another platform and install another set of traps, Sergeant system, as soon as the frost leaves the ground.

A glance at the scores will show who was present, the shooting they did, and will probably make you regret that you didn't attend.

### Dutchess County Championship.

Dutchess county championship: Scores taken from first 100 targets shot at in regular events: Traver 91, Adriance 76, Perkins 71, Tallman 90, Smith 71, Marshall 70.

Ten-man team match, for silver cup, 25 targets per man. Scores taken from first 25 shot at in events 4 and 5:

Ossining.	Poughkeepsie.
Burns	23
Barnard	21
Dykman	20
Hyland	20
Clark	17
Bedell	23
Barlow	15
Huobert	21
Dr Shaw	20
Fisher	16-196
Traver	22
Adriance	16
Perkins	15
Illans	19
Marshall	17
Smith	20
Tallman	24
Tompkins	21
DuBois	17
Taylor	22-193

Out of the 4,380 targets thrown, 3,373 were broken, which is nearly a 72 per cent. average for the whole shoot.

With but two exceptions, all work was done by paid help. Everybody was "on the job" and there was no intermission worth mentioning for the whole six hours.

Harry Valentine, of Albany, interested many of the boys with patterns made with a combination concentrator and spreader of his own invention.

The day was an ideal one for the game. The trap worked well, and good scores were the result.

Nearly every one present had a good word to say for the grounds, and in every instance pronounced the background perfect.

The clerical work was efficiently handled by Secretary A. J. DuBois, and Mr. C. A. Coutan. These gentlemen volunteered their services to the club.

Capt. Traver was a busy man. When not shooting, he was here, there and everywhere, always looking for an opportunity to make it pleasant for some one, and at the same time keep business running.

No boys were employed at this shoot. Boys can never satisfactorily do men's work.

Capt. Walburg made many new friends among those that had never previously had the pleasure of his acquaintance.

E. D. Fulford had a fine exhibition of his firm's products, and when not shooting was kept busy explaining various points in their make-up.

Geo. K. Gunn and J. H. Briggs distributed some good advertising matter among the boys.

H. E. Winans was a busy man. When another man was needed to fill up a squad he would fill in. When not shooting he was assisting the squad hustler, helping the trade representatives distribute their advertising matter, etc. Ed, however, was never too busy to sell a box of shells when asked for.

The honors for longest runs in the professional class were even, with Elliott and Glover, each having 46 to his credit.

John W. Hoffman, the well-known live-bird shot from "over in Jersey," was present, and was well up in the money.

J. Q. Adams led the amateurs in longest number of consecutive breaks, making a run of 43. J. B. Sanders was next in this class with 33 to his credit.

Neaf Apgar, J. W. Hoffman, S. S. Adams came up from New York on Thursday and took part in the regular practice shoot of the club. They made many friends, and Mr. Apgar gave several of the boys much valuable information.

Jack Fanning's ability to make friends is certainly "infallible." Out of the 650 targets that the five professionals shot at, 581 were broken. Out of the same number, the five best amateurs broke 558.

SNANIWEH.

### Ripley (Ohio) Gun Club.

THE attendance at the holiday shoot of the Ripley Gun Club was not what had been expected, and some change was made in the programme. Four events at 10, three at 15 and one at 20 targets, a total of 105 targets, instead of 140 targets, were shot. Entrance 10 cents per target; money divided 50, 30 and 20 per cent.

J. V. Day was high gun with 99 breaks, or 94.2 per cent. W. G. Green second with 97, or 92.3 per cent. The scores:

Events:	1	2	3	4	5	6	7	8	Shot
Targets:	10	10	15	10	15	20	15	10	at. Broke.
J. V. Day	9	10	13	10	13	19	15	10	165 59
W. G. Green	9	8	15	10	13	18	14	10	165 97
E. T. Kirk	7	7	10	9	11	17	12	7	95 73
Dan Shafer	8	8	13	7	12	16	12	7	105 83
J. S. Wilson	6	7	9	5	10	13	11	6	105 67
T. J. Donald	5	10	5	11	17	11	9	9	95 68
Pittinger	5	10	9	6	10	9	6	6	45 25

BONASA.

### An Expert Twenty-five Years.

THE Baltimore Sun of Jan. 2 contains the following account of a conspicuous and esteemed expert, Capt. James R. Malone, of Baltimore.

Capt. James R. Malone, of the Baltimore Shooting Association, with the last of 1903, closed his twenty-fifth consecutive year of trapshooting. Year after year Captain Malone has been found in the front rank of shooters, and is to-day shooting in as good form as he has ever done, and that is saying a great deal. Possibly the year 1903 has been the most successful one in his career. During it he won the championships in both live-bird and target shooting. In one he captured a gold medal given by the Baltimore Shooting Association for the highest average at target shooting. This, it must be understood, was won in Class A of the club, which represents the best shots—known as shooters of 80 per cent. and up—men who can be depended upon to break this percentage in 100 targets shot at.

The live-bird championship cup, the trophy of the well-known Maryland handicap, at live pigeons, was captured on Oct. 15, after shooting on a tie with E. D. Fulford, of Utica, N. Y., and E. H. Storr, of Baltimore. He also won the Hunter Arms Co. badge. This contest required three shoots. He broke 48 out of 50 targets in each of those events from the 20yd. mark. At the Ocean City shoot last August he shot against Lewis Coulbourn, of Salisbury, Md., and J. M. Hawkins, of Baltimore, for the Ocean City live-bird cup on a score of 20 straight kills. Then Messrs. Malone and Hawkins retired, and the cup went to Mr. Coulbourn.

Malone made his first appearance as a trapshooter at the grounds of the old Three-Mile House, on the Brookstown road, Sept. 12, 1878. He then won a silver pitcher in a 10-bird race, in which there were over twenty entries, including William Wagner, E. Mills and Senator McCubbin, of Washington; Frank Kenly, William Fries, Clayton Wertsner, Fred Kenly, Henry Engle, Perry Knight, W. A. Avey, Joseph Atkinson, C. Richmond, Frank Denny, George Webb, Nicholas Kittenhouse, H. Hemen, Capt. George Kussen, Joseph Hiestad and others. Of those mentioned, many have joined the great majority. William Wagner is about the only one who ever shoots in these days. They were all prominent shooters about the year 1878. This match was refereed by John A. Wilmar, who shoots only occasionally at the traps in these days. The trophy was won in this contest after shooting on a tie with Clayton Wertsner and the late Frederick Kenly, at miss-and-out. The original tie was on 14 killed out of 16. In the shoot-off Malone killed 6 straight, Wertsner dropping his third and Kenly his sixth. This trophy is to-day the one most prized by Captain Malone, since it was the first he ever won with his gun.

Among the events which Captain Malone shot in was that of March 17, 1897, when he won the State championship live-bird cup, given by the Baltimore Shooting Association. The cup was shot for during the season, and was won four times each by Malone and Charles Macalester. The pair shot the tie on at 20 birds, Malone killing 40 and Macalester 42. It was the first time Macalester was ever beaten in an individual match. On Nov. 20 of the same year Malone won the State championship cup at Monumental Shooting Park. In this event Malone killed 20 straight. The cup is 22in. tall, is of pitcher-like form and is valued at \$250.

April 16, 1900, Malone was runner-up in the Grand American Handicap at Interstate Park, L. I. There were 108 contestants. Malone killed 59 straight. The race was won by H. D. Bates, of Canada, whose record, 60, stood unbeaten until 1902, when Mr. Hirsch, at Kansas City, made a straight kill of 86.

Among the prizes which Captain Malone values very highly is a pearl scarpin, given by the late Jacob Peniz, of New York, to the Baltimore Shooting Association. It was shot for once each month at 10 birds each shoot for a term of six months. Each man counted his best live scores. In five of the six shoots Malone killed 10 straight.

Captain Malone for the last fifteen years has been a prominent promoter of the trapshooting sport in Maryland, and has ably managed many big tournaments in team and individual shooting. Those who have tried this work have found that the handling of the birds and gun is easy in comparison to the handling of the shooters; but Malone has proved equally as successful with each end of the game.

Captain Malone learned to shoot by "bushwhacking" when he was eighteen years old, on the Liberty road. A crowd of shooters would go out from the city, and Malone would be there with an old muzzleloader, and the birds that got away from the regular shooters generally fell to his gun. Mr. Malone's regular business is that of a dairyman, and he took up sports as a diversion, and for the benefit of the outdoor exercise. He has never been employed by any company interested in selling shooters' supplies. The nearest he has ever come to it has been the using of one maker's shells as a regular thing, but not for pay.

Captain Malone has also been well known as a baseball player. He began to play when seventeen or eighteen years old, and was associated with many of the prominent players of the '70s.

Captain Malone has been captain of the club for many years. In 1897 he, Claridge, Macalester, Bond, Ducker and Hawkins went to Chicago and shot for the DuPont trophy, and Claridge won from 105 shooters. In the following year Captain Malone took the "Oyster squad" to Buffalo, N. Y., and shot in the New York State shoot there. There were forty-seven squads shooting. The Baltimore squad, consisting of Malone, Fox, Waters, Hawkins, Storr and Supers, finished second to the Cleveland squad, which won.

In 1893 Captain Malone took the Big Six to Interstate Park and the work done there added to the fame of the B. S. A. There were over 200 shooters in this tourney, and the Big Six made the best showing of any squad from any one city.

### Scranton Rod and Gun Club.

SCRANTON, Pa.—The Scranton Rod and Gun Club shot the following programme at their Capouse avenue grounds on Jan. 1:

In events 1, (25 cents), 3 (75 cents), and 5, (70 cents entrance), four moneys, divided by the Equitable system. Events 2 (30 cents) and 4 (\$1.10 entrance), Jack Rabbit system. The following are the scores made:

### Interstate Association.

#### Tournament Committee Meeting.

A MEETING of the tournament committee of the Interstate Association was held at 10 A. M., on Jan. 2, in the offices of the Lafin & Rand Powder Co., 99 Cedar street, New York city, Mr. Irby Bennett in the chair.

Present: Messrs. Bennett, Banks, Skelly, Keller and Parker. Mr. Eugene DuPont was represented by Mr. A. W. Higgins, by proxy.

The chairman stated that the meeting was called for the purpose of considering matters in connection with the holding of the fifth Grand American Handicap at targets.

The minutes of the meeting held Dec. 10, 1903, were read and approved.

Manager Shaner reported that he had made arrangements to hold the fifth Grand American Handicap at targets at Indianapolis, Ind., on the grounds of the Indianapolis Gun Club, June 21 to 24, inclusive, the same terms and conditions to govern as those which ruled the four previous Grand American Handicap tournaments. This met with the approval of the committee, and it was ordered that the report be laid before the stockholders of the Association, with a recommendation that same be adopted.

Some matters of minor importance were then considered, and the meeting, on motion, adjourned at 11 A. M.

#### Stockholders' Meeting.

A special meeting of the stockholders was held immediately after the close of the tournament committee meeting. Present: Winchester Repeating Arms Co., Irby Bennett; American E. C. and Schultze Gunpowder Co., Ltd., Edward Banks; Union Metallic Cartridge Co., A. C. Barrell; Peters Cartridge Co., T. A. Keller; Lafin & Rand Powder Co., A. W. Higgins; Hazard Powder Co., J. T. Skelly; Parker Brothers, W. F. Parker. Remington Arms Co. and E. I. DuPont Co., were represented by proxies. Mr. M. Herrington, of Shooting and Fishing, and Elmer E. Shaner, secretary-manager of the Association, were also present. President Bennett was in the chair.

The secretary read the call for the meeting, signed by the President, which stated that the call was issued for the purpose of considering the proposed amendment to the by-laws, notice of which was duly given at the adjourned annual meeting of the stockholders, held Dec. 10, 1903.

It was suggested that the minutes of the adjourned annual meeting, held Dec. 10, 1903, be read. They were accordingly read and approved.

Upon motion of Mr. Higgins, seconded by Mr. Skelly, the amendment to Article V. of the by-laws was adopted.

The action taken by the tournament committee at its meeting held Dec. 10, 1903, and at the meeting held this date, was presented to the stockholders by the Secretary, and on motion of Mr. Barrell, seconded by Mr. Keller, it was approved.

There being no further business the meeting, on motion, adjourned.

ELMER E. SHANER, Sec'y.

### New York Athletic Club.

TRAVERS ISLAND.—The shoots of the New York Athletic Club, held Jan. 1 and 2, had two specially interesting events, respectively, the Holiday cup and the Bradley cup. The scores of the competition on Jan. 1 follow:

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., Dec. 26.—There were difficult weather conditions, a high wind and cold temperature being the greatest obstacles in the way of making good scores.

The city trophy event, at 25 targets, was won by Jules, with the excellent score of 21. Events 1, 2, 4, 5 and 6 were for chickens.

In event 1, Farless and Young were the winners. In event 2 Jules won first, Young second. The scores follow:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

Trap at Heflich's.

Jan. 1.—On H. M. Heflich's Hackensack River Gun Club grounds, near Carlstadt, N. J., two events were shot in the afternoon to-day. Event 1 was at 10 birds, \$5 entrance, for a pair of sleeve buttons. They were won by Smith, with a score of 9.

F Linders, 29.....1002100211—6 C R Tonn, 28.....0000000020—1  
P M Tonn, 29.....0100001011—4 W W Balch, 29.....2020100202—5  
F W Decker, 27.....0000121010—4 E B Smith, 29.....2210211211—9

No. 2 was at 25 birds, also for a pair of sleeve buttons. Smith won, with a score of 19:

C R Tonn.....000001010010100001001101—8  
F W Decker.....010110000000000110000110—7

E B Smith.....100111110110111111111111—19

No. 3 was a 10-bird sweep, \$1 entrance, high guns:  
W W Balch.....1000001000—2 F W Decker.....0110101001—5  
P M Tonn.....0000101010—4 C R Tonn.....1010101110—6

North Side Rod and Gun Club.

Paterson, N. J., Jan. 1.—In the lead in the main event was Mr. C. Spear, who broke 19 out of a possible 25. H. Beckler, B. Terhune, C. Tiddes and W. Banta each broke 16 out of 25. The scores:

Atkinson .....	1100110011100011010010001—13
Veenstrow .....	0000100100010010011000100—9

Trap at Singac.

Singac, N. J., Jan. 1.—A large attendance witnessed the trap-shooting at Singac to-day.

A 5-bird match between John Plog, Richfield, and Dave Rea was won by the former; score 4 to 3.

On Friday, Jan. 8, at Bunn's, a 25-bird match between Arthur Bunn and Andy Radcliffe will be shot. There will be sweep-stake shooting also.

Following are the scores:

First event, 5-bird match:	
J Plog .....	102011—4
D Rea .....	010110—3
Second event, 7-bird sweep:	
Van Horn .....	222201—6
Klotz .....	2112201—6
Plog .....	2100*20—2
Sherman .....	2100002—3
Bunn .....	1211121—1

Third event, 7-bird sweep:	
Van Horn .....	1021002—4
Klotz .....	2212012—6
Plog .....	1211000—4
Sherman .....	0200010—2
Bunn .....	1211111—7

Fourth event, miss-and-out:	
Van Horn .....	2220
Burin .....	0
Klotz .....	0
Rhodes .....	11122111
Plog .....	11112210

Fifth event, 10-bird match:	
Plog .....	11112111—10
Klotz .....	2101122001—7

In this match between John Plog, of Richfield, and Edward Klotz, of Singac, the latter did not shoot up to his regular form.

and killed only 7 birds, while his opponent grassed every bird. He used two barrels on only one bird, the others being grassed with a single barrel. The men then posted forfeits for another match. This will be at 50 birds for \$50 a-side. The match will be shot at Bunn's Hotel, but no date has been set.

Jackson Park Gun Club.

Paterson, N. J., Jan. 2.—A number came out to the grounds to-day in one of the most severe snowstorms we have experienced in Paterson in a number of years. Only four of them cared to face the traps.

Most of the birds were corks, and were delivered at the grounds just before starting to shoot, fresh from the country.

The match at Bunn's next Saturday will be for \$25 a side, and I expect a great shoot. Radcliffe is a comer. It starts at 1 o'clock. Fenny Radcliffe won a handsome cup on New Year's morning at Little Falls, at targets. It was presented by Robt. Beattie, of the Beattie Mfg. Co., of Little Falls, to be shot for by the members of the Little Falls Gun Club. Radcliffe is a member of the Jackson Park Gun Club also.

The men will shoot at 25 birds for a side bet. Arthur Bunn is about the surest shot around these parts. On the other hand, Radcliffe has been doing some remarkable shooting during the present season, and the match should be decidedly interesting.

To-day, in the third sweep Eddie Morgan shot in fine form, killing all 5, and only using two barrels on one of them. Barry missed his first bird, but killed the remaining 4. Radcliffe had considerable hard luck, 2 of his birds dropping dead just out of bounds. Doty also shot well, but one of his birds managed to get out of bounds before it was retrieved.

The second event was a 15-bird sweep, Morgan, Barry and A. R. Radcliffe participating. In this sweep Morgan missed only once, three of his birds dropping dead just out of bounds, making his total number of kills 11. Barry was second best with 10 kills, while Radcliffe killed 9. The scores in detail:

First event, 5-bird sweep:  
Morgan, 29.....12022—4 A R Radcliffe, 28.....22222—5  
Barry, 28.....02222—4

Second event, 15-bird sweep:  
Morgan, 28.....221221\*0\*12\*21—11 Radcliffe, 28.....22\*02012201\*012—9  
Barry, 28.....2\*2202\*0122202—10

Third event, 5-bird sweep:  
Morgan, 29.....11211—5 Radcliffe, 28.....2\*1\*1—3  
Barry, 28.....02121—4 Doty .....

DUTCHER.

Lablatang-Pattenburg.

High Bridge, N. J., Jan. 1.—A very pleasant day was spent at High Bridge to-day. The first event was, as the scores show, for supper. Our boys won, but were badly scared when the score only could be made to show 5 in their favor. The second event was for a very handsome gun case, which also followed our boys home. The event resulted in a tie between W. Sign, Mr. Barber, H. Gano and H. L. Gano. The Gano boys captured the prize.

JAN. R. MERRILL, Sec'y.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Jan. 1.—It was a busy day on the grounds of the Brooklyn Gun Club. The main event was the Holiday shoot, for a cut-glass punch bowl, 100 targets, \$1 entrance. There were ten contestants. The handicap allowances and scores in this event were as follows: Davis (35) 73, Haws 95, Hatfield 100, Winter 100, Goetter 100, O. C. Grinnell, Jr., 79, Caunitz 90, Peckner 74, Hopkins 84, Dudley 92.

In the shoot-off of those who tied, the scores at 25 targets were: G. Hatfield 18, L. J. Goetter 19, Winter 10. Goetter thus was the winner.

Some sweepstakes were shot, with results as follows:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	15	10	10	Targets:	10	15	10	10
Dudley .....	6	7	...	...	Greller .....	3	9	...	...
Hatfield .....	6	8	...	...	Davis .....	7	8	...	...
O C Grinnell, Jr. ....	6	8	4	5	Caunitz .....	7	...	...	...
R H Grinnell .....	9	7	4	...	Peckner .....	5	...	...	...
Winter .....	7	...	6	8	Hopkins .....	8	...	...	...

Crescent Athletic Club.

Bay Ridge, L. I., Jan. 2.—The first competition of January for the January cup was shot by the Crescent Athletic Club shooters to-day. Mr. H. M. Brigham, from scratch, broke 25 straight and won thus the first contest. His nearest competitor was Mr. F. B. Stephenson, who broke 24.

There were four other well contested trophy shoots. Scores:

January cup, 25 targets:

H M Brigham, 0.....25	L M Palmer, Jr., 1.....22
F B Stephenson, 2.....24	Dr Keyes, 21.....21
A G Southworth, 3.....22	O C Grinnell, Jr, 5.....19
L C Hopkins, 4.....22	T W Stake, 4.....17
C J McDermott, 7.....22	G W Stephenson, Jr., 2.....16

Sykes team cups:  
Brigham, 0.....22 F B Stephenson, 2.....21  
Palmer, 1.....22—44 G G Stephenson, Jr., 2.....21—42

Trophy shoot, 25 targets: Stake (4) 23, Palmër (1) 22, Brigham (0) 22, F. B. Stephenson (2) 21, G. G. Stephenson, Jr. (2) 21, Hopkins (4) 20, Southworth (3) 19, McDermott (5) 10.

Trophy shoot, 15 targets: F. B. Stephenson (1) 12, Southworth (1) 11, Keyes (1) 10, Hopkins (2) 9, Palmer (0) 9, Grinnell (3) 8, Stake (2) 7.

Palmer trophies, 25 targets: Hopkins (4) 25, Southworth (3) 23, F. B. Stephenson (2) 20, Brigham (0) 19, Grinnell (5) 18, Keyes (2) 18.

Jan. 1.—The New Year's Day shoot of the Crescent Athletic Club shooters was well attended.

Mr. H. C. Hirschy, of Minneapolis, Minn., was a visitor.

In an event at 15 targets Mr. Frank B. Stephenson and Dr. H. L. O'Brien tied on a straight. In the shoot-off Stephenson scored 12 to 11.

In another 15-target event, Mr. F. T. Bedford, Jr., broke 14 and won first.

Messrs. G. G. Stephenson, W. W. Marshall and H. I. Meyers tied with 15 straight. Stephenson and Meyer each made 14 to Marshall's 13 in the first shoot-off, and then Stephenson and Meyer made 12 and 11, respectively, Stephenson winning the prize.

The Stake trophy was won by G. W. Hagedorn with 25 straight, F. T. Bedford, Jr., and F. B. Stephenson tied for second with 22 each. J. T. Skelly, of Wilmington, and H. C. Hirschy competed in this event as guests, and made 24 and 20, respectively.

A cup trophy was shot for, and F. B. Stephenson won it with 25 straight; D. V. B. Hegeman second with 23, and F. T. Bedford third with 22, after all three had tied in the main shoot for the prize. H. L. Marshall, of Harvard University Gun Club, a guest, made 20 in this event, Skelly 24, Hirschy 23 and J. Buckley, another guest, 17.

The holiday cup was by L. H. Hopkins, after a tie with D. C. Bennett. On the shoot-off they got 25 and 20 birds respectively. Hirschy made 24, Skelly 23 and Buckley 18 in this event.

A team trophy shoot at 15 targets per man, ten men a side. F. B. Stephenson and L. M. Palmer, Jr., captains, was lost by Palmer's team, the totals being 102 breaks to 90.

In the trophy race at 15 targets, T. W. Stake and G. Notman tied in the event, making full scores in the first event, then again tying in the shoot-off at 14. Notman won at the third attempt by 15 to 12.

Three special team matches wound up the fun. J. T. Skelly and L. M. Palmer, Jr., formed one team and G. W. Hagedorn and H. C. Hirschy the other. They tied at 42 birds in the first shoot, then shot off at 15 birds; and Skelly and Palmer won by 29 to 24.

The next one went to Skelly and Palmer by 41 to 40, and in the final match of the series Skelly and Palmer won by the score of 41 to 39.

## Contest for Phellis Trophy.

THE match for the Phellis six-man team trophy between the Urbana and Cincinnati gun clubs was shot at the latter's grounds on Dec. 30. The morning was very cold, and few shooters arrived at the grounds until nearly noon, by which time the mercury had climbed quite a ways up the tube.

The Urbana team started from home early in the morning, but were delayed in Dayton, and did not arrive at the grounds until 1:15. As they came through the gate they were greeted with a salute from the guns of a dozen or more of the Cincinnati boys who had lined up on balcony.

The conditions in the afternoon were not good for high scores; there was little wind, but a heavy bank of smoke in the background made the targets exceedingly difficult to see, and accounted for many misses.

The match began at 2:15, and by 3 o'clock the last shot was fired, and the home club were the victors by a score of 250 to 236. The match was shot at two strings of 15 and one of 20 targets, a total of 50 targets per man. The visitors made a good start, and at the close of the first round were 3 targets to the good, the scores being 78 to 75. In the second round the home team got busy and scored 78 to the Urbana's 70, thus taking the lead by 5 targets. In the last round, at 20 targets, the home team still further increased their lead, breaking 97 to 88 and finishing with 14 targets to the good.

R. Trimble was high gun for the match, making the fine score of 48, losing the 2 targets in the first round. He was the only member of the team who broke straight in any of the rounds. Van Ness and Barker were second high men on the home team, each breaking 42.

D. D. Gross was high gun for the visitors, with 44. H. N. Kirby second with 43. Gross and Alf Hill were the only members of the Urbana team who broke straight in any of the rounds. A. Sunderbruch acted as referee; J. J. Faran official scorer.

Among the visitors was Mr. John Penn, the first secretary of the club. It is several years since he was here, and all were glad to greet him.

Supt. Gambell's son Lutie started for Indianapolis, where he will visit his uncle, Mr. Leonard Shepard, the superintendent of the Indianapolis Gun Club. He took his little 20-gauge Parker with him, and will break a few targets.

H. N. Kirby, of the Urbana team, was shooting in good form when he had the misfortune to break his gun, and was obliged to finish with a borrowed one. This knocked a few off his total.

Holding is always a 90 per cent. shooter, and no reason can be given for the poor showing made in this match.

Barker, of the home team, is one of the steadiest shooters in the club. He can be depended upon in an emergency to make a good showing.

Van Ness showed his old form in this match.

Ahlers would have made a better score if the weather had been warmer.

Mrs. Gambell served one of the dinners for which she is famous, and it was thoroughly enjoyed by all.

The Urbana team issued a challenge for another contest to be held during the week of Jan. 10.

Phellis trophy, 50 targets; scores:

Cincinnati Team.			Urbana Team.		
Targets:	15 15 20		Targets:	15 15 20	
Medico	12 11 14	37	J. Muzzy	10 12 12	34
Van Ness	12 14 16	42	W. Holding	11 12 15	38
Ahlers	13 12 16	41	H. N. Kirby	14 13 16	43
R. Trimble	13 15 20	48	Alf Hill	15 10 14	39
Gambell	12 14 14	40	E. Holding	13 10 15	38
Barker	13 12 17	42	D. D. Gross	15 13 16	44
	75 78 97	250		78 70 88	236

Considerable practice shooting was indulged in, regardless of the cold, and the shooting was discontinued only when it became so dark that the targets could not be seen, the day's sport ending with a match between Faran and Gross, a team desirous of getting a reputation, and Gambell and Sunderbruch.

Team match, 25 targets:

Gambell	16	Faran	15
A. Sunderbruch	13-29	Gross	20-35

## Cincinnati Gun Club.

CINCINNATI, O.—On Dec. 29 a few of the members met at the club grounds and smashed targets. The scores follow:

Shot at. Broke.		Shot at. Broke.	
Gambell	90 76	Don Minto	50 36
Ahlers	75 54	Herman	125 70
Medico	75 58	Hancke	25 8
Barker	75 62		

Team shoot, 50 targets:

Gambell	42	Medico	37
Barker	43-85	Ahlers	34-71

The New Year was ushered in with a cold rainstorm, and very few of the members had courage enough to venture out to the grounds. Of those who went only three were enthusiastic enough to do any shooting, and scored as follows: Shooting at 100, Pullerdyck scored 76, Meader 42; Williams broke 42 out of 75.

On Jan. 2 we were treated to a select assortment of New England weather, rain, hail, sleet and snow falling throughout the day, accompanied by a high wind. The attendance was consequently smaller than for many weeks, and some who were at the grounds preferred the comfort of the warm club room to the discomfort of out doors. A few, however, could not be frightened by the weather, and took part in a number of practice events, standing at the score with their overcoats and gloves on. The wind blew across the traps from left to right and with the falling snow, made the targets exceedingly hard ones.

In the cash prize shoot, distance handicap, Sunderbruch was high man with 40, which was very good work under such hard conditions. R. Trimble was second with 37. The scores follow:

Targets:	15 15 20	Targets:	15 15 20
Block	11 8 11-30	R. Trimble	21..... 12 12 13-37
A. Sunderbruch	19..... 9 13 18-40	Williams	17..... 10 12 12-34
Barker	19..... 12 10 9-31		

Not much practice shooting was done, though a few of them had courage enough to brave the cold and storm. The scores:

Shot at. Broke.		Shot at. Broke.	
Block	35 26	Willy Green	75 28
R. Trimble	15 9	Miles	75 27
Barker	15 12	Williams	25 15
Linn	75 44	Dorf Minto	25 15
Krehbehl	75 44		

The Urbana, Ohio, Gun Club's team will shoot for the Phellis trophy on Monday, Jan. 11. The traps will be ready for shooting all day, and the members are requested to turn out in goodly numbers.

The traveling men of the Peters Cartridge Co. will spend the day at the grounds on Friday, Jan. 11. There will be shooting all day. Come everybody.

The last contest in the cash prize series will be shot on Jan. 16, and then the boys will divide up.

BONASA.

## Shoot at Dupont Park.

ST. LOUIS, Mo.—A one-day's programme was carried out at the well-known St. Louis Park, under the management of Alex. Mermod. It was 11 A. M. before the programme was started, as the drizzling rain and dark clouds were not conducive to a good attendance. Some of the old standbys preferred making New Year's calls, rather than attempting to shoot at birds with the cold rain falling on their shooting eye. The management had provided a good supply of birds, yet they were handicapped by the weather. There were enough screamers to keep all guessing, and while there were four who killed 23, none went above that mark. Kenyon had two fall dead out and they were well hit, and one of them was almost within the grasp of the dog when it took wing and scaled the fence.

The noted shooters were Frank Riehl and Chas. Spencer with his new "pump." Each shot targets well, but Riehl was so far back from the traps that he did not get his eye or the gun lined up correctly. E. C. Fort, the well-known Ohio shot, was out for the first time, and but for a slip-up on an incomer, would have won first money. L. A. Cummings came over and started the year in his usual way of trapshooting. He landed third without a tie. Though he did not draw his entrance, still he was high money receiver. Rupel, who has been secretary of the Chicago clubs for several years, is now, like Fort, a resident of Chicago. He made three straights, one on 25 being alone, and thus won the most money of any one for the day.

A hot dinner was served in the club house. The boys were popping away when the light was very poor. The scores:

Events:	1	2	3	4	5	Shot
Targets:	10	15	20	25	25	at. Broke.
H. Spencer	8	14	16	20	21	95 79
O. Spencer	10	15	18	24	23	95 90
Rupel	10	14	15	25	..	70 64
Riehl	8	14	17	22	20	95 81
Cummings	7	14	15	22	15	95 73
Mermod	9	15	18	24	23	95 89
Childs	4	12	13	18	..	70 47
Knight	9	13	15	17	..	70 54

## Riverside Gun Club.

UTICA, N. Y., Jan. 1.—The weather conditions were against high score making. The wind blew a gale, yet some of the scores were excellent. There was present an enthusiastic attendance of members and friends of the organization.

The 25-bird contest for the club's gold medal and the handicap championship proved a very exciting event, requiring 50 targets to decide it. It was won by William Wagner. Shooting from scratch, E. Loughlin broke 46 out of a possible 50, which was high actual score.

In the 20-bird event for a \$5 gun case, H. J. Borden beat out George Gangloff in the shooting off of a tie for the prize. Other winners were Ed Smith and John Teesdale.

The club's regular season closed with yesterday's shoot. The next prize shoot is fixed to be held on Washington's Birthday, Feb. 22.

In the following scores events Nos. 3 and 4 constitute the handicap trophy event, and the shoot-off of the ties respectively, the figures after the names showing the handicaps of those competing in this event:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

## Glen Rock Gun Club.

GLEN ROCK, Pa., Dec. 30.—Yesterday was an ideal day for a shoot, and the lovers of the gun who were present at the shoot held under the auspices of the Glen Rock Club enjoyed the sport to the full extent.

Charles E. Humer defeated Charles S. Shirk in a 25-bird race for the live-bird championship trophy of York county, killing 24 to Mr. Shirk's 20.

Ten shot through the target programme of 175 targets. Hawkins, of Baltimore, was high man with 165, Humer 158, McSherry 157, and that jolly good fellow, Deardorf, pointed his gun at the right spot 156 times, and at times had our friends Humer and McSherry guessing. Dave says it is not in the shells so much as it is in the man behind the gun. The total scores follow:

Shooting at 175, Hawkins broke 165, Humer 158, McSherry 157, Deardorf 156, Shirk 139, Sweigert 138, Nelson 133, Jackson 125, Seitz 117, Heilman 107.

Shooting at 95, Reichard broke 56.

After the regular programme had been shot, three extra events, with a total of 50 targets, were shot, with the following result: McSherry 47, Sweigert 45, Humer 45, Shirk 44, Jackson 44, Deardorf 38, Nelson 38, Seitz 38, Heilman 33, Reichard 24, Andy 20.

ALLEN M. SEITZ, Sec'y.

## Maryland Gun Club.

ORANGEVILLE, Md., Jan. 1.—J. A. Hartner gave us a very fine exhibition of his shooting by attempting to break 50 targets straight. He did so. He showed some of his old form. I saw him break 50 glass balls with a 12-gauge muzzleloader about thirty years ago, in a snowstorm; then he was only fourteen years old. He says shooting was a gift to him.

J. A. Hartner.....11111111111111111111-25  
.....11111111111111111111-25-50

The following events were at 10 targets, 50 cents entrance, two moneys:

No. 1: Burch 7, W. Bond 7, Evins 8, Fritz 6, Steever 9, Lynch 7.

No. 2: Fritz 6, Steever 8, Bond 8, Lynch 8, Evins 6, Bush 7.

No. 3: Steever 8, Lynch 6, Evins 8, Mason 9, Bond 8, Madison 5.

J. C. EVINS.

## Wawaset—Baltimore.

WILMINGTON, Del., Dec. 30.—In a nine-man team race, the Wawaset Gun Club defeated the Baltimore Shooting Association by a total of 691 to 611, out of a possible 900. This was a victory on a margin of 80 targets, rather an emphatic performance. It was rather an unexpected defeat on the part of Baltimore, as they considered the Wawaset members their inferiors in point of skill.

A strong, cold wind from the west affected the scores seriously. Mr. H. C. Hirschy, famous as a shot of great skill, and a winner of the Grand American Handicap, acted as referee.

On the teams were shooters of the highest skill, and a large number of spectators was present to witness their doings. It was an overflow meeting, hence bonfires were made on the grounds for the comfort of those outside.

Baltimore was in the lead when the first squad finished shooting, but soon afterward Wawaset led. At the end of the 75th round the local team led by 60.

Each man shot at 100 targets. J. M. Hawkins, of Baltimore, was high man with 89. L. Z. Lawrence, of Wawaset, was high man for that club, with a total of 84.

Charles Buckmaster and Clarence Beadenkopf assisted in making the shoot a success.

The Wawaset Club will shoot the Baltimore team a return match within thirty days, and probably within two weeks. The scores:

Wawaset Gun Club.			Baltimore Shooting Association.		
J. T. Skelley.....	13	21 16 15-65	L. S. Graham.....	17	21 22 15-75
W. M. Foord.....	13	19 20 19-71	J. M. Hawkins.....	22	24 20 23-89

Graham.....	20	21 21 21-83	Mordecai.....	8	13 13 12-46
		691			611

In the evening members of the Baltimore team were entertained at a supper by the Wawaset Club, at Ainscow's. About twenty-five were present. Speeches were made by former City Judge Sylvester D. Townsend, Dr. H. Henderson, Luther J. Squier, L. Z. Lawrence, William M. Foord, Grason Gent, and J. M. Hawkins. The Wawaset members were warmly thanked for their hospitality.

## Indianapolis Gun Club.

INDIANAPOLIS, Ind., Jan. 1.—The New Year's Day shoot of the Indianapolis Gun Club was well attended. Thirty-six shooters participated. The club members presented W. T. Nash, president of the club, with a handsome new gun and a life-size photograph which will be used to adorn the walls of the club room.

The 100-target match between Erb and Voris was won by Erb by a score of 85 to 84. Just before the men went to the traps it began raining and snowing, and high scores were out of the question. Erb won the cup some time ago from Mr. Roll by default, and later successfully defended it against C. O. Le Compte. He was challenged by Joe Michaelis, of Indianapolis.

About 3,000 targets were thrown during the day, and the sweep-stake events were interesting. Farrell was high gun, with a total of 54 out of a possible 70. The scores follow:

Events:	1	2	3	4	5	6	7

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 16, 1904.

VOL. LXII.—No. 8.  
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### GAME AND FISH AT THE WORLD'S FAIR.

AN officer of the Maine State Grange made complaint the other day because Maine was to display its game and fish resources at the World's Fair with what he considered undue prominence. Maine will not be the only State to make a showing of what it has to offer the sportsman. Colorado is to have an extensive exhibit of live game in a suitable park; and Missouri is to be represented in the same way. There will be aquaria containing exhibits from the waters, ranging from Missouri's big catfish to black bass; and a tract of three acres will be devoted to large game, furred and feathered. The hunter's cabin, fly-casting ponds, camp-sites, and other accessories will add to the interest of the display.

Between the Maine and the Missouri sporting exhibits, however, there will be this essential difference, that while Maine will make its showing for the express purpose of inducing sportsmen from other States to visit it for shooting and fishing, Missouri will show what it possesses for the benefit of Missouri sportsmen only. Its laws forbid the taking of game by any but its own citizens. However attractive may be the display at St. Louis, no visitors will be allured to the Ozarks for hunting. When the Missourians contemplate with pride their wild animal resources as put on show at St. Louis, it will be with the pride of exclusive possession and use; and the visitor from another State may look on only with envy.

### POSSESSION OF IMPORTED GAME.

IN the case of the people of the State of New York against A. Booth & Co., to recover penalties for the possession of brook trout in close season, Supreme Court Justice H. T. Kellogg, of Ogdensburg, handed down a decision last week finding for the defendants, on the ground that the provision of the statute under which they were prosecuted was void under the Constitution of the United States. The special provision reads: "Wherever in this act the possession of fish and game, or the flesh of any animal, bird, or fish, is prohibited, reference is had equally to such fish, game, or flesh coming from without the State as to that taken within the State."

This clause of the law was an outgrowth of the Buffalo fish case which came up in 1902. The Buffalo Fish Company was sued for penalties for the possession of fish imported from Canada; and the Court of Appeals held that as worded the statute under which suit was brought did not apply to fish imported into the State. To give the law explicit application to all fish and game, whether taken in the State or brought in from outside, the provision quoted was added as Chapter 194 of the Laws of 1903; and under it the suit was brought against A. Booth & Co. for the possession of brook trout which had been imported from Canada. It goes without saying that the decision of Justice Kellogg has created consternation among the friends of game protection, for it flies directly in the face of a principle which in this State has always been held to be good law. The leading precedent is the Phelps vs. Racey case, in which it was established that the defendant Racey, a game dealer, was liable to the prescribed penalty for the forbidden possession of quail, even though the birds had been killed in another State. This is only one of numerous decisions to the same effect both in New York and in other States.

The precedents have been in support of the constitutionality of the prohibition of the possession and sale of

imported game in close season. Indeed the right of the State to forbid the possession of fish and game in close season irrespective of their origin is one of the accepted principles of game protective legislation and practice. Such prohibition is vitally important; it is so essential that the determination of this question of constitutionality cannot be permitted to rest with Justice Kellogg's decision. There is no intention on the part of the New York authorities to permit it to rest here. The case will be appealed. There is abundant reason for confidence that in the higher courts the decision will be reversed.

The Booth case has roused wide interest; for manifestly if Justice Kellogg's ruling is good law for New York, it is good law for other States. A Massachusetts correspondent, who characterizes the decision as "a serious blow to all our efforts at game protection," declares that if it be allowed to rest here, "most of the game protective organizations will feel like disbanding."

### ADIRONDACK FORESTS.

THE legislative committee on Adirondack forests gave a hearing in this city last week to persons interested in the subject. Among those in attendance was Judge Warren Higley, president of the Adirondack League Club, and first vice-president of the Association for the Preservation of the Adirondacks. Judge Higley correctly represented public sentiment, we believe, when he urged the resumption of purchases by the State, which were discontinued at the instigation of Governor Odell two years ago. The committee provided for at the last session of the Legislature to formulate plans for some comprehensive system of purchases will report at this session, and the matter should not be permitted to go over another year.

In his message Governor Odell expresses what is the sentiment of the people of the State when he says, "It is of the greatest importance that the State should eventually own every acre of land within the preserve."

There is a growing conviction, too, that New York must adopt a new policy with respect to the treatment of its forest lands. The constitutional clause which forbids the cutting of trees, and requires that the woods must be let alone, must some time give way for a scientific economic exploitation of the forests such as is practiced in Europe. The constitutional clause was a necessity at the time of its adoption to thwart the plundering schemes of land grabbers and lumber thieves. To reason that the prohibition must be continued for ever for the reason that there are not in the State of New York ability and integrity to administer the forests in a capable and honest manner, is to make a humiliating confession of inability and dishonesty.

Doubtless the people are not now ready to repeal the constitutional provision. They will not be willing to do this until they shall have good assurance that any proposed system of forest administration will be the right one. But the new order is bound to come, and that soon.

Among the recommendations brought out by the forestry discussion is one by the New York Board of Trade and Transportation for the licensing of Adirondack guides. One prolific source of forest fires is the camp-fire of the careless campers. To lessen the damage from this source the board would have the Maine system of licensing guides applied to the Adirondacks, the guides to be held responsible for the perfect extinguishing of camp-fires by parties under their guidance. The licenses, it is recommended, should be issued annually to such guides by the State upon evidence of the good character of applicants and of their possessing the necessary experience to qualify them, and that their compensation shall be fixed by law at such maximum sum per diem as is now charged by competent guides. "This plan, if adopted," the board thinks, "will prevent irresponsible and inexperienced persons from pretending to knowledge of the craft they do not possess; it will insure the comfort and safety of campers, and the guides will become a very important factor in preventing infractions of the laws of the woods, not only in respect to fires, but in other respects also."

Manifestly the Adirondack guide is assumed to be com-

posed of different clay from that of his brother in Maine. The licensing of guides in Maine has not resulted in preventing infractions of the game laws.

### NEW HAMPSHIRE ABANDONED FARMS.

IN his New Year address, Governor Bachelder, of New Hampshire, reports gratifying progress in the movement to restore the abandoned farms of the State. Owing to several causes, chief among them the migration from country to city and to other States, the number of deserted farms had become so great that some fifteen years ago the subject was considered of such importance as to engage the attention of the Legislature. In 1889 a commission was appointed to devise ways to repeople the rural districts. There were at that time 1,343 abandoned farms within the State, and the abandonment of others has since gone on, but at a decreasing rate.

Meanwhile the efforts of the commission were so successful that the tide has turned the other way. There have been found purchasers for the deserted homesteads, some attracted by the cheapness of the land and the possibility of making it pay as a farm, but a greater number induced by the splendid opportunities everywhere offered for summer country homes.

The air, the scenery, the cheapness of living, all combine to make the valleys and hills of the Granite State ideal home sites; and as the unusual opportunities to secure generous country domains at low prices have been heralded abroad, there have come into the State new summer citizens from all parts of the continent. A canvass now being conducted by the State Board of Agriculture, and not yet completed, shows the names of 2,100 owners of summer country homes. Among them are representatives of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, the District of Columbia, Virginia, South Carolina, Florida, Ohio, Illinois, Wisconsin, Minnesota, Missouri, Louisiana, Colorado, and California, as well as foreign countries. It is estimated that the 2,100 landowners, with their families, guests, and employes, add to the population of New Hampshire every summer not less than 20,000 people, and their real estate represents a permanent investment of not less than \$5,000,000; while their annual expenditures within the State amounts to half of that sum.

The fish and the game, the open air country life, and the forest all have part among the attractions which are luring so many to the New Hampshire hills.

To most persons whom the town has called from the country, there comes at some time a longing to get back to the simpler life; and most country-bred men and women wish their town-bred children to know something of the pleasures of country living. The abandoned farms of New England afford opportunities for realizing these desires; we may expect the present movement to be permanent because it has its motive in a sane view of life.

THE non-resident sportsman's license idea is gaining ground. The latest proposition is embodied in a bill in the New York Legislature providing that no non-resident may kill a deer unless he shall have taken out a license, for which the fee shall be \$50. This is in effect prohibitive. There are few men so ardent in the pursuit of venison that they will be willing to pay the tax in addition to the very considerable expense of a trip to the North Woods. It would be interesting to learn by what course of reasoning the advocates of the measure have reached their conclusion of its expediency.

BLESSINGS brighten as they take their flight. The bear of the Adirondacks has not been regarded in the past as a species deserving protection; but the growing scarcity has created a sentiment favorable to the preservation of the remnant. A bill has been introduced into the Legislature making a close season for bears from June 1 to September 30, limiting the "catch" to one bear by any one person, and protecting cubs under one year of age.

THE cruising competitions instituted last year brought in a series of capital stories of experiences and adventures afloat; and these are now in course of publication in our yachting and canoeing pages. The cruises make good reading, and should not be overlooked by those who may not be interested in the technical branches of the sport.

# THE SPORTSMAN TOURIST

## The Angler's Dream of Spring.

ARBUTUS mauve, and lily white,  
And rhododendron flowers bedight,  
On winding banks are blooming.  
Sky-gems, reflected through the night,  
Woo violets nodding blue and bright,  
That sway by waters crooning,  
And peep all shyly o'er the bank  
Beneath sweet-fern plumes tall and rank,  
To thorn-flowers' cool perfuming!  
Above, low, pine-rune zephyrs play,  
As brook-notes sing, "Away! Away!"  
And showers of seed-pearls gaily tossed,  
Are silvered by the moon and lost;  
There bamboo rods are whisked about,  
While flies are cast for lusty trout.

L. F. BROWN.

## In Old Virginia.

### XIV.—The Return.

IN ancient times it was, "See Rome and die;" we do it differently now, we go back again, and perhaps again and again.

Spots dear to memory, hallowed by association with loved ones, call to us with each changing season, and as time passes and we grow less young, the home of our youth sends forth the call that is hardest of all to resist.

I have often seen her who first drew me to the "Old Dominion," struggle with the longing to answer the home call, and generally successfully, until this fall. This time the struggle was short, ending in complete surrender.

"We will go back to old Virginia for the entire month of November, and see the beautiful autumn colors in the forest, and have all the birds we want cooked as they should be, once more," said she.

A maiden lady cousin living with her two brothers took kindly to the idea, and said to come by all means at once, and bring the babies and Mammy. And it would have been just the same if we had suggested that our family consisted of a Presidential full house instead of but two little ones; she was of those who always have room in the heart, and can make it in the house. The genuine Virginia hospitality would not so much as hesitate at a herd of wild elephants if you wanted to bring them along on a visit.

It is only a few inches from Tennessee to southeastern Virginia (on the map), and not so very far in actual travel, as it is all by one railroad, and it is so good to be going back again.

We broke the trip by a stop over at night on account of the little ones, and the next morning crossed the Virginia line, which fact was immediately known to the native in our party.

"We are in Virginia," she said. "I heard a man out on the station platform where we just stopped urging another to get off the train and go home and stay a week or two with him; yes, we are in Virginia now, sure."

Without delay or mishap we reached the end of our railway journey, and found one of the cousins, "the Esquire," waiting with a conveyance which he said was "more ample and safe than stylish," and in which we finished in a most comfortable and satisfactory manner our journey, arriving at our final destination fairly fresh and fiercely hungry. A covey of fine well grown birds crossed the road immediately in front of the team as we drove up the last hill, and made us sincerely sorry for the preliminaries imposed on the non-resident sportsman by the Legislature of Virginia. The first half of the opening day of the season was devoted to securing a license from the clerk of the county court of the county of Mecklenburg to "hunt and kill wild waterfowl, deer, wild turkey, pheasant or grouse, woodcock, partridges, quail, and other game birds during the open season in the next six months," and the reader of this chronicle will soon be led to observe that we by no means exhausted our legal privileges.

By hurrying through a dinner which under ordinary circumstances no man who loves good eating would have done, we were ready by mid-afternoon to enter actively on the campaign. The dog was a black and white setter bearing the unusual name of Roscoe, well bred and fairly well trained. He had faults—as who has not—but on the whole did as well as his masters in the field. A few hundred yards from the house, on a hillside where the cover was heavy, near a pine thicket, he found the first covey of birds, and came down in as staunch a manner as heart could desire. I waited for the Esquire (who was my companion), who was further down the hill, to come up and get position, which he at once did, but declined to do any shooting, although he had carried his gun, declaring that his role was "large and appreciative audience," as he was "no wing shot." An enthusiastic fox hunter, he was only tolerant of all other sport. Walking in I put up the birds, a covey of large strong flyers, which swung around to my left, affording my favorite shot. Having

missed two consecutive seasons in the field I was a bit rusty and rather nervous, and was genuinely pleased and somewhat surprised that I made a clean kill with right and left.

At the crack of the gun, Roscoe dashed in and had bird number one almost as soon as it touched the ground, discovering, thus soon, one of his faults.

His retrieving was admirable, but he was invariably off at the report of the gun, which frequently resulted in flushed birds and lost shots. We could only surmise the line of flight of the covey, as we were under the hill when they rose, but concluded to try to work them up. After long and patient effort we found three single birds. The first flushed wild out of a fallen tree top, and showed no sign of discomfort from either one of the two long shots taken in haste at him.

The second bird lay well to the dog and was a fair shot. The third went sailing down through a thicket of pines at a rate of speed that was discouraging to a man who was but an open cover shot, and not such an extraordinary one at that, but to show that my intentions were good I swung in its general direction and unlimbered. At the second report the bird fell, but whether I had shot it or frightened it so that it had knocked its breath out against a tree, I was in doubt. And so difficult is this thick cover shooting to me (who learned, and shot for years, on the prairies), that frequently I almost doubled my own eyes when a bird fell that I had shot at with little or no hope of killing.

Roscoe seemed to actually congratulate me as he brought in this bird, laying it at my feet, looking up in my face and wagging his tail in a most approving manner. He had carried the others to the Esquire, but from that time on he brought all birds to me, and took his orders exclusively from me. It was getting well along toward close of day, but as we were not more than half a mile from the house, concluded to try for another covey. Skirting along down the edge of the pines we hunted the dog back and forth in the open field and in the woods. And of all the rangers that it has ever been my good fortune to follow in the field, the aforesaid Roscoe dog was far and away ahead of them all. He could not walk, he could not trot, in fact, he had but one gait, and that was his level best. I would cheerfully back him against any well bred dog of his weight and inches—or any weight and inches—to cover two miles to his one all day long, and beat him home at night. I hunted him three weeks, and never saw him for longer than half a minute in any other gait than a dead run, unless working immediately upon game.

It was a pleasure to see him now as he swung back and forth in front of us, first out in the field, and then back into the woods, with almost the grace and speed of a bird. Arriving at the lower end of the field, my companion stopped to show me where he had seen five wild turkeys a few days before my arrival.

He was returning from town on horseback when three of them crossed the road immediately in front of his horse, and the other two flushed from some weeds at the roadside. Of course he had no gun, one never has on such occasions.

Turning back in the direction of the house, we walked on some distance before it occurred to me that the dog had been missing for some time, and we returned to hunt him up. Well out in the pines we finally found him, down on a beautiful point, and I began to cast about for the best direction in which to flush the birds.

"I don't believe it is birds," said my cousin. "Look carefully at his tail and see if you don't notice a very slight quiver."

I looked carefully and admitted that I could observe a thrill permeating the caudal appendage of our faithful canine, but what had that to do with the game?

"It is a rabbit," said my companion with conviction, and so it was; and the next moment it was up and frantically tearing through the woods with the dog in hot pursuit. I managed to call and whistle Roscoe back before he ran entirely out of hearing, and his shame and penitence was pathetic. He was not a dog to be beaten, and so when I had reasoned with him vigorously for a season, we resumed our interrupted hunt, with me in possession of further information as to the faults of the dog.

"Been following the boys around the place and got into the rabbit habit," explained his master. "I don't blame the old rascal one bit for wanting to run them; running anything is fun, but what makes me mad is his trying to fool you when he points one; he knows full well it is not birds, and yet the only bit of his anatomy that does not lie when he points a rabbit is that supersensitive honest tail."

We again headed toward home, much to my satisfaction, as I was beginning to find the running vines and tough matted grass harder and harder to wade through.

"What are these confounded things good for, anyhow?" I asked, as I recovered from a violent plunge that nearly snapped my head off, caused by a tangle up in a running vine.

"Never heard but one man say," was the reply. A peppery old fellow from the rice fields of Louisiana moved up here and lived for a while, and he said our land was fit only to raise tobacco to cure and briars to cuss.

If they are good for anything else I don't know what it is. They certainly do not add to the pleasure of walking, even when you are used to them."

At the upper end of the strip of pine timber along which we had come was a small grove of hardwood timber, and on the edge of this we found the dog down again. "No rabbit about that," said my companion. "Get ready for business."

I quickly saw that the bird would fly through the trees, and began to excuse the misses I foresaw by suggesting that fact, and calling attention to the gathering darkness; but on the flush two or three rose above the others and flew through an opening against the sky, giving me light enough for a fair shot, and I got a pair.

The house was near and we laid a straight course for the fire, whose welcome light streamed forth from the window. And as I began to sum up my sensations at the close of this, the first outing of my visit, I discovered that the matter interesting me most was how soon, after our arrival, would we have supper, and would there be plenty of it.

As we entered the house, the family came "en masse" to welcome us, including cousin Rob, who was confined to the house, entertaining an attack of rheumatism. If we had been favorite sons and brothers and had been away three months instead of three hours, our welcome could not have been more cordial and affectionate. And the birds were inspected, admired, and passed from hand to hand that their extraordinary plumpness might be noted, and our skill commended.

Had an alien been there to see he would have thought us "The Grand Pan Jandrum, with a little round button at the top," and our birds the only birds left of their kind, and the best kind at that. But it is just the Virginia way; they can't help it, and I hope they never can.

"Now here is just a little of my home-made wine to rest you and prevent any ill effects from your unusual exertion," said the dear lady of the house, when we had put off our shooting togs and taken comfortable positions before the open wood fire. "I shall always expect you to take a little something when you come in tired, so be sure and ask for it if I forget."

But I never had the opportunity to ask; it was invariably at my side a very few moments after I got in, and I readily saw why her brothers were contented to live along as bachelors under her thoughtful and affectionate ministrations. The supper was not delayed, and quantity and quality was all that could be desired.

A pleasant evening before the open fire hunting the hunt over again with the "shut in" cousin, and then a ready assent to the question as to "whether it was not tired men's bed time," and this in spite of the fact that I had promised the boy (age 4) that he might be my bed fellow, and he had imparted to the supper table the information that he was "Doin' to sleep wif papa and kick him till he squealed like a pig." LEWIS HOPKINS.

## Recollections of Sand Creek.

HAVING no longer opportunity to practice either shooting or angling, I cannot avoid becoming reminiscent. From time to time, as the spirit moves me, as the Quakers say, I will jot down and mail you samples of the visions called up by memory, which, as usual, you are heartily welcome to dispose of as seemeth proper.

It was in the fall of 1892 that I first saw Sand Creek. With my troop I was attending a county fair at the little town of Spearfish, South Dakota, having been sent out with the rest of my squadron from our station to act, I suppose, as a kind of extra attraction to the fair, and incidentally to give the troops a little change from the humdrum of garrison routine.

The September weather was fine, and as the fair consisted largely of horse trotting—a species of entertainment that failed to appeal to either Capt. K., my comrade in field sports, or myself—we utilized all possible opportunity to visit the surrounding country within a radius of fifteen or twenty miles, with a view of both present and prospective possibilities for shooting, as at that time we were both but recently arrived at that station, and knew but little of the game resources of the neighborhood.

We were old sportsmen and well equipped for the chase. I had an excellent mountain wagon capable of holding everything necessary to a trip of several days' duration, and a splendid pair of horses for our purposes; they would take that wagon, loaded with three or four passengers and their baggage, wherever we wanted to go, road or no road, make their forty miles a day or such a matter, and apparently think nothing of it. K. had a fine red setter which understood what was wanted of him. In addition, we had all the minor equipment of shotguns, shell boxes, etc., necessary to our entire convenience; all we needed for our happiness was opportunity. This came occasionally; at the time we considered these occasions as exceedingly rare; but, as I now look back upon it in these days of ceaseless brutality, I cannot help thinking that, after all, we were pretty well favored, and I have no doubt our colonel thought we wanted permission to be absent shooting and fishing all the time.

Our excursions during the fair had failed to profit us to any considerable degree, and, on one occasion, while in

conversation with a resident of the locality, we expressed our opinion, in rather positive language, of that territory as a field for the efforts of the sportsman. He replied that if sport was what we wanted we ought to go to Sand Creek. That was a new name to us; we hastened to obtain the necessary direction to reach a stream of which he proceeded to give us so golden an account. It appeared by his tale that it was distant to the west some fifteen miles, just across the line into Wyoming; had its rise in the Black Hills, flowed a few miles only in a generally northerly direction, and then emptied into the Red Water; that its waters fairly teemed with trout, and the forest through which it flowed for a portion of its course was fairly alive with both deer and bear; and that, in addition to all this, near the head of the creek lived a skilled hunter, who, for a reasonable consideration, would show all these things to strangers like ourselves. Neither K. nor I cared anything about either the deer or the bear; we had hunted deer a-plenty while in Texas, and as far as hunting bear was concerned, that seemed to us a species of sport wherein the fun falls mainly to the bear and the hard work to the hunter; but what did stir our red blood was his tale of the numerous trout in the waters. As we were already in the month of September, we expected nothing from them that year; but our fancy readily created visions of the sport we would have with them the coming June and July, if our narrator had told his tale truthfully.

We determined to locate this wonderful creek that very day, and view it with our own eyes, so that, if it gave promise, we might know just what to do in the following summer. We accordingly set out and readily found our way to the stream. It far surpassed in appearance any idea our informant's account had established in our minds. In fact, till I had really seen Sand Creek, I didn't know what beautiful streams existed in nature. I will briefly describe it as we found it later on, after we had carefully examined it and whipped it with our flies throughout its entire length, not once only, but many times. It has its rise in numerous immense springs boiling up among the tall peaks of the northern portion of the Black Hills, and sending their almost icy current winding back and forth down a beautiful cañon about a half mile in width, shut in on either side by almost vertical cliffs, accessible, apparently, only to the eagles which nest there, and which could be seen daily wheeling about over their summits. The fall from its source to the valley of the Redwater was steep, so that the creek, as a result, consisted principally of a succession of natural pools, from which the water passed to those below by small cascades of two or three feet in height, interspersed with long, rippling, swift shallows, commonly called "riffles." The entire bottom of the cañon was a forest of mighty oaks and elms, while the mountains on either side were dark with pine. These giant trunks had from time to time fallen across and into the stream, been washed down by high water, and stranded here and there, forming now and then a bridge or dam as well as many excellent hiding places for the *Salmo fontinalis*. The stream was of variable depth, generally about up to one's knees in the "riffles," but much deeper in the pools, many of them being over a man's head in depth; the purity of the water, however, where the overhanging branches admitted the light, tended to deceive one regarding its depth, and I recall an incident of my wife's first visit to this stream, wherein she was so misled by the apparent shallowness of a pretty pool that she had taken our little girls' shoes and stockings off and was about to allow them to wade and paddle in water probably up to their necks in depth, under the impression it was only about up to their knees. In width the stream was about right to afford a wading angler what space he needed for convenient casting and not much more. Without this width it would have been impossible to have fished the principal portions of the stream, as the dense vegetation prevented fishing them from the bank. While of course the bed of the stream consisted mainly of boulders and rounded stones of various sizes, over which the water chafed and frothed on its way, yet, sifted in among them, was quite a deposit of white, coarse sand washed down, I suppose, in freshets from the disintegrating cliffs on either side of the cañon. This sand added to the attractiveness of the stream, and doubtless gave it its name. Three dwellings were located upon this creek, all veritable log structures in most picturesque spots, and all occupied by peculiar and interesting characters. Space will not now permit of their description, but later on I may refer to them in connection with my visits to this stream. K. and I on this September afternoon meandered the stream throughout some two miles of its lower reaches, where the cañon had become more open; but we did not get up to the forest-clad portion of the cañon, nor to any of the dwellings referred to. We caught grasshoppers and tossed in here and there as we went along, but failed to obtain the rise we were seeking. We finally fell in with a resident, who told us that it was several miles of hard road up to the headwaters where the skilled hunter lived, and furthermore assured us that earlier in the season trout were most abundant. As it was then late in the day, and the stream appeared so attractive, we decided to do nothing further for the present, but to be on hand the next June with our rods and reels (and I came near saying "traces," such is the effect of the Red Gods discussion), to see what we could accomplish in season.

The following June—about the 20th, as I now recall it—we found opportunity to put this stream to the test; and, having obtained permission for a few days' absence, K. and I set forth in good spirits. We had with us an excellent man, a German by the name of Potswald; we didn't need him as cook or to do any work of that kind, as we always did our own cooking; but it was necessary to keep someone around our camp during our absences in order to protect it from cattle and meddlers, and to have a general supervision over our property. We had supplies of all kinds, and a small tent to protect us from rain in case we found it necessary; ordinarily we did not put up a tent, but we always carried one in case of a storm. We drove away about 6:30 A. M.; although about the summer solstice, the sky was overcast and a raw northerly wind made it feel more like March than June. We all wore heavy overcoats, and Prince and Jay trotted along at a merry pace, readily passing everything on the way. Shortly after 10 we reached

Spearfish, distant 25 miles, and fed and rested here till noon. The hotel had a roaring fire, and it felt good to us, stiffened up as we were with facing a cold wind for four hours, even though it was summer time. We started on again about noon, reaching the stream between two and three hours later, and having followed it up a mile or two, went into camp before reaching the forest-bordered portion. We reasoned that if trout were as numerous as they were said to be, we should find plenty in that vicinity, and we preferred to camp away from habitations. This view, however, proved a blunder of great magnitude, as will be seen. We hastily put our tackle together, rigged with flies, set out for the stream, and whipped it faithfully for two hours or such a matter without the slightest rise. Our spirits had fallen somewhat, and Potswald's Teutonic countenance showed evident disappointment as we reached camp empty-handed; but we ate our supper of bacon and hoped for better luck on the morrow.

We whipped the stream faithfully till noon the next day, with the same result. As we had thus far been fishing the lower reaches, out in the open country, with flies, we now concluded to go further up and try the forest portion, and also to use minnows. After dinner we managed to seine out some twenty-five or thirty minnows, and with bucket in hand walked up the valley for several miles, baited with minnow, and began fishing the darker waters beneath overhanging trees. Before long I caught a trout; a small affair, to be sure, but we had come so far and toiled so hard without previous encouragement that I well recall our sensations as we gazed on this pretty, speckled, shining little fellow. We were like prospectors who had at last struck "pay dirt." We now forgot all previous disappointment and set about fishing in earnest. Soon K. caught a nice one that would weigh probably a pound; this gave us such a thrill that we chattered about it like boys who had never been on an outing before. We fished along down stream till 4 or 5 o'clock, however, without getting any more, when we were overtaken at a crossing by a gentleman in a buggy, and fell into conversation with him. He seemed surprised at our poor showing, and said it must be due to our fishing the lower portions of the creek. "Just go up to Boydin's," he said, "and I'll guarantee that you'll catch a hundred a day, if you want that many."

On the following morning we packed up and set out for the headwaters, the present land of promise. We had not gone far before we met Boydin himself, the hunter of repute. He was going away from home then, but told us to go ahead and make ourselves at home at his place, and if we couldn't catch all the fish we wanted he would show us how on his return. "Jack" Boydin, as he was known to all, was the typical hunter, the kind one reads about in the story books; small, lithe, alert, straight as an Indian, with an eye like an eagle. He had passed some fifteen years in the forest, part of the time as hunter for mining camps, and part as deputy sheriff. He was not given to boasting, and rarely referred to his experiences as sheriff; but at night, seated under the big trees around the camp-fire, it was a pleasure to listen to him as he recounted his tales of the chase and his observations as a naturalist. Among his wanderings in times past, he had stumbled upon this charming cañon, built a spacious log house at one of the principal springs, and now owned about two miles in length of the stream. Here he kept a few cows and raised some crops upon small patches of ground he had cleared. About five years before the stream had been stocked with several varieties of trout and put under a close period. Although this period had been but indifferently observed in the open country below, he had personally strictly enforced it on his own domain, so that now that the creek was open to fishing, while the lower portions were almost devoid of trout, as we had just discovered, his waters were fairly alive with them. He made a small daily charge for the privilege of fishing his grounds, and kept away all who were unwilling to pay it; by this means his fishing remained constantly good. As he left us he remarked, "You'll find one pretty bad hill on the way, but your team is good, and you will make it all right."

We drove on and soon came to this hill. It was certainly a bad one; I recall but one worse—that up Old Baldy in Texas. On the right of the track the ground sloped precipitously to the creek below, so that, in the event of the horses failing to make the ascent, and letting the load draw them back a short distance, the whole might readily be displaced from the narrow trail and overturned into the stream many feet below, by no means an alluring prospect; and, as if to emphasize its probability, there was at the bottom the remains of a recently wrecked vehicle. Prince and Jay, however, scorned to notice the hill, and climbed it without a halt. From there on the drive under the big trees was delightful, the fords too picturesque for description, and when we finally brought up at Jack's pretty log dwelling we felt we had reached the sportsman's paradise. We camped a few feet from the edge of the creek, turned Prince and Jay into the pasture with Jack's horse, and, being within sight of his house and in a fenced inclosure, we neither feared cattle nor meddlers, but could all three abandon ourselves to the delights of trout fishing under perfect conditions.

We again rigged our tackle and stepped into the stream right at our camp, and soon had plenty of trout for dinner. Having now ascertained that we were at last where the fishing was really good, we stopped, cooked dinner, and lay about under the shade of the oaks (the weather had now gotten hot again), listening to the music of the stream till about two o'clock, and then set out to thoroughly explore its resources, and find out what it really contained. As we did not contemplate returning the next day to the post, we determined not to kill a fish that afternoon beyond the few small ones we needed for supper, but to try the most promising lurking places for large ones, and to carefully release every one hooked. What an afternoon we had of it! Although Jack's stream had been fished more or less, it appeared that K. and I were the first ones to use flies and to boldly wade its waters while fishing, all others having been content to fish with worms or grasshoppers, and from the bank. It was thus reserved to us to fish long reaches of the most attractive parts of the stream whose banks were so hemmed in by thickets as to have precluded all previous fishing.

According to the practice of anglers, we had each

rigged three flies of different varieties in order to discover the most taking, but we soon had to remove all but one. The trout were so numerous and voracious we soon had two or three on at a time, not of the little frying-pan size, but fish that would weigh a pound or two each; and when one has two or three of them on at a time, above his knees in water in a swift stream, making his way about over rounded and slippery boulders, and endeavoring at the same time to preserve his rod from the overhanging branches, it is not overstating the case to say that he has his hands full. After reducing our tackle to a single fly—K. retaining a coachman, I a professor—it became more of a pleasure. We cast only in places where we had reason to expect large ones, and were rarely disappointed. Of course, we didn't catch all that struck, many getting away; still they were not at all shy, and would apparently bite a second or third time as vigorously as ever. Having hooked and played a fish till we could land him, we would carefully remove the hook and release him, and I am not certain but some of these paroled prisoners took up arms against us a second time as soon as they had recovered their strength. We kept no note or record of that day's sport; we needed none to keep it fresh in our memories, and as far as others are concerned, I doubt if any would have believed it if we had shown them an account record—that is, I mean none but our FOREST AND STREAM readers. About six o'clock it became too dark under the trees for the flies to take, so we gave over the chase till the morrow, and wended our way back to camp empty-handed, aside from some half dozen small ones we had saved for supper.

Upon our return to camp we could not find Potswald, and, fearing he might have wandered off hunting and gotten lost, we set out up the stream in search of him, calling out from time to time. He soon answered our halloo, and shortly was seen approaching. As he came into view he presented so ludicrous a spectacle that K. and I could not preserve our countenances. It seems he had never been fishing before in his life, and now, having found a stream where, if you threw in a baited hook, the fish literally caught themselves, it had made him almost delirious. When he first came into view he was climbing a fence, his rod and tackle under one arm, and both hands tightly clasping a bunch of trout scarcely above the legal limit, while tails of many others protruded from his various pockets; his face was flushed, and he could scarcely speak. Although a most exemplary man, we thought he must have been drinking, but it eventually came out that he was so elated at his unexpected success that it affected him like liquor. We showed him how to cut a forked stick and string his fish thereon like the proverbial small boy—he had something like fifteen or twenty of them—and on his return to camp, when his eye fell on the few that K. and I had brought in and he hastily concluded that these represented the result of our efforts, it was laughable to see the evident contempt in which he held our ability as fishermen. We didn't deceive him, but complimented him on his success, cautioning him meanwhile not to catch so many again, as they would be wasted. It was useless, however; the next day he fished just as persistently, and came back to camp again loaded with little fellows.

We spent a pleasant evening round the camp-fire with Jack, who had meanwhile returned, and finally were lulled to sleep by the rippling murmurs of the stream only a few feet from our heads.

The next day we set to work, caught a good string of big ones—some over two pounds—dressed and packed them carefully for the journey, pulled out of the cañon before dark, and made the drive back to the post in the moonlight, arriving in time to furnish our friends fresh trout for breakfast.

FORT RILEY, KAS.

WM. F. FLYNN.

## Seeking the Lost.

KELLER, Wash., Dec. 21.—*Editor Forest and Stream:* Were you ever lost in the mountains? If you never have been, then you will hardly be able to understand my feelings when I went to town last Wednesday for my mail. I was told Billy Boles was lost, and had not been seen since Sunday. Mr. Greer, Lew Phillips and Billy went over on to the meadow on Nine Mile Creek hunting, and camped several days. Sunday morning Billy started out, and told the boys that if he did not get back that night not to get uneasy, for he might go over to his cabin, which is a mile above mine on Silver Creek. Billy did not get back, and Monday morning Greer and Phillips packed up and started over to Billy's cabin, expecting to find him at home, but there was no one there, and the snow around the cabin showed that there had been no one around the cabin since they had left a few days before. Tuesday they, together with Dan McMaster, went to hunt for Billy, and went back to camp and tried to follow his tracks, but the rain and the snow falling from the trees had so obliterated the tracks that they were unable to follow them, and they came back. Wednesday Dan McMaster and Canfield hunted, and not finding him, or any trace, they came to town. That was the first I had heard of. I told the boys that if he did not turn up or there were not some tidings of him, I would go the next day, and I thought if they could show me where he had been last seen I could follow the tracks. This the boys who had been out said was impossible. I said I would try, for we had to hunt, and if we could not follow tracks then we would have to hunt the country over. Billy had his dog with him, and if anything had happened to him the dog would stay with him, and we would be able to hear the dog howl.

Two of the boys that work for our company were over at the camp Billy left on Sunday, and they said they struck Billy's tracks about a mile above the camp and followed them to camp, where they first struck the tracks they turned up the hill, and they thought were heading for Copper Creek. But it was very foggy that day, and the boys were mistaken in the direction.

Thursday Lew Murphy and Mr. Harford came by my cabin, and brought me a saddle horse, and we were soon on the road to their camp; Dan M. and Indian Johnnie had gone a little while ahead of us. When we got up to the forks of Silver Creek, I told the boys with me that we would go up the ridge to the summit of the mountain, between Copper Creek and Nine Mile,

and swing around, so as to pick up the tracks where our boys had seen them. We went around till we had passed clear around, and, not finding any tracks, started for the camp, expecting to find others there, and when we had got to within about half a mile of the camp we came to Dan M. and Johnnie, who were following a track. I told them that was not Billy's track, it toed out too much, and if they followed that track a while they would find it came back to camp. This they did, and the track returned. Some of the boys at camp had been after birds. We went to camp, but none of those could tell just where Billy had left, and which ridge he had started up. Dan M. and Johnnie went up the ridge, Lew Murphy and Harford went up the next ridge above, I went out about a quarter mile from camp and made a complete circle of the camp; and when I got back to camp I found what I took to be a trail made by our boys, but it was very dim, as there had been rain all Sunday night, Monday, Tuesday night and Tuesday and Tuesday night, and till noon Wednesday. The snow that had fallen from the trees had put out all tracks under the trees where they were thick. I followed the tracks I found for over a mile, and came to where a track had gone up the hill, and this I felt certain was Billy's tracks. I followed for at least three miles and came to where a very big pine tree had fallen across a sharp point of the hill; it stuck up several feet, and under this I found Billy's tracks, as well as those of his dog.

When I got out on to the open ground I could see the track quite plainly. I hollered for the boys and soon they answered and came. We followed the tracks quite fast, separating a little way, and in keeping the direction when one would lose the tracks the other would pick them up. We followed till half-past one, and stopped for lunch. Then we took up the tracks, and went right along. Soon we came to where Billy had started some deer; we could tell by the many impressions in the snow, but we had trouble in finding where he had gone, as we tracked him round to where he had recrossed his tracks several times.

I was getting late. I found where he had gone down a hill toward Nine Mile, and I told the boys we had better return to town and get pack horses and come out again, as it would be after dark before we got back. This was agreed to, and it was dark before we got to the summit, and when we got down in sight of Billy's house we saw a light, and I tell you we were greatly pleased, for we thought he had come in, which proved to be true. We hollered at him, as the road did not go close to the cabin, and we thought we would learn the particulars later. He had wounded a deer where we had left the tracks and followed it down toward Nine Mile, and he laid out Sunday night, and Monday he went down Nine Mile to a miner's cabin, which he reached at 4 P. M., tired and hungry, and as it rained all day Tuesday he stayed in camp, and the same Wednesday. He said he never thought of us hunting him till Thursday morning, when he started home, which he reached a little ahead of us. I tell you we were glad that we did not have to return next day, for following tracks is hard work for

LEW WILMOT.

### The Cruising Outfit.

AN OPEN LETTER TO RAYMOND S. SPEARS.

DEAR SIR—I have read with interest your account of preparing for a trip down the Mississippi River. There seems to be something lacking; but of course no two could have agreed on everything. There are a few things I insist on; one is comfort. There is only one way to enjoy this perfectly on such a trip. You must have a 7x7 tent, 3 foot wall, and a good tent stove. Not an oil stove to cook on; you can take one of those, too, if you like; but a sheet iron tent stove to burn wood in and keep you warm and cheerful on rainy, gloomy days and nights. A box 7 inches square and 14 inches long, with 2½ inches pipe, not smaller, will keep you warm in the coldest of weather inside a good 7x7 tent. Also you could take a folding cot, then you will be complete in that line, and have added only about forty pounds to your load, which in a boat so commodious as yours is nothing. Now, I want you to add these, for I am going to think of you often during the winter, and I would like to think of you on rainy nights as camped on a bayou under the mistletoe or cypress, as the case might be, tent walls aglow with fire and lamp light, leaning back in deepest reverie or jotting down the events of the day. You are at home. You have grown familiar with your surroundings, and inside with the flaps closed you are comfortable and content, no matter in what wild spot or how the rain patters of the wind moans through the pines. I have been there through many hundreds of crooked miles. Now, help a fellow out and get in shape and "I'll be with you 'til the roses bloom again."

E. P. JACQUES.

### "It Just Happens So."

YOUR editorial (in issue of January 2) is in line with experiences of my own. Time and again when finding a man out and awaiting his return for a reasonable time—in other words, when I became satisfied that time was up—I have brought the man into his office by simply writing him a note. Sometimes he comes in before I have written two lines, and again as the note was finished. Repeatedly have I done this. Sometimes I have said to the clerk, "I guess I will hurry Mr. So and So up. Please give me a piece of writing paper and see if he does not return at once." And so it would happen.

I even did this on you once. I think you had been out to lunch a matter of two hours or more. I, too, here called you to your desk and duty by writing you a note, only to tear it up as you walked in. It works every time; in fact, I can recall no case where I tried it and failed. I never tried it on a man who had gone to Europe or out of town; I do not know just how it would work in such cases. Write this up for the benefit of humanity.

CHARLES CRISTADORO.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Natural History.

### Cats Eating Corn.

AS I SEE that several writers seem to think this an unusual occurrence, I will say that my experience is that a large majority of cats will eat sweet corn both when cooked and also raw off the cob. They do this from choice, and not because pressed by hunger. Many cats will also eat turnip, squash, and potato when cooked.

While scientists separate animals by dentition into rodents and carnivora, the fact is that nearly all of the rodents will eat both flesh and fish, and most of the carnivora will eat some kind of vegetable food. Rats, mice, squirrels and porcupines will eat meat as quickly as any of the carnivora; squirrels will not only eat meat, but will kill young birds and suck eggs; chipmunks will kill and eat mice, and I have known of one carrying in his mouth a snake a foot long which he probably intended to eat. Flying squirrels will eat others which are in traps. Anyone who has ever set traps for bears knows how often porcupines and rabbits get into their traps. Some will say that they are attracted by something salt which was used for bait, but I have taken porcupines where the bait was perfectly fresh meat, and have taken rabbits in log traps when set for both sable and mink, which in some cases were baited with perfectly fresh fish, and in others with fresh meat. I have known muskrats to be caught in a log trap baited with meat. Samuel Hearne, in his "Journey from Prince of Wales Fort to the Northern Ocean," says, in speaking of a tame beaver, that he has kept several of them, and that "in general during the winter they lived on the same food as the women did, and were remarkably fond of rice and plum pudding. They could eat partridges and fresh venison very freely, but I never tried them on fish, though I have heard that at times they will prey on them."

The only rodent I know of which will not at some times and under some circumstances eat meat and fish is the woodchuck, and I should not be surprised but, if taken young, one could learn.

On the other hand, nearly all carnivora will eat vegetable food. Wolves and foxes will eat beech nuts when they can get plenty of other food. I have seen where a wolf ate beech nuts where just before he had eaten deer meat. I have seen a wolf taken in a bear trap in June whose stomach was full of young beech leaves. There was no doubt that this wolf was very hungry, or else he would not have entered into the trap, but it proves that in some cases they will eat even leaves. Every hunter knows that both bears and raccoons will eat every kind of grain, nuts, or berries. Bears also eat many kinds of roots, some of which—like the Indian turnip (Jack-in-the-pulpit)—few other animals would touch. Pine martin and fisher will eat the berries of mountain ash, also beech nuts. Whether any of the deer tribe will ever eat meat is something I do not know, but I have seen a horse eat a dish of stewed meat, and travelers tell us that in some parts of Norway and Sweden the cattle in winter are fed on dried fish heads, so it seems there are no hard and fast rules as to what animals will, or will not, eat.

M. HARDY.

BREWER, Me., Jan. 8.

### The Meadowlark Again.

Editor Forest and Stream:

Your worthy contributor, M. of Northside, in a recent number of FOREST AND STREAM, made such kindly allusion to some of the letters of Coahoma, that my appreciation thereof is but little marred by the mild censure that follows. Yet am I constrained to offer defense of what I consider to be a very natural position assumed by me concerning the shooting of meadow larks, which resulted, unfortunately, in wounding the sensibilities of M. of Northside, and perhaps of others, who view the question from a different standpoint than my own.

My courteous opponent appears to have retained a somewhat mixed impression as between my own utterances and some that were quoted by me from the pen of John James Audubon; as the suggestion that meadow larks were an easy mark for young sportsmen to practice on was Audubon's and not my own. Your contributor seems also unmindful of the circumstances that called out my article of which he complains, which was to defend a minister of the church, who is a Southerner, against the unseemly abuse of a brother minister, who rudely charged him with moral turpitude of the grossest character because he shot some meadow larks, and in doing so unwittingly violated a local game law. My object was to show that it was perfectly natural for a Southerner—at least one from the Gulf States—to shoot these birds without the slightest suspicion of wrong doing in the eyes of other people; and used arguments to that end which merely reflected the common and generally accepted view of the matter in this part of the country.

The simple fact is, as I endeavored to show, that in the Gulf States the meadow lark is regarded as a game bird and not as a song bird. This is sufficiently attested by reference to the game law of Mississippi, which includes the meadow lark in the category of game birds, along with doves and partridges; and affords him the same measure of protection by fixing for him a close season along with the other named game birds. The meadow lark here is more in evidence during the fall and winter months than in the spring and summer. He is found in association with doves and partridges, feeding on the same ground and possessing the same general habits; and is, moreover, very abundant, with everything to suggest the propriety of shooting him along with the others, except that he is not held in the same esteem as a target for skillful shooters.

It would probably never occur to dwellers in the Gulf States that the meadow lark is to be considered as a song bird; and the suggestion would strike such an one as decidedly novel. As between the frequent, clear, and musical call of Bob White, and the feeble and infrequent notes of the meadow lark, the former would probably be voted to have much superior claims of the two to be exempted from the list of game birds and exalted to that

of the songsters in this part of the country; and yet such a proposition would be regarded as absurd.

We are apt to forget that there is no such thing as bird ethics, except as created in the human mind, with reference to human sensibilities and utilities, and the kind of esteem in which different birds are held by different people is purely a question of environment, depending upon latitude and climatic conditions, which in turn control the local character and habits of the birds.

But it is difficult for any of us to overcome that inborn spirit of provincialism in this and other matters that prevents us from making due allowance for the differing views of those who are differently environed, and looking at a subject from a different standpoint.

I trust that my esteemed friend, M. of Northside, to whom I should like to extend a hand of welcome, both as an "Old Virginian" and one of the noble FOREST AND STREAM brotherhood, will vouchsafe a modicum of charity toward his less sophisticated (in bird ethics) fellow Southerner from further South, and at least accord to him as favorable a footing as that of "the poor benighted Hindoo," etc.

With a happy New Year to FOREST AND STREAM and all its readers, I subscribe myself, everybody's friend,

COAHOMA.

P. S.—I will suggest to the editor that he apply the refrain put into the meadow lark's song by the Southern negroes—"laz-i-ness kill yo-u-u"—to the musical notes given in the last FOREST AND STREAM as representing its musical expression, and note how more perfectly they fit its cadence than do the words "Spring o' the year."

COAHOMA.

### The Night Hawk.

THE communications relating to the night hawk have been of more than passing interest to me. I have on a number of occasions seen these birds flying about in Manhattan, their flight being sometimes high in the air, and as often hardly above the roofs of the buildings. That they deposit their eggs and rear their young on the flat roofs I have not the shadow of a doubt, for as they are here in considerable numbers throughout the summer we can hardly imagine that they do not breed here, and it would be nothing strange that they should do so, for it is their habit to nidify on the flat tops of buildings in other cities.

I have on several occasions found their eggs on flat roofs in Boston, and when I was connected with the State Cabinet other specimens of the eggs that were also found in such places were brought to me for identification.

In W. A. Stearns' book on birds (edited by Dr. Coues), it is stated that the eggs are laid on "the flat concreted roofs of houses in large cities, where the heat of the sun helps to incubate them, as it does those of terns and sandpipers, while the birds are flying about in broad daylight."

Dr. Thomas M. Brewer, who was in his day an ornithologist of repute, affirms that the mansard roofs of many of the houses in Boston afford "a safe and suitable shelter at night, as well as a place of deposit for its eggs."

Dr. Turnbull also states that the flat roofs of extensive warehouses in Philadelphia near the river were employed for similar purposes. The birds are more numerous as summer residents in New York than most persons imagine; in fact, the number who have noticed them here in their peculiar erratic flight is probably very small.

A good point from which their aerial evolutions may be witnessed is the Battery; dozens of the birds may occasionally be seen there on summer afternoons darting about in pursuit of their insect prey.

In their woodland homes they construct no nest, but deposit their eggs on the earth or dry humus, or the moss-covered surface of a ledge.

An extract from the description I have given of the habits of this bird in my book on ornithology may be of interest here.

"This bird arrives in New England about the tenth of May; at this time great numbers may be observed at early twilight coursing through the air in different directions, sometimes at a great height, and often just above the fields and meadows when near the sea coast, where they destroy great numbers of insects.

"Their flight is very rapid, their long wings giving quick, powerful sweeps, and as they dart about in many eccentric movements busily gleaning their food, they utter at oft-repeated intervals their short note or squeak, which almost exactly resembles that of the common English or Wilson's snipe.

"About the middle of May, or certainly by the twentieth of that month in a latitude as high as Maine, the male commences his attentions to the female, his movements at this time are interesting, and from their common occurrence are familiar to all who live in the country.

"At early evening and in cloudy weather throughout the greater part of the day he ascends into the air, and when he has attained a considerable height partially closing his wings he drops with great velocity through the distance of seventy-five or one hundred feet, sometimes nearly to the earth.

"The sound made by the air passing through the wing quills is so loud that I have often heard it at certainly the distance of half a mile; it resembles, as Nuttall truly says, the sound produced by blowing into the bung-hole of an empty hoghead. This act is often repeated, the bird darting about at the same time in every direction, and uttering his snipe-like squeak.

"Wilson was of the opinion that this habit of the night hawk is confined to the period of incubation, the male acting in this manner, as he thought, to intimidate any person from approaching the nest.

"I have had abundant opportunities for observing the bird in all times of the summer and during its stay in the north, and I should unhesitatingly affirm that from the time of early courtship until the young are hatched, if not after, the male acts in this eccentric manner.

"The eggs are two in number, elliptical in shape, of a dirty white color, with fine dottings of different shades of brown, with obscure markings of slate color, and some spots of lavender. I have found numbers of their nesting places in northern Maine, where in walking over a pasture or rocky field I have flushed, sometimes, a bird in

every ten rods. I remember a ledge of rocks back of the little settlement known as Wilson's Mills, which seemed a favorite breeding place for these birds, and in the space of every four or five rods a female was incubating her eggs. The male assists the female in incubating, as I have witnessed many times; when perching by her on a limb of a tree or a fence rail, he always sits along the limb or rail, instead of across it, a peculiarity which is also noticeable in the whip-poor-will. Some authors in alluding to this fact, explain it by noticing the comparatively small size of the feet, and apparent weakness of the legs. I think this can hardly be a sufficient cause, for both species while on the ground can run with considerable speed, and if captured cannot only perch across the finger or the branch or the back of a chair, as I have proved, but can rest on one foot, drawing the other up into the feathers of the belly like other birds.

"About the last of August after the young have become able to provide for themselves, all the families in a given neighborhood assemble in a large scattered flock, after the manner of the swallows, and after having become completely recruited from the labors of incubation, they all leave for the South."

The name "night hawk" is a misnomer, for it is abroad the greater portion of the day in search of its insect prey, which, like the swallow, it sometimes seeks high in the air, so high as to be almost invisible.

It prefers pasture lands, barrens, and other rather desolate places to heavily wooded localities; in the extensive

had never imagined there were so many night hawks in creation.

Of course the birds were in their autumnal migration, but how they managed to get together in such numbers, or why they should simultaneously be seized with the desire to thus come together at that particular time and by that special route, has always been inexplicable to me.

Whether they kept together until they arrived at their winter home or their numbers were scattered as they moved southward we shall never know, for I never heard of any other ornithologist making note of this procession.

Birds of such rapidity of flight as the night hawk could, no doubt, move in very long stages.

My friend, Mr. C. J. Maynard, in writing me on the velocity of the flight of birds, says, according to his own and others' observations, geese, swans, and other large species move at upward of 100 miles an hour; thus they can readily accomplish a distance of 1,000 miles between meals. Ducks, especially the smaller species, like teal, scaup, etc., move more rapidly than this, the average being probably as high as 150 miles per hour. Shore birds move even more rapidly, averaging 180 miles per hour. It is a well established fact that the golden plover sometimes may take one uninterrupted flight from Newfoundland to the West Indies in a straight line, thus covering 3,200 miles. Now, if these birds can cover such great distances, there is no reason why the night hawk cannot make such long flights also.

There is no doubt that it flies across from the conti-

be looked for in the neighborhood of one of the greatest cities on earth.

It has been my practice for years to thus scan the heavens, and almost always I have seen something interesting in the ornithological line.

Once while resting on a seat in Central Park I saw soaring high up in the air a bald eagle, and a very large one at that. There was no mistaking the identity of the bird, for I have seen in past years a number of them in flight. On other occasions I have seen wedge-shaped flocks of geese and ducks winging their course across the sky, and flocks of plover and other shore birds are common.

In fact, if one had a favorable situation from which to make his observations, I have no doubt that he would, almost any day in summer or autumn, be amply repaid for the time consumed.

I have, once or twice when sitting by my window at night, heard the unmistakable note of the qua bird, or night heron, high up in the air, and on two different occasions have at night heard the shrill, quavering cry of the loon as he was winging his way over the metropolis.

The presence of large birds in the neighborhood of a great city, however, is not confined to New York, for scoters, coots, and other sea ducks and black ducks often pass the winter in the Back Bay Fens and the Charles River in Boston, where they seem to know intuitively that gunners will not molest them; and the same aquatic fowl are often seen on the Delaware River near Philadelphia, while steamers and tugboats ply around them.

## Lions for Two Presidents.

Correspondence New York Evening Post.

CONSUL-GENERAL SKINNER, now on his return from the Abyssinian capital, "has been charged to deliver to the President two lions" as a present from King Menelik; and, as they could not well be shipped by express from Abyssinia, presumably the Consul-General has them in his personal custody. It is to be hoped he enjoys the mission thus imposed upon him better than a certain earlier consular officer did a like trust.

In 1839, while Thomas N. Carr was Consul at Tangier, a rumor came to him from Fez that the Emperor of Morocco intended making him the recipient of some barbaric present or other expressive of his regard for the Government of the United States. Consul Carr took immediate alarm, and sought the bashaw, who was the chief official at Tangier, to remonstrate. From the bashaw he got no satisfaction, and set about communicating with the Emperor; but, before he could do so, there came to his door a glittering official, attended by a file of soldiers, and bringing a full-grown lion and lioness—the finest ones, said Mr. Carr, that he had ever seen. The Moroccan official said he had come to give the Consul the lions as a present. The Consul said he could not take presents; the laws did not permit it. "But you are expected to forward these to your President," said the official. The Consul said that the laws of Congress did not permit the President, either, to accept presents from a foreign Power. "Then you may send them to your Congress," replied the official. "But," remonstrated the distressed Consul, "Congress will not accept presents; it has resolved to that effect." "Well," next inquired the Moroccan, "who is back of your Congress—who is the highest authority in your country?" "The people," responded the American. "Then send the lions to the American people," was the conclusive and triumphant answer of the official. Then the Consul refused point-blank to receive the lions for anybody or on any terms. "But," answered the Moroccan, "that is impossible. I have been sent to give you these lions, and give them to you I must and shall; it is the Emperor's orders, and in Morocco to disobey an order means to lose one's head; if you don't take the lions, I shall turn them loose in your street and put a guard across the head of it to keep them there."

Mr. Carr wrote to the State Department that the street in which he lived was a short *cul-de-sac*, in which were only half a dozen houses besides his own; that to turn lions loose in it would have made it uninhabitable, and, at the end of all his resources of resistance, he could see nothing to do but clear a room in his house and turn the lions into it. This he did, and his letter relating to the State Department the story of his adventure and his helplessness against the overpowering generosity of his Moroccan admirers is a most pathetic and moving paper. It is printed in full in House document No. 221, Twenty-sixth Congress, first session.

Communication sixty-four years ago was tedious to an extent which it is hard for those of our day to realize, and his letter, dated September 3, 1839, did not reach the State Department till November 5 of the same year. On November 12 a reply was forwarded in which Mr. Carr was told that as it appeared he had done all that lay in his power to repel the invasion of the lions, he might send them to the United States by the first available ship, and the charges for transportation and for the subsistence of the animals while they remained members of his family would be allowed in the settlement of his accounts. At this point Document No. 221 drops the story. If the chapter—probably of equal or greater interest—relating the shipment of the lions, their arrival in this country, and their reception by the President, is in the public documents, I have not yet run across it. Giving the State Department's letter two months to reach Tangier, and making reasonable allowance for delay in securing a ship (only accidental sailing ships being available), the unfortunate Consul must have had the lions in his household for the better part of six months.

The story of the progress of Consul-General Skinner's menagerie will, of course, be told more minutely, and if King Menelik's lions reach President Roosevelt he will have an easy outlet from the dilemma by way of the National Zoological Park in Washington, which, of course, did not exist in President Van Buren's time.

F. A. CRANDALL.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

THE NIGHT HAWK.  
From Audubon's "Birds of America."

tracts of barrens in Annapolis and Queens counties in Nova Scotia it is very abundant, scores of birds often being in sight in any given spot.

It is one of the most widely distributed of all our native birds; it ranges from Texas and Florida on the south to high northern latitudes, and from the Atlantic Ocean westward to the great central plains. At Matamoros Mr. Dresser discovered it to be a rather abundant summer resident, and throughout the fur countries Dr. Richardson found it to be an abundant and well-known species.

The magnitude of its numbers can hardly be estimated. I once had a good opportunity to form an idea of how numerous the species is. I was tenting on Grand Lake Stream, the connecting link between two of the Schoodic lakes, Maine, in September, forty years ago.

I was sitting with my companions one evening before our camp-fire enjoying our go-to-bed smoke; the moon, which was nearly in its full, illuminated the scenery around us with almost the brightness of day. As we sat there swapping fish stories and recalling pleasant reminiscences, our attention was attracted by the fluttering of wings around us, and looking up we discovered that there were hundreds, if not thousands, of long-winged birds darting about us, but all seemingly moving in one general direction, from north to south. To ascertain what they were I seized my gun and selecting one of the birds that was winging its way within easy reach, I dropped it, and to our surprise we discovered it was a night hawk. That such a prodigious number of these birds, which kept up a procession several hours in length, could be of this species was simply astounding to us. We

went to Nova Scotia in the spring and autumn; the distance across Massachusetts Bay and the Bay of Fundy is no trifling matter, and this is undoubtedly covered by many thousands of smaller birds, warblers, sparrows, swallows, and other migratory species, and we know, also, that myriads of other migratory birds cross the Mediterranean Sea every year.

The night hawk is not the only species of our *fera natura* that is more or less often seen in Greater New York, as can be easily proved by those who will take the trouble to look around them.

A year or more ago FOREST AND STREAM printed a communication from me which noted the occurrence of a pair of weasels or ermines in Fordham; in the same neighborhood I have seen the striped squirrel and the gray squirrel, and have within a year flushed a common bittern or "stake driver" in the swamp through which a small creek runs in the same locality.

One afternoon last summer as I was enjoying a stroll through Riverside Park, I chanced to look upward and saw, high in the air, a great blue heron that was winging its way across the Hudson River, its destination probably being the extensive stretch of marshes a few miles the other side of the Palisades in New Jersey; whence it came of course we can only conjecture, but there are hundreds of localities along the Sound that would have attractions for the bird, and the heron could easily cover such a trifling distance as I have named.

To be sure, not every one has the leisure and inclination to spend much time in gazing skyward, but those who are thus blessed will often see birds winging their way in various directions whose presence would hardly

## Kadiak Grizzlies.

READING in recent numbers of *Outing* the exceedingly interesting articles of Mr. James H. Kidder on "Hunting the Big Game of Western Alaska," one cannot but admire the hunter's determination and persistence in following up the hunt for his first bear so resolutely, which, Mr. Kidder states, took eighty-seven days of actual hunting.

I have no doubt that the hunter felt well repaid for his long chase when, on the 15th of May, 1900, he brought down a Kadiak grizzly or "big bear" at Kadiak Bay. Possibly he felt well rewarded at night for each day's exertions, for hunting, with the true hunter's spirit, is in one respect like virtue—being its own reward.

But if Mr. Kidder had preferred to make short work of killing his first bear, and had gone to a certain place on Kadiak Island at the right time of year, I think much hard work might have been avoided, to say nothing of the time that would have been saved.

This remarkable place to which I refer—perhaps it has not a parallel in the whole world for grizzlies—is Karluk Lake in the interior of Kadiak Island. Karluk Lake is at the head of Karluk River, and is about half way across the island in a general southeasterly direction from the famous salmon fishery at Karluk beach. The lake is uninhabited by white men or natives, but during the spawning season of the "red salmon" or "blue backs" (*Oncorhynchus nerka*), when they ascend the Karluk River to spawn on Karluk Lake, it is a carnival time for the Kadiak grizzlies, and they come down from the surrounding mountains and hills, and I fancy from a large part of the surrounding country, too, to feast on the spawning salmon, which then become an easy prey to the great bears, gathered together as the salmon are in great numbers in the shallow waters near the shores of the lake. Here the enormous grizzlies congregate during the spawning season of the salmon (August and September), and here, where they obtain food so easily and certainly, and in such quantities, I am strongly inclined to think they stay till the spawning season is over, particularly as it is a place rarely ever visited by white men, and very seldom even by the native Aleuts.

Judging from the numerous tracks which cover the shores of the lake, and which along the water's edge were like the beaten cowpaths in a cattle pasture, these big bears must be very numerous around the Lake at this season. This was confirmed by our own experience when we formed part of a Government expedition which, for the purposes of surveying, photographing, and general investigation, visited Karluk Lake and explored the whole length and breadth of the lake in the summer of 1889.

A portion of the party, consisting of two white men and two Aleuts, made a tour of the whole lake shore in two baidarkas on the 19th and 20th of August, and in those two days' paddling, without making any effort to hunt grizzlies, they stumbled, so to speak, on six of the "big bears," of which they killed one. This circumstance,

connected with the fact that grizzly tracks were so thick around the lake, leads one almost necessarily to the conclusion that these bears are very numerous at Karluk Lake while the salmon are spawning; and it seems to me that if Mr. Kidder had gone in August into the interior of Kadiak Island, and hunted on Karluk Lake, he could have almost have averaged a "big bear" a day.

LIVINGSTON STONE.

## Moose Ages.

BUFFALO, N. Y.—*Editor Forest and Stream:* How old is my moose? The question is often asked over the campfire when the successful hunter can hardly leave the head long enough to get his much needed night's rest. There is some difference of opinion among old hunters as to the length of time required for the development of the horns, but the most generally accepted theory is about as follows: The first year the six-month-old calves have merely bumps on the skull where the horns are to be. The second year the yearlings have spike or prong horns according to the size and development of the individual. Two-year-olds to five-year-olds are almost indistinguishable, running three to eight points on a side, usually with some palm and about 30 to 40 inches spread. The size of the moose as well as of his horns gradually increases during these years, but the individual differences are greater than the yearly, so that it is impossible to tell the age with certainty closer than to within three years.

From the seventh to the ninth years he reaches his maximum, both as to size and spread of antlers and width of palm. There should then in the eastern moose be a spread of 50 to 65 inches and about 13 points on a side. The Alaska moose of course runs a larger spread and more points. Somewhere about the fourteenth year the horns are grown with a narrower spread, smaller palms and thicker, heavier points. The moose is "aged," the horns run to points, and the head is ragged looking. Such old veterans are not apt to be found where the country is very much shot over. The bulls are lucky enough if they reach their prime, and seldom get a chance to pass it.

The long whip-lash bell is usually seen in cows or young bulls under six years. In their prime the moose usually have a short bell with a very long base. The aged moose have little or no bell. I have seen a moose with a long whiplash bell, the end of which was a suppurating sore. It looked as if the tip had been torn or bitten off. Repeated injuries of this sort might help shorten the bell not only by tearing off portions of it, but by cicatricial contraction of the stump.

The teeth of the young moose are dead white, marked, especially in the grooves, with very dark color almost black. Even in moose in the prime of life caries may often be found. The teeth of the aged moose are yellow and worn down.

It would be interesting to hear from your readers if these theories tally with their experience, especially from

those who have watched moose develop in captivity and can give facts rather than theories.

Last fall was an unusually good year for large moose horns in central New Brunswick. This was said to be due to the open character of the last two winters.

Partridges (ruffed grouse and Canada grouse) were more plenty than they have been for many years, as noted in your last issue by Mr. Butler, of Pittsfield. Horned owls, hawks, and foxes seemed, however, to be doing their best to restore the balance of life, as many bunches of feathers scattered in the trails testified.

DAVID E. WHEELER.

## The Hoop Snake.

*Editor Forest and Stream:*

I desire to publicly thank Mr. Hay for his valuable criticism of my last article on the "Joint Snake," which appeared in the December 26 *FOREST AND STREAM*; and to add that I hope no reader has jumped to the conclusion that I intended to oppose my bare "guess so" to hard scientific facts; but I do want to affirm that I consider a number of orthodox scientific opinions (negative ones) far from infallible; and while I, at present, seriously respect the conclusions of men of learning—leaders in their line of research—yet I prefer to remain open to contrary evidences, and to boldly and candidly declare a "change of mind" whenever convinced that a pet theory is in error.

I have known a turtle to live, and remain active, for about thirty hours after its head had been entirely removed. Any scientist, who had never seen or heard of a turtle, would call that a miracle, or an impossibility. The turtle's heart will continue to beat strongly for a very long while after it has been taken out and entirely disconnected.

Frog's legs, removed from the body, skinned, and laid away for awhile—I forget the exact time—will begin to quiver violently as soon as salted.

I could name many other facts that seem to defy scientific notions. Of course none of these prove that a broken "joint snake" can re-unite; and reason—as well as science—says it is very unlikely that the reptile can do so. Does either, however, dare to say positively that it cannot? Has the matter ever been proven? And, indeed, it seems to me that it would be easier to re-unite parts of the "snake" than to graft skin (or ears or noses) on to human beings—especially as the creature's vitality is much greater than human vitality. But the operation might require human skill instead of brute instinct; and this brings me back to the evident unprobability of its intended self-restoration. So I am bound to agree, after all, that the skepticism of the naturalists is reasonable, and almost unassailable. However, albeit I am no surgeon, I intend to try another experiment on the first uninjured "joint snake" I can secure.

L. R. MORPHEW.

ARKANSAS.

## Possession in Close Season.

### The Booth Case Decision.

CONSIDERABLE interest having been aroused by a recent decision of Justice John M. Kellogg, of Ogdensburg, in the New York case of the People vs. A. Booth & Co., a foreign corporation doing business in this State, in which it was held that the people could not recover a penalty for the possession, sale, and transportation of brook trout in the close season (as the evidence showed that the trout were imported from Kingston, Canada, to a warehouse at Cape Vincent, N. Y.), a reporter called on Major J. W. Pond, Chief Protector of the Forest, Fish, and Game Commission, who, in reply to questions as to what bearing he thought the decision would have on future actions of a similar character, said in part:

"I do not believe this decision will have any bearing on game which Justice Kellogg has alluded to in several instances in his decision that was not involved in this litigation, as the Act of Congress known as the 'Lacey Act,' which became a law May 25, 1900, provides 'that all dead bodies or parts thereof of any foreign game animals, or game or song birds, the importation of which is prohibited or the dead bodies, or parts, thereof, of any wild game animals, or game or song birds transported into any State or Territory, or remaining there for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police power, to the same extent and in the same manner as though such animals and birds had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.'

"It is doubtful if Judge Kellogg was thoroughly familiar with this law, as he cited several cases showing that the States have no power to regulate commerce with foreign countries or with each other, but that such power has been delegated to the Congress of the United States, and that body can by law determine what shall or shall

not be permitted to be imported. We are pleased at this decision of Judge Kellogg, which has been sustained by the United States Court, as found in 140 U. S., 545, an action that arose on habeas corpus proceedings in the Circuit Court of the United States for the District of Kansas by Charles A. Rahrer vs. John M. Wilkinson, sheriff of Shawnee county, Kansas. The litigation referred to was for the sale of liquors transported from the State of Missouri into Kansas in the original packages. The courts held:

"That all fermented, distilled or other intoxicating liquors or liquids transported into any State or Territory, or remaining therein for use, consumption, sale or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such States or Territories enacted in the exercise of its police powers, to the same extent and in the same manner as though such liquids or liquors had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.'

"This decision, with others cited by Judge Kellogg, should be taken as a concession on his part that the Lacey Act is constitutional."

When asked what attitude the Forest, Fish, and Game Commission proposed to assume with reference to game that may not be turned over for sealing and bonding as the law requires, on account of Judge Kellogg's decision, as certain dealers had withdrawn from the lists submitted to the Department certain foreign game which it was the intention of the Commission to seal, Major Pond said:

"The Department is fully convinced that its interpretation of the law is correct, and will not in the most minute detail deviate from the course it has hitherto pursued, for if the sale of foreign game is permitted no protection is furnished to State game, as was the case under Section 149, which caused so much contention some years since that its repeal was demanded and secured. Under that law the Department detected grouse going into the New York markets during the winter and early spring. Judge Kellogg's opinion seems to be based wholly on the de-

cision in the case of the People vs. The Buffalo Fish Co., 164 N. Y., 93. Since that decision the game law has been amended to provide that where the possession of fish or game is prohibited, reference is had equally to that coming from without as to that taken within the State. It was a divided court in the decision in the Buffalo fish case, standing three to three—the seventh judge concurring in the opinion of the lower courts, but stating that he formed his opinion upon the basis that the State law as it then read did not apply to foreign caught fish.

"The amendment to the law made since the decision in the Buffalo fish case obviates the objection as to foreign fish, and the Commission is firm in the belief that should the case be resubmitted to the Court of Appeals, but one decision could be rendered, and that in favor of the people, and it is hoped that no dealers in fish and game will be misled by Judge Kellogg's decision to their own disadvantage."

### The New York City Game Markets.

NEW YORK, Jan. 7.—*Editor Forest and Stream:* The markets here are now literally glutted with game, and fully 90 per cent. of it is shipped in from Western States. In Washington market I saw prairie chickens that they said came from Minnesota, ducks (mostly mallards) from Kansas City, and rabbits by the tens of thousands alleged to have come from Michigan. It is wonderful to see the numbers of rabbits; surely wherever they were gleaned from rabbits must be plentiful, indeed.

It is truly a great pity that the selling of game cannot be wholly prohibited. Much of the game sent to New York must bring the shooters rather small prices, for it often looks badly, coming packed in barrels, and when offered for sale has a sadly muddled and distorted appearance.

Last spring I saw at one place in Washington market ten boxes of jacksnipe, each box containing twelve dozen, or about 1,440 snipe, all shipped from Indiana, while that number of ducks or even quail would not seem so great; it is a lot of snipe sure.

COURTLANDT BABCOCK.

## Maine Sportsmen's Association.

BANGOR, Me., Jan. 9.—*Editor Forest and Stream:* The sportsmen from all over Maine particularly interested in the work of the Maine Sportsmen's Fish and Game Association, met in annual meeting Tuesday, the fifth, and passed a delightful evening congratulating themselves and each other on the success of the laws advocated by this association in the past, and considering the pronounced danger from the recently announced attitude of the State Grange, which has started out to wipe all fish and game legislation from the statute books.

Previous to the business session the visitors participated in a dinner at the Bangor House, and the dining room was then given over to speeches and elections.

Chairman L. T. Carleton of the Fish and Game Commission was the first speaker of the evening, and was announced by President C. A. Judkins to speak on the work of the Commission for the past year, and of the results of the first year of the new hunters' license law. Space forbids a report of his speech, which was largely devoted to a laudatory resumé of the work of the association in advocating and passing the important features of fish and game legislation, and a scoring of those who have opposed any or all of the measures advocated. He felt that the top notch of wisdom had been reached in the enactment of the law requiring all non-resident hunters to pay a license for entering the woods to hunt, although he was very frank in disavowing any credit for it personally, since there were several features which he advocated and which were eliminated from the original bill. Among these was the graduating scale of license, which would include game birds as well as big game, and one would pay only according to the kind of game he was going to shoot; the permitting of marketmen to handle partridges and woodcock, and permitting hunters (residents) to sell not more than ten of these birds in a season to the markets; and the clause permitting a non-resident who had paid for a license to hunt to take a limited number of game birds home with him, whereas the present law forbids the taking of any game birds from the State. These were some of the features of the law which, omitted, made it weaker than he would like to see it, but he unhesitatingly declared it "an unqualified success," even in this its first year of operation. He felt that all the "legitimate, desirable sportsmen" the game supply would stand had been here this past season.

Other speakers in favor of the workings of the law included Hon. I. K. Stetson, of Bangor; Hon. V. W. Macfarlane, of Greenville; J. F. Sprague, of Monson; while Secretary Farrington's report reviewed with much satisfaction the important addition to the treasury of the fish and game department of the State, the result of this law's workings in its first year.

Hon. Wm. Engel, of Bangor, who had been aroused by the reports that the agriculturists of the State, in session at the convention of the State Grange, at Waterville recently, had decided to sweep the obnoxious fish and game laws from the statute books entirely, presented what was beyond question the most important speech of the evening. Mr. Engel is a business man, never goes hunting or fishing, but looks at the question purely from a commercial point of view, and as chairman of the legislative committee on fish and game a few years ago, learned much that surprised him in regard to these important interests. He brought figures, taken from the books of the State assessors, to show just where this money (\$25,000) appropriated for fish propagation comes from, and he showed that the average farm in Maine was assessed, last year, only three cents and a few mills as its proportionate share of this amount. On the other hand, no class receives so much immediate and direct benefit as the farmer from the incoming of sportsmen, who buy his produce at his own door at the highest market prices—and, he might have added, even higher than that at times.

Hon. Wm. T. Haines, of Waterville, spoke of the importance of uniting with the landowners and lumbermen in a crusade of education to bring the people up to a realization of the need of preserving the forests, and so maintaining the water powers that are dwindling because of the loss of the forests.

Hon. Charles E. Oak was called upon, and he wanted to correct one statement made by Mr. Carleton, that the license law had proven itself "an unqualified success." He preferred to view it as a financial success, but he was willing to give it a reasonable time in which to prove its real right to exist. If at the end of two years it is not deserving of a place on the statute books, he will be found ready to fight for its repeal. He has from the first been the chief opponent of the law, although he was unwilling to longer fight when he saw that the Legislature was bound to pass it, and, as a former member of the Fish and Game Commission, and a loyal member of the association, he has stood to one side to let the law have a trial.

Quite a ripple of interest was created by a letter from Hon. H. M. Heath, of Augusta, who has been for many years, if not from its inception, the attorney and counsel for the organization, and who has been the past year the only officer thereof not in accord with the license idea. He suggested that he was still of the same mind, and that the license is wrong in principle. But he suggested further that he wanted them to know just where he stood, and if, after his declaration of principles, the association wished him to stay in his office, he would serve it as well as he could. He reviewed briefly the dangers that confront the game and fish laws from the attitude of the Grange, pointed out its unreasonableness and lack of wisdom in the reported attitude of the agriculturists, and urged that all friends of fish and game stand firmly and unitedly, forgetting, or at least burying, personal differences of opinion for the next three years, giving the new law a chance to prove itself worthy or unworthy, and preventing every attempt to change in the least degree any of the laws on the State books affecting fishing and hunting. He believed that fully as much unrest and dissatisfaction comes from the frequent "tinkering" which these laws receive every two years, and he believed in letting them stand as they are for at least one whole session of the law-makers.

The election of officers resulted in the choice of the following: President, C. A. Judkins, Kineo; Vice-

Presidents, I. K. Stetson, Bangor; C. A. Marston, Skowhegan; F. C. Barker, Bemis; J. W. Brackett, Phillips; W. T. Haines, Waterville; A. H. Shaw, Bath; W. H. Newell, Lewiston; Secretary and Treasurer, E. C. Farrington, Augusta. Directors, C. A. Judkins, J. F. Sprague, of Monson; W. H. Gannett, of Augusta; V. W. Macfarlane, of Greenville; E. C. Farrington, A. B. Farnham, of Bangor; G. G. Weld, of Oldtown; Harry R. Virgin, of Portland; appointed by Governor and Council, W. T. Haines, of Waterville. Attorney and General Counsel, H. M. Heath, Augusta.

HERBERT W. ROWE.

## High Game.

WHENCE originated the theory and practice of allowing pronounced decomposition to set in before game is thought fit for the table?

Some give the credit to the English and explain as follows: In the days of the stage coach the grouse and pheasants shipped from the north were days en route, packed in hampers, and when unpacked in London were invariably found to be of high odor and flavor; in other words, tainted. As game reached the market in no other condition it was accepted as the proper form in which game should be eaten.

Brillat-Savarin, perhaps the greatest gastronomic authority the world has known, in writing of the proper condition of food, says: "Others when they begin to decompose, such as snipe, woodcock, and pheasant."

Decomposition as related to food, I presume, must be accepted as a matter of degree. Decomposition may be broadly defined as a change from one condition to another.

Presumably with the cessation of life decomposition or change at once begins; this applying to vegetable and animal food.

The Englishman has his mutton "hung" until it "tenders." They tell a story of Frank Forrester, who was an Englishman, when living in New Jersey, how he secured mutton to his liking and at a low price. He would order a leg of mutton "hung" one side for him and kept until called for. Days would go by and the mutton would remain uncalled for. To the butcher's ordinary trade it was unsalable, but about the time the butcher in despair would decide on throwing it in the scrap barrel someone wanting some cheap meat and not over particular would come in, and of course the butcher would be glad to sell it at a reduced price. The customer was said to be an obliging friend of Forrester's. If this story were true, Forrester must have either eaten mutton sparingly, or he must have had a large circle of butchers to draw from.

Dickens speaks of the ceiling of a butcher's shop hung with mutton "like a grove."

When first married and living in London, my wife and self attended a dinner at an English barrister's. There were but four of us at the table, the host and his wife besides ourselves. When the game course was served a roasted pheasant was placed in front of the host and a roasted teal duck was set before me.

The duck was nicely cooked and tastefully garnished, and withal was a tempting morsel. Before carving the bird, I noticed a decided greenish hue of the skin covering the umbilical region of the duck. But I went bravely to the task, and as I carved an odor went up that not only cried to my nostrils, but also, I thought, to the very heavens. It was a nauseating and trying ordeal. I served my wife a portion and myself in turn, and only by dexterous playing with our knives and forks, and, as soon as decency would permit, a paralleling of our knives and forks upon our plates (which notice the servant understood), did removal bring relief. Yet the pheasant was just as gamy as the teal, and was freely partaken of by our host and hostess.

We might go a step or two further and refer to the cheeses. There are those who stop at a fresh American cheese; others who enjoy Roquefort, and then draw the line, and so on down the line until Limburger is reached. Now, I have no love for Limburger, for I remember how it nearly spoiled a day's duck shooting for me because some of the party would eat it for lunch, and were foolish enough to throw the emptied tin (it was imported Limburger in a tin—the genuine article "made in Germany")—on the ground beyond our blind. The ducks coming up wind scented it and veered hundreds of yards to the right and left and rocketed over our heads. The burial of the tin alone restored the atmosphere to normal conditions, and good shooting was had once more.

But as to game, high or low, mutton, cheese, and other things, it is a matter of taste and *de gustibus non disputandum*.

CHARLES CRISTADORO.

## New York Legislation.

Special Correspondence Forest and Stream.

ALBANY, Jan. 9.—There is promise this winter of considerable legislation relating to fish and game interests. Although but one day of the session has yet been held, a number of game bills have already been introduced and others are looked for as soon as the Legislature reconvenes. Those thus far offered emanate from Senator Townsend, of Oneida, and in brief provide as follows:

Prohibiting the killing of black bear in June, July, August, and September.

Providing that a person who violates the game law relative to non-resident hunters shall forfeit his license, and in addition thereto shall be fined fifty dollars.

Providing for the licensing of non-resident hunters to hunt deer in this State.

Making the close season for wild deer from November 1 to August 31.

The Senate Committee on Forest, Fish, and Game will probably be continued as it was a year ago—Senators E. R. Brown, of Jefferson; Armstrong of Monroe, Allds of Chenango, Lefevre of Ulster, W. L. Brown of Otsego, Townsend of Oneida, and Keenan of Queens.

The composition of the Assembly Committee on Forest, Fish, and Game, which is not a hold-over body like the Senate committee, has yet to be made public by Speaker Nixon.

## New York's Forests.

From Governor Odell's Message.

Cornell School of Forestry.

By chapter 122 of the laws of 1898 the State purchased townships 23 and 26 in the county of Franklin, and Cornell University thereupon took title and undertook practical demonstration and instruction in the School of Forestry. Its operations had for their object the substitution for so-called worthless timber valuable growths, but this has resulted in the practical destruction of all trees upon the lands where the experiment was in progress. No compensating benefit seems possible to the present generation. The preservation of the forests is primarily for the protection of the water supply, and this is not possible through the denudation of the lands. Therefore, this school failed of its object, as understood by its founders, a failure which was not due, however, to the work of the university, which followed out the letter and spirit of the law. The report of the committee of the Assembly at the last session of the Legislature, and the knowledge of the disapproval of many of our citizens, led me to veto the item for its support in the appropriation bill of 1903. The question, therefore, is before you, and to the Legislature we must accordingly look for such action as will properly protect all interests. Cornell University undertook this work at the request of the State, and as such was its agent. In so doing it has made contracts for which it is primarily responsible, but which responsibility as the agent of the commonwealth it should not be called upon to assume. Neither should the school be founded be discontinued, because with the lapse of years a proper understanding of scientific forestry will become more and more a necessity. This is particularly true of farm forestry, which will form an important part in the future of agriculture within the State. That our people do not desire, however, that public lands shall be denuded is beyond question. It would seem, therefore, desirable that immediate legislation be had to recover to the State this property, of which there is about 30,000 acres, and for the payment into the treasury of the unexpended portion of the capital fund advanced by the State. Permission should be given to clear up and remove all cut timber and wood by the university, so that the danger of fire may be lessened. The contracts made between Cornell and the Brooklyn Cooperage Company might be left with the executive for adjustment, and failing in this, either to the Court of Claims, if the State is to be the party defendant, or to the Supreme Court if Cornell should be the responsible defendant. In neither case, however, should any burden be placed upon the university.

### Forest Preserve.

The purchase of land in the Adirondacks and Catskills by the State was discontinued two years ago, because of the belief that some comprehensive plan should be formulated for the continued acquirement of property and for avoiding the constant increased price of land which followed each appropriation. A committee appointed in accordance with the recommendation made in my last annual message has investigated this subject, and will doubtless report some method of arriving at the desired results. It would seem to me that in every private camp, since it is the object of the State to protect the water supply, that at least the timber rights should be secured either through purchase or condemnation, and that all other lands should be acquired in full. There are in private reserves 705,914 acres, and in other holdings 1,356,816 acres. Much of this land has been lumbered over. Much has been burned and destroyed. In both cases replanting and protection should begin at once. The numerous forest fires, causing great destruction, call for greater vigilance upon the part of the State. Restrictive laws and additional means for properly patrolling those points where danger exists should be provided. The many disputes, with consequent litigation as to ownership, it seems to me, call for a comprehensive plan to prevent the acquirement of lands by people who rely upon vague titles for possession. It is of the greatest importance that the State should eventually own every acre of land within the preserve. Some action, therefore, should be immediately taken to acquire quasi possession at least, and thus prevent speculation in that which it is the policy of the State to own. The recent fires have left dangerous debris which should be removed. To sell it is beyond the power of the State, but to clear up burned over tracts is necessary for replanting. If a constitutional amendment is required to accomplish this end, it should be undertaken at once.

### Nova Scotia Moose.

SOUTH BROOKFIELD, Nova Scotia, January 4.—*Editor Forest and Stream:* Our successful hunter, trapper, and guide, James B. McLeod, has spent a large portion of his time in the woods for the last ten winters. He has been very successful in getting game with all who have called on him to act as their guide, also on his own account. His record for the past four years is: For 1900, 100 wildcats and 75 foxes; 1901, 85 wildcats, 38 foxes, and 9 bears; 1902, 36 wildcats, 16 foxes, and 2 bears; 1903, 13 wildcats, 2 foxes, and 13 mink to date, January 1, 1904. He has also got his quota of two moose each year for the last ten years.

Since writing you last on November 4 I have to report a great many moose killed, and some of them very large. About twenty killed near here in the past two weeks. Some of the parties were only a few hours from home before they got their game, and I am pretty sure hardly anyone was more than one day gone. Bears took the hint that it was better to leave this section, and there have been few trapped or shot. Our American friends have had very good luck in general. Mr. Wm. G. Miller, of West Medway, Mass., takes home a fine head and antlers. Moose have been very plentiful this season, and it is quite evident that they are increasing in number.

GEORGE SEAMAN.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

### Adirondack Deer.

*Editor Forest and Stream:*

At a meeting held by the New York State Fish, Game, and Forest League, in Syracuse, in December, it was voted by different club members to recommend that the last fifteen days of the present open season on deer be cut off, instead of cutting off the first fifteen days of September. The game law is intended to give the sportsmen of all sections of the State an equal show in securing and participating in the use of its game. To cut off the fifteen days' open season in November would deprive a great share of those in the southern and western portion of the State of participating in the sport at all, for the reason that they could not ship their game in warm weather and have it arrive in a sanitary condition. Even that secured in the first half of November must quite often be disposed of by a free distribution to friends and neighbors.

Secondly, such a change of the law would not only deprive the sportsmen above mentioned, but would shut out all hotels, restaurants, boarding-houses, and consumers throughout the State of securing it in November, whether killed in this State or elsewhere, as the Lacey law would take effect when our open season closed. Thus many of our townsmen would be debarred of privileges that other States freely accord their citizens. The object of this proposed cut cannot be on account of the scarcity of game or of the immediate extermination of the same, as the outlook, judging from all accounts, especially on the west side of the woods, never appeared more favorable than last fall for deer. In the coming report of game shipped out of the Adirondack woods during last open season, I hope we may have the numbers given of the shipment for each month separately, instead of the total for the season, thus giving us a pointer as to when sportsmen prefer to still-hunt for deer.

CAP LOCK.

JAMESTOWN, N. Y.

### Pennsylvania Game.

ELMIRA, N. Y., Jan. 2.—*Editor Forest and Stream:* Since writing you last I have made a short trip through Pennsylvania and found by questioning the shooters that Pennsylvania has had good grouse, deer, and wild turkey shooting during the season of 1903. I also talked with Dr. Kalfus, secretary of the State Game Commission, who is the noblest Roman of them all. He says that the State of Pennsylvania will have to look after the wildcats, foxes, skunks, owls, etc., if they would thoroughly protect the grouse, quail, and turkeys. The doctor was out in the deer section twelve days during the season, and in that time counted the tracks of at least sixty cats and 200 foxes. There was snow on and it made a good register to read their record in.

Our duty in this State and every State is to stop the sale of game, feed the birds during the cold weather and deep snows, make the open season short, restrict the bag, make uniform laws for New York and Pennsylvania, all

game to come in at one time and close at one time; no shooting in July or after the season closes. All work together for the same grand purpose—to protect the game and give it a fair show; and we can use automatic and pump guns galore—I think.

I found a new thing to-day that will perhaps interest the sportsman. That is a soft brass hob nail  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch long,  $\frac{1}{2}$ -inch for sole,  $\frac{3}{4}$ -inch for heel of our hunting and fishing boots and shoes. Mr. L. M. Millspaugh, of this city, had them, and, like all our shooting friends when they have a good thing, wished to divide with three fellow sportsmen. Most of us can remember the old soft iron hob nails; they were good. Then came the steel nail that would get slippery as glass and break half the heads off in a day's tramp, and are worthless. This soft brass hob will stick to a stone in or out of water like a puppy to a root, and I advise my fellow cranks (bless the name) to get some and try them.

I am off next week for a trip through the South and I hope to find something interesting to write you from there.

E. H. K.

### A Good Shot on Birds.

FORT MITCHELL, Va., Dec. 28.—*Editor Forest and Stream:* On re-reading some of my old files of your paper, I found an article relative to quail shooting in Minnesota, stating the birds are so much stronger and harder to hit than southern birds. A gentleman has been shooting on my preserves this year who, I believe, can kill 45 out of 50 quail either in Minnesota or any other State in the Union. I am considered a pretty good shot myself, and have entertained some of the best shots from northern cities, but Major La Rue is the greatest shot with shotgun and rifle that ever visited this country. I have hunted with him day after day and he takes every shot that comes his way, very seldom scoring a miss, and frequently killing three quail on the covey flush with his pump gun, all single birds, firing the three shots as quickly as most good shots fire a double gun. Day before yesterday I flushed a single quail in the thick pine woods that flew directly at Major, who poked his little Winchester skyward and shot off the bird's head as cleanly as though cut off with a knife. Incomers, drivers, quarterers, twisters, all look alike to him, and it's a lucky bird that dodges his charge of shot.

With a rifle he is equally at home, making the most wonderful kills that I ever saw.

Wild turkey and deer are very wild just now, and other game hard to find owing to the unusually cold, dry weather and heavy winds, so we have about given it up for this year. We had woodcock and quail for Christmas dinner, and have a fat 'possum in the oven now for to-day's dinner.

Major has gone up the State to look after some mining interests, much to the regret of the many friends he made while here.

There will be fine shooting here next fall, as the cover is heavy, feed plentiful, and conditions favorable in every way.

R. A. THOMPSON.

### A Bronxite's Bargains.

LOCUST VALLEY, L. I., Jan. 7.—This is the story of a sportsman from the Bronx and two Locust Valley farmers. There is no need to mention the names of any of the parties to the incident; the story is just as good as if the names were printed in full. It was a few days ago that the sportsman, who had been hunting in this neighborhood all one day, with poor success, drove up to the homestead of a well-known Locust Valley man, and, seeing a flock of pigeons about the place, asked the farmer what he would charge to let him take a shot at the birds. The farmer, who evidently thought the stranger could not shoot very well, said, "Twenty-five cents." The Bronx man handed over the money, raised his gun and fired, and six pigeons fell dead. The sportsman gathered up the birds, and then asked the farmer if he could go into the house and get warm. Permission was given him, but not very graciously, for the farmer was evidently mad, although he had too much sporting blood in his makeup to say anything, for if he had played a losing game he had no one to blame but himself.

After warming himself at the farmer's fire the crack shot from the Bronx drove on a short distance and soon came to another farmhouse, in the yard of which he saw a fine flock of fowl. He decided that some chickens would be a good thing to have if he could get them at a reasonable outlay, and asked the farmer, who was in the yard, what a shot at the flock would cost him. The farmer answered that he could shoot into the flock for 50 cents, and the sportsman lost no time in putting up the cash and firing the shot. His aim was good, and four fat pullets lay dead on the ground. These were quickly gathered up, and the sportsman from the Bronx returned to his home with material for a savory pigeon potpie and a chicken fricassee, and all at the modest outlay of 75 cents, plus the cost of two shells. He has, however, made it difficult for others to work a similar trick upon the farmers of this vicinity, for they are now "wise."—Brooklyn Eagle.

### The Webb Preserve.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* I note your report that Dr. Webb's Adirondack game preserve has been thrown open and the game set free.

Dr. Webb was the first, if I am not mistaken, to take advantage of his wealth and fence the "po' white trash" out of an enormous tract, and his is the first example of common sense being roused to crowd out selfishness and work for the interest of himself and the general public, and I predict that others will be forced to follow suit; for this war will never end until they do.

I hope you will open the question of State ownership of all wild lands. If that can be brought about there will be but little opposition to game preserves of 5,000 acres; but not an acre over that should be allowed.

DIDYMUS.

### The Michigan Whitefish Case.

#### Memorandum for Judgment on Order to Show Cause.

UNDER the acts of Congress providing therefor, the President of the United States, by and with the advice and consent of the Senate, appoints a Commissioner of Fish and Fisheries, whose duty it is to investigate the subject, with a view of ascertaining what diminution, if any, in the number of food fishes of the coast and the lakes of the United States has taken place, and from what cause the same is due, and whether any protective, prohibitory, or precautionary measures should be adopted in the premises, and report upon the same to Congress. It is also provided that the heads of the several executive departments shall cause to be rendered all necessary and practical aid to the Commissioner in the prosecution of his investigations and inquiries, and section 4398 of the Revised Statutes provides that "the Commissioner may take or cause to be taken at all times in the waters of the sea coast of the United States, where the tide ebbs and flows, and also in the waters of the lakes, such fish or specimens thereof as may in his judgment, from time to time be needful or proper for the conduct of his duties, any law, custom, or usage of any State to the contrary notwithstanding."

On November 6, 1903, which was during the closed season, under the Michigan statute, while the eggs of whitefish and trout for the purpose of propagation in Michigan were being gathered near Marquette, in Lake Superior, under the direction of S. P. Wires, superintendent of the United States Fish Hatchery at Duluth, he was arrested by the defendants in this case and the fish in his possession were confiscated. The action of Superintendent Wires and his men, in submitting to the humiliation of the forcible boarding of their boat and the seizure and confiscation of the fish, without forcible resistance, and appealing to the courts, where controversies of this nature between two sovereign

governments should be settled without friction, cannot be too highly commended.

The defendants are the Michigan State Game and Fish Warden and his deputy, who claim that all fishing by the United States Commissioner of Fish and Fisheries, in the Great Lakes bordering on the State of Michigan, must be done under the supervision, and that the only right the United States Fish Commissioner has to fish, for the purpose for which Congress created it, in Michigan waters during the closed season, is conferred by Act No. 88 of the Public Acts of 1899, which reads: "It shall be lawful for the United States Commission, through its representatives or employes, to fish with nets in any of the waters of this State, during any season of the year, for the purpose of gathering spawn from such fish caught, to have and to hold both ripe and unripe fish, and to have the privilege of selling such fish after stripping, to help defray the expenses incurred in the work of propagation. Provided, that such fishing by said Fish Commission shall be under the supervision and control of the State game and fish warden, and; Provided further, that at least seventy-five per cent. of the fry resulting from the spawn so taken shall be planted in the waters of this State, the same to be determined by reports of the State game and fish warden."

A deputy of the State game and fish warden demanded the right to superintend the fishing operations of the United States Commissioner of Fish and Fisheries, which demand was refused, and he then seized and confiscated the fish in the possession of the commissioner's agent and caused the arrest of Wires and the persons found assisting him.

If the United States has the right which Congress evidently intended to confer by the legislation above quoted, and a deputy game warden can legally interfere with the exercise of that right, in the manner admitted in the answer filed in this case, then the Government is entitled to the contempt which the deputy game warden exhibited toward it. The United States cannot undertake any work where it is not supreme, and a

Government officer could not, in any legitimate function of the Government, be under the direction and control of a State officer. If the Federal statute by which it was intended to confer on the commissioner the right to take, or cause to be taken, in the waters of the lakes, such fish as in his judgment is needful for the proper conduct of his duties, is constitutional, that legislation is exclusive, and any act of any State, so far as it conflicts with that legislation, is void. The attorney general in his brief says: "The defendants contend that the right of complainant to so take fish can be exercised only pursuant to the authority granted to the United States Fish Commission, by the laws of the State of Michigan; that the power of complainant is limited and defined by those laws, and that any enactment of Congress contravening the statutes of this State in relation to such fishing is unconstitutional and void." The act of Congress, if invalid, is so because it conflicts with the Federal Constitution, and not because it contravenes the statutes of the State of Michigan. If it is decided that the United States has no right to take fish under the act of Congress, its propagation of food fishes must cease because it would be intolerable for it to exercise any of its functions under the direction and control of persons over whom it has no authority.

If the acts of Congress creating this department are void, the Government must of necessity suspend it, and such suspension would mean an immense loss to the State of Michigan, and probably a much greater loss to the States bordering on tide water, where shellfish are propagated. The constitutionality of this legislation has not before been questioned in the courts, and if the laws of the United States seeking to confer upon the commissioner of fish and fisheries the right at all times to take fish needful for the conduct of his duty, notwithstanding contrary legislation by the State, is unconstitutional, such grave consequences must flow from a judgment announcing it, that it seems to me not proper to pass upon that question on a preliminary hearing where the preparation must of necessity

be inadequate. The precipitate action of the defendants in this case indicates that a dissolution of the injunction will remain in force until the final hearing of the cause.

## Lake Champlain Pollution.

Editor Forest and Stream:

It is a great deal easier to sling mud than to remove the traces of it. I spent several days that I could not afford to spare investigating the charges of Edward Hatch, Jr., and his associate as to the pollution of Lake Champlain by the Willsboro pulp mill, and I think I made out a case that any fair minded man will accept.

Mr. Hatch has replied that my introductory is a "silly denial of facts which can easily be substantiated by any school boy living in the region in question." I am not a rich man, but as owner of lake shore property Mr. Hatch is doing me incalculable mischief, and as the matter has now resolved itself into a simple question of veracity, I make the following proposition, and I think FOREST AND STREAM owes it to me to see that it is carried out.

I will pay the traveling expenses of any impartial man FOREST AND STREAM may select to come to Essex to make an investigation, and will donate \$50 to any charity named by FOREST AND STREAM if Edward Hatch, Jr., can prove one of his statements controverting mine.

The only conditions I make are that such representative be sent at once before the lake freezes, and that FOREST AND STREAM, having as arbiter satisfied itself of the falsity of Mr. Hatch's statements, shut off the discussion.

JOHN B. BURNHAM.

NEW YORK, Jan. 6.—Editor Forest and Stream: I have no desire to become involved in the controversy in regard to the alleged pollution of the waters of Lake Champlain, but the interview with me, published in your issue of Dec. 19, is such a misstatement of my views, and of what I really said, that it compels my attention.

Some weeks ago a man representing himself as being sent by Mr. Edward Hatch, Jr., called on me. I had some conversation with him, supposing that he represented Mr. Hatch, and was entirely unaware that I was being interviewed for publication. Mr. Hatch has since informed me that he has no such agent.

For the past fifteen years I have lived during the summer months at Essex, on Lake Champlain. My place is situated about a mile below the mouth of the Boquet River. We have always used the water from the lake, and have found it an excellent and healthful drinking water. I have never noticed any disagreeable taste or odor, nor have I heard any complaints in regard to it from my neighbors. An analysis made a few years ago showed the water to be pure.

The only basis for any part of the interview as published, is that I stated that I proposed, in view of all this newspaper notoriety, and merely as a matter of precaution, to have the water again analyzed before returning to Essex for the coming season.

I have read with interest the letters to you written by Mr. John B. Burnham, which are published in your issue of January 2, and it seems to me that they cover the facts in the case clearly and concisely, and his views accord with mine in all essential particulars.

Essex is so far distant from any source of contamination (other than the alleged pollution of the Boquet River), that this subject is the source of no anxiety to me. I am, however, heartily in favor of any intelligent and honest effort that may be set on foot to keep the waters of the lake pure, but it certainly does not seem to me that the present agitation comes under that head.

D. CRAWFORD CLARK.

[The foregoing disclaimer having been submitted to the reporter of the interview, he assures us that he represented himself to Mr. Clark as a newspaper man; and that the interview as published in the FOREST AND STREAM was substantially correct.]

## Shark Fishing in Cuba.

If anyone doubted the existence of man-eating sharks in Cuban waters, doubts were forever put to rest while within sight of the city not long since while a Havana steamer bound for New Orleans was passing out of the bay.

As one of the sailors was hauling down the Cuban flag a short distance out of port, he fell backward into the water. A boat was lowered at once and hastened toward him. He was seen to be splashing the water with his hands, and the practiced eyes of his fellow sailors knew that he had been attacked by sharks. Hoping to hasten his rescue, they threw him a rope. He seized it eagerly, but it proved to be a fatal move, for the instant he quit fighting the water the sharks lost fear. It became a race between the men in the boat and the deep sea monsters. The latter won.

The rest is soon told. There were three sharks, and they attacked their victim viciously. It was ghastly play that the passengers of the ship watched the three brutes struggling for one man. Some turned away, unable to look on any longer. When the sailors finally succeeded in snatching the prey life was all but gone, and death came within a few minutes.

The ship turned back to the city to leave the body of the dead man, and then went on its way again.

The incident is attracting much attention and comment in the city, for it is the first well-authenticated case of a living man being attacked by a shark that has occurred during the past five years. From time to time other stories have become current, but none have gained much belief, as investigation has showed that they were founded on circumstantial evidence; no one has seen the shark—the only fact known was that the man in the water had disappeared. There has been a great deal of discussion, both public and private, on the subject, while the majority of persons believed that these sharks would attack living persons, very few knew positively of their having done so.

One man, in his desire to learn definitely whether these sharks are of the man-eating variety, offered a reward of \$1,000 for any well authenticated case. It has been suggested that the sad occurrence of Sunday be brought to

his attention and the money turned over to the family of the dead sailor.

There has been some talk of the city council offering a reward for sharks since they are so numerous, but as yet this has developed into nothing more than a suggestion.—New Orleans Democrat.

## The Indianapolis Outing Club.

THE Indianapolis Outing Club is the name of an organization which owns a club house in northern Wisconsin. The club was organized in the winter of 1902. The committee having charge of the arrangement purchased between six and seven acres of land on Lake Planting Ground, one of a chain of twenty-six lakes in Oneida county, and located near the Chicago and Northwestern Railroad, 341 miles northwest of Chicago. The station is Three Lakes, and the club house is located about four miles from the station; the committee contracted for and had built an ice house, boat house, and a ten-room club house, and furnished the club house with a complete outfit, also purchased an eighteen foot Fay & Bowen gasoline launch and necessary rowboats.

The club house is arranged for the entertainment of members and their families, and the wives and little ones get as much enjoyment out of the affair as the men folks.

The club is capitalized for \$2,500, providing for twenty-five members, who are required to take one share of stock of \$100. During the open club season, which is from

The Club's Wisconsin Home.

June 1 to September 30, all matters pertaining to the management of the club are looked after by a house committee.

Last summer was the club's first season, and all the members who availed themselves of the opportunity to visit the club during the summer came home delighted with the club's location and surroundings, and pronounced it a typical summer resort.

That part of Wisconsin being what might be termed the "wilds of Wisconsin," affords the members of the club and their guests an opportunity for every conceivable kind of recreation; fishing is excellent, as evidenced by some of the fine catches made by members of the club. These lakes abound in muskallonge, bass, pike, pickerel, and other smaller fish, and the larger ones caught by the members the past season were one weighing 16½ pounds by Mr. Bookwalter, a 23½-pounder by Mr. Tutewiler, and the daddy of them all, a 35-pounder, landed by Mr. Bowlus.

Hunting in the vicinity of the club's property is excellent, there being a goodly number of deer, partridge, ducks, and other wild game, and while none of the members availed themselves of a trip during the hunting season this year, in all likelihood another will not pass without some of the members taking advantage of this fine shooting, as some of them are not only experts with rod and reel, but with the rifle and shotgun.

The club members are now discussing the building of an addition to the club house which will add about eight or ten bedrooms, which will answer for all purposes.

## The Angler's Toast.

WHEN men meet to drink to those they love most,  
Let anglers fill up their cups for a toast.

Touch lip to no glass

To proud dame or lass

Who from gentle sport will tempt you to stray;

But let your cups clink,

Ye anglers, and drink

A health to the fish,

To the biggest fish,

The fish that got away!

You lured him by craft; he fought you at odds—  
In fair fight or foul, he splintered your rods.

Barbed weapon of steel

You've oft made him feel:

But, valiant and strong, he won every fray.

Then fill to the brim

And drink deep to him—

A toast to the fish,

To the biggest fish,

The fish that got away!

What others you've killed with cunning and skill  
You've never caught him and never you will.

In brook, lake or sea

The monarch is he—

Ye anglers, stand up and due homage pay.

Let every glass ring,

A toast to the King—

Long life to the fish

To the biggest fish,

The fish that got away!

—Norman Jeffries in the New York Sun.

## Fish and Fishing.

What the Ouananiche has to Contend Against.

Mr. J. G. A. Creighton, of Ottawa, tells of catching a ouananiche about a pound in weight, which, before it was landed, was seized and swallowed by a pike weighing 10½ pounds, and says that upon another occasion he saw another ouananiche of 5½ pounds swimming about in an odd and helpless manner, and found that his spine had been broken by a pike so that he could not use his tail.

I well remember, too, that some years ago, after a day's fly-fishing for ouananiche in the Grand Discharge with Mr. A. N. Cheney, we both trolled for pike for part of an hour in Lake St. John, immediately in front of the Island House. My spoon was promptly taken by a small ouananiche, and Mr. Cheney, following close behind, had his troll seized in almost the same spot by a 12-pound pike, a second one of the same size taking my troll a few minutes later. These monster pike must do a frightful amount of slaughter among the ouananiche, particularly in Lake St. John itself, and in the rivers flowing into it, for in the rapid waters of the Grand Discharge they are apparently less abundant.

More rapacious still, however, are the burbot or ling of Lake St. John, sometimes known as fresh-water cod. It grows to an immense size in this lake, and is more dangerous to its betters from the fact that it is largely a night feeder. This huge skulker not only preys upon the unsuspecting young of the fresh water salmon, but specimens of the ouananiche half as large as itself have been found in the stomachs of these prowlers of the deep. It is supposed that they commit their worst ravages among the ouananiche during the winter months, when the latter are most abundant in the lake. Large numbers of the burbot are then taken through the ice on night-lines by the settlers about the lake, who use them for food, and very good they are, too, at this season of the year, being almost as firm and flaky as cod, despite their somewhat repulsive appearance. Mr. Yarrell, in his "British Fishes," says that the flesh of the burbot "is white, firm, and of good flavor, and by some considered superior to that of the eel." In fact, this burbot is a species of cod or ling, and from its liver may be extracted an oil similar to cod-liver oil. The habitants call it *lusi*, and, before I had obtained specimens for examination and identification, frequently and erroneously described it to me as a catfish. I take their name of the fish to be a mispronunciation of the French *loche* (losh), though that "most dainty fish," as Walton calls the loach, neither belongs to the same family as the burbot, nor yet has it the same peculiar arrangement of fins. But while without the tapering, eel-like form of the hinder part of the burbot's body, the little loach "has a beard or wattles like a barbel," and lives and gets its food close to the bottom of the water. In these respects he is resembled by the burbot, and herein it may be that the latter has received the name by which he is known to the French-Canadians of the Lake St. John country. In the greater depths of the inland sea he often attains a size much exceeding that to which he grows in English waters, and has been taken there from three to four feet long.

The burbot of Lake St. John is the ordinary *Lota americana*—the *Lota maculosa* of LeSueur, which is found as far south as the Mississippi. It is common in Lake Ontario, and is known in various localities as ling, eel-pout, lake-lawyer, and fresh-water cusk. Experiments have proved that it is capable of being so salted and dried as to be practically undistinguishable from salt cod-fish.

North American Fish and Game Protective Association.

The Hon. Leroy T. Carleton, of Augusta, Maine, president of the North American Fish and Game Protective Association, has called the annual meeting of the Association for the 20th and 21st of January next at Portland, Maine. It is expected that there will be quite a large attendance of eastern Canadian and New England members of the Association at this meeting.

A Cod that Swallowed the Burial Service.

Perhaps one of the strangest articles ever found in any member of the finny tribe was that discovered by Mr. C. Volcker, of Penzance, Cornwall, in the stomach of a cod. According to his own account, this gentleman was fishing off Lamorna Cove, near Newlyn, when he caught a cod-fish weighing nearly 19 pounds.

On being opened and cleaned the following morning, the stomach of the fish was found to contain a copy of the Burial Service of the Episcopal Church, in a complete state of preservation. By certain writing which was found in the book it was possible to identify an undertaker who had provided the book at a funeral seven years before, but there was nothing to show how it came to have been cast within reach of the fish. Probably, however, it was dropped some time later overboard from some vessel, for as both the print and the writing were quite legible, it does not seem likely that the book had been for any great length of time either in the water or in the stomach of the fish.

E. T. D. CHAMBERS.

Long Journeys Made by Whales.

ADDRESSING the Academy of Science of Christiania, Professor Goldlob said that the whales that swim about the islands which lie off the coast of Norway and Finland in March and April travel immense distances. In May they turn up at the Azores, or even at the Bermudas, and sometimes pay a visit to the Antilles. They swim fast, for in June they are back again off Norway. Some of these whales have been known to bring back evidences of where they have been, for harpoons of the peculiar kind used off the coast of South America have been found stuck in them.—St. James's Gazette.

A Fish Story.

A FISHY old fisher named Fischer  
Fished fish from the edge of a fissure;  
A cod, with a grin,  
Pulled the fisherman in—

Now they're fishing the fissure for Fischer.  
—Cincinnati Tribune.

## Cruise of Mblem.

BY GEORGE E. DARLING.

The Story Which Won the Second Prize of \$50 in "Forest and Stream" Cruising Competition.

Editor Forest and Stream:

I notice in the announcement made in your paper, it stated that you regret that I did not send pilotage notes for entering Chatham and Small Point harbors. I would say regarding Chatham, that there is not over 3ft. of water at low tide, and the channel will sometimes change anywhere from 50ft. to 100ft. one way or the other in a night, when a heavy sea is running, and the best advice that can possibly be given the average cruising yachtsman would be to keep away from it unless he has some one with him who is acquainted with the place and the peculiar conditions existing there. The tide out of Pleasant Bay sweeps from the northward in such a way that the point of sand to the southward of Orleans Life Saving Station has "made" nearly a mile to the memory of Chatham residents, and only a man who is experienced in handling a boat in the breakers and one who could pick his way in by the look of the waves, has any business to enter the place. The seas do not look as bad from the outside as they do from the shore, and this place in particular is not safe for a stranger.

The harbor at Small Point is nothing more than a hole in the ledges back of Seal Island, so small that we rowed the Mblem out the next morning, and it would not be a safe place to run into with a boat drawing over 3ft. of water, or with a boat that could not be depended on to spin round like a top, if necessary. It would be impossible to sail any boat out of it with the wind anywhere from northeast to southeast. The day I entered it the wind was west, and we worked the boat in a good deal as one would wheel a wheelbarrow into a shed.

G. E. DARLING.

MBLEM was built during the spring of 1900 by Daniel and Charles Crosby at the home of the Cape Cod catboat, Osterville, Mass. She is 28ft. long on deck, 23ft. waterline, 10ft. 10in. beam, draws 1ft. 10in. Self-bailing cockpit, 9ft. long, 8ft. wide. Cabin trunk, 11ft. long; cushions in cabin 13ft. long. Sleeping room for four, 4ft. 6in. head room; lockers and shelves in abundance. Interior of cabin and cockpit finished oak and cypress, varnished. Sides of cabin trunk, curbing and rail, oak varnished. Decks and cockpit covered with canvas, painted. Square stern, with "barn door" rudder, and steers with a tiller. Her keel is nearly flush with the planking, wood centerboard and balanced rudder. A large hatch in cockpit opens to ample space for supplies, extra anchors, warps, ice-box, etc.

Her rig is simplicity itself; the throat and peak halliards lead to the cockpit on the starboard side. The sail hoists between two independent topping lifts, both of which lead to the port side. These ropes, with the main sheet, complete the running rigging. I have a spinnaker for use on long cruises. By tying in a 6 foot reef it makes a fine balloon jib, using the pole for a bowsprit. Her boom is 37ft. long, gaff 24½ft., mast 33½ft., and spinnaker pole 24ft.

The principal specifications I gave her builders were that she should be fast as possible, yet able and seaworthy under all conditions.

I did not tie them down to "so long" and "so wide," etc., but left her model and dimensions to their best judgment. How well they executed their commission may be judged from her racing record for the past four seasons. During this time three boats have been built for the express purpose of beating her, yet out of 51 races she has won 33 firsts and 7 seconds.

One of her 1903 performances was the winning of a silver cup in a series of three races by three straight firsts.

How staunch and seaworthy she is, may be judged from the following "yarn."

### Mblem's Down East Cruise.

ALL through the twelve years that I have owned a seaworthy boat I have been looking forward to the time when I could take a cruise from Narragansett Bay to Maine. The idea of rounding my own boat up into the wind and anchoring off the rocky shore of the old farm overlooking Penobscot Bay, where my earliest attempts at boat sailing in a flat bottom skiff were made, and where I had the best times of my boyhood days, was a delightful one.

Early last spring I began "sounding" such of my friends as I considered "salt" enough for such a trip, and while several practically agreed to go, only one came to the starting line when the time was up. He—and suppose I introduce him as Sam—had spent one summer on a fisherman for the fun of the thing. Then when the Spaniards got saucy he shipped on the St. Paul as an able seaman under Capt. Sigsbee, and the "yachting" experience he gained was the real thing, and such as few amateurs have with them. You should have seen him with his sleeves rolled up showing artistic designs of skulls and bones, coats of arms, bed bugs, flags, etc., in India ink, and a generous cud of chewing tobacco behind his cheek. The tales of the sea that he could reel off would cause the average enthusiastic amateur to turn green with envy.

"All aboard" was called at 6 P. M. on Saturday, June 27, and with a west wind and a fair tide we left our mooring at Pawtuxet with a feeling that we were now off for a royal experience. We made good progress down the bay and passed Conimicut lighthouse before the sun went down; Sam at the tiller, I storing away a generous supply of provisions. At 8:15 we rounded Popasquash Point, ran through Bristol Harbor and narrows and up

Mount Hope Bay to Common Fence Point, then turned into the Sakonnet River. At 9:30 we passed through the railroad and stone bridges. The railroad bridge is easy to pass, having a wide draw, but the stone bridge opening

MBLEM.

is only 30 feet wide, and the tide runs like a mill race. This is a bad place for a stranger after dark. We went through flying, and continued on for Sakonnet, steering by compass down the channel, which is lined on both sides by fish traps with leaders extending well out into the channel. By dropping the centerboard half way

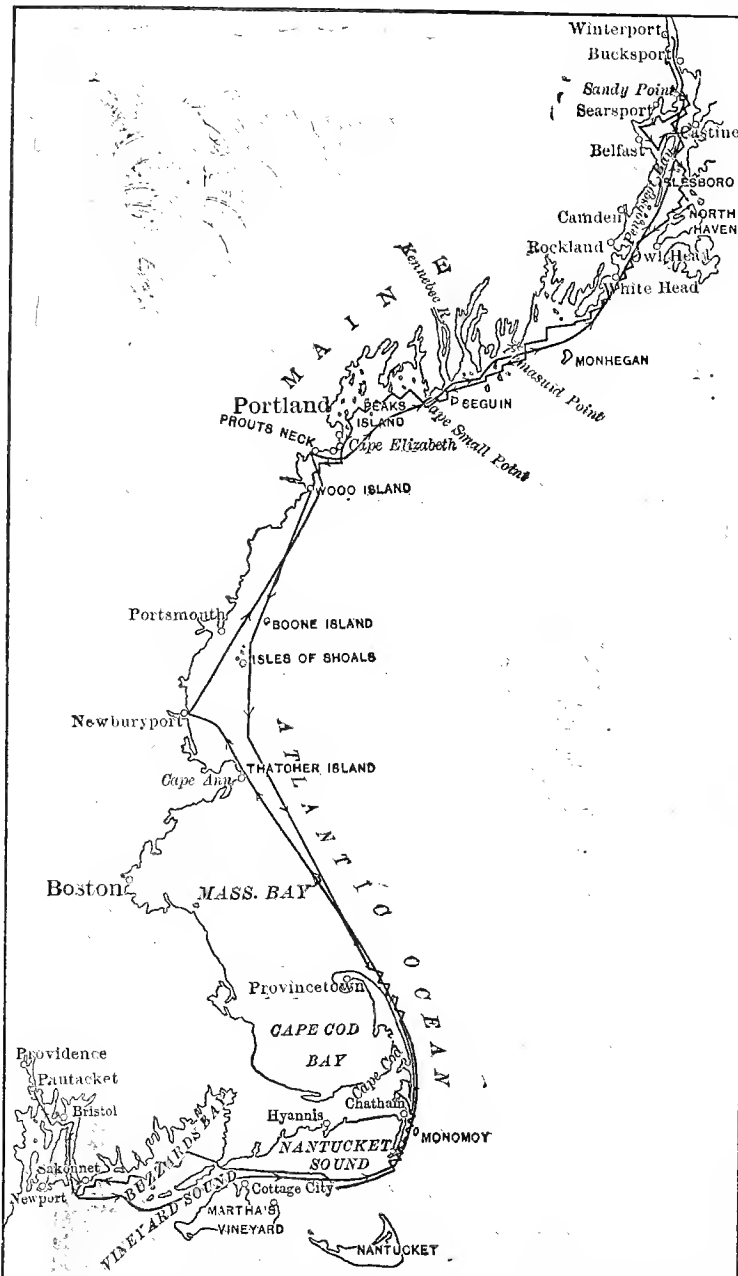

Chart of Course taken by Mblem.

down we were able to run over these safely, though the remarks we made as one after another showed up across our bows must have started the ears of more than one "Gee" fisherman itching.

Sakonnet lighthouse soon opened up, and at 12:30 we ran into the harbor, keeping well to the north shore to avoid a dangerous ledge. A short breakwater protects the steamboat wharf, and to one familiar with the place a fine berth can be found in a south wind by luffing sharply around this breakwater and running within 50 feet of it up to the wharf in perfectly smooth water.

June 28.—We were up as we had planned "with the chickens," and at 5 o'clock were under way. We met two fishermen and bought a small blue for breakfast. The southwest wind did not have strength enough to hold the four parts of the sheet out of the water, so we unhooked the inner block off the boom, doing away with two strands. We made slow progress steering east by south, and at 11:30 we were slowly drifting past Cuttyhunk Island, when we came up with a Greek fisherman pulling lobster pots. Passed the general observations of weather and tide with him, and were delighted to hear him ask, "Want some lobster?" "Well, I rather guess yes." Sam was in the small boat with a couple of cold bottles in about fifteen seconds, and came back with all of a half bushel. Of course we had no foot rule. We didn't care to measure them anyway. Good lot like "looking a gift horse in the mouth," but it is sufficient to say we had a kettle going, boiling lobsters well into the afternoon.

The tide from Buzzard's Bay carried us south of Sow and Pigs ledge, and we ran into Vineyard Sound just in time to meet the first of the western tide. The wind blew up a little stronger and our course up the sound was straight before it. Set the spinnaker, pulled the centerboard way up, and she slid over the water very nicely, but was making slow headway over the bottom, as the tide runs three to four miles an hour. With both her sails drawing Mblem was a picture. I sat in a steamer chair with plenty of pillows, steering, and took life like \$1,000 a week, while Sam ate lobsters. It was a glorious sail.

A large steam yacht with quite a stag party on board passed within one hundred feet of us. All lined up along the rail as we flew by, and just as evidence that we had no jealous eyes on them, I called out through the megaphone, "We're having a sail that discounts yours." From their expressions they thought so, as all had a hand in the air, or salute of some kind for us.

At 5 o'clock we made West Chop wharf, tied up to wait for the tide to turn, and had a very pleasant call from the lighthouse keeper. He looked over our line of cups and prizes that were tied up around the cabin in wonder. About 6 o'clock the tide turned and wind freshened, so we made sail again. We had figured on making a harbor for the night at Cottage City (or Lake Anthony), which is just to the south of East Chop light. This is a very handy and safe harbor for boats of not over five feet draft. It was such a beautiful night, clear as a bell, that we decided to keep going and get full benefit of the easterly tide. I held the tiller until 11:30, when we were just past Handerchief light vessel, then turned in, with Sam on watch. He kept her on her course till past one, when the tide turned against us, then he called me and we anchored off Monomoy, one of the most dangerous spots on the coast, but the water that night was as smooth as a pond.

June 29.—Monday morning we were on deck bright and early, the tide had just turned to the eastward and a fine whole sail breeze from the east-northeast was blowing. We were under way at 5:30, and with the sheet started just enough to make the Mblem foot fast, we could lay our course up the beach. Passed Chatham Bar at 6:45, and at 10 were off Cape Cod light. The wind held true and was freshening, the sea smooth, with a long easy roll and occasionally a white cap. We laid a course N. N. W. for Thatchers Island light and with sheet well off, board half up, and the wind abeam, we reeled off the knots at a rattling pace. At 3 o'clock raised the land under our lee bow, and at 5:45 we passed inside The Salvages. It was a lowery evening, and Thatcher Island twin lights certainly looked like grim sentinels of the sea. The wind had freshened very much, so we pulled down and tied in two reefs and kept going up the coast, figuring that in the prevailing conditions we could make Portsmouth by 9 o'clock. By 7 o'clock it began to look stormy and rained so we ran into Newburyport and dropped our mud hook at the mouth of the Merrimac River for the night, well satisfied that we had covered a good bit of our long road to Maine, and were safely past the dreary, dangerous stretch of sand beach known as Cape Cod.

June 30.—The sea was like glass, a faint northwest wind barely raised the telltale, and we did the wisest thing possible—laid at our anchor, cooked a fine breakfast, and waited for a breeze. About 9:30 it came west and we started up the coast. As the forenoon wore on the wind freshened and hauled around to southwest. At 4:30 we were off Wood Island with Cape Elizabeth a long way ahead in the breeze that was blowing, so we ran in by Stratton Island and saw the wreck of the new five-master, Washington B. Thomas. Her bow was standing high out of water, with all the fore rigging in place and perfect, the main mast out of line with the fore, and every part of the hull from 20 feet aft the main mast gone. It was a sorry sight.

Running in behind Prout's Neck, we anchored at low tide in five feet of water, and went ashore to mail word home and get the daily papers. Here some local yachtsmen said we would get into all sorts of trouble if we re-

mained at our present anchorage over night. They could not figure how a boat of Mble's size could lay in such shallow water. We, however, were looking for smooth water and a good night's rest, and had no idea of moving off shore.

July 1.—Wednesday morning broke bright and beautiful, but the winds were on strike, and continued out of business all morning. We finally got a breath of air southwest, and drifted out past Cape Elizabeth, where we passed a typical down East Yankee fisherman pulling in codfish. For twenty-five cents he gave us three fine fish.

At 2 P. M. we passed Half Way Rock, and at 4 Cape Small Point, where we met three fine fishing schooners standing out to sea. We had a view of Seguin Island with the fog gradually closing around the higher lands and slowly drifting down over the leeward side, while the steam fog signal gave its note of warning. Gradually the fog shut in, the wind died down, and we made a harbor under the lee of Salter's Island, a barren spot with perhaps three acres of scrubby spruce and a few sheep for inhabitants. It was with "just out of school" feeling that we stepped ashore, after getting everything snug for the night. We found loads of dry drift wood, and it occurred to us that a fire and a feed on shore would be a welcome change. So with all our "fixins" and a codfish we made a chowder—such a chowder! The memory of that feed, as we sat on the grass beside a roaring fire, in fog so thick we couldn't see fifty feet; with the roar of the surf, the dismal tolling of the bell on Pond Island and the horn on Seguin for music, will always be a delightful one.

July 2.—Thursday showed up with fog as thick as ever, and Sam slept off the effects of his chowder while I went

at times had to swing the boom high into the air to keep it out of the water, while I luffed and eased her through the fiercest squalls. We were making railroad time, however, and throwing spray practically all over the sail.

By running close to leeward of Islesboro we had comparatively smooth water, but the squalls came off the land in such ugly puffs it seemed best to keep about one-fourth mile off shore, far enough so the squalls could get straightened out, and we could see and judge their force and direction better as seen on the water. At 5:30 we were off Castine and our two-masted friend was hull down astern. From here to Fort Point was dead to windward, and after our hard day's pull at the tiller it seemed like a long road. We finally made it, however, and as the wind began to drop with the sun, we pulled out two reefs, and at 7:15 tied up at our destination, Sandy Point, a salt looking pair. Oilskins from head to foot, the sail wet except the highest part of the peak, and when we informed several retired sea captains that we left Salter's Island at eight that morning they had hard work to believe it. The facts were, while they had expected to see us soon, their judgment was that on such a boisterous day we would be tied up in some snug harbor waiting for "Ladies' Day" weather.

During the following twelve days we made many short trips around Penobscot Bay; visited Belfast, Searsport, Islesboro, Castine, Bucksport, etc. Anchored one night off the mouth of a trout brook in Searsport, and at four o'clock next morning, in a drizzling rain, started up the stream. We wore full suits of wet weather clothes, hip boots, oilskins and sou'westers; and perhaps we didn't have a good old-fashioned time wading in water knee deep, climbing fences, ducking and scrambling through the wet underbrush, fighting mosquitoes, and eating cobwebs. We

Sam got hungry for a chowder, so after preparing all the "fixins" he lit up the stove just as I tacked for a long run up toward White Islands. When the chowder was boiling hot the stove ran dry of oil, and in trying to fill it and keep the hot kettle right side up at the same time, he mixed a liberal portion of kerosene oil in the chowder, and then capped the climax by turning the whole thing up side down on himself and the cushions. The sight he presented was a whole show. He was saved from a serious burn by the oilskin pants he was wearing.

Passed Cuckold's at 5 and at 6 o'clock were off our old stopping place—Salter's Island. We were figuring, however, to keep going, pass Cape Small Point and make Peak's Island sometime in the evening, but the wind changed west, and an ugly looking thunder squall was working out over the land, so we ran in behind the ledges at Seal Island. It was low tide, the water clear, and we worked into a snug little harbor with an anchorage like a mill pond, so limited that we put out anchors at bow and stern for the night, the surf from the ocean breaking 200 feet away.

Thursday and Friday, July 16 and 17.—Woke at 5 o'clock, found a light northwest wind, rowed Mble out of her snug corner and made sail for another beat to windward across Casco Bay. Found it rough outside from yesterday's blow, and the northwester not quite strong enough to hold the sail full as she pitched over the waves. The beauty of the distant islands and ledges, with the surf dashing against them more than compensated for the dull sailing. Stopped at Peak's Island House and had a fine dinner. This is an ideal stopping place for yachtsmen, a fine harbor close to the open sea, supplies of all kinds handy. At 1 P. M. we ran outside again in a west wind that was caused by a thunder squall which we barely dodged, getting full benefit, however, of the strong fair wind. At 2:30 as we passed Richmond's Island the wind came southwest very light, we beat to windward past Stratton Island, saw the wreck of the Washington B. Thomas again, everything down and out of sight except her port bilge, and wreckage floating around as though yesterday's blow had been smashing her to pieces.

At 6 o'clock we were off Wood Island light, and the wind changed again to west; fair and steady at last, a beautiful night promised, without a cloud in sight. The sun set a ball of red, and as the moon was due to rise at 10:30, we decided immediately to run all night. Laid a course to clear Isles of Shoals, and Sam took his trick from 8 to 11. The westerly wind knocked down the choppy southwest sea very fast. The breeze was steady as a mill and just right for whole sail; in fact, the conditions were what I considered Mble's best time to go fast. Passed Goat Island light at 8:05 and Cape Neddick Nubble at 11, with Boon Island under our lee. The Portland steamer picked us out with her search light, and kept it full on us for some time. I took the tiller at 11, and it was certainly one of the most beautiful nights I ever spent on the water. Mble's big white sail looked like a snowy wing. She was flying along at a great pace, and held so true to her course that I lashed the tiller, and for over three hours she forged ahead without varying more than a point one way or the other. Isles of Shoals' light was on our weather bow, flashing its warning of white and red.

[TO BE CONCLUDED.]

### American Power Boat Association.

A MEETING of the American Power Boat Association was held on Friday afternoon, January 8, at the office of Mr. A. B. Cole, 68 Wall street, New York city. The delegates discussed the racing schedule for the season of 1904, and definite action was taken.

The first race will be held under the auspices of the executive committee on Decoration Day, 1904, and will be open to all boats whose owners are members of clubs which are enrolled in the association.

The race will be open to all classes and will be held in Manhasset Bay, off Port Washington, L. I., starting at 2 o'clock in the afternoon. The course for the small classes will be confined to the waters of Manhasset Bay, making a start off the Manhasset Bay Y. C. club house. The course for the larger boats will be from the same starting line out into the sound and return.

For first, second, and third prizes, the association will award a pennant to the winner in each class, and the winner will be entitled to fly this pennant as the winner of the class during the balance of the season.

The Association Prize Pennant, for first prize, is a broad pennant with a blue field and a white propeller in the center. In the upper left hand corner is the class letter and in the lower right hand corner the year. The second prize is the same arrangement, with a red field and white propeller and letter. The third prize is a white field with red propeller and letter.

The Manhasset Bay Y. C. has extended the courtesies of the club house to the visiting clubs. Entry blanks will be mailed to each of the club members of the association. Entries will close at 6 o'clock the day before the race, and from the inquiries that have already been received by the secretary interesting races are expected.

The association decided to offer a perpetual challenge cup, valued at about \$1,000, open to boats belonging to any recognized yacht club in the world, except that such club, if located in the United States, must be a member of the association. Boats must be not less than 25ft. waterline, and must rate not less than 35 feet, under the measurement rules of the association, and in all cases the rating must not be less than the waterline length.

The first match, consisting of three races, will be held on the Hudson River on June 23, 24, and 25, 1904, the starting and finishing line off the Columbia Y. C. house, located at Eighty-sixth street and Riverside drive, the course to be about twenty nautical miles up the river and return.

Boats must be entered by the clubs to which the owners belong, not more than one boat from each club. Entries will be received up to June 13, 1904, at the office of Anson B. Cole, 63 Wall street, from whom all particulars can be obtained.

All contesting boats must be measured under the association rules by the association representative prior to the first race. The winning boat will be determined by the point system, whereby each contestant is allowed one

On the way to the weather mark—Mble leading—Pleasure Bay Y. C. race.

fishing for lobsters. Had fairly good luck, landed a dozen good sized ones in a half hour, and felt very thankful to the kind man who owned the pots.

By 8 o'clock we were disgusted with waiting for the fog to clear, so got under way and sailed around the north end of the island and steered E. ½ N. for Cuckold's fog signal. Made our course good and also proved that little dependence can be placed upon a bell buoy in a fog. We passed to windward of one within 300 feet, yet could not hear it ring until well by and further to leeward. After passing Cuckold's we made a new course for Ram Island lighthouse. In a freshening breeze made good time and passed at 9:30; the bell buoy at The Hypocrites soon after, and at 10:30 the fog lifted sufficiently so we made out Pemaquid light under our lee bow. The wind continued to freshen, the fog cleared, and at 12 when we were off Allen's Island had developed into a smoky southwester, and the sea was getting decidedly rough. We dropped the sail and tied in two reefs. We expected to surely make our destination that night, so dressed ship with two new club pennants at the peak and ran for White Head; passed the light at 1:30, and were thinking that the rough part of our trip was over, but had gone less than a half mile when a regular knock down squall from well to the westward nearly put us out of business. We lowered the peak and eased her through the worst of it, then hoisted it again. As we proceeded up through Mussel Ridge Channel the wind kept working further to the west, and came off the land hot and in ugly puffs. As we approached the red Nun buoy off Sheep Island we met a light coaster bound out. With everything set, she was bowling along at a great pace. We kept off to pass to starboard, and she nearly ran us down, as she was sliding to leeward about as fast as she went ahead. Her captain went through all the motions of a Dutch windmill, and we haven't yet been able to figure out just what he meant. At Owl's Head we could see that things were wet up the bay; coasters were plowing along under shortened sail, one two-master just ahead of us took in all except foresail and staysail, and we pulled down again and tied in two more reefs. This brought the jaws of the gaff within five feet of the deck. The tide was running against the wind, and such a mixup and tumble and slop of a sea as that blow did kick up was a caution. Sam sat at the top-lift while we ran off to leeward of Mark's Island, and

returned to the shore at noon, a happy, hungry pair, with forty-five trout, some of them measuring more than 4¾ inches long.

We left our small boat that morning at low tide, with a long rope leading up the beach to a rock. On our return found the rock covered with water and the boat floating off shore. I waded in to the top of my boots, fished up the rope, and was slowly backing ashore, when one foot went into a hole and I sat down in a mixture of salt water, oilers, big boots, and big words. Needless to say Sam had a glorious laugh at my predicament.

Another day with quite a party on board we sailed up the river past old Fort Knox and Bucksport. When we returned the tide was running ebb, about four miles an hour, the wind south, dead ahead, and strong enough for two reefs. Talk about going to windward, I would like to own a "wind jammer" capable of getting over the ground in dead water as fast as we worked down through the Narrows. It was great sport.

Tuesday, July 14, at 12 o'clock set sail for Pawtuxet. A fine southwest wind just right for the whole sail was blowing, and we started on a long thrash dead to windward. We took the east channel down the bay as being the most picturesque scenery, and found it very interesting sailing among the little islands. At 7 o'clock we ran in to North Haven and anchored for the night. This is one of the finest little harbors on the coast, perfectly protected, with water deep enough for a battleship.

Wednesday, July 15, we were up at 4:30, found the same southwester blowing a fine steady breeze. Took a long port tack to Owl Head, then worked down through the channel to White Head, and out past the light. At 10:30 we passed Mosquito Head and went inside the island. Passed Marshall Point and Franklin Island lights, always sailing to windward; first a short starboard tack of a half mile or so, then perhaps several miles on port tack. We went to windward of island after island that day when the ship channel was to leeward, but such a thing as running off the wind when we had everything to windward wasn't for a minute to be seriously considered. In a boat of Mble's draft we were safe to go anywhere the seas did not break.

At 2 P. M. were off Pemaquid Point. The ebb tide running to windward out of Muscougus Bay made the sea very rough, and we put in two reefs. About this time

LINE AND CONSTRUCTION PLANS OF 22-FOOTER—DESIGNED BY FRED. D. LAWLEY AND BUILT BY THE GEO. LAWLEY & SON CORP., 1903.

point for going over the course, and an additional point for each boat which she defeats, all boats starting in one class and at the same time, corrected time to be computed in accordance with the association time allowance tables.

The club by which the winning boat is entered is entitled to hold the cup, subject to the provisions of a declaration of trust, until it is challenged for and won by a boat of another club.

Full particulars can be obtained from any member, of the committee, composed of J. H. Wainwright, American Y. C.; H. J. Gielow, Atlantic Y. C.; E. W. Graef, Brooklyn Y. C.; E. M. MacClellan and Anson B. Cole, Manhasset Y. C.

This association, which was formed about one year ago, is composed of delegates from yachting clubs, and since its organization it has formulated rules and tables of time allowance, governing speed and endurance contests of power boats, which have not only become the standard of this country, but have been adopted by the Marine Motor Boat Association of England and elsewhere.

The purpose of the association is to encourage power boat racing and endurance contests, thereby improving power boat engines and models. The annual meeting of the association will be held at the Hotel Spaulding, Forty-third street, between Sixth avenue and Broadway, on February 3, at 8 o'clock P. M.

### New Theories on Time Allowance for Racing Yach.

NEW YORK, Dec. 29.—*Editor Forest and Stream:* In the discussions of the principles involved in a rule of measurement for classification and time allowance which have recently appeared in your paper, I have looked in vain to find any criticism of the system at present in general use of basing the time allowed upon the length of the course sailed.

It seems to me that this method is wrong and that the time allowed should be proportioned to the length of time taken to sail the race.

If one yacht sails the course in two hours and has to give a smaller vessel ten minutes out of the two hours, it does not seem at all logical in case it takes the larger vessel four hours to sail the course that the smaller vessel should only get the same allowance or ten minutes out of the four hours.

In some of the foreign sailing clubs the amount of the allowance is varied according to the force of the wind, and in strong winds the allowance is much less than in light winds.

It appears to me that the time taken to sail the course gives us a true measure of both the distance sailed and the force of the wind, and that if the time allowance were based on the elapsed times of the race instead of on the distance sailed, a much more satisfactory and logical application of time allowance would result.

In carrying out this plan, the present tables of allowance per mile could be used with the addition of a speed column giving the average speeds opposite the rating measurements.

This speed column could be figured out with reasonable accuracy from past performances, and need only be correct in relative speeds.

The time allowed, instead of being figured the same for strong and light breezes, for quick and slow races, upon the distance sailed would be proportioned upon the time taken to sail the race.

The calculation of time allowance would be no more complicated than at present; the allowance per mile between the yachts being taken from the table and being multiplied by the average speed, would be the allowance per hour, and this, when multiplied by the elapsed time, would give the allowance for the race.

As an example, a yacht 40ft. R. L. allows one 30ft. R. L. 70 seconds per mile; with the average speed if fixed at 5.5 miles per hour, we would get an allowance of 6 minutes and 25 seconds an hour, and this multiplied by the elapsed time of the larger boat or the mean of the elapsed times of the two boats, would be the allowance for the race.

If the elapsed time taken should be two hours, the allowance would be 11 minutes and 50 seconds; if 3 hours, 19 minutes and 15 seconds; if 3 hours and a half, 22 minutes and 23 seconds. If the race should be sailed at the average speed of 5.5 miles per hour the allowance would be the same as if figured by the present method on the length of the course.

The only conditions under which this system might work unfairly would be in case of prolonged calm for part of the race and strong winds for the rest.

If this should be considered a serious objection, the allowances could be figured in the way suggested, and also on the length of the course and the mean of the two taken for the allowance in the race.

It seems to me that this plan would be a much more logical method of adjusting time allowances than the present way of basing them on the distance sailed without regard to conditions of wind or weather.

N. D. LAWTON.

All communications intended for **FOREST AND STREAM** should always be addressed to the **Forest and Stream Publishing Co.**, New York, and not to any individual connected with the paper.

### Design for a 22-Footer.

THE 22ft. restricted class bids fair to be one of the most popular in Eastern waters next summer, and the design published in this issue shows a boat intended for it. The boat was turned out by Mr. Fred D. Lawley, and will be built for a Massachusetts yachtsman by the George Lawley & Son Corp., South Boston, Mass.

The design shows a smart looking boat that will no doubt have a good turn of speed. Her overhangs are long and full, which give long, easy sailing lines and ample deck room.

Under a cabin house, 11ft. long and 7ft. wide, there is good headroom, and under the skylight and companion there are 5ft. in the clear. The cabin floor is 3ft. wide, and on either side are bunks 8ft. long and 2ft. wide. Behind these are lockers. At the after end of the cabin, on each side, are hanging lockers, and at the forward end are sideboards. In the galley there is a two-burner stove, an ice box and dish lockers.

The cockpit is watertight and is 8ft. long, and on either side are slatted seats. There is a 20in. waterway all around the cabin house and cockpit.

The boat's frames are of oak, and she is planked with  $\frac{3}{4}$ in. cedar. She will be steered with a tiller. The boat has a liberal rig, her sail area being 900 sq. ft.

Her dimensions are as follows:

Length—	
Over all	37ft. 8 in.
L. W. L.	21ft. 8 in.
Overhang—	
Forward	8ft. 10 in.
Aft	7ft. 2 in.
Freeboard—	
Forward	2ft. 8 in.
Least	1ft. 10½ in.
Aft	2ft. ½ in.
Breadth—	
Extreme	10ft. 1 in.
L. W. L.	9ft. 6 in.
Draft—	
To rabbet	1ft. 11 in.
Extreme	5ft. 8 in.
Sail area—	
Jib	180 sq. ft.
Mainsail	720 sq. ft.
Total	900 sq. ft.
Lead on keel	3,100 lbs.

King Victor Emmanuel has offered the Club Nautique de Nice a silver cup for a yacht race between Spezzia and Nice.

SAIL PLAN OF 22-FOOTER.

## Boston Letter.

BOSTON, Jan. 11.—For the 30ft. class that has been recently formed by Massachusetts yachtsmen, there now seems to be the prospect of three boats with which to start the season, even if no others should be built. Mr. T. K. Lothrop, Jr., ordered one from Messrs. Burgess & Packard some time ago. Mr. F. G. Macomber, Jr., is almost certain to have one of the new boats. Mr. S. Reed Anthony is said to be another prospective owner. It is understood that Mr. Macomber's yacht will be designed by Messrs. Gardner & Cox, of New York, and it has been said recently that Mr. Macomber's boat and Mr. Anthony's boat will be built from the same lines. Both boats will be built by Fenton, of Manchester. In the present state of apathy into which yachting has fallen, the prospect of even three new boats for a new class is encouraging. More than one Boston designer has expressed the belief that if the boats to be built were a little heavier they would be better for all-round purposes, and would prove about as fast as they will on a displacement of about 15,000 pounds. However, this will all have to be proved in the sailing.

One boat is now under construction for the new 21ft. class recently adopted by the Yacht Racing Association of Massachusetts. She is for Rear-Commodore Walter Burgess, of the Boston Y. C. She was designed by Mr. W. B. Stearns and is being built by Messrs. Stearns and

McKay, at the Marblehead Y. C. Her sails will be furnished by Messrs. Cousens & Pratt. The design shows a boat of moderate dimensions, with well-rounded bilges and some deadrise. The form, on the whole, is easy, and the boat should be a good actor in a seaway. She is 32ft. 6in. over all, 21ft. waterline, 7ft. 9in. beam, and 5ft. 3in. draft. She has a very roomy water-tight cockpit and cabin 8ft. 6in. long. This gives two large clothes lockers alongside the companionway, two good transoms wide enough to sleep on, ice chest, racks, etc., on the port side, dish locker, stove space and small sideboard on the other. This really gives fair accommodations for spending a couple of nights or more. The headroom is 4ft. 5in.

Mr. W. B. Stearns, who designed the boat, says of the class: "In point of speed this class ought to show up exceedingly well, and should give very interesting racing without exacting quite such close attention or becoming quite so much of a business instead of a pleasure, as racing in the more extreme classes. So far as the skill is required in designing a boat of this sort, it would seem from the result that the most sensible restricted classes we have ever had—the raceabouts and knockabouts—approached more closely to being models of boats found practicable in larger classes than those in which the designer is given a free hand. We believe the nucleus of a class is assured and two or three more boats will lend some excitement to the sport. It will be some satisfaction to the owners of these boats, whether they are winners or not, that they will be worth to sell the second season

CABIN PLAN OF 22-FOOTER.

probably seven-eighths of their cost price, and are of the most marketable size on the coast."

The first of a series of winter meetings and dinners of the Lake Winnepesaukee Y. C. was held at the Hotel Bellevue, on Wednesday evening last, at which Mr. Parker H. Kemble gave an interesting general talk on power boats, the principles of design and the relative values of steam and gasoline. The Lake Winnepesaukee Y. C. is quite a new organization, having been formed in March of 1903. It is mostly composed of residents of Boston and vicinity who have summer places on the lake. As is the case in most inland waters, the fleet of the club, which is growing quite fast, is mostly composed of power boats. Since the club was started the members have become much interested in improving the lake as a summer resort. During the winter talks will be given on ways and means of clearing the lake of pollution, the strict enforcing of pilot regulations, rigid examination of hulls and boilers, and the lighting and buoying of the lake.

Mr. W. H. Hand, Jr., of New Bedford, has turned out lines for the following boats: One-design class of 15-footers for members of the Buffalo Y. C., to be built by Weir, of Hamilton, Can.; 30ft. cruising yawl for Mr. E. P. Hussey, of Buffalo; restricted 16-footer for Mr. George E. Gooderham, of Toronto; restricted 15-footer for Mr. Charles E. Whitcombe, of Hamilton; and an auxiliary 21-footer for Mr. John A. Goldsmith, of Washington, D. C. Mr. Hand is now at work on the lines of a new one-design class for the Marine and Field Club.

Mr. B. B. Crowninshield has an order for a 52ft. auxiliary centerboard yawl for Mr. Sumner Hayward, of Buffalo. She will be 72ft. 6in. over all, 52ft. 6in. waterline, 17ft. beam, and 2ft. 9in. draft. She will be built in the west. Mr. Crowninshield also has an order for a boat to compete in the trial races to select a challenger for the Seawanhaka cup, for a syndicate of White Bear Lake yachtsmen. She will be built at White Bear Lake. The 21ft. raceabout which Mr. Crowninshield has designed for a New York yachtsman will be built by Rice Bros., at East Boothbay. She will be planked with mahogany.

Messrs. Stearns & McKay, at the Marblehead Yacht Yard, are at work on the lines of a 21ft. auxiliary yawl for Mr. J. A. Donovan, of Lowell, and a 21ft. cruising raceabout for Mr. C. R. Clark, of Plainville, Conn. The yawl will be a powerful boat, 40ft. over all, and will carry 925 square feet of sail. A novel speed launch is being built at this yard. She will be only 17ft. long and will carry a 20 horse-power engine.

The auxiliary knockabout, Chester Kilburne, owned by Mr. F. K. Priest, of Nashua, N. H., has been overhauled at Messrs. Murray & Tregurtha's. She has been equipped with an eight horse-power double-cylinder M. and T. engine, which is expected to give her good speed when not under sail. This firm has sold to Mr. C. S. Chandler, of Worcester, Mass., for use in Florida waters, the 47ft. gasoline launch Idler. The 85ft. gasoline yacht Tuna has been sold to Mr. W. B. S. Whaley, of Columbia, S. C.

At the annual meeting of the Corinthian Y. C., to be held at the Boston Athletic Association on Wednesday evening, the following officers and committees will be balloted for: Commodore, J. O. Shaw; Vice-Commodore, Butler Ames; Rear-Commodore, Frank E. Clark; Secretary, Everett Paine; Treasurer, J. B. Rhodes; Measurer, W. B. Stearns; Executive Committee, Frank E. and W. H. Rothwell; Regatta Committee, Herbert S. Goodwin, Lawrence F. Percival, Harry H. Falker, William L. Carlton, and Stephen Bowen; Membership Committee, Percival W. Pope, O. W. Shead, Frederick Estabrook, and Charles D. Wainwright; House Committee, three years, Fritz B. Talbot.

At the annual meeting of the Columbia Y. C., held Wednesday, Jan. 6, the following officers were elected: Commodore, Frank E. Grainger, Vice-Commodore, Hiram Patterson; Rear-Commodore, Manuel B. Roche; Secretary, Thomas A. Shephard; Treasurer, Albert E. Justice; Trustees, Lewis Masters, A. E. Justice, and Hiram Patterson.

The annual meeting of the South Boston Y. C. was held Wednesday, Jan. 6, at which the following officers and committees were elected: Commodore, Fred W. Rauskolb; Vice-Commodore, Harry S. Brown; Rear-Commodore, George M. Hannan; Secretary, P. J. McMahon; Treasurer, W. H. French; Measurer, Fred H. Borden; Fleet Surgeon, Dr. Thomas G. Reed; Trustees, Arthur Fuller and W. J. O'Brien; Regatta Committee, G. E. W. Armstrong, Thomas Colo, Walter Dixon, Arthur L. Leary, and Maurice Lee; House Committee, George P. Field, James H. Hayes, Theodore L. Kelly, M. J. Lynch, and H. T. McArdle.

JOHN B. KILLEEN.

The organization of a motor launch section has, for several months past, been in contemplation by the Long Island Automobile Club. The agitation resulted in a final and decisive action at a recent meeting. At a gathering of the officers and board of governors, President F. G. Webb named the following committee to take suitable steps toward a definite plan of action and enrollment: Chairman, L. R. Adams; J. Adolph Mollenhauer, commodore of the Penataquit-Corinthian Y. C., of Bay Shore, and C. H. Tageman, the well-known club man, who is having a high-speed launch built for his purposes in Italy.

From the numerous expressions of approval from launch-owning members, the future of the "Motor Launch Section" seems an assured success. H. L. Towle, the chairman of the technical committee of the club, is to act in advisory capacity to the committee.

Through co-operation with the Tavem Club of Brooklyn, which owns a commodious house-boat, it is expected to maintain a permanent summer rendezvous in Hempstead Harbor, as the Tavem Club contemplates anchoring off Glenwood, about a mile south of the Sea Cliff Y. C. house. A number of the members of the Tavem Club are actively interested in the automobile club. This probably is the first of a number of affiliations which later will be formed.—Brooklyn Eagle.

Mr. Sydney Russell has gotten out plans for a 21-footer for Mr. F. H. Walker (donor of the Walker cup for 21-footers). The new boat will compete in the races for the cup next summer, and she will be sailed by her designer,

## Designing Competition.

### \$225 in Prizes.

Two designing competitions have been given in *FOREST AND STREAM*. The first was for a 25ft. water-line cruiser; the second was for a 15ft. one-design class. Both competitions were very successful. The great interest taken in those competitions has prompted us to give a third one, open to amateurs and professionals. The prizes which will be given are as follows:

- First prize—\$100.
- Second prize—\$60.
- Third prize—\$40.
- Fourth prize—\$25, offered by Mr. Theodore Zerega for the best interior plan.

The designs are for a yacht conforming to the following conditions:

- I. Centerboard cruiser, 40ft. l. w. l.
- II. Boat must not draw over 6ft with centerboard up.
- III. The lowest freeboard to covering board must be 3ft.

The design must be modern in every particular, without containing any extreme or abnormal features. The conditions have been made as simple as possible, that competitors might have all latitude and scope in working out their ideas. We wish to produce an able and comfortable cruising boat, one that shall have ample accommodation for two or three men living aboard for a period of several months, and one that can be easily managed at all times by two or three paid hands. The draft is restricted to 6ft. in order that the boat may have access to nearly all the desirable harbors, and may, thereby, widely increase her cruising field.

### Drawings Required.

- I. Sheer plan, scale  $\frac{3}{4}$ in.=1ft.—showing center of buoyancy, center of lateral resistance and center of effort of both rigs.
- II. Half breadth, scale  $\frac{3}{4}$ in.=1ft.
- III. Body plan, scale  $\frac{3}{4}$ in.=1ft.
- IV. Cabin plan, inboard profile and at least one cross section, scale  $\frac{3}{4}$ in.=1ft.
- V. Two sail plans, scale  $\frac{1}{4}$ in.=1ft.; one as a yawl; one as a pole mast sloop.

In the case of the yawl rig the position and height of the mast and length of gaff are to be the same as in the cutter rig. Plans must show working topsail and size of light sails.

- VI. All ballast outside on keel except amount necessary for trimming.

An outline specification must accompany each design. The drawings should be carefully made and lettered. All drawings should be on white paper or tracing cloth in black ink. No colored inks or pigments should be used. The designs must bear a nom-de-plume only, and no indication must be given of the author. In a sealed envelope, however, the designer must inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the *Forest and Stream* Publishing Company, 346 Broadway, New York City, not later than March 1, 1904. All drawings will be returned, but postage should accompany each.

The *FOREST AND STREAM* reserves the right to publish any or all of the designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, who passed upon the designs submitted for the 25ft. with great care, has again consented to judge the designs and make the awards.

### Little Shamrock's Measurement.

*Editor Forest and Stream:*

The statement of Mr. C. W. Schmidt, Jr., in his article on "Lake Yachting" in your issue of this date, regarding the measurement of the yacht *Little Shamrock* is incorrect.

First—The bow of *Little Shamrock* complies with rule 4, being within the thirty degree limit.

Second—That the yacht *Little Shamrock* was measured before participating in last year's Country Club competitive cup races by Mr. S. Russell, the official measurer of the Country Club, assisted by Mr. J. W. Dyar, at that time secretary of the yachting committee of the Country Club.

I had charge of and sailed the *Little Shamrock* in the Country Club competitive cup races, and personally requested that the yacht be measured before starting in the races, and was present when measured, and I am therefore positive no fault can be laid to the owners of *Little Shamrock* or its crew as to its admission to competition in last year's Country Club competitive cup races.

I can very easily comprehend how the bow could be measured on a drawing and found over the thirty degree limit, as on measuring three different drawings of deck plan it was found that one measured thirty and one-half degrees, another exactly thirty degrees, and the other twenty-nine and one-half degrees. This is very easily accounted for, as a reduction of a deck plan from thirty-six feet to thirty-six inches make it so small that the minutest increase in inked line on the drawing will make angle vary a half degree one way or the other, or the slightest variation of pen or ruler will do the same thing, and such a measurement can only be determined by measurement of the deck of yacht itself.

*Little Shamrock* is laid up here, and can easily be reached and measured, and thus stop all controversy on this subject, which all seems to have arisen from the bare statement of a disappointed designer and builder who has made two attempts to build within the rules and failed in both instances.

EDWARD T. BALCOM.

### YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Messrs. Wilson & Silsby, the Boston sail makers, have recently gotten out a very handsome picture of the auxiliary schooner *Ariadne*. The sails for *Ariadne* were made by this firm and the picture shows off the splendid suit of canvas to the best advantage.

The annual meeting of the Indian Harbor Y. C. will be held at the Club Cottage, Rocky Neck Point, Greenwich, Conn., on Wednesday, January 13, 1904, at 8:30 P. M. The nominating committee presents the following nominations for officers, directors and regatta committee: Com., George Lauder, Jr., schooner *Endymion*; Vice-Com., Edward Shearson, schooner *Quickstep*; Rear-Com., Wilbur C. Fisk, yawl *Onawa*; Sec'y, Charles P.

Geddes; Treas., Richard Outwater; Meas., Morgan Barney; President of the Corporation, Charles T. Wills. Directors (term expiring 1907), Charles T. Wills, Louis R. Alberger, Regatta Committee, Frank Bowne Jones, chairman; Charles E. Simms, T. J. McCahill, Jr.; E. Sterne Wheeler, Geo. J. Bradish.

The handsome club house of the Winthrop Y. C., of Winthrop, Mass., was totally destroyed by fire on December 28. The club house was of wood, and with the flames fanned by a strong breeze the building was soon consumed. The damage sustained by the club will be \$10,000 for the club house and \$1,500 on its furnishings, upon which there is only \$5,000 insurance. Absolutely nothing was saved. The loss to members in sails, rigging, tenders, etc., cannot be fully estimated, but the total will be large. A meeting of the directors to take action on rebuilding will be called at once.

There is building at Woods' yard, City Island, a cruising yawl from designs made by Messrs. Cary Smith & Ferris. The boat is for Mr. Henry S. Gibson, and her dimensions are as follows: Over all, 50ft.; waterline, 30ft.; breadth, 12ft. 2in., and draft, 7ft.

The schooner yacht *Dixie* owned by the Rev. S. C. Thomson, of Coxsackie, N. Y., encountered a bad storm off Cape Charles and was dismasted. The yacht was towed into Norfolk, where she will repair and proceed to Jacksonville, Fla.

Mr. H. E. Tinker is having a cruising schooner built at Bayley's yard, Port Jefferson, L. I. The yacht is a centerboard boat of heavy wood construction. She is 100ft. over all and 70ft. on the waterline. The boat will be coppered. Mr. Tinker will name the boat *Palestine*.

*Vergemere*, the auxiliary schooner owned by Mr. Albert C. Bostwick, which left New York on December 22, experienced good weather on the run down the coast until within fifty miles of Bermuda. At this point a S. W. gale struck the yacht and she was hove to for some time. *Vergemere* was designed by Messrs. Cary Smith & Barbey, and built by the Harlan & Hollingsworth Company, Wilmington, Del. She is of steel throughout, 158ft. 6in. over all, 120ft. on the waterline, 28ft. breadth, and 16ft. draft. The engine is of the compound type, with cylinders 12in. and 24in. in diameter by 14in. stroke. Steam is supplied by two Almy boilers. The yacht has liberal sail plan, with about 10,000 square feet of canvas in the lower sails.

In another column we print a letter written to us by Mr. N. D. Lawton. Mr. Lawton comments on the time allowance tables now in general use, and advances some new theories on the subject that are most interesting. It is difficult to tell how measurement rules will work until they are put into actual practice, and the same thing may be said of new time allowance tables, but we believe Mr. Lawton's suggestion has merit, and we hope it will bring about some beneficial results.

# CANOEING

## The Nomads on the Osage.

BY PERRY D. FRAZER.

The Story which won the Second Prize of \$25 in "Forest and Stream" Canoe Cruising Competition.

THE canoe in which the cruise I am about to write of was made, is an all cedar Indian model open paddler, 15 feet in length, 32½ inches beam, and 47 pounds weight. She was built by J. H. Rushton, Canton, N. Y. Her ribs are fashioned like those of the common canvas-covered canoe, being very broad and continuous from side to side. In the center they are about two inches in width and are spaced that far apart, while the space between each rib for almost the entire length of the craft is filled with a bit of cedar of equal thickness with rib, and of such length that these pieces and the ribs form a solid floor, which is far superior in regions where there is as much mud as in Missouri, to the regulation floor-boards or gratings. Another feature made possible by the adoption of these wide ribs is that this canoe has no inwales. Each rib is made fast to the gunwale with a round-head brass screw. Mud, sand or dead leaves may, therefore, be swept out of the canoe almost as readily as though her interior were perfectly smooth, either by turning the canoe on her side on shore and using a moist sponge, or by washing the interior thoroughly while she is in the water and then shaking the water out in the customary way. She has three thwarts and very short decks. Her sheer is pronounced. She has a substantial oak shoe her full length, and this and the

gunwales, which are of cherry, constitute all the material in her make-up that is not white cedar, the copper nails and brass screws also excepted. *Nomad* has a very flat floor and such full lines that her capacity is enormous for her size, but while she is not as fast as the average canoe, she is surprisingly steady and a good load carrier. Single blade maple paddles, 5ft. 4in. and 5ft. 5in. long, are used.

The outfit consists of the following principal articles: A brown conical tent 8½ft. high and 9ft. wide, fitted with door awning, window, sod cloth and floor cloth, with netting for both window and door. No poles or pegs were taken, although both are at other times used. Two pneumatic mattresses, each 25 by 75 inches in size, and three small air cushions occupy small space when deflated. There are two heavy army and two other double blankets, two small pantasote blankets, a mackintosh cape and a pantasote coat, heavy sweaters, a heavy wool cape, which my wife wears when the days are cold, and rubber-soled canvas sneakers for canoe wear. A round box of heavy tin, 10 by 11 inches in size, and with a hinged cover, protects a vapor stove, two quart kerosene cans, 1½ pints of wood alcohol for priming the vapor stove, and several tight top tin boxes containing matches, soap, salt, etc. A small padlock protects the contents. The grub box is 15 by 16 by 8 inches in size. It has a shallow cover which is braced with a brass rod when serving as a table. It has four removable legs, and these were stowed within the box, together with five aluminum plates, three aluminum cups that nest in the coffee pot, an agate ware frying-pan, a kettle and a low

coffee pot, also agate ware. Three shallow saucepans, a long thin cracker can for spoons, forks, etc., a coffee ball, whetstone, waterproof salt and pepper shakers, and several tins for daily supplies, all were stowed in this box for shipping. A rather large tackle box contained screwdriver, file, cleaning material for firearms, combs, etc., and was a most useful companion. A folding camp chair, two cork cushions, and a brass lantern complete the outfit.

It was on September 26, 1903, that I paddled *Nomad* from Meramec Highlands three miles up the Meramec river to Valley Park, with my outfit packed for shipment. At the railway bridge I went ashore, and hailing a small boy and his sister, who happened to be driving by in a wagon, persuaded them to haul the canoe and outfit to the railway station, a short distance from the river. In a few minutes, therefore, the outfit was placed in the wagon, and with the canoe over all, we started for the station. Arrived there, the young people were satisfied to name 25 cents as their reward, and drove away well pleased, while I congratulated myself that I had met at least two persons that day who had not been spoiled by contact with fee givers.

The station platform was broad, there the canoe was placed on a large piece of burlap, a sail needle and a ball of twine produced, and I went to work. The paddles were tied to two thwarts, the chair, a bag of light stuff and the lantern to the other one, and then the canoe was sewed up in the burlap and tagged. The grub box was wrapped in the tent and securely tied, as it was heavy though frail. The floor cloth was

then spread out and the beds, blankets, etc., wrapped in it, and tied up. The tin box containing the stove and other articles was provided with a rope handle. The fifth parcel was a large canvas bag containing loose articles and changes of clothing. The station agent shipped the canoe by express to Osage City, Mo., 117 miles distant from St. Louis, and about 99 miles from Valley Park, while he checked the other parcels as baggage, all going over the Missouri Pacific railway. This is one of the railways that will not carry canoes as baggage. Some roads will carry them as baggage; and one road merely requires full tickets for two persons, and the assurance that they are members of the American Canoe Association, and entitled to the privilege. I was compelled to pay for the canoe at the rate of four times first class express matter.

Three days after the canoe and outfit had been shipped, Mrs. Frazer, little Helen—who is almost a veteran canoeist, although little more than two years of age—and myself, all clad in comfortable old clothing, arrived at Osage on an afternoon train, carrying with us a camera, two fishing rods and two .22-caliber rifles, one of them a single shot and the other an automatic with telescope sights. At the little station we found the canoe, the outfit and a box of groceries we had shipped from St. Louis, all in good condition.

timers were to be believed. There was no current to be noticed in this part of the Osage, so that ascending it was an easy matter. The wind made progress slow, however, although we hugged the eastern shore, getting some protection from overhanging willows for a distance of three miles.

While passing the mouth of the Big Marais, that afternoon, we saw the first and only raft of railway ties encountered during the cruise. In this country the best of oak ties are sought, and this fact has been chiefly instrumental in the cutting out of the one-time immense forests which shaded the Osage. The ties are placed as closely together as possible in long rows or tiers, as they are called, and held in place by split poles of sycamore, poplar, or other material found handy. The tiers are then fastened together side by side with other poles, making a complete raft. A sweep made from a pole with a bit of plank spiked in its large end, which is split for the purpose, is placed at each end. This raft, we were told, contained 1,500 cross ties, and was small by way of comparison with the rafts the writer found so common on this river in the early '80s, when we first cruised there. Three men were in charge, and they alternately used the sweeps to steer the thing, and their long poles to push it along, as the current aided them but little. The

Immediately below the lock, far up on the low shore, lie several stone barges that tell how high the water was last spring; and also that those responsible to Uncle Sam were either unable to float them into deeper water, or too lazy to do so, in time to save them when the water receded.

Not far above the dam we came to the low gravel bars and the towheads that gave a practical illustration of the need of the dam to the friends of the Osage country. For a long distance the eastern two-thirds of the river is occupied by these obstructions to any craft drawing more water than a canoe, while at low water there is more shingle than water. And here, in a comparatively small space, is enough magnificent red, clean gravel to pave every street in New York city several inches in depth. Every tiny particle of stone forming these bars is as smooth and as clean as if polished by hand, and if such bars were referred to by Kipling, I do not wonder that he was fond of basking in the sun-

Nomad Under Way.

shine on them. And all along the stretches of clean gravel were thousands of beautifully tinted mussel shells that had been washed down by the freshets, and polished by the gravel until not a vestige of the freshwater clams they one time shielded was to be found in them. Crows stalked along the bars in numbers, seeming to understand that we were too busily employed with the single blades to disturb them; for a west wind had sprung up and freshened with the passing clouds, and presently the sun was shining brightly.

Shipley's Shoal consists of a low dam and chute placed there by the Government during the Civil War for the purpose of making the river navigable to gunboats of small size which, it was anticipated, would be used on that stream in the event of the seat of war being west of the Mississippi river. And this dam is the first of a series to be found at intervals along the river as far as my acquaintance with it extends. This shoal compels the canoeist to use his blade steadily for about 300 yards, but when we reached the head of the chute, we bore off to the left-hand shore, following close to the bars until Rice's Island was passed, when the river widens slightly and is deeper. As we gradually turned northward and then to the northeast, in circling the first great bend in the river, the wind hindered progress less and became a beam wind. Then a small flock of ducks rose a long distance ahead and we remembered that autumn had come, but the sun seemed bent on reminding us of its power in August. Again, in passing a small creek, four wood ducks scurried

The Osage from the Bluff; Round Bottom and Harrington's Shoal in the Right Background.

out and over the tree tops, and shortly afterward a great blue heron was disturbed, and it flapped along, alighting here and there until we had passed Prince Edward's Island, in the shoal water at the head of which it took its final stand and refused to be disturbed again.

We had completed the first curve and were turned in the opposite direction when hunger, and a grove of persimmon trees with the fruit ripening, sent us ashore. A splendid spring of water pours out from under the bluff at that place, and this was an additional attraction. While eating luncheon we could look across the wide bottoms on the eastern shore, now denuded of every tree that could cast a shadow, and although I could recall the day when woods extended almost everywhere on that side of the river, so utterly desolate was the place then that remembrance seemed more of a dream than reality. Turning further west that afternoon, in rounding the second great bend in the river's course, we felt the full force of the wind. At Castle Rock, once an important town on the river, all that remained were a few tumble-down houses and the ferry, a flat-bottomed scow, large enough to transfer wagons from one side to the other. In antebellum days, steamboats were built here, and the village boasted a hotel, a great

CHART OF THE OSAGE RIVER.

Forest and Stream

The agent was a St. Louis man who had grown homesick and lonely during his enforced stay in the village, and as he was glad of the opportunity to talk with anyone from his home town, he was very friendly, and aided us in many little ways, besides permitting us to leave a bag and the burlap in his office until our return, in a fortnight. And as this was at one time an important railway cross-tie shipping point, and the negro workmen were at that time idle, it was not difficult to obtain help in transferring Nomad and the outfit from the station to the shore of the Osage River, 300 yards distant. In fact, it was a matter of asking the crowd of loafers if anyone was willing to help me. All were willing enough, so I chose the first man I came to. Meanwhile, my wife went across the way to a general store and purchased a supply of fresh eggs and butter. I carried the canoe to the river, expecting to return with my helper for the other parcels, but was astonished, on putting the canoe down at the water's edge, to find every article en route for the river, each on black shoulders, some big, others little, but all filing down toward me. A pickaninny brought up the rear guard with the lantern, which had dropped out of the canoe on the way. The big fellow whom I had engaged said, "two bits," (25 cents) was enough for him, but it was fortunate we had some small silver for the others. Altogether there was a gathering of well-pleased individuals on the muddy bank of the Osage, most of whom found reserved seats on the nearby ties and watched the two men who helped me stow the numerous heavy articles in the canoe.

"I 'spec' you ain't never goin' git all dem t'ings in dat lil boat, boss," said one, while another afterward agreed that "Hit do beat all whar dem t'ings went to," although there was room for both of us to sit or kneel, at our option, and a cosy space amidships for Helen to sit on the blankets, and issue orders to the old folks, or play with the different articles she could reach and pull out of their places. The bank was a very muddy one, but by means of two planks and a skiff tied at the water's edge all hands reached their places and we paddled away into a fresh breeze that had sprung up within an hour.

We left behind us the village, and the long steel bridge at its foot. Here and there a stern wheel steamboat was moored along shore, and a glance down stream revealed the long curve of the river where it hastens to meet the Missouri, a short distance beyond. There ahead of us was a long reach of water perhaps 400 yards in width, somewhat muddy because of recent rains, its surface ruffled by the wind. The shores were low and fringed with willows, which, in turn, hid the wide and rich bottoms that were covered everywhere with water the previous spring, when the Missouri was higher than it has been since 1844, if the old

ties were so low in the water that the men were wading constantly in tramping back and forth, but a fire smoldered and smoked on some green poles placed in the center of the raft for the purpose of maintaining a fire. Just below the Marais, the first bluff was seen, and also the first squirrel. And this high hill is interesting for two reasons: On its summit are to be seen several Indian mounds of large size, and also on its summit there stands an immense pole from which telegraph wires span the river, their next support on the western shore being a series of poles so high that I would be afraid to even estimate how far in the air the wires swing. At the Marais there is a sweep-propelled ferryboat and a steamboat landing that is called Westphalia Landing, a well-traveled road leading off among the hills to Westphalia, an inland town, where many anglers and quail shooters go for sport.

It was our intention to make camp that night on the western shore, in a picturesque spot where I had often camped in other years, but as the banks had been covered with a deposit of deep mud, and the woods in question had disappeared, we went on, stopping a short time under an overhanging tree while a shower passed. The old camping place being out of the question, and the next available one several miles distant, we crossed the river, and at last found a place under a wide-spreading hickory tree in a bit of woods close to Westphalia Landing No. 2. At dusk the steamboat Romana, which plies between this landing and Osage, tied up for the night, leaving in the morning.

Getting away the first morning of a cruise takes time, as the whole outfit requires overhauling in order to stow the different articles where they belong, so we did not leave until late, meeting a shower just as we passed through the open lock of the new dam the Federal Government began to build at the foot of Shipley's Shoal, then left to the mercy of the elements, lacking an appropriation from Congress. If this dam is ever finished and put into operation, the river as a cruising stream for canoeists will be ideal, as the waters for miles above this point will lack current, and it will be comparatively easy to reach points nearly 100 miles from the mouth without encountering any current worth mentioning. At present, however, the dam affects the river very little, as it does not extend entirely across the river, and its finished parts rise only to the surface of the water at the stage found at the time. A half-dozen immense pillars of dressed stone mark the height of the proposed structure, and judging from these, one would infer that when the dam is completed the river immediately above it will be at least twelve feet deeper at low water than at present. The finished lock is a fine structure. It is on the extreme western side of the Osage, and seems large enough to accommodate any of the river craft likely to ply these waters.

sawmill, stores, warehouses and numerous homes. At the time of which I write, the houses where I had often stopped while hunting quail in the bottoms and squirrels in the woods, was the only one that was occupied. Not far above the village we passed the cliff from whence the name was derived, a square-topped wall of stone not unlike some old castle. Its base is pierced by caves, one of which is quite large, and in it there is a natural fireplace, the chimney being a vertical outlet to the hill above, so that the smoke from a fire built in the fireplace ascends as freely as in one fashioned by man. Not far from the rock we saw our first water moccasin. It was a large one, and it was coiled among the branches of a willow at the water's edge. Which reminds me to warn fellow canoeists to paddle at a respectful distance from the many overhanging willows to be found in these waters. Moccasins and other snakes are fond of lying on these low-hanging stunted willows, and so close to the water that if disturbed they can drop into the water and disappear. I have often knocked them off the bushes while using a double blade paddle, in hugging the shore in the shoals, so difficult is it to see them as they lie among

The Noon Hour.

the leafy limbs; and once, in a swift and narrow chute, as the canoe passed under a willow, an ugly moccasin dropped on my shoulder, fell to the gunwale and slipped into the water before I had time to get away. As I told my companion at the time, it was a good thing the reptile went overboard, as the canoe was not roomy enough for both of us, and the place was not a favorable one for jumping overboard anyway.

Passing Rock creek, I was reminded of more devastation on the western shore, for where there was at that time an almost barren waste grown over with cockleburrs, deep and dark woods stood twenty years ago, and in those woods I had hunted turkeys and had seen deer. A mile from the river, and alongside of the creek mentioned, was a spring which flowed out of the solid rock in a strong stream almost a foot in

Under the Maples.

diameter, the water cold as ice, yet, according to the farmers, that water never froze over in winter. For this statement, however, I cannot vouch.

Bolton's Shoal came next. This shoal also consists of a wing-dam and a chute, but as the latter is very narrow, the current near its head is quite lively and we were glad to reach the still water beyond. The river bears away to the east, too, and this brought the wind abeam again, this time on the starboard hand. The Civil War and the ax wrought havoc in this part of the beautiful valley of the Osage. On a high hill on the western side of the river stands a great cottonstone mansion that was the pride of all the Boltons and their numerous slaves; across the river and on another hill is the ruin of the late Major Clarke's stone palace and plantation, with its row of neat quarters for the slaves. To-day the scrub oaks hide the great house from the river. Paddling on, we passed the old Thornton farm. The bottoms are almost a mile wide there, and they are bounded on the east by a sort of hogback that it is possible to scale in few places, while beyond the ridge lies a narrow valley. To-day the old house stands in a field of corn. In '83, when I saw it first, there was a wide grassy yard running down to the river, maples and pecans and sycamores shaded it, and a colony of fox squirrels frolicked about the house and yard in perfect safety. Along the river there was a fringe of trees; now every one has been cut that in any way shaded the fields. I will never forget the day, now ten years distant, when, in descending the Osage for the first time after a long absence, I scaled the cliffs back of the farm and hurried down their eastern

slope, my mind filled with thoughts of the great trees I knew as friends, many of them, in the deep woods that clothed both slopes. But I stopped in astonishment, for there lay the valley, a wreck of tree stumps and decaying limbs. The tie-hacker had been at work in my absence. Oh, the pity of it all! It was in that valley that I had first found that I could use a wing bone caller well enough to deceive old man Schneider, the hunter who lived in a log house hard-by. I will never forget the morning in question. Sitting behind a fallen log, watching for a squirrel, I took the curious caller out of the pocket in my flannel shirt, and began softly to practice, as I had often done, forgetting for the moment where I was. Perhaps I called three or four times, when I was astonished to get a reply—and from a gobbler at that; no one could mistake the sound. But when I peeped over the log, there was the old man, crouching behind his rail fence, rifle in hand, peering anxiously in my direction. My cup of joy was full, for, if I could deceive a hunter who never missed a shot (my opinion of him at that time), what would happen if a gobbler should listen to my quavering call? There may have been doubts as to the gobbler's opinion of my efforts, but there were none in the mind of old man Schneider, if his forcible expressions were true indications of his feelings. And thereafter a coolness existed between us.

[TO BE CONTINUED.]

### CANOEING NEWS NOTES.

The Duquesne C. C. held the annual election on Tuesday night in the town house, No. 300 Meyran avenue, Pittsburg, with the following ticket elected without any opposing candidates: Com., Frank C. Demmler; Vice-Com., Edward H. Demmler; Sec'y-Treas., Albert Heeren; Trustees, W. C. Weckerle and Alton Brown. The club is in fine condition, and all anticipate a record breaking season. The members are keeping in close touch with one another during the winter by frequent social affairs in the town house. Elaborate summer outings and trips are being planned.

### Rifle Range and Gallery.

#### Fixtures.

Feb. 27-March 5.—New York.—At Zettler's, championship rifle gallery tournament.  
June 12-20.—National Schuetzenbund Festival, Union Hill, Schuetzen Park, N. J.

#### New York Corps.

SEVENTY-THREE members were present at the bi-monthly practice shoot in the Zettler gallery on Friday night, Jan. 8. R. Gute and Geo. Ludwig led for high scores on the ring target. On the bulls-eye target P. Heidelberg made the best center shot. Wm. Schultz was second.

Ten-shot scores, 25-ring target: R. Gute, 245, 243; G. Ludwig, 238, 244; O. Schwanermann 238, 234, B. Zettler 235, 240; G. Thomas, 237, 231; G. Offermann, 226, 231; J. C. Bonn, 232, 231; J. Facklamm, 224, 232; F. Facompre, 232, 226; D. Pepper, 228, 225; W. Dahl, 220, 225; J. N. F. Siebs, 222, 226; C. Schmitz, 221, 223; C. Mann, 225, 221; P. G. Tholke 223, 217; H. Lohden, 217, 227; H. Decker, 226, 218; H. Nordbruch, 225, 217; W. Schultz, 207, 230; G. Junge, 218, 215; C. Konig, 216, 216; H. Haase, 209, 231; H. R. Coplan, 226, 206; N. C. L. Beversten, 218, 217; H. Beckmann, 211, 227; C. Brinckama, 218, 215; A. W. Lemcke, 211, 222; J. H. Meyer, 206, 229; H. D. Meyer, 204, 232; H. B. Michaelen, 216, 222; R. Ohms, 211, 219; H. Rottger, 222, 216; L. C. Hagenah, 225, 211; A. Beckmann, 220, 213; H. Meyn, 210, 214; M. J. Then, 207, 222; G. Voss, 206, 217; E. F. Lankenau, 209, 207; F. Feldhusen, 216, 197; H. C. Hainhorst, 216, 213; J. Jantzen, 227, 190; H. Offermann, 194, 215; W. Schaefer, 190, 211; F. Dierks, 191, 214; P. Heidelberg, 192, 235; H. Leopold, 208, 192; H. Winter, 201, 205; J. C. Degenhardt, 193, 203; J. C. Brinckmann, 203, 194; J. May, 189, 205; F. Schultz, 194, 201; J. H. Doscher, 153, 207; A. Evers, 206, 153; J. Paradies, 163, 200; H. Quinten, 128, 200; D. Ficken, 196, 197; H. Gobber, 201, 157; Gus Hagenah, 187, 191; D. Van Glahn, 199, 183; H. D. Von Hein, 184, 239; N. Jantzen, 200, 189; H. Konig, 193, 196; A. Lederhaus, 177, 181; J. H. Grote, 190, 149; L. L. Goldenstein, 176, 196; J. Gobber, 147, 189; D. Dede, 167, 171; D. H. Brinkmann, 169, 193; J. C. Kruse, 198, 203; N. W. Haaren, 158, 164; H. Haaren, 141, 128; B. Kumm, 133, 158.

Bulls-eye target, 4in. carton, best center shot to count, by measurement: P. Heidelberg 32 degrees, Wm. Schultz 36½, D. H. Brinkmann 45, J. H. Meyer 48½, G. Offermann 51, H. R. Caplan 52, Geo. Ludwig 53½, H. D. Meyer 58, A. Evers 64½, R. Gute 71½, D. Pepeer 71½, H. Lohden, 73½.

#### G. A. Schuetzen Bund of New Jersey.

THE organization of German-American riflemen known as the German-American Schuetzen Bund, of New Jersey, contains seventeen separate companies, with a membership of about 600. The annual election of officers was held at its headquarters, Lohman's hall, West Hoboken, Jan. 6 and the following board elected: Chas. Gent, President; Fritz Ganzberg, Vice-President; A. Habedank, Recording Secretary; Geo. Wagenbrenner, Financial Secretary; Frederick Schopmann, Treasurer, and Otto Fleischaur, Custodian.

At the next meeting, which will be held on the first Wednesday in February, the several committees and a sergeant-at-arms will be appointed by the president.

#### Miller Rifle Club.

THE weekly shoot of the Miller Rifle Club was held at the club's headquarters, 423 Washington street, Hoboken, on Jan. 6. Only a few members were present. Nevertheless good scores were made: F. Unbehaum 244, D. Dingman 242, R. Goldthwaite 243, O. Smith 242, C. Miller 241, W. Evans 235, E. Daley 239, P. Schultz 226.

On Dec. 30 the scores were as follows: R. W. Evans 241, F. Unbehaum 240, D. Dingman 240, D. Miller 237, H. Bahn 236, C. Miller 235, E. Doyle 235, H. Meyns 231.

#### New York City Corps.

New York.—The New York City Corps held its bi-monthly gallery shoot at the Zettler gallery on Jan. 7. Aug. Kronsberg led the group with a total of 481.

Ten-shot scores, two to count: A. Kronsberg 481, C. Wagner 474, O. Schwanermann 473, R. Busse 472, J. Facklamm 472, R. Schwanermann 466, R. Bendler 466, J. Keller 447, A. Wiltz 415, C. Schmidt 403.

#### Zettler Rifle Club.

ON Tuesday, Jan. 5, the Zettler Club held its monthly meeting, which was the annual meeting for the installation of the new board of officers elected in December. It was decided to present the National Board with a prize of \$250 for the June tournament, to be sub-divided into five prizes of \$50 each.

In the club's winter gallery contest the competition was keen and the averages close. In the 100 shots, E. Van Zandt and Louis C. Buss finished their scores only one point apart:

Ten-shot scores, 25-ring target, 100 shots: E. Van Zandt 2449, L. C. Buss 2448, Geo. Schlicht 2422, Aug. Begerow 2310.

Fifty shots: W. A. Tewes 1223, R. Gute 1217, Aug. Kronsberg 1214, W. A. Hicks 1207, C. G. Zettler, Jr., 1201, H. C. Zettler 1193, B. Zettler 1187.

#### Italo-American Riflemen.

AMONG the great body of riflemen in and about New York city there is an active group known as the Societa Tiro A Segno Nazionale Italiano, in plain English the Italian Rifle Association. It is made up from the best element of our Italian-American citizens. They are enthusiastic shooters with both the rifle and shotgun. At the fall meeting of the New Jersey State Rifle Association at Sea Girt last year, in the Inter-club team match, the Italian team was second, and it is yet an open question as to whether they should not have been given first prize.

It began its winter gallery practice Jan. 4. Scores: Blanche 236, G. C. Conti 230, De Anglers 224, Louis Reali 220, A. Orseniga 192, E. Orseniga 191, G. Fontanella 181, S. Fontanella 180, Soldarini 166, Vignino 158.

#### Our Own Club, Hoboken, N. J.

THE Our Own Rifle Club has at its weekly practice shoots from fifteen to twenty-five men in line. On Jan. 5 scores were made as follows, 10 shots, 25-ring target, distance 75 ft.: John Ortheb 240, J. H. Kruse 234, J. Kemmer 236, A. Schmidt 226, W. Dilger 224, S. Fisher 224, Wm. Armson 224, C. Lewin 224, L. Christ 226, J. Trus 220, L. L. Levy 227, C. Drees 218, F. Buehler 220, A. Thomas 216, A. Naar 214, A. Puhn 214, Ch. Oltmer 212, H. W. Von Holten 214, W. Brand 210.

#### Rifle Notes.

The next practice of the New York Central Corps will be held on Jan. 14.

The next shoot of the Plattdeutsch Corps will be held Jan. 18.

The New York City Corps will hold its next practice shoot on Jan. 21.

The New York Corps' next practice shoot is on Jan. 22.

### Trapshooting.

If you want your shoot to be announced here send a notice like the following:

#### Fixtures.

Jan. 12-15.—Hamilton, Ont.—Gun Club tournament.  
Jan. 13.—Guttenburg, N. J.—Handicap for Knockabout gun; handicaps, distance and bird allowance; 15 birds; entrance, price of birds. Gus Greiff, Mgr.  
Jan. 16.—Wanderers' shoot for L. C. Smith gun on grounds of Brooklyn Gun Club.  
Jan. 18-23.—Brenham, Tex.—Sunny South Handicap.  
Jan. 20.—Brown's Mills, N. J.—Match at 100 live birds each, between Fred Miller and Richard Lamb.  
Jan. 23.—Edgewater, N. J.—Shoot for L. C. Smith gun on the grounds of North River Gun Club.  
Jan. 30.—Bound Brook, N. J., merchandise shoot.  
Jan. 30.—Newark, N. J.—Shoot for L. C. Smith gun on the grounds of the South Side Gun Club.  
Feb. 12-13.—Paterson, N. J.—Jackson Park Gun Club tournament; live birds and targets.  
Feb. 21.—Jersey City, N. J.—All-day shoot of the Hudson Gun Club. A. L. Hughes, Sec'y.  
Feb. 22.—Schenectady, N. Y., Gun Club tournament. Valentine Wallburg, Capt.  
Feb. 22.—Lexington, Ky.—Jefferson County Gun Club.  
Feb. 23-26.—West Baden, Ind.—Colonial Handicap. Targets and pigeons. Open. \$500 guaranteed. John L. Winston, Mgr.  
April 19.—Springfield, Mass., Shooting Club Patriots' Day tournament. C. L. Kites, Sec'y.  
June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 219 Coltart Square, Pittsburg, Pa.  
June 27-July 2.—French Lick Springs, Ind.—Tournament of the National Gun Club. John M. Lilly, Pres., Indianapolis.  
Aug. 10-12.—Brantford, Ont.—Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament. A. B. Cutcliffe, Sec'y.

### DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The Jackson Park Gun Club has fixed on Feb. 12 and 13 for a two-days' shoot at targets and live birds.

On Wednesday of last week, Messrs. Fred Miller, of Philadelphia, and Richard Lamb, of Brown's Mills, N. J., shot a 100-bird match on the Point Breeze race track, Philadelphia. Miller won by a score of 89 to 82.

The members of the U. M. C. Southern Squad were guests of the Little Rock Gun Club, at Little Rock, Ark., on Jan. 4. They shot for targets only. Messrs. Frank E. Butler and J. L. Head are the avant couriers of the squad in its Southern tour.

The Keystone Shooting League, of Philadelphia, contemplates a series of shoots to be held on the grounds at Holmesburg Junction. A valuable trophy will be one of the chief inducements to evoke active competition on the part of the club members.

Under date of Jan. 8 Mr. A. B. Cutcliffe, secretary of the Brantford, Can., Gun Club, writes us as follows: "This club claims Aug. 10, 11 and 12 as dates for the Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament, to be held at Brantford, Ont."

## Beer Keeps One Well

It is a noticeable fact that those who brew beer, and who drink what they want of it, are usually healthy men.

You find no dyspeptics among them, no nervous wrecks, no wasted, fatless men.

And so in those countries where beer is the national beverage.

The reason is that beer is healthful. The malt and the hops are nerve foods. And the habit of drinking it keeps the body supplied with fluid to flush out the waste.

The weak, the nervous and sleepless must have it. Why isn't it better to drink it now, and keep from becoming so?

But drink pure beer—Schlitz Beer. There isn't enough good in impure beer to balance the harm in it. Ask for the brewery bottling.

The Schlitz logo is written in a large, elegant, cursive script. The letters are dark and have a slight shadow, giving it a three-dimensional appearance. The 'S' is particularly large and ornate, with a long, sweeping tail that underlines the rest of the word.

**The Beer That Made Milwaukee Famous!**

PHILADELPHIA, Pa., Dec. 9.—The 50-target handicap of the Hill-side Gun Club, held on the Chestnut Hill grounds, was won by Bert Bisbing. He also won the badge for the longest run in the beginning of the score, 8. Mr. Bisbing won the Laurent for the greatest number of straight breaks made during the event other than at the start. The scores and handicaps follow: R. Bisbing (9) 48, L. Parsons (8) 44, M. Bisbing (11) 44, J. Hamil (12) 43, Clark (12) 43, P. Laurent (8) 40, W. Aimen (11) 39, Kelly (10) 37, A. Calf (11) 35.

## Indianapolis Gun Club.

IN connection with the presentation of a new gun to the president of the Indianapolis Gun Club, Mr. W. T. Nash, as an important incident of their New Year's Day shoot, Dr. S. H. Moore made a presentation speech as follows:

"I have been delegated to bring a very serious matter to the attention of the club.

"One of our members, now president, has caused a good deal of talk among the club members. He is charged with many misdemeanors, among which are the following:

"First—He has neglected his personal business in a shameful manner.

"Second—He has neglected his family and his social obligations most outrageously.

"Third—He has been so absorbed in his hobby that he even neglects to speak to his friends on the street, but passes them by without recognition.

"Fourth—In stead of attending to business and giving a portion of his time to his family and friends, he seems to think it is his duty to cater to a lot of 'gun cranks'; seems to think that it is his duty to see that every one, except himself and family, has a good time, and is made to enjoy himself.

"Fifth—By hypnotic influences or otherwise he has obtained the State tournament to be held on the grounds of the Indianapolis Gun Club. And by methods known only to himself, and which no one except an expert in the matter could have employed, he has induced the board of directors of the Interstate Association to hold the Grand American Handicap, the greatest shooting tournament in the world, on the Indianapolis Gun Club grounds, thereby giving him an opportunity, of which you may be sure he will take advantage, to still further neglect his business and family and friends.

"The member who is charged with all these misdemeanors is well and favorably known as William T. Nash, president of the Indianapolis Gun Club, and I call on the members here assembled, who have heard these charges, to state whether or not he is guilty.

"Having been pronounced guilty by a jury of your peers, I now call on you to stand up and receive your sentence—and, oh, you old Indian, you don't know how much good it does me, to pronounce this sentence.

"In explanation of the mildness of the sentence, I will say that the members of the Indianapolis Gun Club are not little men. They are made on a broad-gauge plan, with great big warm hearts in the right place.

"They don't believe in waiting until a man is dead and then putting eulogistic inscriptions on his tombstone. They believe that words of commendation and encouragement while here will help to round off the rough corners in the journey of life and are worth more now than after one is dead.

"And, while we do not think the sentence is commensurate with the crime, still it shows the good will and intent of the members, and we hope that you will accept it in the spirit in which it is given, and that it will do you good, and that you will learn a great lesson therefrom—namely, that modest ability and duty well performed will always be recognized, and that warm hearts and glad hands will always be at the service of him who thus performs his duty.

"And, while we fully appreciate the obligations we are under to the board of directors for their unselfish efforts in the interest of this club, still feel that the phenomenal success of the club is very greatly due to your untiring and efficient services.

"This being the feeling of the members of the Indianapolis Gun Club, they have, after mature deliberation, decided on the following sentence:

First—That you be deprived of the use of your old gun, which is dear to your heart, and with which you have made so many good scores; and

"Second—That so long as you are a member of this club, which please God, will be many years, you will be compelled to shoot with this old blunderbuss, which I now have the pleasure of presenting to you, and may your scores, as well as your shadow, never grow less, is the sincere wish of every member of the Indianapolis Gun Club."

## Glenside Gun Club.

AUBURN, N. Y., Jan. 8.—The Glenside Gun Club, Skaneateles Junction, N. Y., gave a successful tournament on Jan. 7. The main attractions were one-cent targets and an L. C. Smith gun in merchandise event 5. Shooters were present from Rochester, Syracuse, Auburn, Wolcott, Fulton, Baldwinsville and Newark.

In event 5 C. S. Cattle, president of the home club, won the Smith gun with a straight score of 20; Norton, of Rochester, second a nice gun case; Weineith, of Hatlot, third, pipe and case. The scores all show lack of practice at this time of year among the shooters present, with the exception of ex-Sheriff Marvin, of Syracuse, who shot in his usual good form.

Events:	1	2	3	4	5	6	7	8	9	10

Jos. N. KNAPP, Sec'y.

## Wilmington Country Club.

WILMINGTON, Del.—On Friday of last week, the grounds of the Wilmington Country Club were the scene of high class competition between some of America's greatest shooters. The weather was disagreeable, and as a consequence the attendance of members was only fair as to number. The shooters who participated were Messrs. Fred Gilbert, Jack Fanning, Hood Waters, J. T. Skelley and Luther J. Squier. Cold weather and a dark background combined to make a formidable difficulty in the way of making high scores. Gilbert made a score of 98, having a run of 67. The fine work of Skelley resulted in a score of 96.

The scores of the exhibition shoot follow:

Gilbert .....	25	25	24	24	98
Fanning .....	23	24	21	92	96
Waters .....	22	23	25	98	
Squier .....	20	23	23	24	90
Skelley .....	23	25	24	24	96

In addition to the exhibition shoot there was some practice shooting on the part of a number of the Country Club members.

## IN NEW JERSEY.

## Bunn-Radcliffe.

Singac, N. J., Jan. 9.—The match between the two famous shooters, Mr. Arthur Bunn, of Singac, and Mr. Andy Radcliffe, of Little Falls, at Singac, drew quite a large crowd of spectators. It was rumored that Bunn was to give Radcliffe a handicap of 5 birds, but this was found to be false. The match, as originally arranged, was on even terms. Every one thought that the match was easy for Bunn. Radcliffe, however, has been doing some remarkable shooting this season, and in the match yesterday he was there from beginning to end. It was one of the most evenly contested that has been seen in this vicinity for some time past, and from a spectator's standpoint it was a fine exhibition of trapshooting. Both men started off in fine style. Both killed their first four birds, and it looked as if they would make clean scores, but the expected break came when Bunn's fifth bird got away from him. In the meantime Radcliffe was killing his birds in fine style, the majority of them by using only one barrel. When Radcliffe missed his seventh and eighth birds it looked to many as if Bunn would have a wa'kover, but after this both men settled down, and there were no further misses until Radcliffe lost his 22d bird. Bunn fell down on his next shot, and it was then thought that Radcliffe would tie him, but he again flunked on the next shot, which gave the match to Bunn by a score of 23 to 21.

The birds were all fast, but they were backward in leaving the traps when liberated, and this kept the shooters guessing. The scores:

A Bunn .....	21	20	21	21	21	21	21	21	21	23
A Radcliffe .....	11	11	11	11	11	11	11	11	11	21

There were two sweeps of 5 birds each, one before and one after the match. Connors took first money in the first event by making a clean score. Garret A. Hopper was next with 4 kills.

In the second sweep Bob Radcliffe and Garret A. Hopper tied, and they split the money. Andy Radcliffe, George Radcliffe and Kayhart each got 4 out of the 5.

After the regular match Bill Sherman and Bert, both of Little Falls, arranged a match to decide for once and for all which one is the poorest shot. Sherman managed to kill 2 out of the 5, while Bert killed one, and barely missed a second. While Sherman and Bert were having it out, Andy Radcliffe and Connors agreed to meet in a 5-bird match. Each man killed 4 out of 5. It was then too dark for a shoot-off, and they agreed to call it a draw.

First event, 5-bird sweep:	Score
A Radcliffe .....	1010—2
Bert .....	0000—1
Sherman .....	00110—2
R Radcliffe .....	10101—3

Second event, 5-bird sweep:	Score
A Radcliffe .....	2012—4
Bert .....	0000—0
Connors .....	0222—4
W Sherman .....	*020—1
G Radcliffe .....	11011—4

Third event, 5-bird sweep:	Score
W Sherman .....	01010—2
Bert .....	00*10—1

Fourth event, 5-bird sweep:	Score
A Radcliffe .....	22012—4
G Connors .....	02122—4

Only four members of the North Side Gun Club put in an appearance at the regular weekly shoot yesterday afternoon, and only one 25-clay-bird sweep was held. Following are the scores: C. Teddis 20, H. Becker 19, F. Elmer 10, G. Deitrich 17.

## Bound Brook Gun Club.

Bound Brook, N. J., Jan. 7.—The members were not favored with the best of weather for this shoot, Dec. 26, consequently some very poor scores were made. In the 25-target event, Dr. Pardoe scored 12, Rosenthal 10, and Rushmore 8.

The club is making arrangements for an all-day shoot open to everybody, Jan. 30. The club is looking forward to it as a great day. Messrs. Neaf Apgar, Money and Butler, paid representatives, have all promised to be present on this occasion. Mrs. Butler (Annie Oakley) is also expected.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	10	10	10	10	10	10	10	10	10	10

Brampton .....	1	1	1	1	1	1	1	1	1	1	1	1	1

STANLEY BRAMPTON, Sec'y.

## Jackson Park Gun Club.

Paterson, N. J., Jan. 9.—The Jackson Park Gun Club will hold a two-days' tournament at Jackson Park, Paterson, N. J., on Feb. 12 and 13, at both live birds and targets, and will endeavor to offer an attractive programme for the occasion, and also to provide for the entertainment of a large crowd of shooters. All targets will be thrown at the rate of 2 cents each, with a popular entrance in each event. In all live-bird events the charges will be 25 cents for each bird, price included in the entrance fees. Any shooter will have the privilege of shooting for the price of targets or birds only, if he so desires. The committee expect to make added allowances to the different events in the shape of added money and merchandise prizes, so as to offer additional encouragement for shooters to come out this way.

Commodore Ed. Morgan is quite seriously ill at his home in Paterson with grip, which is threatening toward typhoid pneumonia. A telephone message to me to-day informs me that he is resting a little easier.

Fuller particulars will be sent you later about the shoot.

DUTCHER.

## Cleveland Gun Club.

THE Cleveland Gun Club dedicated its new dining cottage with a tournament and dinner on Jan. 1. Ever since the club sold its property in the South End and leased the present grounds on Mayfield road, this event has been looked forward to with much interest by the members. It is certain that the interest in the sport will now be renewed, and that the members will turn out in larger numbers than ever.

President Frank H. Hogen intends to make this club one of the strongest in the country, and is being greatly assisted in his efforts by Mr. F. H. Wallace, who has charge of the grounds.

Twenty-six took part in the various events, eighteen shooting through the programme. The race for high average was quite exciting. Snow won with a score of 126. Doolittle second with 120.

President Hogen had installed a new trap, which proved to be a big success. It throws a perfectly true target, without a curve, thus making the competition much fairer. The trap-puller sits and discharges the trap, while the trapper loads and changes

the angles. It is a spring trap, and the targets are all thrown a uniform distance. During the day 3,300 targets were thrown, and there was very little breakage.

The club is receiving many new members, and the limit will soon be reached. An excellent dinner was served in the manager's house.

Events 7 and 9 were for merchandise prizes, the winners being as follows:

No. 7: Kramer first; Tully and Snow second, Saffold third, Raven fourth, Hogen fifth.

No. 9: Tully and Snow first, Doolittle second, Brock third, Battles fourth, Hogen fifth.

The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.
Hopkins .....	10	12	12	7	11	10	5	6	11	140	89

Lower .....	6	0	9	9	9	9	9	9	9	40	15	

High averages: Snow 126, Doolittle 120, Thomas 117, Tully 117, Eadie 116, Raven 114, Hogen 112, Brock 104, Battles 104, Mack 100, Kramer 100, Saffold 100.

BONASA.

## SIDE LIGHTS OF TRADE.

At the Poughkeepsie tournament, Jan. 1, high average was won by J. A. R. Elliott, Dec. 30, J. M. Hawkins won high professional average at Wilmington, Del. J. C. Graham won high amateur average. At St. Joseph, Mo., Dec. 28, the professional first average was won by Fred Gilbert; second by Chas. Spencer. In the amateur class first average was won by Mr. Murphy. Fred Gilbert, who led the trapshooters in 1903, has missed but one live bird out of the last 200 shot at, his handicap being from 32 to 33yds. Each of the aforementioned used Winchester factory loaded shells. Messrs. Elliott, Hawkins and Murphy also used Winchester repeating shotguns. In San Antonio, Tex., Dec. 27, Ad. Topperwein, shooting for a record at flying objects with a rifle, hit 4954 out of 5000 wooden blacks 1½ inches by 1½ inches. This was done in a bad light. He used two Winchester automatic rifles and Winchester greaseless bullet cartridges. Neither gun was cleaned from start to finish.

Any one who desires to possess the beautiful calendar for 1904 issued by the Savage Arms Co., of Utica, should remember to inclose ten cents in stamps with application for it. The scene is from a painting by a famous artist, Mr. Carl Rungius, who is an accomplished sportsman and has had much practical experience in big-game hunting in the far West. There is therefore a fidelity in his work consequent to practical knowledge. The scene is of the wilderness, and portrays a successful issue to a hunt. The hunter has dismounted, holds his Savage rifle ready for action, as he scans the fallen elk, which is in its death throes. The horse is saddled in true cowboy style.

The Excelsior Wire and Poultry Supply Co., 26-28 Vesey street, New York, have in stock every kind of standard food and medicines for dogs, kennel fencing and furnishings, and a full line of dog and cat collars, bench show and kennel chains, leads, muzzles, combs, brushes and dog and cat crates of all kinds. An illustrated catalogue will be sent to applicants.

The 1904 calendar of the Quebec and Lake St. John Railway can be obtained on application to Mr. Alex. Hardy, General Pass. Agent, Quebec, Can. It is specially prepared for the use of sportsmen. With each month it presents a list of the fish which are in season, besides minute information concerning the statutory seasons referring to fish and game.

## PUBLISHERS' DEPARTMENT.

## The New York Life Insurance Co.

THE life insurance business, as shown by the reports of the large companies, does not indicate any slackening in the demand for this kind of protection and semi-investment. The New York Life's annual report, which we publish to-day, shows over a million dollars in new paid-for business for every working day in 1903, a total of three hundred and twenty-six millions. This is the largest new business ever reported by any company in twelve months. The New York Life's paid-for insurance in force now exceeds seventeen hundred million dollars, which is also a record-breaker in the history of the business. It had been thought that the heavy decline in the market value of securities would make a big hole in the surplus of all financial institutions; but the New York Life announced several years ago that it would not thereafter invest in stocks, and so what it then held while the boom was on. Its holdings of bonds show less depreciation than United States bonds or British Consols, and its unassigned surplus shows so small a shrinkage that it does not include thereon some two million dollars of excess of market values over book values. The report is the best ever presented by the company, and shows that it has the largest income, the largest amount of insurance in force, and the largest new business of any life company in the world.

## THE STRANGER IN TENNESSEE.

In the simplicity of his mind he thought he would go to Tennessee for quail shooting. A friend suggested that it would be well to look up the license law. Recourse was had to the *Game Laws in Brief*. This is what he found:

Any person who is a non-resident and who desires to hunt in this State shall first procure a license, for which he shall pay the same fee as a resident of Tennessee is subject to in the State of said non-resident.

Being a resident of New York, he turned to the New York law to find what might be required of a resident of Tennessee before shooting in New York. This is what he found:

Nor shall any non-resident not the owner of real estate in this State and against whose real estate there are no delinquent taxes, take fish by spearing in this State except on a like license if there is any discrimination by requiring a license or otherwise in the State or country where such non-resident resides against residents of New York in taking fish in such State or country. Game shall not be taken by any such non-resident except pursuant to a license issued on payment of a fee not less in amount than the fee, if any, required of a resident of New York for taking game in the State or country where such non-resident resides, and if there be none, then on payment of such fee as the Commission shall prescribe.

Which made him think. The more he thought the more in doubt was he; and he has appealed for advice.

It is clear that a non-resident must pay a license fee for shooting in Tennessee, but what shall be the amount of the fee to be paid by a New York visitor is a subject of speculation. Tennessee exacts a sum equivalent to the fee charged by New York. New York demands a sum equal to that asked by Tennessee. Each is equal to, determined by and based upon the other. If one were known the other would be known. The visiting shooter may make choice of the one he thinks most readily to be found out, and find it out; or he may simply quote the two laws to the game warden of Tennessee and compel that functionary to do the thinking and solve the problem.

## ALASKA INDIANS AND THE GAME.

A SUB-COMMITTEE of the Senate Committee on Territories visited Alaska last summer to investigate the conditions existing there. The committee consisted of Senators Dillingham, Burnham, Nelson, and Patterson. A report has been submitted, which in its financial summary shows that during the period since the acquisition of Alaska by the United States the Government receipts have exceeded the expenditures by nearly \$1,000,000. From the 1902 output of canned salmon, 2,631,320 cases, valued at \$8,000,000, the Government's revenue was in excess of \$100,000. The committee recommends that Government salmon hatcheries be established, to be conducted at the expense of the canning establishments, each one being assessed in proportion to its output.

With respect to the Alaskan game law and its relation to the Indians the report says:

"Hunters by nature and habit, and able and willing before the influx of the whites to care for themselves, they are, through the game laws, wholly deprived of their chief means of maintenance. Why they should be deprived of their immemorial right to hunt at will passes the comprehension of the committee. The first measure for the relief of the natives, particularly the Eskimos and Aleuts, should be the absolute repeal of the game laws in so far as their provisions prohibit hunting and trapping by aborigines and natives, and the sale of skins so taken. The deplorable condition of these classes is such as to demand other and further relief at the hands of Congress.

"The business of Alaska is carried on by citizens of the United States. It is claimed by them to now be a 'white man's country.' To all intents and purposes, such is the fact. In every contest for gain, the white has been the gainer. Poverty, extreme and pitiful, prevails among the natives, and develops their tendency to disease. Death is ever present at their doors. Justice and humanity alike demand legislation for their relief."

With all that is here said of the duty of the American people to make provision for the present sustenance and permanent support of the unhappy natives, every right minded person must most heartily agree. That hardships are caused by the game law, which could be alleviated by the repeal of the law, is yet to be shown. As we have on a previous occasion pointed out, the Alaska game law does not relate to fur-bearing animals, but to game; and the Indians are specifically exempted from the provisions of

the act. The game law of Alaska was designed to meet the new conditions which have been brought about by the settling of the country with whites, and to call a halt in the destruction of game, which destruction, without some such wholesome check could have no other result than the speedy extermination of species. The step thus taken was in every way most necessary and most wise. The interests of the Indians, so far as hunting was concerned, were intelligently and carefully observed and assured. The expedients which Congress may now adopt for the relief of the natives must be found in some other measure than a repeal of the Alaska game law.

## GOOD ROADS.

THE Brownlow Bill now pending in Congress has for its theme the appropriation of \$24,000,000 to be applied to the building of good wagon roads throughout the United States by the National Government. It was introduced by Hon. Walter P. Brownlow, of Tennessee, and Hon. Jacob H. Gallinger, of New Hampshire. The arguments advanced in its favor are so cogent that to read them forces one to concede their soundness.

The bill provides that the appropriation be available at the rate of \$8,000,000 a year, apportioned to each State according to the relative number of inhabitants, excepting that those States whose population is less than 700,000 shall not receive less than \$250,000. The bill further provides that each State, county, or town, to be a beneficiary of this contemplated national appropriation, must add an amount equal to the amount received, thus the total of the good wagon roads fund, as provided for in the Brownlow Bill, would be \$48,000,000.

This bill comes up for Congressional action in the near future. It is directly and materially of important interest to every resident of the United States, but it is specially important to every dweller in the country districts. The sponsors of the Brownlow Bill adjure all citizens to write to their Congressmen and Senators, urging them earnestly to vote for it, and to use their influence with their fellow members of Congress to make it law.

As to the constitutional powers of the Government in relation to the purposes of the Brownlow Bill, the framer of it cites that the National Government appropriates about \$30,000,000 a year for rivers and harbors; that it gives towns and cities great public buildings such as post-offices, court houses, etc.; that it gives manufacturers protection by the tariff; that it justly gives veterans and their families about \$140,000,000; that it has loaned its credit to private individuals to build railways, and given them grants of millions of acres of land.

Concerning the economic advantages of good wagon roads, Mr. Brownlow presents the following illustration of the wide differences between good and bad roads. Taking \$1.25 as a basis, he avers that it will pay for hauling one ton 5 miles on a common road, 12½ to 15 miles on a well made stone road, 25 miles on a trolley road, 250 miles on a steam railroad, and 1,000 miles on a steamship. He further presents for consideration that on a good wagon road the farmer can haul his produce to market and the necessary supplies to his home the year round; that he can haul twice as much and in less time, thus in a way obtaining a better price; that a saving on the wear of wagons, team, and temper is effected; that a farm contiguous to a good road has a much greater monetary value than if contiguous to a poor road, and that in short the facilities for rapid transit in the country are as necessary as they are in the city. He maintains that the benefits conferred by the trolley roads in the cities are equally to be conferred on the farmer by good wagon roads which insure rapid transit for the farmer and his produce.

It is further urged that foreign governments have appropriated large sums for the building and maintenance of good roads, notably France, which has 23,603 miles of wagon roads made and maintained at the government's expense; that Italy has 5,000 miles under similar conditions.

However, it should not be ignored that, to keep a good road good, the narrow wagon tires so common on all wagons light and heavy in the United States would need to be abolished. We think that in France and Italy the regulations strictly enjoin that wide tires shall be used on heavy traffic wagons. But in any event, the matter of good roads is directly related to national commerce and prosperity.

## MACKENZIE'S WHITE BUFFALO.

In the year 1801 Alexander Mackenzie published his remarkable "Voyages from Montreal," and revealed to the world a vast amount of new information as to what existed in the interior of northwestern America. He gave a detailed account of his long and arduous voyage from the Lake of the Hills, or Athabasca Lake, down the great river through Great Slave Lake to the frozen ocean, and of his subsequent journey up Peace River across the Rocky Mountains, through what is now central British Columbia to the Pacific Ocean north of Vancouver Island.

The record is one of infinite toil, requiring unflinching determination and splendid hardihood, for the journey was through unknown wastes among unknown people to an unknown sea, and the man who accomplished it gave to one of the greatest streams of the continent his undying name. The account of his journey is to-day almost as interesting reading as a hundred years' ago, and it abounds in curious and fascinating statements.

One of them possesses especial interest, as showing how easy it is to be misled by statements made in perfect good faith, and well exemplifies the human characteristics of comparing unknown objects which are described to us with objects which we know well, even though this comparison may, in fact, be altogether erroneous and misleading.

In Mackenzie's account of his descent of the river which has since borne his name, he speaks of a range of mountains seen to the west, concerning which he was told that bears were there abundant, and also small white buffalo. Again he says that certain of the natives said that they had never been beyond these mountains, to which, however, it was their custom to go to hunt the small white buffalo which were abundant there. In other places in his narrative these small white buffalo are mentioned.

Many of the natives whom he met on this river had never before seen a white man. They were still using knives and other cutting implements made of stone, and some of them seemed to care very little about iron, though expressing the greatest admiration and desire for the beads which Mackenzie had taken along for trade.

Mackenzie could not speak the tongue used by these natives, but he had with him an interpreter who was of the linguistic stock to which they belonged, and who could speak besides the Cree language. Mackenzie talked in Cree with the interpreter, who then turned the Cree into Chipewyan. This interpreter was familiar enough with buffalo, but since he came from the lower country we may feel sure that he knew nothing of the mountains or of the animals inhabiting them, and when the small white buffalo were spoken of by their Chipewyan name, we may feel quite certain also that he did not know what the animals were, and that it was necessary for the Indians to describe these white buffalo to him. What would they have said? They would have told of an animal covered with long shaggy hair, especially on the front part of the body, with long hair on the fore legs down to the knees, with a beard, with a hump on its back, holding its head low, and with black horns. In other words, an animal which, except for its size and color, would be described in terms that would exactly fit the buffalo. Of course, if the detail of the horns or the tail had been inquired about, it would at once have appeared that these were not buffalo, but omitting particular inquiry as to these parts it is not strange that the interpreter told the explorer that there were white buffalo in these mountains, and that the explorer believed it.

The naturalist of that day, if asked what these white buffalo were, could not have replied; for at that date the white antelope goat of the Rocky Mountains had not been described. Yet this is unquestionably what the Indians referred to, for even at the present day the mountains in question are said to abound, as they did then, in bears and white goats.

THE intensely cold weather and the conditions of snow and ice sheet which prevail over a large territory mean extreme hardship for the wild creatures of field and wood. The quail will take care of themselves if they have a sufficient food supply. Persons who are interested in the preservation of the birds and who have opportunity to put out food for them, can do nothing more efficient than this to assure the well being of the game.

# THE SPORTSMAN TOURIST

## In Old Virginia.

### XV.—In the Field.

THE small boy made good in the matter of promised kicks, and there was early rising on my side of the house next morning.

I heard two or three shots fired in the yard while dressing, and questioned the boy, who came in to build the fire, about it. "Dot Marse Gawge," he explained. "He shootin' at robins an' Billy whickahs wid you' gun. He say he des hat ter git out an' shoot at somfin wid dat fine little gun."

"Billy whicker" is the name generally given to the yellow-hammer or flicker in Virginia.

It was a glorious day that was beginning when I got out into the yard that morning. The sun was sending long straight beams of golden light through the trees of the forest that lay east of the house, which broke against the buildings, stretched in narrow paths across the lawn in front, and shot in and out of the orchard trees in the rear. The air was still and crisp, while a light frost whitened the grass where the sun had not turned it to dew.

The cattle were lowing in the lot below the barn; the pigs were droning in dissatisfied contentment, as they scuffled over the few remaining grains of corn in their morning feed; the chickens and turkeys were busily engaged in foraging; a boy was swinging an ax at the wood pile, with moderation in his blows and excess in his grunts; a work-hand was hitching a team of mules to the wagon with much mule talk, loud and fierce, amid the musical rattle of trace chains; many bird voices could be heard from crows in the distance, to robins in the trees overhead, and amid it all there was peace and quiet. Not the peace of stagnation, nor the quiet of perfect stillness, but the better peace and quiet, the lack of strife and absence of discord. There was harmony in earth, air and sky, and the beasts of the field, fowls of the air, and even the ingrate, man, were moved upon to feel gratitude for the perfect day.

We made no haste to get afield, preferring to wait until the sun had dried the cover and made walking more comfortable.

It is never a good plan to get out too early after quail, for though a great fellow to travel after he once moves, he is slow to get started in the morning, especially if the conditions under foot be not just to his liking.

I felt a strong sympathy for the dog when he took the first two or three fences as though his legs were not geared up to the proper tension, for I had very decided symptoms of that next day after the first day out, disability, myself; but we were both soon limbered up and going smooth.

We hunted out some very promising looking cover the first hour and a half without raising a bird.

What I at first thought to be a very fine fat young rabbit jumped from under my feet in the first bit of stubble through which we passed, but I saw my mistake after emptying my gun at it; it was old, very old, and tough—very tough. I felt sure of this as I watched it speed away and disappear over the hill.

Roscoe worked well, but failed to find birds in the places where we felt sure they ought to be; but finally, in passing through a thin piece of pine woods, he struck a scent that, for the first time, looked encouraging. Back and forth he swung across the trail, gradually working out to the edge of the trees, and then striking the scent hot, roared down into a little patch of sedge grass and came down fast and true. It was a small covey; not more than eight or ten birds, but large birds and speedy.

They were at full speed when they left the grass, and I was glad to see that one was stopped by my second barrel, although I had the humiliation of knowing that my first shot went wide of the bird I had intended it for by about three and one-half feet.

Following up this covey, we found them scattered on a sidehill in some small pines.

The dog was down on a bird when we came up to him, which proved itself altogether too difficult a proposition for the man out of practice. It flew almost straight away, not in the least disturbed by the two ounces of chilled shot which poured through the trees in its wake.

Roscoe ran over the next bird, which rose from under my feet, startling me so that I accidentally killed it the first shot.

Another bird flushed at the shot, but did not scare me sufficiently, so escaped. Two more birds rewarded the dog's honest effort, only one of which we got; the other one showed a hard hit, but got away. I had done all the shooting, the Esquire backing me up with compliments (undeserved) and condolence, much needed.

We swung around in a circle in the general direction of home, finding no more birds until near the house, when the dog broke in on a covey enjoying a "siesta" in a narrow thicket of briars and scrub growth, along where years ago there had been a

fence. They went out on the opposite side from us, not so much as offering a chance shot, and the dog sneaked back, drooping apologies at every angle of his body. He probably deserved the thrashing he was evidently expecting, but got off with a very stern rebuke.

Taking their direction, we followed after the birds, and on the way jumped another rabbit. This one proved himself to be all that a rabbit should be by stopping short at the crack of my gun.

We found the birds in a bottom near a branch, in a heavy growth of weeds and briars. They had not scattered, and rose all at once. I made a clean kill of my first bird, and got a second one down in the edge of the woods, to which they flew; but it was only crippled.

We concluded not to try to follow them into the woods, but look up our wounded bird and go on to the house, get dinner and start afresh.

Roscoe soon located the bird, which, though unable to fly, gave him a short race, but was soon brought to bag.

On the way to the house we fell in with two brother sportsmen—the small boy and his little darky companion.

"Oh, papa," squealed the former, "did you dit any buddies and wabbits? Me and F'eddy has been settin' us a twap, and we will catch you all de wabbits you want."

I am not an advocate of the "twap" as a method of taking game, but it occurred to me that unless improvement showed soon in my shooting, it would be necessary to supplement my efforts with something of the kind if the family was to enjoy a game diet.

Taking the little fellow on my back, where he could put his hand on my gun, to the satisfying of his highest ambition, we jogged along to the house. The dear cousin, who spoiled young and old alike, started in to scold the little darky for taking her "dear little boy so far out in the fields and wearing him out," but the accused made a good defense, as follows:

"No, ma'm, I dinn' take him much fuh, an' he des would go. We only went down lil' way pas' de turnip patch to set a hare trap, an' I tote him all de way down on my back, an' he pappy tote him all de way back, an' now how he goin' git ti'ed?"

I had intended offering my services for the defense, but concluded it was ably and sufficiently represented, so left the mistress and little man to have it out.

It was by no means unwelcome news to hear that dinner was about ready, as we were beginning to adopt the volunteer fire company's motto, as regards all meals, to wit: "Always ready." And what full, finished, well rounded repasts those dinners were, day in and day out. Your Virginian of the old school, when pressed by stringent times, gives up every luxury, and many necessities; but when the last panel of fence is down, the last head of stock gone, and his wardrobe reduced to units, and fractions thereof, his table will delight an epicure and satisfy a gourmand. Everything which the country affords or importation can furnish, is seen, in season and out of season, on these tables, although the tax fund may be about one or two-thirds shy.

If there is anything produced in that country which excels the justly famous ham, it is the lamb. The sheep are pedigree, and are F.F.V.s as well as the shepherds. And the most elaborate function on the plantation is butchering a lamb. And so, instinctively, you begin, in Virginia, to do as Virginians do, eat often, and the limit each time; and instead of trying to remember where you put the pepsin bottle, or what you did with the soda mints and charcoal tablets so soon as you leave the table, you are so busy following those around who have actually eaten more than you—watching to see them die—that you positively forget to have the awful attacks of indigestion, which, in your case, usually follow such indulgence. Then after a while, when you remember what is due you, and begin to canvass your anatomy for symptoms, you find a clue, which you work out, only to discover that you are very hungry again.

It is a great country, is dear old Virginia, the nation's cradle, and full of good fellows who are proud of it.

You can kill every good impulse, instinct, and emotion in some men, all but the pride of his origin, in a Virginian.

Well, we did finally get back into the fields again, feeling as though—by token of quantity and quality of meat taken—we had strength to go far and fare hard.

There was heavy timber to the north and east of the house, and our hunting ground lay to the south and west. This time we went due south, and found a covey of birds in a stubble field on a hillside. I was a little slow with my first barrel, and undershot my bird; but quickening my action, got on it with my second, making a kill "out of bounds."

The birds sifted down through a heavy growth of brush and briars, which promised all sorts of difficult shooting, but following them up, we found they

had gone on through this and scattered on a level bit of ground between two forks of a branch among some tall, straight pines, an ideal shooting cover, and here we had a veritable warm corner. They lay well, and we worked out the ground at our leisure, flushing them one by one, with an occasional double. The dog steadied down and his work was perfect, except for the fault of trying to be under each dead bird when it fell. The first bird up was a straightaway, and was clean killed, with the first barrel.

The next went around to the right, and in a hurry, so that I never caught up with it, although having two fair tries. Then the dog pointed by a bit of brush, and it proved a double. One bird went straight away, flying low, and the other high around to the left. I knew I was on the first bird when I pulled, but had my doubts about the second, but got them both.

I now began to feel that I was getting my hand in, and the rest would be easy, but the next one flew straight as a gun barrel, and went off without a feather ruffled. It is when you begin to think that you can kill anything that flies that you are developing symptoms of that pride which immediately precedes a miss. The next bird was considerable, giving me my favorite shot, around to the left, and was bagged. Then we crossed the ground two or three times without finding any birds, and were about to give up and go on when the dog came down out near the bank of the brook. Here we found two more birds, one of which got behind a tree immediately on the flush, and the other proved so tough that, though showing hard hit, flew some distance before falling, and gave us a troublesome search before we found it.

The sun was low, and we had enjoyed sport enough to satisfy any reasonable man, so we turned our steps toward home, with pleasant anticipations of the cheerful fireside and supper.

LEWIS HOPKINS.

## Life in the Woods.

### I.—Alexander Sampson.

I CAN recall him now, after the lapse of many years, as vividly as if he stood before me or as if I had the capacity of a camera to reproduce with perfect truthfulness not only his form in general, but every detail of feature as well as of figure. Short, thick set, but withal well proportioned; of dark complexion, the predominating shade of which was brown; his dress of modest make, with blue and brown invariably the colors, and they so chosen as to harmonize and always appear in perfect keeping with all the other external attributes of his character. Of frank and open countenance wherein no guile or deceit was ever seen, a quiet, unobtrusive way was always with him, and yet in his make-up strength was displayed in all its essentials, and there lurked behind a consciousness of power that was infectious; that created voluntary respect and even prompted admiration. Faithfulness, too, was there portrayed, and steadiness, all calculated to win support, to cause confidence in him, and create self-reliance in his companions. There was a modesty and sedateness about him that was becoming, and though they seemed to indicate a quiet demeanor, yet they were accompanied by plain evidence of an abundance of reserved power. He was neat in appearance, and always careful about every detail of dress. A silent fellow who never spoke without sufficient reason, and this trait was so extreme that, although he had abundance of experience and often seemed most competent to decide, yet he never vouchsafed a word unless called upon to act. On such occasions he never failed to speak up promptly and decisively. He was successful in life, and his whole carriage indicated it, but in a way that was entirely free from that obnoxious quality which has been labeled "conceit." He was of a responsive nature, too, when one came to know him, which added another charm to his personality. With all these traits, is it surprising that he should make a good companion? He had his faults, and so have all of us, and many of them, too, are common to us all, but we learn to overlook them, the more readily, too, when we scan those which we ourselves possess.

Who is Alexander Sampson?

Before I answer this question I want to add a word or two to that which I have already said. I have told you he was faithful, and he was. He was ever ready to share activity or quietness, fatigue or rest, sorrow or joy. He took everything that came with a quiet indifference that was a balm to irritability or an incentive to enthusiasm, as the case might be. Praise or censure seemed alike to him, and I can truthfully say that during all my acquaintance I never knew him to lose his temper. How, then, can I call him aught but a faithful friend, and by that term does not man accord the highest meed of praise that is in his power to bestow? Aye, good friend, you are and always have been! Often have you stood by me. Often have you been tried and are willing to be tried again; but never have you failed me. You have shared with me my pleasures and my pains, my joys and my sorrows. You have born fatigue and hardships. You

have suffered neglect without a murmur. You have incurred unreasonable, unjust criticism without even recalling, except by your mute presence, the unkindness of the moments that have sped away. You have lived to see justification done you, and by no sign have you shown that you gloried in it or rejoiced over your final success. You have, indeed, been a true friend, and now I unreservedly yield to you that meed of praise which everyone who does his duty shall finally receive. And that it may not be myself alone who shall testify to your true worth, and before I reveal your personal identity I shall describe to those who care to read the details of some of the accidents and incidents through which we have passed together, knowing full well that you will never reveal them. Thus I shall leave it to you, reader, to pass judgment upon Alexander Sampson's worth.

## II.—The Gilligan Guards.

The green birch wood in the little camp stove crackled and hissed. The dim oil light on the rough table sputtered to itself. The smoke drawn vigorously from three pipes rose in successive strata to the canvas roof. Outside the wind blew gently from the east while the first snow of the approaching winter fell damp and soft till a spectral gloom pervaded the great woods. On the edge of one of the bunks across the north end of the camp sat the "Colonel," his beard and hair as white as the snow outside, and his strongly marked, though kindly face, set off by a black skull cap. He was the first to break the Quaker-like silence by saying: "Boys, we will get our first deer to-morrow." "If we don't we better get out of the woods," remarks the "Old Trapper," in his usual sententious manner. And so, the first gun having been fired, the whole party take up the conversation and discuss the plans and outlook for the morrow's hunt.

When the Sirens passed away to other realms and Orpheus, having subdued all with the magic of his music, bade good-by to earth, each left with us not only the storied treasure of the history of their lives, but the sweetness of their voices, and their wondrous skill was bequeathed to the spirits of the air and they were bade to play these tuneful lays on the Æolian harps of the great pine trees. And so when nature thinks laggard man should renew his neglected homage to her charms she bids these spirits play, and calls him to her as she wills. And every true lover of her arts, especially he who in hunter's guise is one of her most ardent devotees, hears the call and answers without delay.

So perhaps on this account it comes about that every fall the Gray Rock camp in Wisconsin's northern woods, in the weeks of October and November, is peopled with men of kindred minds.

Close to the base of an immense rock, that in height and circumference would rival some of the castles of the barons of old, stands the camp. The other side of the rock runs the Pembine Creek, tearing along over its rocky bed on its never ending journey to the Menominee River. Rocky ridges are in sight in all directions, and from them stretch broad areas studded with arrowy Norway pines under which the brown pine needles form a carpeting rich and soft. Not far distant flows the Menominee River, the source of which is located far north toward the southern shores of Lake Superior. As the waters of this stream flow along they rapidly increase in volume, and for many miles before reaching Green Bay, into which they finally empty, the river becomes a majestic stretch, a part of some of the Badger State's finest scenery. In some places the river pours through rocky chasms and dashes over precipitous heights, forming cascades and magnificent falls, while in the background are high bluffs and miniature mountains, the summits of which are crowned with regal pines. At other times it flows with silent majesty along reaches where its banks are fringed with graceful cedars which cast their dark shadows upon the mirror-like surface of the water, and make a scene of wonderful impressiveness by reason of its silent grandeur. So, too, at times, as some lone voyager passes down these stretches standing erect in his canoe it creates in one quite an idea of the Silent Land.

Near-by also are six or more beautiful lakes looked down upon by hills and surrounded by dense forests, the trees of which never lose the color of youth. Old pine choppings, tamerack, and cedar swamps, ridges of hardwood, plains covered with a stunted growth of jack pines, high ledges of rocks and a large number of small streams are the other features of the country, and though the through trains on the "Soo" road, only a few miles distant, go hurtling by on their way to and from Boston and Minneapolis, and though the hand of man has disfigured the country by stopping the flow of the grand river with an immense dam used for logging purposes, yet the wild game is still there, and in the deep recesses of the forests the timid deer and wary bear and wolf are to be found, and in the thickets the small game abounds. It is here that our party of hunters built their camp and enjoyed for years, with a keenness born of love of nature, their annual vacations.

The party has been composed of true sportsmen, one of whom, S. B., was born and spent his childhood on his father's farm, now a part of Central Park, New York city, and who enjoyed his other sports among the highlands of the Hudson. As he grew to manhood he became imbued with the pioneer spirit of a true hunter and left the city for the western wilds to become identified with the history of a new country. The Colonel was born on one of the islands in Lake Champlain and spent his early days among the green hills of Vermont and the fastnesses of the Adirondacks. From his home could be seen the Green Mountains with their high peaks rising to the skies, while toward the setting sun lay the beautiful lake its bosom dotted with emerald isles. The "Buckeye," such by birth but a Badger by adoption; Mack, Bill, the "Old Trapper," all veterans of the late war, Louis and Henry, who claim Germany as their birthplace but America their home and the United States their nation, these, with the Young Badger and the dog Sport, completed the party.

Every fall for more than thirty years some of these veterans of rod and gun have had an attack of the "fever," which has always culminated in chests being packed, tents rolled up, guns resighted and put in trim, a gathering at the depot at early morn, a ten hours' spin over the rails to the little lumbering town, a trip of from

eight to ten miles by team, a hunters' camp away from everyone in all its glory, several weeks of rare sport and pleasure. Every fall this has been the programme, and, though some have come and some have gone even beyond the confines of this life, yet in the main the party has been kept together and the experiences of the members while in camp form the basis of these sketches. In relating them also an epoch, fast passing away, in the history of the State, is in some measure described, for though poorly told they give a few of the details in the history of the passing of the pine tree, and tell of hunting and pioneer life in northern Wisconsin, which, as it has in some of the Eastern States, is there fast merging into the life of the farmer and the resident of the city, and will before long have disappeared entirely.

The wind outside continues to blow soft and low and the blanket of snow becomes thicker and thicker, but the scene inside does not change. The sides and ends of the camp are boarded up with what was formerly the roof of an old lumber camp, and then chinked with moss and banked from the outside with sand. A snug fitting door at one corner is hung on hinges made from the soles of an old pair of rubbers. A heavy canvas roof is stretched over a strong ridge pole and fastened to the edges of the top boards, which are about five feet from the ground. Across the north end of the camp is built a tier of bunks, each one large enough for two men. In one of the south corners on the ground sits a small sheet iron stove, with an oven attached to the pipe, and behind it is piled a goodly supply of split wood. On one side of it are some shelves for the pots and pans, and on the other a roughly made washstand. On one side of the camp stands a table with legs like a sawbuck and a top as rough and black as a sidewalk. Piled on it are the supper dishes neatly washed, and over it from a small shelf shines a small lamp, while beside it sits a little clock, ticking as vigorously and homelike as one could wish. A large chest on the other side, a trunk or two, and two long benches complete the furniture, while on the sides, in brackets, hangs a formidable array of guns.

The Colonel still sits on the edge of the bunk. The Old Trapper stoops over and lights his pipe. Mack hugs one knee and watches closely, while the Young Badger takes down his Winchester and begins to clean it. "Boys, we'll get our first deer to-morrow," says the Colonel again. "This snow makes me think of the time in '76 when John, S. B. and I camped at Echo Lake. It seems almost like yesterday. We got over to the farm and it snowed so hard we stayed there over night. In the morning we started to make camp, and on our way to the lake saw any number of tracks crossing the road. John kept saying some venison would taste good for dinner. By and by I got tired hearing him say this, and finally told him and S. B. if they would take a stand a little ways ahead near some large Norways I would take a short circle and try and drive a deer to them. So they slipped on ahead. I hadn't much more than half finished my circle when bang cabung went S. B.'s old 'shower gun,' and pretty soon bang again. The sound of these shots excited me some, and I hurried through the woods pretty lively. When I got to the boys I found S. B. had killed two beautiful deer, a doe and fawn. So we had venison for dinner. Now I feel it in my bones that we will have venison for dinner to-morrow. There is one thing," continued the Colonel, "that we experienced that same night which won't happen to us here to-night. We worked lively the balance of the day, and by night had our camp about completed, but were so tired that as soon as supper was out of the way we were all ready to go to bed. I don't think we had been asleep more than an hour when we were awakened by the most unearthly sounds I ever heard. It is an actual fact that my hair stood up straight. At least it felt as if it did. It seemed as if a thousand demons had let loose the most diabolical noises they were capable of producing, and as if the whole posse of them had launched themselves at our camp and were not over fifteen feet away. 'For heaven's sake, what's that!' shouted S. B., while the rest of us were too scared for a moment to say anything. It was not long, however, before we realized that a gang of wolves had scented us out and had come to investigate. They didn't stay long, nor did they stand upon the order of their going, for we soon heard them howling in the distance, and could tell by the sound that they were retreating rapidly. We had slipped out to get a shot, but they were too cunning for us. You can rest assured we did not sleep much more that night. We all thought that we would kill at least one of the gentlemen during our three weeks' hunt, but not one of us got even as much as a sight of a single wolf during our entire stay."

The Old Trapper, when the Colonel stopped talking, scratched his head and said: "That makes me think of the time before the war when I worked in a lumber camp on the Little Cedar. There were no railroads up here in those days. We had to go by boat from Green Bay to the Menominee River, and then up through the woods to camp. I can remember I made the trip on a little schooner called the Polly Jane, and it was so cold we almost got froze in. I'll be hanged if the first thing I saw when I came on deck in the morning wasn't a big buck swimming right plump across the bay, breaking the thin ice like a good fellow. We took after him but he had more speed than a snow plow, and got to shore before we could reach him. When we got to where our company kept their supplies, they gave me an ox team hitched to a pair of bobs, loaded with supplies, and, among other things, a small keg of whisky. I hadn't been on the road more than half a day when the snow melted, and you can bet it was slow going after that. Consequently, you see, I got caught in the woods over night. Well, I unyoked the cattle, fixed them up the best I could, built a big fire, got some lunch, and then went asleep. Holy smoke! along in the night if I didn't wake up and think that a railroad train was running over me. The woods seemed full of wolves, and they howled and yelled around as if they were having a ghost dance. A young lad who was with me was so scared that he climbed a tree and wouldn't come down until daylight. I'll be honest and tell you that I didn't sleep much between keeping the fire going, the cattle quiet, and tapping that keg, I had about all I could do until morning. That's my only experience in the woods with wolves, and while I know they are usually cowardly devils, yet I would rather not meet a pack of them after dark."

After that everyone had to tell all he knew about wolves, and it was found to be the general experience of all, that while they had heard many frightful stories, yet they never knew, from their own experience in northern Wisconsin, of wolves attacking anyone or making any decided demonstration toward such a thing. In the meantime the fire burned low, and in a little while one by one the party turned in to their bunks, and soon the only sound in the camp was the ticking of the clock and the snoring of the dog. Nor did anyone arouse until about five o'clock in the morning, when the buzzing of the alarm turned out the entire party to breakfast, and for preparations for the morning's hunt.

CAROLUS.

## Weather Prophets.

WHY does a duck look at the sun? That is a question I heard argued with great vehemence when I was a boy. One side contended that the duck wanted to get the time of day or the sun's altitude, while the other side held that the duck was not looking at the sun at all, but merely trying to relieve a crick in its neck. A quiet man who happened to come along while the dispute was at its height suggested that perhaps the duck was looking to see if there was any sign of rain. The disputants, with a complacency rare among men holding such opposite views, declared that this had never occurred to them before, and that probably it was the right explanation of the matter.

And probably it was and is. However, there are many things that birds and animals do which are not clearly understood, but have an undoubted significance. Especially is this so in regard to the weather.

I recall reading a letter in *FOREST AND STREAM* last fall, in which the writer predicted from his observations of wild animals in the Adirondacks an unusually severe winter. How fully the prediction has been verified we are all only too painfully aware. Undoubtedly the gentleman referred to must be a keen observer, and it would be extremely interesting to have from him particulars of his late observations.

The professional weather prophet is, I believe, given to smile disdainfully when told of the prophetic power of animals in regard to the weather. Or he may even exclaim, "All rubbish, sir—all stuff and nonsense! What in thunder can an animal out in the woods of Jersey, say, know of polar conditions, which alone make a hard or mild winter?"

On first blush, this question seems to be logical enough. What, indeed, can an animal out in the woods of Jersey know of polar conditions, or even conditions much nearer home? It has no observatories, no telegraph wire, no scientific instruments—nothing, in short, with which the professional weather prophet is equipped. And yet, although the animal has none of these things, it may still, possibly, be a very good judge of the weather.

Balzac has said, "L'instinct chez les femmes equivaut à la perspicacité des grandes hommes" [The instinct of women equals the perspicacity of great men]. Perhaps it is true also that the instinct of animals equals the perspicacity of the weather prophets.

Instinct is a thing which is but very imperfectly understood, as has often been pointed out in the columns of *FOREST AND STREAM*. That it is closely allied to intuition, however, there seems to be little doubt. And therefore it is that instinct may leap to a right conclusion while reason—the much vaunted reason—gropes in the dark.

Creatures of instinct have their sensitive nerves or sensibility highly developed, and, it may be assumed, are alive, in a telepathic way, to subtle changes or indices which entirely escape the notice of reasoning intelligence. Now it is very probable that as early as September or October certain signs appear, foretelling the character of the coming winter. If we concede this, it will be easy to understand why animals act with providence or the reverse.

And after all, would it not argue a serious defect in nature's scheme if animals were not endowed with some prescience in regard to the weather? One hard winter might play havoc among them unless some unusual preparation was made. As it is, many of them do succumb, but we may be pretty sure that these are paying the penalty of carelessness or neglect of warnings, just as many a man pays the penalty of such conduct.

So the disdainful attitude of the professional weather prophet does not really seem justified. The modus operandi of this gentleman—i. e., stationing himself on the top of a high building in a city and observing the clouds, measuring temperatures, rain-falls and wind velocity, and connoting high pressures and low pressures of areas more or less remote—may be all right, and will, I sincerely hope, result in the evolution of an accurate science of the weather; but so far we must admit the predictions based on it have not markedly been in the habit of coming true.

As to the amateur weather prophet—that is, the man who casts a sage eye toward the horizon, sniffs the air and then will tell you infallibly when it will rain or clear up—I would say to him, emphatically: "To the woods!"

In connection with this type, I may relate a story which I recently heard, and which, I trust, will carry its own moral.

In a village down East there lived a weather sharp, whom we shall call Obadiah Squalls. He had a son out West who had long been trying to induce the old man to join him. But Obadiah loved his native place and the reputation he had earned, such as it was. Finally, however, the son one day was able to announce to his friends in the village store that the old man had agreed to come West. "And I tell you, boys," said he, "he's the boss weather prophet!"

"Kin he tell when it'll rain?" asked a man who had some corn in a bad way.

"Sure," replied the son. "That's his strong point."

But there were many skeptics, and wagers were laid on the old man's ability, it being agreed that on his arrival the son should have no opportunity of private talk with him—this for a reason which shall appear.

In due time the old man arrived and was met at

the railway station by a committee who conducted him to the village store, where was an assemblage of the notables, who accorded him a cordial welcome. After some general conversation, the chief notable arose, and formally welcomed the old man, telling him that his reputation had preceded him and how proud they were to have a man of his eminent talents among them (at which there were cries of "Hear! Hear!"). The speaker then proceeded to say that as there were doubters in the village, as there were in every village—men who never believed anything unless they had ocular demonstration—he repeated ocular demonstration (a cry of "Shame")—certain wagers had been laid on Mr. Squalls' ability, and in order to decide these wagers and cast confusion upon the doubters, he now requested that their distinguished fellow citizen, as he hoped he might call him, would give them a proof of his powers. What they were all anxious to know was, when were they likely to have rain?

The old man arose, trembling slightly, and thanked the speaker briefly. Then regaining more courage, he walked to the door, put out his hand a moment, and exclaimed: "Wind south—we'll have rain!"

On hearing this, the assemblage, for the most part, broke into a roar of laughter.

The fact was that in that section of the country it blew nearly always from the south, and there was rain only when it blew from the east or west.

Poor Obadiah had lost his reputation, and from that moment he pined away and died.

FRANCIS MOONAN.

### "It Just Happened So."

CARTHAGE, O., Jan. 10.—The coincidences given in your editorial in *FOREST AND STREAM* of January 2 interested me very much, and are now again quite in evidence. In the issue of January 9, in reading Mr. Spears' "Floating Down the Mississippi," I was charmed with his researches and the exhibit made of then and now in the history of St. Genevieve and Kaskaskia; and having completed the perusal of the number from ad. to ad. of first and last pages, took up a volume just received entitled "The Conquest—the True Story of Lewis and Clark," by Eva Emery Dye, and was ere long perusing with eager interest the story of the exploits of Gen. George Rogers Clark at those very places, and the aid given him by Vigo and others named in Mr. Spears' article.

"The Conquest" is most truly "an epic of the West," written in terse epigrammatic style that holds the reader from beginning to end.

E. S. WHITAKER.

## Natural History.

### Vagaries of Horses' Appetites.

Editor *Forest and Stream*:

Mr. Hardy in the current number under the caption of "Cats Eating Corn," gives an instance of a horse which ate cooked beef. I have in mind some three different horses which may be said to have had a perverted appetite. One, a small half-breed Texas horse which I had for a few months, would eat a fresh piece of beef as large as a dinner plate and an inch thick. He ate it just as a dog would, holding it down with his fore foot, then tearing off chunks of it and swallowing them. This appetite for fresh beef was so well known that none of it was ever left within his reach except by accident. When it was, whoever left it never saw it again.

The troop that I first served in had a horse that died in it when he was twenty-three years old. Seventeen of those years had been put in with this troop, fifteen of them under the saddle. He had been shot several times, once through the neck, and once in his flank; but neither shot had sent him to the rear. He never had been sick a day.

The last two years of his life he spent on the retired list, but was still marked fit for duty in order to keep him there; any other horse would have been condemned and sold; but he was kept as a matter of sentiment, and had nothing to do but eat and sleep. The only other horse that I ever knew to be treated this way was the one which survived the Custer Massacre; he was kept in a troop of the Seventh Cavalry until he died. He was saddled up and led out in every mounted inspection, but was never ridden by anyone.

This old horse of ours (we called him Bummer) was never tied in the day time, but let go where he pleased. He paid regular visits to the cook house, there getting his head in the slop barrel he would half empty the barrel. It did not seem to make any difference to him what he found there—bean soup, stale bread, cooked meat, or potato parings—all went. He did not need the stuff, he got just what the other horses got to eat twice a day.

Soon after the close of the war we were dismounted at Macon, Georgia, and sent to Texas; here we got the old horses that the Eighteenth New York had been riding, and I kept a lookout for a sorrel, but the best I could get was a small sorrel mare. Mares are never used in time of peace, but for the last four years before this anything that could carry a saddle would be used. We had three of these mares by the time we were all mounted. They had been "captured" down South; none of them had been bought. My mare just suited me; she could carry me fifty miles a day, then carry me back again next day if I wanted her to do it. I had her about two days when I found out that she chewed tobacco. She grabbed a small package of fine cut out of my hand, and then stood chewing it, paper and all. Seeing that it did not hurt her, I kept her in tobacco, buying the leaf tobacco that all these Mexican stores sold here then, a large "hand" of it for a silver dime; that would not have paid the duty on it had any been paid, but the collector had not got here yet; when he did come these men had to stop selling it at any price. I never went near my mare without bringing her tobacco; if she did not get it right away she would begin to shove me with her nose, and keep it up until I gave her the usual chew. When we were ordered to turn in our mares a few months after this I parted with her with more regret than I have since felt when parting with a better horse than she was.

I rode a horse for four years, my race horse Charley, which would eat half a peck of peaches as fast as I could remove the stones out of them. The same horse could eat a pound of sugar or candy without even stopping.

CABIA BLANCO.

### An Apple Bird.

AUBURN, Cal.—Editor *Forest and Stream*: In your issue of September 26 there appeared an article by Forked Deer in which mention was made of some "apple birds" which stirred up considerable discussion in your columns regarding their identity. The loose and unscientific description gave rise to considerable "guessing," some of which was right and some wrong. The name of the gentleman in whose orchard the bird was observed is Bloomingcamp—not "Woolmincamp," and the name of the stream is Bogus, not "Bogers." There is a post-office at the ranch of the same name.

Having passed through this section several times on annual outings, and having seen many specimens of the Lewis woodpecker there, I was satisfied that it was the bird in question. But thinking that the better way would be to procure a specimen, I wrote directly to Mr. Bloomingcamp, asking him to send me one. He replied that the fruit season was over, and the birds had gone, but that he would send me one at the first opportunity, as he was anxious to know what the bird was.

He has now kept his word, and has sent me a specimen, which I forward to you, under separate inclosure, together with his letter, a copy of which follows:

Bogus, Jan. 7.—Dr. Rooney—Dear Sir: Being able to kill one of those apple birds that you wrote to me about under the date of October 26, 1903, I send you the specimen by to-day's mail, hoping you will give me a full description of the same, and oblige,

FRED. BLOOMINGCAMP.

The skin sent me, as you will see, is a Lewis woodpecker—just as I expected, and as guessed by your editor. And now the guessing contest is over, although without the specimen, no one could possibly suspect the bird from the description given; they could only just guess.

R. F. ROONEY, M.D.

[The specimen has been received as stated. It is a Lewis woodpecker (*Meelanerpes torquatus*), as suggested in a footnote to Forked Deer's article describing the bird.]

### Notes on the Night Hawk.

Editor *Forest and Stream*:

Your notes on the night hawk in *FOREST AND STREAM* of January 16 are full and interesting, but I can add some facts which are not included.

As a youngster I was quite familiar with the night hawk, or mosquito hawk, as he was popularly known in northwestern Massachusetts among the Hampshire Hills, and in midsummer often located their nests on the bare rocks near thickets and running water. We used to watch their erratic flight, so like a bat's that in the South they are known as bull bats, and supposed that the two raptors hunted insects in similar fashion. We always assumed that the downward dive, with a whirr, was a grand scoop with wide open mouth by which the birds took in the biggest part of a swarm of gnats, flies, or other diptera; while the sound they uttered was a grunt of satisfaction. Years after, while at Thousand Island Park on the St. Lawrence, and strolling just outside the canvas limits, I was moved by the simulated lameness of a night hawk to scan a ledge of rocks for her nest. It was the month of July, and so I expected to find half-fledged younglings, which would be more easily detected than sandy-hued eggs; but I quartered the ledge carefully in the vicinity in vain, paying no heed to the old bird's maneuvers, until I finally stood still quite discouraged, when, chancing to look down at my feet I discovered what seemed to be a bunch of angleworms! Then I saw that I was standing right on the nest, which held three chicks, and from one of them the entrails protruded.

I find that when the night hawks gather in the Laurentides and New England to begin their seasonal migration southward, they follow the trend of the Allegheny Mountain range, passing through the Middle States into Virginia and the northwestern part of North Carolina. In both of these States where observed the birds are shot at for practice and are eaten in large quantities as game. I have observed them at Asheville by the thousand early in September. Where they finally settle and locate I am not informed, but they are common in winter in Mississippi and Louisiana. I suppose they keep south of the Appalachians until they pass the terminal foothills in the vicinity of Anniston, in central Alabama, and then scatter. Meanwhile they have halted for sport and food (grub?) at numerous stations en route.

Let me add that your replica of the Audubon plate is simply exquisite, and shows the great advance in photo-engraving which has been made since 1873, at which date the first crude products of the American Photo-Engraving Company were used by the Harpers for a partial illustration of my "Fishing Tourist."

CHARLES HALLOCK.

### New Southwest Coast Mammals.

An interesting paper containing descriptions of Twenty-Seven Apparently New Species and Sub-species of Mammals has recently been published by Dr. D. G. Elliot, Curator of the Department of Mammals in the Field Columbian Museum. It constitutes No. 14 of Volume III. of the Zoological Series of the publications of that institution.

The first animal described is a new sub-species of mountain sheep under the name of *Ovis cervina cremnobates* from the San Pedro Martir Mountains of Lower California.

In a paper published some time ago on the "Mammals of the San Pedro Martir Mountains," Dr. Elliot referred a number of specimens of mountain sheep collected by Mr. Heller to *O. c. nelsoni*, with a query explaining that he had not had an opportunity to compare them with undoubted examples of that form. Recently, however, such a comparison has been made, and Dr. Elliot concludes that the Lower California form should stand by itself. This determination bears out the opinion expressed to us some years ago in letters from Mr. Anthony,

the ornithologist, that the Lower California form of mountain sheep differed from the Nelson sheep.

Besides several new forms of hare, and many other rodents, Dr. Elliot describes a fox from San Bernardino county, California, *Vulpes arsipus*; a new species of black bear, *Ursus hylodromus*, allied to the black bears of the Olympic Mountains; a new civet cat, *Bassariscus albipes*, from Vera Cruz, Mexico.

All these specimens were collected by Edmund Heller.

### Ski Running.

SKI RUNNING as a sport is modern, though the use of the ski dates back many hundreds of years. Up to less than thirty years ago these shoes were used almost altogether for practical purposes; that is to say, for getting about from one place to another over the deep snows. But in the decade between 1870 and 1880 a few citizens of Christiania, who found skiing to be a good and pleasing exercise, formed a ski club, and set on foot those ski exhibitions and competitions in Norway which have since become so famous. For nearly forty years skiing has been practiced in the Rocky Mountains, and in many places there it would be impossible to get about except by this means. All the winter travel through the Yellowstone Park is on skis, and many of the high mountain passes further to the south are traversed only by this means. A few years ago Mr. Elwood Hofer taught a few people in New England the use of the ski, and the time will come when in the northern portions of the United States these shoes will be extensively used. Recently a

FIG. 2.—Skrid-Finner hunting (Olaus Magnus, ca. 1550)

FIG. 3.—Skrid-Finner (Olaus Magnus, ca. 1550).

ski club was organized in England, and a book on "Ski Running" has been published there by Horace Cox, which is practical and useful. It is a composite book, written by D. M. Crichton Somerville, W. R. Rickmers and E. C. Richardson, who also edits the volume.

There was historical mention of the snowshoe before the Christian era, while Norwegian traditions dating back some 1,600 years make mention of the ski. Perhaps the Lapps were the first skiers, and it is suggested that they may have brought the skis from Central Asia in their migrations so long ago. In Olaus Magnus are curious old cuts illustrating the ski running of the Lapps. In America the tendency seems always to have been to use the aboriginal snowshoe, commonly called webs, and skis never seem to have been used in Canada. Even in the northern Rocky Mountains, where timber is thick, web snowshoes of varying type are mostly used, and skis very little or not at all.

Needless to say the greatest skill with the ski has been acquired in those lands where it is part of the everyday outdoor life, and the peasants—men and women—of the district of Telemark are still perhaps the most skillful skiers in the world. At the same time the sport is easily acquired by any young and active person, and among the cavalry men stationed in the Yellowstone National Park are many men very skillful in the use of these implements. It is declared to be far less troublesome to learn to ski moderately well than it is to learn to skate moderately well, and the opportunities for skiing are very much more frequent than those of skating.

Obviously the important thing in learning to use the skis is to have good ones. These are fully described, as well as the outfit—including always the pole—the clothing, and any food that may be taken. Following this are pages, fully illustrated with photographs and diagrams, as to the very best methods of passing over different surfaces, and after instruction in walking comes a chapter on ski jumping, also very fully illustrated, and with directions which are easy to follow. A chapter called "Odds and Ends" brings out the good many interesting small points. It is suggested that to teach children to ski nothing more is needed than a couple of barrel staves pointed and rounded with toe pieces to hold the foot.

One would imagine that south of Scotland the British ski runner would not have much of an opportunity to use his skis, but it is altogether probable that a time is coming when ski running will in this country be a sport in high favor. Price, \$1.25.

## Stillwater Camp.

THIS is a veracious and unvarnished account of a week's delightful sojourn in the wilds on the De Grasse River, St. Lawrence county, New York.

At the invitation of Dr. Geo. J. Hornung, of Jersey City, a member of the club, afterwards most cordially seconded by Mr. John Bird, one of the proprietors of the 30,000 acre game preserve and said camp, who was making a short visit to Jersey City, we took the 11:30 train, N. Y. C. R. R., Tuesday evening, October 20, for a taste of cabin life among the fir and the balsam. At Canton we were met by Mr. Bird, our host, one of the most popular as well as energetic citizens of the county. Through him we were made acquainted with several of the many strenuous citizens, Mr. James Spear, president of the St. Lawrence County Bank, and one of the partners with Mr. Bird and Mr. Wells, of the game preserve; also Messrs. John Milligan and Will Sherwin; all three of these we afterward met in camp for a day; also Mr. Murry Ralf, who has the barge canal on the brain. I presume he is a happy man now the bill has been so largely indorsed. Right good fellows they all are; in fact the big heart (not big head) seems to be very prevalent in that section of the moral vineyard. As it was they were so profuse in their cordiality that we got off late for the trail. With a two horse team with baggage we drove 16 miles over a good road to Clare, Mr. Bird's farm, near where the trail begins up the steepest and rockiest path we ever saw, equal to any in the early west. They call the trail three miles, but it is the longest league I want ever to encounter. Dr. Hornung stood it like a veteran; he had been there before; but Jacobstaff, the last half mile in the dark, came very near giving up. He told the boys to go on and he would appear in the morning, for his enthusiasm pretty much evaporated before the welcome light in the window of the private cabin threw out its rays of glory. We were royally welcomed by Mr. Ruben Wells and given the freedom of the camp at once. The sight of a couple of three-pronged bucks hanging outside added immensely to our resting capacity. A hot venison stew with mealy

other, Mr. James O'Brien, is attached to the company's camp. Both men are examples of the true woodsman; keen of eye, rugged in build, unassuming in deportment, good shots, and knowing their business. It is a pleasure to be associated with such men.

We were up betimes in the morning, but it was too noisy in the dry leaves and no one got a shot, though flags were seen. Cervus was in a hurry and stopped not on the

think, another fair one, tramped in on the trail last summer in the very worst storm of the season; and they got in long after dark wet as drowned rats, but as blythe and gay as from a ballroom waltz, bringing cheer and sunshine to all. Such are the folks around Canton.

My gun was a take down (of '96 I think), which Mr. Sanford of the Winchester Arms Company helped me select; it proved a darling, and did splendid execution, first at the targets, and then on Saturday it was duly christened at a bounding straight away two-pronged buck going I don't know how many miles a minute, more or less. The soft nosed bullet overtook him just below the tail, and passed out through the fore shoulder. The white flag dropped and the quarry was ours. It (the gun) has been greatly admired by those in camp, where there is a variety of shooting material—Daly, Piper, La Fevre, two other Winchesters, etc.

Tuesday morning. Mr. Bird, Mr. Wells, Dr. Hornung, and Eastman the guide and the three jolly fathers are all out to-day. It is a good sight to see these sensible exponents of the church having for the time being dropped their clerical habiliments and appeared in corduroys and canvas coats with big shooting boots ready for the woods, with all the earnest enthusiasm of a free life in the mountain air. May they at least see a flag even if they don't get a shot. All of the other camp are also out. But poor Jacobstaff is laid up with a touch of his old complaint, rheumatic gout.

It is very noisy in the woods, and unless they make a drive, as they call it, there is not much of a chance for success. At a drive the guides place their men at different runways, while they go away off a mile or two and endeavor to drive the animals to or by you. A dog of any kind whatever is not allowed on the preserve, and will be shot sooner than a deer. It is tedious this sitting silently and alone on log or stone for hours, as the deer mostly go off somewhere else or come by you with the velocity of a young whirlwind. Doctor Hornung was the only one that succeeded in getting a shot. The game was a fine

Jacobstaff.

Dr. G. J. Hornung.

order of his going. And now a word about a splendid character in the next camp—Doctor Manly. A Canton resident originally, a graduate of St. Lawrence University, then Long Island Medical College, and now settled in Brooklyn where he has a good practice, he came into the woods two years ago condemned by prominent physicians as a hopeless case of genuine consumption. A few weeks or months in this section of fir, balsam, and hemlock, with its splendid soft water, proved a charm and a cure. He comes up here now twice a year for trout and deer, and renewed life. He is a robust man, a thorough woodsman, a more than good shot. Retiring in disposition, but practical in every way, he has been a boon to the camp, having himself killed the first two deer; and one of the party having been taken seriously ill the Doctor in his practical business way soon brought him around; in fact, he furnished the camp with both meat and medicine.

Saturday evening brought in Mr. Spear with Mr. Kimball, Mr. Stanly, Elsworth Searfench, V. R. Stivers, of Fifth New York Infantry, now in the recruiting station at Canton; Messrs. John Mills and James Kahaly, who killed his first deer, in fact, it is said, the first deer he ever saw alive in the woods, and that only about a half mile from camp. "Some are born lucky, some have luck thrust upon them." We have been out several short trips and haven't seen a flag.

Tuesday evening a two-pronged buck was brought in by Dr. Manly; he won't shoot at a doe or small deer of any kind; three does passed him and he would not shoot.

Wednesday and Thursday *non dies*. Friday another buck for the other camp.

Saturday Mr. Wells left for Canton to bring in three invited guests—three clergymen from New Jersey. On Monday they came in over the trail a little before dark—Father Roger McGinley, of the New Durham diocese, Father John Westerman, Crawford; and Father Wm. Brothers, of Weehawken. Right good company they proved to be, rollicking good specimens of educated manhood. They took to camp life as a duck to water, were full of good stories, and very ready at repartee, and made a most wholesome addition to our social party after the cares and labors of the day. We inquired for Mr. Reuben Wells, their escort. "Well," said Father McGinley, "we struck a track crossing the trail about a mile back. Mr. Wells said it was fresh, dropped our bundles, told us to keep the trail for camp and he would be in later." Sure enough, in about half an hour after dark Mr. W. came in with a fat doe. Mr. Wells is strenuous in all he undertakes; he is president of the First National Bank of Canton, and is a large owner of the 30,000 acre preserve on which there are three pulp mills, logging camps, etc. The hospitality of Messrs. Bird and Wells keeps their camp full of the best class of men, and they are never more cheerful than when administering good cheer to their many guests. Mr. Wells' wife and daughter, with, I

Jacobstaff. Father Westerman. R. Wells. Dr. Hornung. Father Brothers.

### THE RETURN.

5-pronged buck. He would not have anything else. He would not take a shot at a fleeing deer yesterday because it did not have the embellishments of a he. Some folks are very particular. (Jacobstaff was satisfied with a fat doe later on, and his friends of the "Sit Down Club," of Jersey City, proclaimed it fine eating. So did Mrs. Jacobstaff.) All hands in about 12 for lunch; started six deer, too noisy, deer heard first. Out again. Started two but got nary shot, except that Eastman the guide got a long shot just before dark, found blood, but the deer swam the river and darkness coming on the hunter had to abandon the trail.

Wednesday.—Mr. Wells and Eastman off by daybreak for scene of last evening, returned in time for breakfast with the big doe Mr. Eastman had wounded the evening before. At 8 A. M. all hands except I off for a three-mile tramp and to bring back Hornung's buck killed on Tuesday and left by the guide hanging in the woods. They are accustomed here in these parts after bleeding and disemboweling the deer to leave it hanging in the woods for days; and if they have meat enough in camp, for weeks. In fact they will not eat venison here before it is from 36 to 48 hours old; say it is not healthy.

STILLWATER CAMP.

potatoes, good camp-made bread, canned goods of all kinds, and as good coffee as anyone gets at home, finished the rest, and all fatigue was forgotten. In fact, they are a strenuous lot here in the woods, and while they do hard work they believe in having the best of good things and plenty of them to keep the strain as well as enjoyment, and when you realize that all of this except trout and venison has to be packed in on that confounded trail, you may know what a class of men these are.

The Wells and Bird cabin is a substantial structure, 20 by 16 feet, of trimmed or squared logs, with ample kitchen and a sleeping apartment adjoining, which is the sanctum of Mr. Arvin Eastman, the guide of the camp. The house with porch fronts the still water of the Grasse River, from which it takes its name. De Grasse River is famous as a trout brook, the beauties running from 6 to 16 inches, and being of fine flavor. There are two other log cabins close by, the property of the Stillwater Club, who lease the privilege of the 30,000 acre preserve. They are some score members of the best citizens of Canton and vicinity. The three camps use the same water from a bubbling spring, soft, ice cold and never failing of supply. Of the guides, we have mentioned Mr. Eastman; the

At noon they are all in, and the pack baskets that they strapped on are empty, with exception of one buck's head severed close above the neck—bear. Of all things Jacobstaff has doubted the propriety of leaving a fat quarry in the wilds for any length of time. When they arrived at the scene of the hanging up they found only the hoofs, backbone, and the head gnawed off close to the skull. A bear had preempted the whole property. Confound him! the fineset head of course, a 5-pronged gray head handsome and symmetrical. Hornung is inconsolable and swears he never will spare a bear's life in the future. He intended having it mounted providing he did not secure by his own eye a better one. But it will still do nicely on a panel.

Thursday.—Mr. C. Austin and Mr. C. Austin, Jr., came in this morning with mail from home and New York papers as late as Monday and very welcome. The guide, Mr. E., had wounded a doe late the night before and was going to hunt in some other direction; said this doe would be safe if as badly hurt as he thought for a day or two. Jacobstaff informed him that we didn't want any more bear work and it would be the proper thing to secure that deer first. They laughed, said they were rarely troubled with bear and the bear that got away with Hornung's deer was two or three miles the other way. Well, they went after this deer. On approaching the place where Eastman thought it would be found lying down dead, they heard a noise in the bushes ahead, and on approaching found their animal, but they broke almost on to a bear that heard them first; but he left the mark of his claws on the hip and hams of the deer. The noise made in the dry leaves saved the deer from further mutilation. An hour later and another good carcass would have been added to the loss of Stillwater camps. These may sound as good bear stories; but they are facts.

After a hasty breakfast of slapjacks (they call them) and maple syrup made only a half mile from camp, we

AT THE CAMP.

were off shortly after 7:30 A. M. Pretty noisy yet, but we have hopes. Tried a drive, but an hour and a half on a cold gray stone was enough for Jacobstaff, and he returned early to the genial warmth of the camp.

Father McG. left us this morning, having received a telegram of the sudden death of one of his parishioners. Before his departure he took several views of the camp and camp life, among them one as we came in from a successful hunt which we inclose to you and hope to see with this article in the best sporting paper of the world.

And now our time is about up, as we leave to-morrow, Friday, on the trail for home. How I dread this packing of our game over that carry—glad it does not weigh any more. But our friends must have some testimony of our success or they may believe this is all a fairy tale. We have had a most delightful eight days of camp life. It reminded us of life in old Winsconsin forty years ago. It has done our old bones and sinews good. The smell of the balsam and the hemlock, the moss on the south side of the trees, the crisp brown leaves, the pure crystal water, the woodpecker's tapping and the piratical, scoundrelly blue-jay's saucy talk, all bring back the glorious days of long ago. We have gained six pounds of healthy weight in avoirdupois.

There were in all in the eight days' camping, including those that came in for a day or two at a time, ten would-be shots, and eight good deer, besides plenty for camp, were divided up. It seems to be a good deer country. The animals are much smaller than those in the West, especially in antlers; a five or seven-pronged buck is the exception.

Good-by to Stillwater camps and the boys. May their shadows continue to grow.

JACOBSTAFF.

### Game Preserves.

Editor Forest and Stream:

Didymus in the current number notes the fact that Dr. Webb has thrown open his game preserve and let the animals go free. The papers that first gave us an account of that told us why he had done so, the forest fires of the past summer have destroyed his feed and he was not likely to keep those animals penned up and let them starve. Dr. Webb no doubt thinks still, as he did when he first made his game preserve, that he had a moral right, as he had a legal one, to make it, and he may restore it again when conditions allow him to do it.

CABIA BLANCO.

## Among the Wild Geese.

A MUSICAL crackling sound such as might be made by a hundred fairy glaziers working close at hand, roused the writer one morning lately, and at the same time he became drowsily aware that the ceiling of his room had descended unaccountably near to his pillow. Moreover, just on the other side of this ceiling heavy feet were making energetic attempts at a highland reel. All these singular phenomena were explained, however, when the foresaid writer, shaking himself free from the last traces of drowsiness, woke up and recognized he was in his berth on board the little shooting cobbler Snowflake, snugly moored in the creek of a northern estuary; that it was a cold morning with last night's ice breaking like glass all around as the making tide lifted it from the sedges; and lastly, that his only companion on board was already up and doing.

"Hullo!" said that individual, bursting into the cabin a few seconds later, "thought I would wake you up—nice sort of fellow you to come shooting! Sun been up an hour; sea black with geese; sky full of widgeon. Now get up, or, by heaven! I will take the guns and scuttle the Snowflake under you." Thus admonished I did as I was bid, and found my admirable comrade, usually known as "the crew," had already got breakfast under way, while above, when I scrambled on deck, was a lovely winter morning, with the sun—which, by the way, was only just rising—shining crimson over the salt lagoons, and lighting up with a wonderful fire the frosty haze on marsh and slob behind us. Needless to say, neither sky nor sea was quite as full of wildfowl as my friend had hinted, but there were undoubtedly many about, and I noticed the moment I came up a wisp of teal settle among the pools half a mile away which roused my enthusiasm to the highest pitch.

So we breakfasted forthwith; rashers easy to cook and appetizing; home-made bread from the farm ashore; coffee, warming and aromatic with all the spices of Arabia; then all hands mustered on deck to get up the anchor and punt out into the open where it became possible to hoist the sail and slip away on a freshening morning breeze to the northward.

We were after bean-geese, which differ from one or two other species haunting British coasts in winter time, in that they prefer inland feeding to salt water, and, above all, have a liking for the farmer's barley stubbles. Now, this year the barley has lain sadly long afield, herein being the geese's opportunity—and ours. My companion knew of a derelict farm, and especially a field or two coming low down to the marsh land, where crops had never been properly garnered and consequently all sorts of wildfowl held high revel since the autumn flight began. He had seen geese there in the stubble himself, and carefully noted the way they went seaward when disturbed by shepherds moving about on the uplands each morning. Could we but hide ourselves on their line of flight it might mean a couple of shots at least; so in high glee we slipped up along the coast before a frosty wind that powdered our deck with minute crystals of congealed mist, and in half an hour ran the ship in under a miniature headland where we made her fast. Then getting into our heavy boots and thickest jackets I took the big 8-bore, while "the crew" brought along the double barrel, and we set out silently, under shelter of the sea wall, for the barley fallows.

As will often happen, we met all sorts of tempting shots on the way, which on another occasion we would have gladly taken, but were now obliged to ignore. Half a dozen teal rose from an empty creek, while a couple of ducks came so close overhead we could hear the whistling of their wings as they passed through the mist. Curlews, too, generally the shyest of birds, flitted spectral to and fro, and I saw my friend making grimaces as he looked hastily away from the tempting sight.

The nearer we got the more cautiously we had to pick our footsteps, and then presently my friend, who was a red Indian for keenness when on the trail, stopped and listened intently. When he looked up it was with an expression of supreme contentment, and a hasty sign to follow told without words that his sharp ears had caught the sound of geese at work on the stubbles. So on we went again under shelter of the little marsh escarpment, scrambling forward in breathless haste for a bluff round which the birds generally came on their way to sea. At the base of the bluff lay a little watercourse with frozen reeds at bottom and some leafless willow bushes here and there. "The crew" led into this on all fours, looking in his heavy clothes for all the world like a frolicsome sloth bear, and I was seized with a desire to laugh. But the deadly frown which came on my companion's forehead when he discovered my emotion was so awesome that I hastily suppressed all traces of it.

And now the crisis was at hand. J. proceeded to worm himself along almost on his stomach up the left-hand slope to a knot of willows commanding the fields beyond, and I followed with my piece of ordnance as well as I could. We gained a vantage point between those knotted stumps in safety, and peeping thence a sight to put even a hardened fowler's heart in a flutter met our eyes.

The frozen stubble, with wind-blown barley shocks still lying about in pitiful neglect, lay silent under the winter mist, with here and there an ice-covered pool beginning to take a rosy hue as the sun crept up over the far-away hedges. Round the nearest of these frosted puddles, but about eighty yards away, a dozen great brown birds were standing preening themselves. There was another of the same sort on a hillock still further off saying funny things with neck and bill pointed straight up in the sky, and beyond him again, but far out of shot, a second smaller group of geese. Here and there about the stubble several score of green plovers were running and stopping in their mouse-like way. Altogether it was a pretty picture of wild bird life, and I lay as still as a stone for a minute or two, partly to get my breath, and partly to admire it. My comrade, who never lacked for breath and admired nothing till the shot was fired, impatiently dug me in the ribs, however, at the end of that time, and whispered in my ear, "Now, then, with your blunderbuss! Are you going to sleep?"

Very slowly I drew myself together, and very slowly pushed the big 4-bore loaded with swan shot through the willow stems. But carefully as it was done, the barrel touched one of them, and down came a shower of tink-

ling icicles and powdery frost. The keen-eyed sentinel, who had perhaps been telling his sleepy comrades all along that he was sure there were men about, uttered one hurried "There, I told you so!" and lapsed into rigid silence. Close together stepped the flock, up went their necks, a dozen eyes were fixed suspiciously in our direction.

Now was our chance. There was a flake of snow in my eye and several blurring the ridge of the barrel, but I took the best aim I could for the brown mass in the distance and pulled trigger. The resulting noise was shocking in the absolute stillness of the morning, and the smoke hung among the twigs like a lace curtain, but there was joy in J.'s exclamation, "Good! Three down and a runner—lie still a bit." The latter bit of advice proved valuable. The remainder of our special covey swerved away and were soon off to sea, while the plovers, with some ruffs we had not noticed, circled about tumultuously in mid air. But another party of geese, disturbed from a stubble further inland, came straight down toward us. I put in a fresh cartridge in haste as they swept past us sixty seconds later at a tremendous pace, letting fly at the leader—and completely doubled up the bird next behind him! "The crew" failed to stop with the first barrel of his lighter gun, but hit hard with the second and that bird we found subsequently dead on the beach half a mile away. My runner was secured without any great difficulty, so that we had six birds to show for our stalk, and I need not add, felt highly pleased with ourselves.

We had come out for wild geese, and had got some, which is better luck than the shooter of these watchful birds can always count on. When we reached the boat again after a heavy tramp with the spoil a suggestion of a second breakfast was carried enthusiastically, and thereafter we coasted out to sea, and round the edge of the mud flats picked up a couple of ducks besides a few fowl of lesser kinds to add variety to the main bag of a memorable morning.

A.

## Massachusetts Association.

Boston, Jan. 16.—Editor Forest and Stream: The Massachusetts Legislature has been very prompt in getting down to business, and both President Jones of the Senate and Speaker Frothingham are strenuous for a short session.

The chairman of the Committee on Fisheries and Game on the part of the Senate is Hon. Moody Kimball, of Newburyport, who was a House member last year, and is a believer in the doctrines for which the sportsmen have labored the past few years. The House chairman is Mr. Hinkley, of Tisbury, who was also on this committee last year. Senator Pratt is also a member again this year and will be remembered as the president of the Middleboro Sportsmen's Club mentioned in a previous letter.

In his inaugural address Gov. Bates recommends legislation "for the establishment of forest reserves in the various sections of the State," and the appointment of a State forester. He says the purchase by the State of 900 acres of so-called waste land for \$6,000 in Rutland indicates that without extravagant outlay the land may be obtained for this purpose to the great advantage of "the Massachusetts of to-morrow." No doubt sportsmen will see reasons from their standpoint to give their influence in favor of the plan.

The annual meeting of the State Association was held at the Copley Square Hotel on last Wednesday evening (January 13), with President Reed in the chair. The treasurer's report was presented showing the total cash assets to be \$2,556.78. The report of Hon. George W. Wiggins, chairman of the Fund Committee, showed that the fund invested in savings banks had gained an increase of \$121.71 in 1903, it being now \$2,550.74. A vote of thanks was tendered ex-President B. C. Clark, Maurice H. Richardson, M. D., and Mr. George O. Sears, for their liberal donation of \$100 each toward the expenses of the annual banquet at the Algonquin Club last March. A similar vote was tendered the retiring president for his valuable services as the presiding officer for the past three years. Dr. A. R. Brown passed around sheets with words to be sung to familiar tunes which proved a pleasant feature of the meeting. After the routine business, Vice-President A. B. F. Kinney told the thrilling story of his shooting a grizzly, which was greatly enjoyed by all present. Two of our members at the meeting are in the present House of Representatives, Mr. S. O. Staples, of S. Framingham, and Mr. George H. Moore, of Boston. Representative Herbert Thayer, of Franklin, was also present. Five candidates were elected to membership and the officers elected for 1904 are as follows: President, Wm. S. Hinman; Vice-Presidents, James R. Reed, Benjamin C. Clark, Joseph T. Herrick, George H. Payne, Robert S. Gray, Irving O. Converse, A. B. F. Kinney, Heber Bishop, B. V. Howe, A. R. Brown, Salem D. Charles, A. C. Sylvester; Librarian, Edward W. Branigan; Secretary-Treasurer, Henry H. Kimball; Executive Committee—J. N. Roberts, H. S. Fay, M. H. Richardson, C. W. Dimick, Rollin Jones, N. LeRoy, Gilmer Clapp, Paul Butler, Frank Fallon, M. A. Morris, N. C. Nash, F. B. Crowninshield; Membership Committee—Thomas H. Hall, W. B. Hastings, R. V. Joyce; Fund Committee—G. W. Wiggins, B. C. Clark, A. D. Thayer.

CENTRAL.

### Mr. Kinney's Bear.

At the annual meeting of the Massachusetts Fish and Game Protective Association at the Copley Square Hotel on the evening of January 13, after President James Russell Reed had gracefully delivered his valedictory to end his three years in the chair, and after William S. Hinman, of Auburndale, had been unanimously elected president, the members pressed Mr. A. B. F. Kinney, of Worcester, for a fulfillment of a long standing promise to tell them how he got his grizzly. His good nature could not resist the solicitation, and so, taking position near the head of the table, he began, leading up to the climax by graphic preliminary, somewhat as follows:

I was born outdoors—that is, on a farm, and after I learned that I could do better indoors and had abandoned farming, I used to take an outing every year for the sake of keeping my physique in good trim. Away back, about 1875, before the railroads had penetrated the great Northwest, I used to go into that country, and it is the

fact that I have seen as many of 50,000 buffaloes in one herd and as many as 3,500 antelope. As time went on, I had shot every kind of game in the country and found that I had quite a reputation as a hunter. But I had never yet got a grizzly. I felt that I wanted that to earn my degree, that I was not a real professional until I had got my grizzly, and you know that when a man wants to get his degree he expects to pay for it and he does not mind a few dollars.

The year that the Northern Pacific extension was opened into the country about Yellowstone Park, a party of us went out in a special car. We left the track at the station nearest to the region where big game was most likely to be plenty. Quite a large party of us went into the woods with guides, horses, and a full camp outfit. We hunted there for two weeks. We got a silver-tip bear and moose, elk, and other big game, but we did not see a sign of a grizzly anywhere. It came time to return to the station and to our party there.

After we had gone two days' march and had about fifty miles more to go, after we camped for the night, I lay thinking it over and could not sleep. I said to myself that I should never be any nearer the grizzly country than I was then, that I should never be any younger, and that if I was ever to get my degree, then was the time. So I made up my mind to let the rest of the company go on and tell my family what I was going to do. My wife and daughter were in the party at the station, and I did not want to leave them, or anybody else, try to turn me back. Then I rolled over and was asleep in a minute.

In the morning, when the others struck their tents, mine was left standing, for I had arranged with my guide to come back and return to the grizzly country. My companions of the party asked me if I was not going to strike my tent, too. I told them no, and that I should stay in it. They tried to persuade me not to do so, but I was determined, and the outfit departed for our camp. So, in due time, my guides returned with horses and provisions, and we went back our two days' journey.

I hunted around for a week, but did not find a sight of a grizzly. The weather had changed. Snow came on and it was evident that the bears had gone. You know that they are great travelers. One of their peculiarities is that, under such circumstances, they are likely to go to the north slope of the mountains, where the snow is more probably blown away. So I said to my guide that we would stay and try to find a grizzly if it took all winter, for I did not mind the cost of \$15 a day which the guides charged me for their services, horses, and provisions.

After a while as I was going around the side of an elevation which had a growth of pines, I found tracks in the snow. They looked perfectly fresh and from their size I felt sure they were made by a grizzly. Now the guide and I had whistles to call each other by if we were separated and wanted to find the other. I blew my whistle for him and he was on the spot pretty soon. He said that there was no doubt that the tracks were made by an old "Ephraim," and that they were fresh. We followed sharp along the trail and could see where the grizzly had stopped to feed. Finally we came to a place which is called a conlee; this is a piece of low ground where standing water has killed the trees and then it has grown up to rushes, cat-tails, tall grass, and the like.

When we got in sight of the rushes we could tell from the motions that our game was there. He evidently heard us, for he stood up on his hind legs and looked at us. He was a genuine Ephraim. As we measured him afterwards we found that he stood eleven feet high, and he was as tall as a Jersey cow when he was on all fours. As he stood facing us, I said to the guide that I was going to do the shooting, and I didn't want him to do anything until it was necessary, for I believed that I could stand the bear off myself without any help. But I know more now than I did then. I aimed my rifle—and I had a good one—straight at his breast, expecting, if I did not put a bullet through his heart, to break his backbone and disable him in that way. So I let drive.

He dropped into the tall grass. We used black powder in those days, and I stepped one side to see what had happened. Now, when a grizzly is hurt and not disabled, he means business, and he means business right off. As soon as I could see by the smoke, I could see that he was coming straight at me. All his hairs were standing up and his mouth was open and he looked just like the pictures of bears that are made to scare people. "Good heavens! He is coming!" shouted the guide.

I let fly with another bullet, but it had no effect on the grizzly, not a bit. He was so tall and rangy that he was coming pretty fast, and I aimed again at his head. He was not more than 50 yards off, but the bullet did not stop him at all. Somehow I was just as cool as I am now. I aimed again and that bullet struck him right in the corner of the eye and went through his brain. He curled his head around and partly under him, and he wasn't more than 25 yards off then. He fell over on his side, with his head curled under him.

Though I had been so cool, when I looked around at my guide, the sweat was running down his face and off from his beard in streams, he was so excited. When the reaction came for myself, there was a minute when I felt my strength completely gone. I could not possibly have picked my rifle from the ground if my life had depended upon it. But it was all over in a minute, and I was myself again. The guide did not notice how I felt. As we went toward the grizzly, we were careful, but we saw that his breathing was coming slower and slower, and then it stopped.

It was then four o'clock in the afternoon of a short day and we were fifteen miles from camp. I told my guide that we must get out of there that night anyway. His pony was a good one, and it is a fact about the trained ponies of that region that if you give them their heads in a dark night, when you can't see the trail, they will bring you out all right. We had come through one deep mud hole, where I had been thrown off my pony into the mud, and we had come up one place which was so steep that we could not ride, but had to be dragged up, holding on to the tails of the ponies. We had to make those places in the dark.

When we skinned our grizzly, I found that my first ball had not gone straight through the body. I supposed that he was facing me squarely when he stood up in the rushes, but he had been turned to one side. He had not

changed the position of his feet when he stood, but twisted his body to look at us, so that my bullet went out about six inches from the backbone and did not disable him. I found that the second bullet which I fired when he was coming at me went in at the hump over his shoulders and passed along about four feet under the skin where I took it out. It did not hurt him, but only warmed him up. The third bullet struck the cheek bone at an angle and passed along under the skin, coming out back of the ear, and did not penetrate the skull at all. It was the last bullet which settled him.

We loaded the skin on the pony and made our way back through the darkness, reaching our camp all right about nine o'clock. That is how I got my grizzly and earned my degree—i. e., having killed every species of game on the American continent.

## Adirondack Deer Hounding.

HURRICANE, N. Y., Jan. 11.—*Editor Forest and Stream:* The Essex County Board of Supervisors, of which I am the Keene (not keen) member, seems to have started the ball of discussion rolling by passing a resolution in favor of deer hounding.

In a recent issue of your journal I find a signed protest against cutting fifteen days from the end of the deer hunting season, and also a copy of Mr. Flint's letter to the Elizabethtown (N. Y.) Post and Gazette, in effect asking for statements from the Essex County Supervisors.

There seems to have grown up a sentiment that the people of this section were, and are, opposed to a hounding law. I am at a loss to account for the growth of such a sentiment, except that it is founded on the "hollering of the other fellow," and our feeling that it was needless as well as useless to deny such statements. The facts are so self-evident to us, they need no bolstering. They are so fresh in our minds by constant living with them, and we were so sure that anyone who came into this region, and took the trouble to inquire intelligently, could come to but one conclusion, it did not seem necessary to say anything. Another reason we have kept quiet, to speak perfectly frankly, is that by the attention which was not paid to our protests by the Legislature at the time the present law was being pushed, we were given to understand quite distinctly that our wishes in the matter did not amount to anything. Yes, you say, but why this resolution then? On Lincoln's principle of "peggin' away, peggin' away," and also because we do not mean to sit quiescent and have the impression go forth that we who live in the Adirondacks, and have our interests here, admit we were wrong when we protested strongly against the passage of the present law.

In any argument or discussion it is useless to ever hope to arrive anywhere without some fundamental point of agreement—some ground on which the contending parties can stand, or some common object for which both are striving.

With this in view I would state as a general proposition this, at which both the opponents and defendants of the present law are aiming—a deer hunting law which will give the greatest amount of sport to the largest number of people consistent with the protection of the deer.

If any reader of this is aiming at the absolute protection of the deer with no hunting whatever, which seems to be the aim of our legislators, who last year cut off fifteen days at the beginning of the hunting season, and now propose to cut off fifteen days from the end, he need read no further, for agreement between us is hopeless. This letter is addressed to those who agree with me as to the end to be attained, but disagree with me as to the method of arriving at it.

That a hounding law will afford more sport to more people than any other form of hunting law is so patent it hardly needs support; still I shall put one prop under it.

It is a matter of history that the people of this section through their representatives, by articles to newspapers, and otherwise, fought strongly against the passage of the present law. Is it not the fact that we were, in effect, accused of desiring the hounding law continued because we cared nothing about protecting the deer, caring only for the business which came to us because that law was on the statute books? Was it not said that the hotels and guides accounted for all the opposition, and that they were "hollering so loud" because their business would be hurt so much?

If you agree with me that the guides and hotels of the Adirondacks could see more business for them under a hounding law, then you must agree with me that a hounding law would attain the end of "the greatest amount of sport for the largest number of people," and also that the present law most emphatically does not attain that end.

But would such a law fulfill the condition "consistent with the protection of the deer?" This needs careful attention, for unless the condition is fulfilled the first part of the proposition would soon cease to be effective—there would be no deer to hunt.

It was assumed at the time of the passage of the present law that deer were, and had been, decreasing for some time, and that the hounding end of the law was responsible for that decrease.

Admit for a moment the deer were actually decreasing, what evidence was there to prove that hounding was responsible? One hard winter of deep snow and little food would account for more deer than two or three seasons of hounding, and it would take a long while for the deer to recover. Jacking and salt-licks, while illegal, were practiced, and accounted for a great many more.

Now, on what is based the assumption that deer are increasing? The only evidence I have seen is in the reports of the Forest, Fish, and Game Commission. Portions of these reports are given wide circulation in the newspapers. They are compiled from reports of shipments, and cannot be accurate, for a great many are killed that are not shipped, and the Commission can have no accurate knowledge as to those. Even allowing them a certain value, and they have, they have no comparative value, because these statistics have only been collected for a few years, and nothing is known of the shipments when the hounding law was in force. The conclusions drawn in this year's report from the increased shipments, to my mind, are erroneous. To me, the figures given prove two

things—more perfect methods of collecting data, and an increased number of violations of the law. And a little inquiry will lead you to the same conclusion.

I believe that deer were decreasing at the time the present law was passed, and I also believe they have increased since the law was passed. Nevertheless, I do not believe that hounding was responsible for the decrease, and I am far from giving the present law credit for the increase. Most of the credit must be given to the large number of private parks and reserves, which have been a safe refuge for the deer.

Aside from any comparison with other laws, the present law is bad for a number of reasons. It is responsible for the deplorable shooting accidents which have occurred every season since it became effective. It makes it possible to kill deer from a "blind" on the edge of a pond or marsh, when flies drive them to the water for relief when the weather is so warm that all the meat cannot be saved, and, worse than all, the majority of deer killed in this way are does. It is an axiom that an unjust and unpopular law is almost impossible of enforcement. Convictions before a jury for violations of the law are few and far between, not because of any lack of effort on the part of the protectors, but because of the universal sympathy with the violators, and the knowledge that the majority of men who come here to hunt deer cannot stand the fatigue incident to bonafide still-hunting, and it is a case of violate the law or not hunt.

For these reasons, if for no others, this law should be changed, and if a hounding law should be passed I would favor cutting out the still-hunting, at least from the beginning of the season.

While on this subject of game laws, I want to ask why this attempt to protect bears? No one in this section wants them protected. Essex county pays a bounty on them. They furnish no sport. No one hunts them. Those caught are trapped.

I have seen it stated somewhere that bears do not kill sheep. Why, then, do trappers bait their traps with sheep? A law to protect bears would be no more effective and no more observed than a law to protect panthers or wolves. Sheep raising is one of our most profitable industries, and no sentiment in favor of "poor, downtrodden Bruin" should be allowed enough influence to pass a law making it a crime for a farmer to kill him if he saw him chasing his sheep. There is a law now on the statute books which allows a man to kill any dog chasing sheep. Should bears be given a license to do it?

In almost all bodies of men, measures proposed which affect a particular section are passed or not passed largely on the approval or non-approval of the men representing that section, they being given credit for knowing more in every way of the conditions and effect of the measures on those conditions than men can possibly know who are not actually in touch with the people of the section affected.

Game laws in the Adirondacks are for the benefit of the people of the whole State, but you cannot get away from the fact that first and foremost they are the concern of the people of the Adirondacks, who know all the conditions, and know the direct effect of the laws.

I would suggest that if a hounding law be not passed applying to the whole State, let one be passed covering Clinton, Franklin, St. Lawrence, Essex, Warren, Herkimer and Hamilton counties. Let it be a law allowing hunting only from October 1 to November 15, hounding during the month of October and still-hunting the balance of the season.

ROBERT W. MOTISHER,  
Supervisor of Town of Keene.

## Pennsylvania Game Interests.

JOSEPH KALBFUS, secretary of the Pennsylvania State Game Commission and chief game protector, in his annual report says, "I have suggested to the Forestry Commissioner the propriety of establishing a preserve, in which to propagate deer and elk for distribution throughout the State, and my idea is to surround a certain piece of land, at such place and of such size, on the forestry lands of the State, as may be decided upon, with a fence of woven wire that will hold deer, etc., and outside this fence, at a distance of say half a mile, stretch another single wire, completely surrounding the preserve, and allow no hunting whatever within the single wire. I know that where a preserve is established for deer, the deer within the inclosure draw the wild deer from the outside, and a sure place to jump the deer is within a few hundred yards of said fence on the outside.

"I have also recommended the setting apart of certain tracts of land, one or more on each reservation, of dimensions and location to be decided upon, as a harbor of refuge into which game and birds of all kinds can retreat, and be safe from harm at all times. These tracts should be surrounded with a single wire, simply as a notice to the hunters, the ground poisoned systematically two or three times a year, and I am satisfied the increase of game, deer, and birds will be very noticeable. The Forestry Commission seem disposed to furnish the land for either purpose, leaving the question of wire and the erection of the fence to the Game Commission and the sportsmen of the State.

"Many complaints come to us of various forms of violation of the game laws. The men who, up to a limited time, have been in the habit of using dogs in hunting deer, complain bitterly of the energy with which we pursue the dog that runs deer and punish the owner for permitting such running, and still permit the use of birds dogs in the deer country during the open season for deer, claiming, and justly, too, that the bird dog trained to stand a deer is far more dangerous than the running dog, and that nine-tenths of the bird dogs taken into the aforesaid country at that time are taken for the purpose of hunting deer, and nothing else. I myself saw several men this fall hunting with dogs they called bird dogs. In two instances the dogs were led, and the men carried Winchester rifles, every bird hunter, almost without exception, carrying cartridges loaded with buckshot. It does seem to me that there is much justice in the complaint of these men, and that it would be only fair that all dogs be kept out of the deer country during the open season for deer. I have recommended that this be done upon

the forestry reservations. The birds hunter will have two weeks in October and two weeks in December wherein he can use his dogs on these lands. He can hunt anything he pleases during November without a dog.

"My experience in the woods this fall teaches me that two deer to the hunter is a too liberal allowance, and should be altered. One deer is surely enough, especially when we consider the fact that the law forbids the having in possession of venison except during the month of November and for fifteen days thereafter.

"I feel that some law should be adopted to prevent, or at least curtail, the use of the pump gun, and the automatic gun, recently introduced. Our law at this time forbids the use of the swivel gun, which, in my opinion, is not to be compared, for destructiveness, to the guns above named, especially on the water, where there is no limit to the kill. These guns are also very destructive in the field, for experience teaches me that the great majority of men who carry pump guns, continue to rain their loads after flying game, long after there is any probability of killing it, frequently, after the possibility is passed, with the result that many a bird or animal is seriously wounded, yes, mortally hurt, yet because of distance is not knocked down, and is lost to the hunter.

"We have had reported to this office during the past year the following apparent violations: Deer killed out of season 10; other game killed out of season 50; game killed in excess of limit, 5; killing of song and insectivorous birds, mostly by foreigners, 160; running deer with dogs, 23; deer killed by dogs running at large, 9; hunting by non-residents, 21; hunting by unnaturalized foreign-born residents, 67; carrying game out of State, 10; hunting on Sunday, mostly by foreigners, 97; sale of game, 20; purchase of game, 11; possession of game out of season, 3; destroying birds' nests, 10; using ferrets, 17; game in captivity contrary to law, 3; game taken by methods forbidden, 31; trapping of song birds, 9.

"We have pushed to conviction the following cases: Game other than deer killed out of season, 9; purchase of game, 5; sale of game, 3; hunting by non-residents, 17; hunting by unnaturalized foreign-born residents, 57; hunting game on Sunday, 31; destroying birds' nests, 3; trapping song birds for sale, 7; killing deer ahead of dogs, 5; dogs killed for running deer, 40; using ferrets, 3.

"We have tried and lost the following cases: Killing deer out of season, 1; killing song and insectivorous birds, 5; killing game, other than deer, out of season, 7; hunting game on Sunday, 7; hunting without license, 15; hunting wildfowl from naphtha launch, 1."

## Game in North Carolina.

RALEIGH, N. C., Jan. 15.—*Editor Forest and Stream:* Your correspondent's publication of the fact that the law in regard to the killing of game, ducks and geese, at night is being violated in the county of Carteret, has created quite a stir among the officials of the State Audubon Society, and it brought Secretary Gilbert Pearson here in haste to see the Governor. Mr. Pearson and the writer talked over the matter quite fully. Mr. Pearson says that the game wardens in the counties of Currituck and Dare, have done their work admirably well, and that they have stopped the killing of waterfowl at night, by the means known as "fire-lighting." The wardens in those counties are very determined men, and have been on the go day and night, while in Carteret the warden seems to be afraid to do his duty, and as a result the shooting has gone on nightly. Secretary Pearson has gone to the Carteret waters and will endeavor to secure a warden there who will do his duty. If he fails to find one, he will take warden Weatherly from Guilford, a most determined and thorough man, and may also take a warden or two from Currituck. He is determined to put a stop to this sort of slaughter in driving away of game, which ruins legitimate shooting.

Speaking of the work of the Audubon law in Currituck, Secretary Pearson says it has increased the legitimate killing of waterfowl three fold. He is told by dealers there that this is a fact, and also learns that the men who kill such game have received this season about \$5,000 a week. Two months of the season yet remains open.

The detection of fraudulent shipments of partridges out of the State, goes on with very great success. The men who are engaged in this traffic are now trying the scheme of first shipping from the place where they buy the game, to some place near the Virginia State line, and then re-shipping to the north. Birds have been found in trunks purporting to contain samples of goods, in valises and dress suit cases, in egg crates, in butter tubs and hidden between fresh pork. Trained dogs are now being used by the wardens in the detection of partridges and with very great success, warden Weatherly, of Guilford county, having first tried this smart scheme.

The Audubon Society has turned in to the State treasury \$4,880, as its receipts up to January 1, this being regarded as a very good showing. It is well understood that in the next Legislature there is going to be a fight against the Audubon law, as the pot-hunters will rally all their friends against it. Secretary Pearson is well aware of this fact. Non-resident sportsmen are well pleased with the law, and 160 of them have taken out licenses in the county of Guilford alone, the license being \$10 a season.

The amount of game in the State this season is unquestionably considerably greater than in recent years, as reports from various places show. As a general game market, Newberne appears to lead, and it is an admirable point for sportsmen to begin work from. Near Newberne the State owns many thousands of acres of land, known as swamp lands, and on this there are some of the finest lakes in the South Atlantic States, these being greatly visited by waterfowl, while the land shooting in the vicinity is excellent.

So far as yet reported the largest number of partridges killed in one day this season by one sportsman is 84, this "big string" having been made in Johnston

county, near Smithfield. Many persons have an idea that the shooting in the central part of the State is by far the best, and that birds are more numerous there, but they will find if they visit the pine country, in Johnston and other of the eastern counties, that partridges are very abundant. It is true that the cover is rather thick in many places, but this only adds to the interest in the sport.

Several experiments in game breeding have been tried in the State. English partridges have been turned loose in Warren county, and the gay-colored eastern pheasants in several counties. The mountain pheasant, or grouse, is being fostered in Mr. Vanderbilt's Pisgah Forest, and also in the extensive tract of country near Linville, of which Col. Murphison, of New York, and other gentlemen are the owners.

F. A. O.

## Cuvier Club.

THE annual meeting of the Cuvier Club was held on January 9, and the following officers elected, President Starbuck being chosen to serve for his ninth term in that office: Alex. Starbuck, President; Peter F. Swing, Henry Hanna, P. E. Roach, First, Second and Third Vice-Presidents; Trustees for three years—E. G. Webster, J. T. Rouse, and Hon. Peter F. Swing. New members as follows were elected: W. S. Magley, Alfonso Aralus, Joseph Hummel, C. I. Donnell, O. C. Ellis, Walter B. Weaver, John H. Kuhn, and A. B. Trum.

The custodian of the museum and library, Mr. Chas. Dury, reported the receipt of several new specimens for the museum and books and pamphlets for the library.

Chas. J. Ryan, Deputy Game Warden, reported as the result of his year's work 40 violations reported, 25 arrests made, 18 convictions; cases pending, 4; and \$471 assessed as fines.

The president delivered his annual address, which contained many points of special interest to sportsmen and game protectors. He reviewed the progress made by the club in its chosen work and in its gain of strength. He dwelt briefly on the gradual disappearance of game once plentiful in the State. Of the ducks he said:

"It seems like writing the history of a vanishing race to take up the large family of ducks—canvasback, red-

THE CUVIER CLUB'S NEW HOME.

head, teal, dusky and others that journey in myriads from the frigid regions of the North, where snow and ice are almost perpetual. This season there were few good bags made in our State, and these by the habitues of the club houses along the bays and inlets of Lake Erie. Judging from numbers slain, we arrive at the conclusion that the ambition of these gunners was simply to make a record. No wonder that spring shooting of these waterfowl is not abated, as this clan is always seen in the lobby of the Legislature looking to the continuance of it. It seems to be a gigantic undertaking to suppress this greedy class of red-handed butchers, but their day of sorrow and lament will soon come. While we notice that Indiana has suppressed the spring shooting of ducks, Illinois gives open season for them from September 1 to April 15. Fifty ducks per day is the limit, and twenty-five of any other game bird. Fifty ducks per day. Think of it for a moment, if you can, and then realize on its mathematics for the entire season of 227 days. This at 50 per day is 11,050 to a single gun, if the limit is reached; figure then on it for 100 gunners, and you have 1,105,000 ducks that have been taken from the feathered tribe, and here the problem of these vanishing fowls is completely solved, much to the shame of the Legislature."

Of the conflicting game laws of adjoining States, or those of similar climatic conditions, he says:

"There is still another embarrassment in the laws conditioned by conflicting open seasons, as per example: In Ohio you can kill quail from November 10 to December 2; in Indiana, from November 15 to January 1; in Illinois you have the open season for quail from November 10 to December 20. Here is a wide difference between these three States, while the Ohio River laves the shores of all three. Again, in North Dakota, the legal season for catching all species of fish extends to January 1; in South Dakota no fish of any kind can be taken in the month of

December. These two States lie alongside of each other, with the Upper Missouri River running through both from end to end. Again, in Arizona a somewhat singular law prevails regarding black bass, which have been introduced into the waters of that State. The close season is legally from December 1 to September 1. In the North, including Canada, these fish are through spawning in July, and why they are prohibited in the months of July and August in a section where the thermometer has frequently shown a registration of 120 degrees in the shade, and where the spawning season for them is certainly at an end by June 1, is known only to the rustic legislators. Nevada shows an analogous condition. A code of seasons adapted to each particular zone should be formulated by a convention of fish commissioners. We have harped on this for years in belief that some action would be taken that would rectify it, and we still live in hopes of seeing it accomplished."

The disappearance of the forests is mentioned. These, he says, are essential for the protection of fish and game. As Chas. Hallock says, "Preserve the forests and all is preserved." The National Irrigation Congress which met at Colorado Springs is a step in the right direction, and will prove of interest to sportsmen.

"Some game dealers conceived the idea that foreign black bass could be sold, and in attempting it they found themselves before a magistrate to answer for said offense. The cases were bitterly fought and finally decided against them, and not being satisfied with the decision, they appealed the cases to the Common Pleas Court, where they have recently been decided in our favor."

Of the difficulty of preventing poaching on the Miami River, he says:

"We regret to state that it has been a source of great annoyance to us and cost some treasure to patrol it. Nearly every farmer that is located on its banks or lives near by is the owner of a net, and uses it when occasion offers. Form a jury from this class to try a violator and acquittal or disagreement is the rule, and not the exception. What violators of this stream we have had found guilty have been the result of long vigil as well as its prosecution in a distant locality from this army of poachers. The angling there, despite the repeated seining, has been fairly good, so report some of our members who summer on its banks and listen to the hum of the festive mosquito and the grating notes of the cicada."

Mr. Starbuck's suggestions for changes in the game laws will be seconded by most sportsmen:

"Our State laws need some pruning and repairing, and there are also some new statutes required. The first defect discovered in our game laws enacted by the last Legislature was that of the rabbit law, which proved inoperative, and, as a consequence, was used as a subterfuge for all poachers with which to kill game birds. If overhauled when afield, by a warden, the plea presented was that of hunting rabbits, and so, perforce, Mr. Game Warden had to permit the release of the vagrant gunner. We want the open season for rabbit the same as the quail season, and then there will be no excuse for having gun in field or forest. Nearly everything in the land is taxed, and we see no reason why a license fee of \$1 should not be charged for use of a gun during the open seasons. It would, in a great measure, stop our adolescents and others from waging war on everything that has feather and fur. This law was before the last Legislature, but it was defeated by the representatives from the country districts, as was the law for discontinuing the spring shooting of all waterfowl. We urge their passage again and hope our Senators and Representatives will give earnest support to this particular bill.

"There are, we regret to state, a number of opponents to the license law from the belief that the game and fish are for the people, but when we consider that 75 per cent. of the game birds have already been destroyed by the people with at least 50 per cent. of the fish, it looks very much like this democratic measure will not round out very well. If some such strong means as the license does not prevail to save the remainder of the game, it will vanish into a memory. Let us restore it if we can, some part of it or a good part of it.

"The only practical way of saving game, when we have such a horde of poachers and pot-hunters and cold-storage houses to hide the illegal plunder, is to entirely prevent the sale of it. The League of American Sportsmen heartily indorses it, and also a large number of thinking sportsmen are heart and hand in favor of it. I would not take the liberty of speaking for our organization on the subject of 'no sale for game,' but individually I feel that I am unquestionably being fast drawn to that platform by the presentation of adverse facts that show the rapid decimation of our game, and that because I desire to see it preserved and once more populous in our fields and forests. It is a sad thought to realize present conditions, and heroic treatment seems to be the only remedy for these destroying evils. To show how this principle of 'no sale for game' is spreading, I will state that it is forbidden in Alabama, Indiana, Iowa, Oregon, Pennsylvania, Tennessee, Wyoming, and in some of the counties of Maryland. It will, we are confident, soon become universal, and then, in a few years, the depleted flocks will again be filled and once more the game exceedingly abundant. Then you can generously give open seasons and also permit the sale of game.

"The State Fish Commissioners, in their report, recommend changes in several of the laws relating to Lake Erie, and especially that providing for the tonnage tax upon the fish catch, which they wish supplanted by a license tax. The operations of the State fish hatcheries along Lake Erie and at London, O., are reported as being reasonably successful. At the London hatchery it will be recommended that the experiment of propagating quail be undertaken, and that the fish ponds be increased in capacity. In regard to the distribution of fry this fall, the report states that from the car Buckeye nearly 500,000 fry, composed of large and small-mouth black bass, crappies and marble catfish were distributed. Four trips were made with the Buckeye car, which traveled about 1,475 miles. Fish were distributed to 165 persons, and of all the applicants only six or eight were missed. This was either caused by inability to reach them with the car or failure on their part to be at the station as notified, and shortage of fish on board to supply all wants on return trip.

"The hatchery has been most successful under the

supervision of George Morcher, producing double the amount of fish in 1903 that were raised in 1902. The car Buckeye has been used so long and in such a condition that we believe it can not be used another year with any degree of safety. We had much trouble with it last fall, and it was a source of uneasiness at all times."

Mr. Starbuck closed his address with a few remarks regarding the new home of the club, which he feels confident will be built before the end of 1905, if the members will all work unceasingly for that end.

## Brown's Tract Guides.

THE annual meeting of the Brown's Tract Guides' Association at Old Forge, in the Adirondacks, on Thursday, January 14, attracted a goodly assemblage of men who are interested in the protection of fish and game and the preservation of the forests, about 150 being in attendance. The association has about 500 members, of whom 100 are active. The following officers were elected for the ensuing year: President, Richard Crego, Boonville; First Vice-President, William Stell, White Lake; Second Vice-President, Peter Rivette, Old Forge; Secretary and Treasurer, A. M. Church, Boonville.

Resolutions were adopted favoring the black bear bill now in the Legislature, condemning the sale of venison, brook and lake trout, opposing anchor and buoy fishing, advocating the further purchase of land by the State for the Adirondack Park, and condemning the cutting of timber on State lands. The report of the Secretary and Treasurer, A. M. Church, said:

Six years ago thirteen guides met in the boat shop of H. D. Grant, in Boonville, and formed this Association. The circumstances leading to this step and the necessity for such action is familiar to all. With the completion of the railroad came the summer tourist, and after them came incompetent and irresponsible men who posed as guides. To protect ourselves and the sportsmen and tourist from this class, and to furnish the constantly increasing army of hunters, sportsmen and tourists with good, competent guides, to patrol the section through which we worked and prevent violations of the game law, and to assist in the making of needed amendments to the game laws, has been the work of this Association.

At the time of the completion of the Mohawk & Malone Railroad, there were comparatively few sportsmen and hunters who visited this region. A few buckboard loads of hunters came during the open season. A few—it seemed like many in those days—came and fished. Now, every day of the season has its train loads, and for many days the train service has to be doubled to accommodate the constantly increasing throng.

These hunters and sportsmen are scattered far and wide, and there is no hill or valley but has its quota. The Game and Forest Commission report that nearly two thousand deer were shipped from the Adirondacks during the open season of 1903 by express, and they also estimate, that for every one shipped there are four killed and disposed of in the woods. This would bring the total slaughter to nearly ten thousand, and this estimate is believed by many who are in a position to know, to be much too low.

For four years this Association has advocated the shortening of the hunting season by cutting off the two weeks, in November, now allowed as open season, and it is very gratifying to know that this year we have nearly every sporting association throughout the State with us on this question. The New York State Fish, Game and Forest League, which is made up principally of delegates from other organizations, passed resolutions declaring it to be the sentiment of the League, that such November hunting should be stopped, and there is a bill before the Senate now that will close the season of 1904 on Oct. 31. During the session of the last Legislature bills were passed abolishing the shooting of wildfowl, ducks, etc., in the spring, and prohibiting the sale of woodcock, quail and partridge killed or taken in the State.

Deer seemed fairly plenty during the past season, but it is a question of doubt as to there being any increase in their numbers. The present winter bids fair to be one of the greatest severity, and as they are already feeding on the cedars about the lake shore and in many places are confined to the balsam swamps, indications are that there will be great mortality among them before spring. There were no grouse or partridge in our section this year.

Our herd of five elk, which we wintered at William Dats, were turned loose in April and were a great attraction. But late in August one was run over by a train on the Mohawk & Malone Railroad and killed, and Sunday, Sept. 6, the remaining four were found shot and killed near the outlet and not far from Morse

Lake. All were killed in the open and but a few feet apart. The shooting was without doubt intentional, and from pure malice. The case has been investigated under the direct care of Chief Game Protector Pond, but we have no report of progress. The Association, together with William H. Staake, of Philadelphia, and William Dart, of Second Lake, offer a reward of \$500 for the arrest and conviction of the person or party who did the shooting.

The fishing season was in some respects satisfactory, but the fact cannot be denied that brook trout are growing scarcer each year. The Fulton Chain hatchery turns out many trout which were planted mostly in the vicinity of the Fulton Chain, and a full carload of lake trout, fingerlings, were liberated in the four lower lakes of the chain.

There has, of course, been the usual violations of the game law, but the fact is plain that there is a largely increasing sentiment in favor of a more rigid enforcement of the game and forest laws. There were a few valuable hounds turned loose in the woods, but for some reason the climate in this vicinity does not seem to agree with them.

There is another subject that has received much attention at the hands of the press throughout the State, and the comments thereon have not always been as favorable to the guide as they should, and that is the relation between the private preserve owners and the Adirondack guides. These comments seem to carry the idea that the owners of the preserves and the guides have nothing in common. The very reverse is the case, and the most cordial feeling exists between the members of the Brown's Tract Guides' Association, and the owners of all private preserves with whom they have come in contact.

W. E. WOLCOTT.

## Dogs for Wounded Game.

Editor Forest and Stream:

I have noticed that deer hunting with dogs is not allowed in this country, and find this to be a very wise precaution. But why is it not allowed to use a dog for tracking wounded animals?

Lots of deer, elk, and moose must now be lost because even the best and most reliable trackers may fail to find them, and they are left to die in misery and rot, while the hunter bangs away at a new one. It would be very interesting to get an approximate estimate of the percentage of animals wounded and secured. A good woodsman, aided by a well trained dog, will lose very few animals, and the real amount of killed ought to be considerably diminished.

Many will say that to allow this will be to revive deer hounding; but this is not at all sure, and can easily be avoided by using the right kind of a dog. The German dachshund is specially well adapted to this, is an excellent tracker, and is often in Europe used for this purpose. It is true that this dog, when allowed to do so, will hunt deer, but his lack of speed and his inability to make any headway in rough country, makes him practically useless for hounding deer. The rough haired variety is a hardy dog and very cheap to keep.

EUROPEUS.

## Quebec Game Shipments in 1903.

AYLMER, Que., Jan. 14.—Editor Forest and Stream: Inclosed is a statement of deer, moose, and caribou shipped from a few points in the Province of Quebec by the Dominion Express Company, which speaks for itself. I would be pleased if you would notice that there were 55 moose shipped from Kippewa, Temiskaming, and surroundings, notwithstanding the misrepresentations made by one of the magazines. As soon as I receive other reports of the same nature I shall only be too pleased to send same to you.

Deer—Arundel 46, Masson 50, Calumet 3, Campbells 33, Conception 14, Conlonge 50, Gracefield 168, Kazabazua 167, Labelle 107, Megantic 374, Montebello 35, N. N. Mills 16, North Wakefield 24, Parineauville 317, Point au Chene 25, Scotstown 108, Shawville 52, St. Jovito 10, Thurso 24, Vonosta 1, Wakefield 8, St. Faustin 1, Kippewa 8, Temiskaming 7. Total, 1,736.

Moose—Megantic 2, Kippewa 23, Temiskaming 33; total, 57.

Caribou—Temiskaming 1. N. E. CORMIER, Prov. G. Warden and F. Overseer.

## Tessie's Cougar.

SEATTLE, Wash., Jan. 12.—A mountain lion or cougar measuring 11 feet was killed yesterday by a little girl in the Cabinet Gorge country, Idaho. She accomplished the task, which required the steady aim and cool nerve of an old hunter, with that calm assurance born of freedom from knowledge of the word "fear."

Tessie Edwards is the little heroine of this startling adventure. She is only fourteen years old, but an expert with the rifle. Her father is a great hunter, and has made a chum of her in his rambles through the woods and over the hills. Yesterday they were hunting rabbits, which are numerous in Cabinet Gorge. Tessie became separated from her father, and was walking along a path when she unexpectedly came face to face with a crouching cougar. Without a moment's hesitation she fired, inflicting only a flesh wound. Made angry by the wound, the monster cat gathered itself and shot through the air at the little girl.

Just as the yellow fury left the ground, Tessie fired again; the bullet went true to its mark, and the monarch of the mountains fell helpless and expiring almost at the feet of its slayer. The bullet had broken its back.

Not until the trying ordeal was over did the girl realize what she had passed through. PORTUS BAXTER.

## The Albany Committees.

ALBANY, Jan. 16.—The standing committees on Forest, Fish, and Game have now been announced in both branches of the Legislature, and they will begin work at once. The Senate committee, which is a hold-over body from last session, is made up as follows:

Senators Elon R. Brown, of Jefferson; Armstrong, of Monroe; Allds, of Chenango; Lefevre, of Ulster; W. L. Brown, of Otsego; Townsend, of Oneida, and Keenan, of Queens.

The Assembly committee on Forest, Fish, and Game is an entirely new body, and will meet this coming week for organization. It comprises the following: Messrs. Reeves, of Suffolk; Merritt, of St. Lawrence; Bridgeman, of Orelans; Knapp, of Clinton; Simpson, of Sullivan, A. P. Smith, of Wayne; Matthews, of Franklin; Stevens, of Rensselaer; Pratt, of Oneida; Wood, of Fulton-Hamilton; Wolf, of Kings; Rosenstein, of New York, and Chanler, of Dutchess.

No bills on fish and game have made their appearance thus far in the Assembly. The Senate bills introduced already in that branch of the Legislature were reported last week.

## Adirondack Guides' Association.

UTICA, N. Y., Jan. 15.—The Adirondack Guides' Association held its annual meeting in the town hall at Saranac Lake, Wednesday afternoon, January 13, and in the evening enjoyed a banquet and dance. About fifty guides were in attendance. The following officers were elected: President, Peter A. Solomon; Secretary, Frank Vosburgh; Treasurer, B. R. Moody. Dr. F. E. Kendall, of Saranac Lake, was elected honorary president.

Resolutions were adopted favoring the prohibition of the sale of venison, trout and bass at all times, and endorsing the measure now in the Legislature providing for the protection of black bears during the summer months.

W. E. WOLCOTT.

## Lake Champlain Waters and Fish.

PLATTSBURG, N. Y.—Editor Forest and Stream: Replying to your inquiry regarding the pollution of the waters of Lake Champlain by pulp mills, I beg to say that I have never observed any evidence of such pollution. It is true that there are no sulphite mills that would be likely to affect the portion of the lake opposite Plattsburg, unless it be the mill at Ausable Forks. As that is located, however, some seventeen miles distant from the lake on the Ausable River—which is a rapid running stream—I doubt if any effect would be perceptible at its mouth.

I have observed with interest the newspaper discussion regarding the mill at Willsboro. I am very much inclined to believe that the evidence of pollution from that source has been exaggerated; in fact, in considering the question of the pollution of these waters, it should be borne in mind that Lake Champlain is a large body of water, one hundred and twenty miles long, by some twelve or fifteen miles wide, with a considerable current toward its outlet, the Richelieu River. If it be a fact that there is no evidence of pollution from the drainage of the city of Plattsburg, with its ten thousand population, or the city of Burlington, with its twenty thousand people, I can hardly see how the waters of the lake would be

affected to any great extent by the deposit of such chemicals as would result from the operation of an ordinary pulp mill. I have never seen or heard that fish have been injuriously affected from that source. I have never explored the shores of the lake in the vicinity of Willsboro, and only know of the situation there as described in the newspapers. I am informed by residents of the vicinity, however, that the evidences of pollution discovered by Mr. Hatch were not caused by the refuse from the Willsboro pulp mill.

As a resident of this locality, and as the chairman of the executive committee of the Catholic Summer School of America, not only am I deeply interested in preserving the purity of the waters of Lake Champlain, but I regard the preservation of the food and game fish of the lake as a most important matter. It is generally thought that the supply of fish has been depleted during recent years. I attribute this, however, more to the fact that during the early spring the pike, following the Vermont shore of the lake north to their spawning beds in Missisquoi Bay, in Canada, are caught and shipped to the New York market in carload lots. This seining is licensed by both the Vermont and Dominion authorities. The particular law of New York which does not permit seining in Lake Champlain at all is, in my opinion, unwise. Probably the most valuable food fish in Lake Champlain is the fresh-water shad, which obtain in large

numbers, but which can only be caught by seining. Except for the shad, seining at any time other than during the spawning season, would be unprofitable. The number of pike, bass and pickerel, for instance, that could be caught by seining at this season of the year, would be of little consequence. If the FOREST AND STREAM can arouse a sentiment which will bring about uniformity of law covering the seining question, within the three separate jurisdictions to which the waters of the lake are subject, it will have accomplished a most valuable service. I do not wish to be understood as in any way justifying pollution of the waters of the lake from any source; but I confess that I do not believe that such an extensive body of water can be perceptibly affected by the discharge of the refuse of any one or ten pulp mills of the size of the Willsboro plant. If this were possible, then in my opinion the waters of New York Bay would be unfit to even navigate. JOHN B. RILEY.

## Old-Time Rhymes.

A Fox is kill'd by Twenty Men;  
That Fox, perhaps, had kill'd a Hen;  
A gallant Act no doubt is here!  
All wicked Foxes ought to fear,  
When Twenty Dogs and Twenty Men  
Can kill a Fox that kill'd a Hen!

## A Camp-Fire on Fifth Avenue.—II.

THE second dinner of the Camp-Fire Club was held Saturday night, Jan. 9, at the Aldine Club, on Fifth avenue, New York.

The toastmaster for the evening was carefully selected, and he delivered himself again into the hearts of all his old friends and new ones, too. Mr. Dan Beard kept the fire aglow. The guest of the evening was Mr. Hamlin Garland, who read an admirable address on "The Joys of the Trail." Mr. Ernest Thompson Seton told his experiences in conducting a local game preserve at his summer home in Connecticut, of his conversion of the mischievous boys in his neighborhood from desperadoes to good Indians, from poachers to game protectors, from mortal foes to tried and true friends.

Dr. Robt. T. Morris told of the domestic troubles of Caribou Charlie. Prof. M. T. Bogart, of Columbia College, described the absence of dignity that in modern times is applied to the word professor. Mr. J. A. Dimock explained the difference between an old man and a man who has lived a great many years, and the ascendancy of the camera over the rifle in filling the game bag of remembrance. Mr. L. C. Ivory called attention to the higher education of man in his pursuit of game, making it plain to all that the logical excuse for killing is hunger alone. Capt. E. B. Rogers, U. S. N., gave an interesting account of trout fishing in Japanese waters, and of an international boat race in Asiatic waters. Mr. J. Dunbar Wright told some very interesting stories and defined the difference between an automobile and a skunk, giving the automobile the benefit of the doubt.

Mr. C. Bardwell Brown, who has recently returned from the Bering Sea country and brought a bear cub with him which he presented to Mr. Hornaday, interested his hearers with the details of its capture.

In Dr. Geo. T. Harrison one could easily imagine that Harry Stilwell, Edward's Col. Crawford Worthington, had been brought to life, his story of the old darkey and the 'possum will be told "at" again and again.

Messrs. Ezra H. Fitch and Dr. T. K. Tuthill received a deserved vote of thanks as the dinner committee. One of the very many pleasant features of this dinner was a course called "That Reminds Me," which consisted of a tin plate, an iron knife and fork, and on this plate was served bear meat and bacon and a boiled potato. Each member and guest carried home with him his plate and knife and fork as a souvenir of the occasion.

T. E. B.

### A Dinner to "Uncle Bill."

DR. J. P. BAKER, William J. Frey and Rufus E. Taylor, of Findlay, O., gave a dinner on New Years eve, to Col. William Thompson, of Platte Lake. Some eighty guests sat down to the tables, and the occasion was one of great jollity and good feeling. Says the

Darby Courier: Colonel William Thompson, known in the upper lake regions of Michigan as "Uncle Bill," and by the same cognomen to the hundreds who have visited his famous hotel on the shores of Platte Lake and enjoyed his hospitality—this "Old Uncle Bill," seldom if ever before having strayed far away from his home among the pines, came down to Findlay, Thursday evening, to be present at the dinner designed in his honor, by Messrs. Baker, Frey and Taylor, three of the most enthusiastic fishermen that ever held a rod and reel or dipped a net. He put on a suit of clothes quite unlike the kind he wears when at home and a "biled shirt" and collar. He appeared in Findlay quite unlike the "Uncle Bill" of Platte Lake, except for his characteristic smile, his open, frank manner, and the heart that in generosity must be bigger than several men of his diminutive size.

The table at which the guests of honor were seated was beautifully decorated for the occasion. Three rods and reels, supporting a landing net filled with beautiful carnations occupied a place in the center of the table. A thirty-pound muscalonge, presented to Dr. J. C. Tritch for Christmas by friends in the Platte Lake regions, had been generously contributed to Messrs. Baker, Frey and Taylor for the dinner.

### League of Salt-Water Fishermen.

NEW YORK, Jan. 16.—The Protective League of Salt Water Fishermen was organized in 1898, for the purpose of obtaining legislation in regard to the protection of the salt water fish, and the doing away of the wanton destruction and criminal extermination of certain game species. They desire the help and co-operation of all anglers in conforming to and enforcing existing laws, and generally in furthering and aiding all lawful methods looking to prompt action in all violations of the law.

The regular meetings are held on the second Wednesday evening of each month, at 8 P. M., at 106 West Thirty-first street. Membership is only \$1 a year.

The officers of the League are as follows: President, Albert Baywood; Vice-President, Michael Roach; Recording and Corresponding Secretary, John C. Smith; Financial Secretary, Fred Hochgraef; Treasurer, Louis Bergé.

The entertainment is under the direction of the following committee: A. F. Albert, chairman; Martin Kuhnke, Emil Drescher, Charles Habenstein, Michael Roach, and Charles Noehren.

The League extends a cordial invitation to all anglers to come to their meetings and investigate. The sixth annual Grand Stag of the League will be held at National Hall, 1021 Second avenue, between Fifty-third and Fifty-fourth streets, Wednesday evening, January 27, 1904.

JOHN C. SMITH, Secretary.

## A Harpoon Carried Twenty Years.

Editor Forest and Stream:

A short note in the current number about long journeys made by whales mentions the fact that harpoons are sometimes found in them. While out with the whaler in 1874, we took a rather small one, and when cutting in found the remains of an old harpoon that had been rusted off, and had the flesh grown over it.

It was passed up on deck and cleaned off to find out what ship it belonged to. The name would be on the shank. The name was here, but none of our mates had ever heard of that ship. The captain, on being shown the harpoon, said that this ship had been lost in the Arctic in 1855. The whale had been carrying the harpoon at least twenty years, and maybe twice that long.

## The Kennel.

### The Lonesome Puppy and the Glass Pig.

Theresa, N. Y.—Editor Forest and Stream: In reading your valuable paper from time to time I have noticed many useful articles in regard to the care of dogs, birds, etc., and thought perhaps you and your readers might be interested in knowing of an experiment that was recently tried with a five weeks old pup.

The pup was a full blooded English pointer, and had been purchased from Michigan by Mr. J. B. Cooper, of this place, and had arrived from that State on the evening train, December 6. The little fellow had whined and cried incessantly for a period of two days and nights. Mr. Cooper was about to find another home for the dog, when I suggested that he place in the basket with him a small glass pig which lay on the table near-by, and was doubtless used for ornamental purposes. After the pig had been placed in the basket with the pup, the pup began immediately to lick the pig with his tongue, and lying down by the pig went to sleep with his head resting over the back of the pig.

After it was discovered that the pup wanted company, two toy dogs were procured, and from that time up to the present the pup has been thoroughly contented with his new companions, and can be found daily among them fast asleep; and when they are removed he becomes uneasy and whines for their return.

This article is written with the hope that it may fall into the hands of some person who has the bringing up of a young dog, and does not want to be annoyed by its constant crying, and who desires, most of all, to see the little animal enjoy itself.

Red Lake Oarsman and Guide.

## The Nomads on the Osage.

BY PERRY D. FRAZER.

The Story which won the Second Prize of \$25 in "Forest and Stream" Canoe Cruising Competition.

(Concluded from page 56.)

Beyond the Thornton farm we hugged the left-hand shore. So far the channel in shallows had been on the other hand with one exception, and that one in the passage of Prince Edward's Island. Here the shores became cleaner and more attractive, consisting of bright red gravel on which it was a positive pleasure to walk. There was a two mile stretch of this, and then we came to the bluffs again on the left-hand side. I had long ago made the acquaintance of every tree and rock and cave along these bluffs, and even remembered where to look for a certain cluster of persimmon trees, which we found to be bearing fruit as bountifully as of yore. And as we fared along, Bloody Island, with its great stretch of shingle and its fringe of cottonwoods and sycamores, an island at high water, but only a peninsula as we saw it, brought forth another flood of memories; for it was among the cedars beyond it that I hung up my first deer; and it was on its gravel that a fellow canoeist and myself had crawled ashore one night, tired and hungry after a long day's paddling, cooked our dinner and turned in without further preparation than to spread our blankets. To be awakened long after sunrise by an ugly, lean razor-back hog that had spilled all of our cornmeal that it had not eaten, and was walking over us in search for more. To-day there is a miserable log hut midway of the island, and ere we passed it, one head, then another and another bobbed up behind a fallen sycamore until we counted six, of all ages but without acquaintance with the clear water that flowed so near at hand. The nets and the john-boat moored at the water's edge told of the calling of the head of this family.

Passing on, this time to the left-hand shore, we heard a mighty wheezing and snorting, and Helen, who had been napping at her post, announced the coming of a

"choo-choo boat." This one was a diminutive affair, propelled by a gasoline engine, and it had a barge in tow that was partly loaded with wheat in sacks. And presently, in response to a signal waved by two men on the other shore, the captain swung round, and with much puffing and fuss, the barge was pushed into the soft mud of the bank, and loading wheat began. It seemed meet that the wind should cease blowing and that the surface of the river should become as a mirror, for we were approaching Painted Rock, that weird and curiously fashioned landmark, once the gathering place of all the Osages in the days of old, before the coming of the white man. Even of the old legends there is now a dearth, evidence of which fact is to be seen on the clean white face of the great cottonstone cliff, where the curious pictures and marks, placed there by the red men, have been daubed over in places with black paint by young rascals, who have desecrated the old landmark with their own names. That villages existed among the hills is evident from the number of arrowheads to be found thereabout, and we picked up a very large one on the gravel at the water's edge. And whether by accident or design, it is impossible to say, but the fact is that both edges of this dart are curved, seeming to carry out the theory that has been advanced by some writers, that the spiral motion was not first imparted to rifle bullets, but to arrows.

The shadows were long ere we drew away from the Painted Rock, and sought a camp site. Immediately above the rock two hollows merge into one, cold water seeps through the white gravel of both little streams, and the long grass hardly the pawpaw bushes suggests rest—and ticks. Formerly the lowland of these hollows was a famous place for squirrels and turkeys, and time had changed this place for the better, from the hunter's point of view—save the game, which is now only moderately abundant; but we went a little further along to a spot where another tiny run breaks through the cliffs, leaving on its western side a bit of level ground, where I had often camped. This place was high above the water's edge, and but for a log that had long ago fallen down the slope and served as a gangway, we could not have gone ashore at all in

comfort, if indeed in safety, so soft and deep was the deposit of mud near the water's edge—one of the mementoes of the great overflow of the summer time. It was for our own information and guidance that George Irwin and myself had called this place Turkey Hollow, when, in the early '90s, we passed several weeks along the Osage, making this our permanent camping ground. It was at dawn one morning that I climbed the steep hill to a spot further up the rocky gulch, where a trickling spring provided us with water, and putting the tin coffeepot down on a stone with a clatter, was dumbfounded to hear a great crashing in the trees hardly as several turkeys, disturbed on their roosts, sought safety in flight to the summit of the hill above. Often had we laughed over this occurrence, we who were hunting turkeys in far distant woods, when a number of the great birds were roosting—at least that night—in our own backyard, so to speak. Is it remarkable, therefore, that on the morning following our recent visit to the old camp ground I should, on awakening, have fancied only one night, instead of ten years, had passed, and that my old friend and myself were still in the same old pup tent and a drove of turkeys making a great clatter in the hills? I rubbed my eyes and sat up, looking about me for some time before I could realize that I was wide awake and that George was thousands of miles from that spot. But the turkeys—they were real and no mistake. Nothing else could make a fuss like unto that which came to my ears as I hurried into knickerbockers and moccasins. Even little Helen sat bolt upright and said "Phut," signifying astonishment, in her own baby language. I hauled the automatic out from its dry bed on the edge of the blankets, then put it back again, remembering that the open season for turkeys was still a month in the future. Armed only with a desire to see the big birds; therefore, I climbed softly up the gulch, and although the hour was past seven, and the sun was shining brightly athwart the hilltop, those turkeys were still in the trees. I counted fourteen birds in good condition, taking my time in examining them, before a stone slipped under my foot and tumbled down the rocky slope, startling the birds to

flight. Even then not all of them sought the ground, a few fluttering down into the dense growth of scrub oaks, while others flew to trees further up the hill and craned their necks in my direction. Once afterward I heard this or another lot of turkeys while in the woods, but during our stay they did not go to roost in that place, which recalled the conclusion arrived at by Irwin and myself, that these birds did not always roost in one place, else we should have heard them and not been surprised to find them in the trees several days after our coming. However that may be, it was pleasant to fancy these birds to be of the same group seen there so long ago. Not that such a thing is probable, but it was good to think so, and be content with that.

Breakfast over, and the camp made snug that morning, we had time to look about us, and I for one surveyed the old camp site with deep interest. The tent stood beneath a noble oak, while beside the larger tree were three smaller ones that had grown wonderfully during the decade that had passed since my last cruise in these waters; but on looking at the trees carefully I found six or eight wire nails in their trunks seven feet or so above the ground, and knew at once that those nails were driven by Irwin and myself, and that they were brought with us from Denver, being of a sort not seen to-day. We had, in preparation for our cruise down the South Platte River, included a few of these nails in the outfit, and as that cruise was abandoned on the plains, and all our camping duff was shipped with the canoe to the Missouri, we had not again noticed these wire nails until camp was made in Turkey Hollow, when, finding no other use for them, we drove several in the trees and hung our rifles, salt meat, sweaters, etc., on them. Time had dealt kindly with them, and they were still serviceable to us, although the bark of the oaks left but an inch or so of the nails exposed, so much had the trees increased in diameter. Forty feet from the tent the hill above terminated in a little cliff twelve feet in height that was at right angles to the main cliff facing the river. The corner was almost as even and smooth as the corner of a stone house, while a perfect tunnel about five feet in diameter pierced the walls from side to side, making an arched shelter that had often been used by man and beast, if the numerous signs told the truth. One could scarcely believe this tunnel had been formed

Skinning Squirrels.

by the action of water, so smooth and even were all the walls, but without doubt thousands of years have passed since it was first exposed to the light. Above it the hill rose sharply to the summit of the cliff that overlooked the river, at which point of vantage the view was sublime. As we sat there in the sunlight and watched the great buzzards soaring in the blue sky above, and the myriads of wasps whisking here and there, the outline of the great Round Bottom, from Bolton's Shoal to Osage Bluffs, could be followed with the eye, a distance of thirty miles, perhaps, by water, but only three or four across the neck. In the '80s this immense tract of lowland was all heavily timbered, save a tiny spot here and there along the river where some Dutchman, more enterprising than his neighbors, had cut out a field or two and was content with the handful of live stock and the puny crops the land provided for. Those trees were grand—tall oaks and hickories and sycamores, that sheltered myriads of small game and prevented the numerous creeks, springs and swamps from drying up. One could shoot enough squirrels to satisfy the needs of camp without walking a half mile, and often without moving about at all, once he had found a comfortable resting place on a fallen log. As we saw Round Bottom the condition of it all was sufficient to bring tears into one's eyes who had seen it in all its natural beauty. Strips of woodland ran here and there, marking the timber that was deemed of little value for cross-ties or cordwood. Elsewhere the fields were thickly dotted with the ghosts of one-time giants of the deep forest; great bare snags, devoid of foliage, their limbs fallen or falling in every storm; their trunks bearing the telltale girdle made with the ax for the purpose of rendering them barren of leaf or sap—in other words, the shiftless man's method of preventing the shading of his fields without going to the trouble of cutting the trees down and removing the wood from the spot. Enough grand timber to provide houses for millions of poor people is thus utterly wasted, in this country; wasted because these girdled trees are left to stand until the elements accomplish their decay and they fall, breaking up into bits that also are permitted to lie until sufficiently decayed to be plowed under with the soil.

One improvement noticeable to me was the rapid growth of the small hickory trees on the hills surrounding our camp. And every tree twenty or more feet in height was groaning under its burden of nuts, while even then, although the few frosts that had visited the region were mere reminders of those to come, the ground was so generously sprinkled with the ripening nuts that we had no difficulty in filling pockets with

them wherever we went. Persimmons, too, were ripening nicely, and the great luscious fruit lay here and there among the stones at the water's edge, waiting for us to pick it up, so that camp was bountifully supplied with this delicacy, although the persimmons disappeared like magic, while it seemed that the pawpaw crop would be exhausted in short order, so well were these peculiar things liked by us all. Not every person acquires a fondness for pawpaws on short notice, but both Helen and her mother, who tasted both persimmons and pawpaws for the first time that day, became very fond of them.

Heavy winds and dark skies kept the squirrels at home, and I devoted a part of the day to building a

Marais Creek.

corduroy runway from the top of the slope to the water's edge. This was an easy matter, as a great quantity of driftwood lay a short distance from camp, and all that was necessary was to select short bits of wood and carry them to the place selected. The first stick was dropped in the soft mud, and my weight put on it, whereupon it sank half its diameter and remained there as solidly as if it had been glued. Another stick three to four feet long was placed just below it and treated in the same manner. Continuing in this fashion down the slippery incline, it was not long before I reached the water's edge. For a landing two huge logs were rolled down and set in the mud side by side. Then two long oak saplings were cut, and after having been shorn of limbs with the ax, were pushed down in the mud until bottom was reached, so that they prevented the logs from rolling off into deep water. How long those poles were I will not say, but their tops were even with our heads when we stood on the landing, so that the depth of the mud is left to the imagination of the reader. The walk was as even and dry as the most exacting canoeist could desire, although a misstep would have placed one in a very unpleasant predicament.

Several days were passed in this camp, some unpleasantly warm for October, others dark and with drizzling rain. There was one evening when thunder was heard afar off in the west at sunset, followed later on by lightning. Not a breath of wind was stirring, and the storm that was gathering muttered and rumbled until 3 o'clock the next morning before it reached our vicinity. Snail-like it crept along until a few drops of rain fell on the tent; then a heavier shower, and presently the rain was falling in dense sheets, while the thunder was tremendous, and lightning flashed so rapidly that the woods were a glare of light. How

Our Camp at Friday Hollow.

long the downpour lasted we did not know, for we went to sleep again presently; but in the morning the river was discolored and rising slightly, which argued that the rain had been of wide scope.

The one thing we had forgotten in starting on the cruise was kerosene for the vapor stove, and thinking of the little backwoods store where I had purchased supplies years ago, and which was but two miles due east, on a county road, we closed the tent one morning, and taking Helen "pick-a-back," we climbed the hill, and in due time arrived at the spot where the store once stood, but not a vestige that would lead one to believe human beings had ever lived in that tiny open spot in the woods was to be found; yes, one certain oak that was some thirty yards from the store and dwelling showed, three feet from its roots, a group of tiny rough spots that recalled how, during the visits of Irwin and myself to the store, its keeper and his wife had practiced rifle shooting with us, and the target was tacked against the oak. That little rough spot

as large as one's hand, then, was all that was left to tell that a house had stood hard-by a few short years ago.

Behind our tent there was the dry bed of a stream, as previously mentioned. And across the ditch there was a well defined game trail that wound along under the cliffs to other hollows below. That it was used while we were asleep was not to be doubted, and often, as we sat beside the smouldering fire of logs, the patter of small feet could be heard as some small creature passed along the path on its way up the hill or down the riverside. One very bright moonlight night I happened to be looking in that direction when I saw a bobcat in the trail, headed toward the slope, and in no haste to reach it, as it stopped a moment on seeing the camp, then moved on, looking back now and then, as if to satisfy its curiosity. The guns were at the time carefully stowed away in the tent.

One afternoon I happened to be standing on the edge of this trail trying to locate a squirrel we had seen from camp, when a familiar sound reached my ears, and looking up the trail I saw a single file of quail coming toward me in the nervous, jerky walk these pretty birds assume when the springs in their legs and wings are drawn tense, ready for instant expanding. On they came until they were twenty feet distant, when the file executed a right oblique movement and sought a higher level along the lower ridges of the cliff. No leaves had as yet fallen, so that my footsteps gave out no sound as I followed the quail in a general direction for fifty yards or more, then stopped where I could command an open space slightly above me. Hardly had I stopped when the leader reappeared and hopped up on a block of fallen stone, then sprang on a dead limb that had fallen from the height above and lay in a horizontal direction with its outer end resting in the top of a sapling. Along this the leader edged, his company following, until all were standing side by side. The leader called, as I afterward concluded, to learn if all were present. This was followed by a jerky ruffling of feathers, then came another low note, the birds took wing in unison, and in a trice the covey was making its way across the river. This was the first time it had ever been my good fortune to see so much discipline and preparation observed by Bob White, and in view of the fact that the flight of these birds is short, and many persons claim they

Nomad and the Mate.

seldom or never cross wide streams, in my opinion this covey was agitated over the matter and had fears that it would not reach the other shore; but as the river is less than a quarter of a mile wide at that point, the covey gained the fields on the opposite shore in good order.

There are some of the most curious things to be observed along the honeycombed bluffs of the Osage. For instance, while watching for squirrels one morning a short distance away from camp, my vigil was rudely disturbed by a huge stone that came rattling down over a low bluff and fell some twenty feet away with a crash. As it happened that I was looking at the bluff that rose above the level place where the stone came from at the moment the stone made its appearance, I could see that it was pushed over the lower bluff by some power not visible to me. Training the telescope sight on the spot revealed nothing unusual, and half forgetting the occurrence, and seeing no game, I presently moved on to a small group of persimmon trees and was in the act of gathering some of the luscious fruit when another stone, weighing thirty pounds or more, bounded down from the same low bluff and hurtled through the persimmon grove to the water just below. Again I examined the entire face of the broken bluff, but could see nothing; and intent on discovering what animal powerful enough to move those stones was in the vicinity, I circled about and approached the far end of the bluff, working toward the place against the wind and as cautiously as possible, keeping hidden behind pawpaw bushes until within ten yards of the place, but nothing could be seen. No human being was near the place, nor could one scale the low cliff, judging from my own unsuccessful efforts. "Brer Fox," I finally concluded, and sat down in a place commanding a clear view of the level spot on the bluff, keeping the glass handy, but no more stones were rolled down in the half hour I remained hidden.

It was on this morning that I found myself in a wide hollow, where in years past the trees had been tall and sheltered countless squirrels, both fox and gray; but all were gone, and the place was a waste of stumps and dead timber and persimmon scrub choked with Spanish needles. The one-time pretty stream that drained the valley was a mere ditch, with almost vertical banks inclosing a bed of deep ooze, in the center of which a tiny thread of water wended its way riverward. Beyond the creek stood a few tall hickory trees, left by the tie-hackers as fit for fuel only, and these were groaning under their weight of nuts. And while I sat behind a soft maple tree on the bank four

gray squirrels frisked about in those hickories and on the ground, devoting no attention whatever to me, although their keen eyes had made me out. They seemed to know I could never get across the creek to their side, and also to understand that to shoot them would have been mere waste, as a landing for the canoe was a matter of paddling a long distance and wading a half mile; therefore, not worth the trouble, seeing that there were other squirrels nearer camp. But those along the bluffs and in the wooded hollows were difficult to find, the leaves being so thick and the character of the country such that we earned every gray squirrel we killed. No fox squirrels were seen, save one, and that one the last day but one of our cruise. In former days these beautiful animals were almost, if not quite, as abundant as their smaller cousins, the grays; and being more like their namesake, it was a greater pleasure to bag three of them than a dozen grays, one being compelled to exercise all his skill as a still-hunter before he could hold his foresight fairly on the little brown head and be reasonably certain of a kill.

Helen had her first experience in going squirrel hunting one afternoon, and for a beginner she gave promise of being good company, at least, although she has a natural fondness for the woods and is growing to notice things of interest. At first she wanted to prattle at every opportunity; but after being cautioned in a whisper and by the holding up of a warning finger, she took to whispering herself, and seemed to take pride in the lark. Only when she was left alone for a few moments did she break out, and the firing of our rifles caused her to bubble over with keen delight; but it was with real grief that she declared, on seeing the fresh blood on a squirrel, that the "poor kitty had a sore foot," though the wound was often in the head.

In few other places can one feel safe in going away from camp for hours, leaving his canoe and camp traps at the mercy of every two or four-footed pilferer that may happen along; but we had nothing to fear but the razor-back hogs, and even they visited us but twice, each time while we were in camp, so nothing was lost. There were too many things of interest to be seen and visited for us to remain in camp long, and the wealth of bird life was a continual source of wonder to my wife, who had never before seen and heard so many winged creatures in so short a time. At first the owls kept her awake at night, but she soon ceased to fear their weird cries, although in few other places can one hear four or five owls of different species calling at the same time, a nightly occurrence at Turkey Hollow.

Time passed and one day our "Henna house"—Helen's own curious name for her brown tent—was struck, and the canoe headed toward Harrington's Shoal. For the reason that our time was short, and we had been too long content to haunt old familiar places near Painted Rock, we did not ascend the Osage further, but turned back at the shoal, passing the balance of our vacation in idling here and there, crossing and recrossing the river, doubling back, and drifting for hours, as the whim suited our moods. As, however, the long reaches of the river above and beyond the shoal mentioned have been cruised again and again by me, for the benefit of fellow canoeists I will describe as briefly as possibly the places of interest.

Harrington's Shoal, distant from the mouth of the Osage about twenty-seven miles, is rather long and somewhat swift. Its wing-dam reaches from the left hand or eastern shore to a point two-thirds the width of the river, the chute confined within a long line of riprapping which follows the lines of the western shore. From this side a spur extends a short distance into the channel, making the ascent of the shoal by

the left, but if the river is not too low it is easier to hug the right-hand shore and pass through a break in a short dam extending from that side to a long tow-head in midstream. Just where this crossdam lies one should go ashore and climb the bank, then look about him for a large cave that is worthy of his investigation. Its entrance is gained by a descent of fifteen feet, which finds one in a large chamber which turns sharply to the right a hundred feet from its entrance. The natives say one can walk for miles in the different galleries, but this I doubt. A fine spring is not far distant, and there is a pretty spot a short distance beyond the cave for a one-night camp near open woods, where in the autumn one may see not only squirrels, but turkeys. I camped at this spot one night because a flock of turkeys crossed the river just as I was about to run the rapid, and going ashore in pursuit, we—for there were two of us—got a fine hen and a gobbler, and a couple of squirrels the next morning.

Dixon's Shoal follows, and is long, but the current is not too swift for leisurely paddling. Osage Bluffs is on the right-hand shore one mile further on, and here one can replenish his larder. There is a ferry at this point, on the county road, and the village marks the upper curve in the neck of Round Bottom. Jefferson City, the State Capital, is just thirteen miles distant by this road, while by water it is almost fifty. Continuing, one finds islands here and there, the river gradually curving toward the left once more, then in the opposite direction for a short distance to the Brule,

Meramec River.

once a famous stream for fishing, and its bottoms for squirrels. When I saw it the last time it was shaded by the largest trees then to be found on the lower reaches of the Osage—giants of the primeval forest—so that when one brought down a squirrel from their topmost branches he had cause to feel proud of his skill with the rifle. One follows the western shore through the next shoal, whose name I cannot now recall, which is both long and crooked, but deep and somewhat rapid at its head, gaining which, one turns abruptly to the right, and is immediately in a wide deadwater. At Teal supplies can be purchased, while the farmers will help one out with farm produce at reasonable prices.

At Schuyler's Ferry there is the nearest approach to a fall so far to be encountered, the shoal being narrow and with a marked drop, but with sufficient water for canoe navigation at all stages. For a short distance the going is slow. Swinging still to the right hand, one comes to Sugar Creek Shoal. The channel turns sharply to the left throughout its short course, while on approaching its head I have found it easier to tow the canoe, walking along the shingle of the island until within ten yards of the crest, then paddling across to the deadwater above, requiring one's best efforts for five minutes. This point, according to various estimates of river men and others, is some forty miles from the mouth of the river; but the distances I have given I will not vouch for, as Government data are not at hand to make corrections, and the farmers seem to know little concerning the subject. As an example, we stopped at a farmhouse near Schuyler's Ferry one day to purchase eggs and sweet potatoes, and on asking, were told the Big Tavern River was twenty miles distant. "But," we protested, "some men down the river told us yesterday afternoon the Tavern was just twenty miles distant, and we have been paddling hard ever since." "Well," came the reply, "it may not be more than ten miles." The truth is the distance was less than ten. Kirkman's Shoal comes next, and the channel is on the left, swift for a short distance only. Here the great Brouse's Bend commences, and if the canoeist is fond of fishing or of shooting in season, he will be well satisfied to limit his meanderings to Kirkman's at this end and the Devil's Elbow at the other extreme, which will give him some fine country and two grand streams, the Big and Little Tavern. Some day in the near future, I hope to be able to tell readers of *FOREST AND STREAM* that a railway which will cross the Osage in this region has been completed, and that one may ship direct to this point and cruise down the Osage, a trip that cannot be excelled for variety of scenery and sport, in the foothills of the Ozarks at least.

There are bluffs of cottonstone everywhere along the river; but in the eddy below Little Tavern Creek some of the most picturesque ones are to be found, and here the camera will be wanted, as the surroundings are grand and well worthy of reproduction through photographic processes. The Little Tavern will scarcely be noticed unless one wishes to explore it, as it enters the Osage at a point where one's attention is taken away because of a roar of water coming from above an exceedingly sharp turn to the left hand; but the creek enters from the right-hand side, its course for a short distance being just the opposite of that of the main river. Crappie and bass may be caught in its clear waters, and there is game in the surrounding woods.

This brings us to the hardest proposition so far, a shoal that is very narrow, has a marked fall, and through which a large volume of water rushes. Two single blades will take the canoe up to its head, however, but only when the paddlers have dodged into all the little eddies and hugged the left-hand shore as closely as possible, towing being out of the question because of the high and steep clay bank along that side. Once the eddy above is gained, however, one will forget that he is breathing deeply, for just there a

great cliff rises almost from the water's edge, and near its summit a cave is to be seen whose entrance would easily accommodate a tally-ho coach. Ropes or ladders, however, are necessary in reaching and exploring its numerous galleries. Beyond the bluffs bear away from the river, and following that shore, the left-hand, one fancies he is about to pass a large island, and may paddle a mile in the Big Tavern before he realizes that he is in another stream. Do not make haste to leave this charming waterway, but make camp in the woods, where a pretty spot may be selected almost anywhere and pass a few days in exploring the upper pools and shallows of the Tavern, or in fishing for bass. Ten years ago the low bottomland along the Tavern was ideal for squirrel shooting; we killed numerous turkeys about the small fields, and bobcats grew so bold as to visit our camp on dark nights and fight over scraps thrown away by us. There are numerous caves in the cliffs, and these were occupied by these interesting animals. One of the cliffs is pierced by a cave of large size, reached by a climb of fifty feet. Across the Tavern, in woods where sycamores predominated, there was a blue heron roost, or more properly a nesting place. Their nests were four to five feet in diameter, composed of sticks and grass or rushes, placed in the highest forks of the great trees. Twenty or more of the nests were to be seen in that group of trees, while the going and coming of the immense birds added to the attractiveness of the place. The Tavern is very crooked, and when the river is not low one can paddle far up the former, fishing the shallows or watching for squirrels along the low banks.

Continuing the ascent of the river, one passes Reynolds and the Devil's Elbow Shoals, the latter crooked but short; past Capps, a tie camp now probably deserted, and finally bringing up on the beach at Tuscumbia, a somewhat wild and woolly village as we found it one day when we stopped there for supplies and were almost mobbed by a crowd of half-drunk backwoodsmen, who had never before seen anything so curious as our old canoes and modest outfit, while I innocently called down the righteous wrath of the mob by saying, truthfully, in answer to a query as to the contents of a quart bottle lying in my canoe, that it contained black coffee we had saved from the last meal for the purpose of quenching our thirst. And that in a country where moonshine whisky could be had at less than fifty cents per gallon! From Tuscumbia one must either follow the chute through the long shoal just above or pass through a break in the wing-dam, in this case keeping to the western side, according to the stage of water. Brockton Shoal is the next one of importance, marked by a long and low bluff full of caves near the water's edge. Take the right-hand and tow the canoe, for the current and the rock-strewn channel make this shoal the most difficult one to be encountered so far. Then follow numerous islands and small shallows, and Bagnell comes into view on the western shore. This is the terminus of the Lebanon branch of the Missouri Pacific Railway, and one can ship his outfit and go himself to the capital, taking the morning train to Bagnell, distant about fifty miles, and descend the Osage from there, a most delightful cruise. It is a half day's paddle from this point to the Big Gravois River, which enters the Osage from the right at the foot of a long island, and should never be passed by, as its clear pools contain game fish and there is a large cave hard by which merits exploration.

Leave this stream by way of the smaller channel, behind the island. Miles of still water, alternating with short shallows, and beautified by high bluffs dotted here and there with small pines, reminding one that he is approaching the Ozarks, follow, and when an unusually loud roaring comes to one's ears he can look for Zebra dam and

Early Morning on the Osage River.

paddling slow work. It is possible at high water to cross the low dam with ease by hugging the right-hand shore, or in passing through a break inside the wing-dam at any other stage than low water, while at medium stages "cordelling," as the raftsmen call towing a craft through quick water, is a simple matter along these stone dykes, which are so water-worn as to give safe footing. This work is rendered far easier than paddling, when the canoe is laden, by joining the bow and stern painters, making a continuous line from bow to stern. Grasp this a little forward of its center, and at the first attempt the canoeist will be astonished to see how rapidly the canoe will tow, and with almost no other effort than walking on the part of he who holds the joined painters. It is necessary to hold the line so that the canoe will continually head away from you the merest trifle, the lateral resistance of the current on the bow preventing the craft from swinging toward you as it would do were the line made fast to the bow alone.

Above Harrington's Shoal there is a long reach of dead water, or an eddy, as the river men call these stretches of almost quiet water. On the left-hand side one passes Profis Creek, whose woods-bordered shores were once swampy and the haunts of much small game. Further on one turns to the right and approaches Round Bottom Shoal. The chute is to

The Osage River.—Painted Rock on the Right; Bloody Island in the Distance.

prepare for a bit of quick water, the ascent of which suggests wading, so shoal is the water in the channel, but towing from shore is possible. At its head the Grand au Glaize enters the Osage, and one should ascend it to the first shallow, camp there, and pass a day in fishing. Immense channel catfish will be caught, whether he wants them or not, but an occasional bass or crappie may reward his efforts. Anyhow the stream is a pretty one, and a camp there will be long remembered. At Zebra, the village at the mouth of this stream, I have purchased grand eggs at six cents per dozen, and other supplies as well. But as the distance to Linn Creek and the village of that name is not far, one should wait until he arrives there before buying more plunder. Linn Creek is midway of a shoal that deserves the name, but at its head a landing should be made and a tramp of a mile east will surprise the canoeist, for a pretty village lies at that point on the creek, and for a change a hotel meal may be enjoyed, while groceries of almost any sort may be had.

Afloat again, one sees an immense bluff on the left, while what resembles a large island is just ahead. Turn to the left hand and enter the Niangua River, the largest feeder of the Osage, and one of the finest streams for fishing to be found in the West. Its course is almost due north, its water clear and sparkling, its pools abounding with gamy fish. I am almost afraid to hazard a statement

as to the distance from the mouth of the Osage to the Niangua, but in a cruise to the Niangua in the nineties, both Gerhardt Guenther and myself, after careful estimates and information such as we could gather, agreed that the distance was not far from 140 miles, or 120 allowing for overestimates. Just here I should state that the descent of the Osage to the Niangua is possible only in this manner, if one wishes to avoid a long portage by wagon over the roughest roads imaginable. By rail to Warsaw, said to be 240 miles distant from the mouth of the river; or from Osceola, still further. As the ascent thus far is not difficult or dangerous, however, provided one goes slowly, it is preferable. The ascent of the Niangua, because of the numerous shallows, will be more tedious, though the current is not too rapid for easy going, and the natural beauties as well as the fishing in this almost unknown stream, will repay all the efforts required in the ascent of the main river. Once there, too, one will enjoy a feeling akin to that which impels the small boy to walk a couple of miles in order to be able to ride back on a train, for the descent of the Osage can be made most delightfully easy if one does not hurry. Then, instead of dodging into eddies and hugging banks, as in the ascent, he steers for mid-channel and goes with a rush through rapids that are for the most part devoid of stones and snags; therefore, a safe voyage and a delightful one.

The Niangua is bewilderingly crooked, a succession of tree-shaded eddies and tiny rapids where great channel catfish lurk and bass are to be had when the wall-eyed pike are not hungry, though these voracious fish, known only as jack-salmon in these waters, will give one a lively fight before he can conquer them. Cold springs abound; indeed, this river takes its source in great springs; and interesting caves and other natural formations are to be found all along the river's course. Camping grounds need not be sought, as the shores are well adapted to the purpose. The time for a cruise to these waters, in my opinion, based on many trips on the Osage and its feeders, should be one month, beginning October 10 or 15. Even if cool days do come in November, one will not feel them, so guarded by hill and bluff are these waters. On the other hand, an earlier trip will be attended by many little annoyances, not the least of which are mosquitoes and ticks and snakes, while several heavy frosts are needed to bring down the dense leaves and make the squirrel shooting good, as well as to ripen the nuts and persimmons. Frosts can be counted on October 15 or later, rains are not frequent at that time, and the calm, hazy, mild days are unequaled. The fishing is always good then, too, so that one may carry and use both the rifle and rod, although the season for turkeys is not open until November 1, and squirrels are not now protected.

Returning to our own recent cruise, the day we broke camp at Turkey Hollow was passed in loafing and in gathering pawpaws and persimmons. On the shingle at Harrington's Shoal we saw a bunch of ducks numbering hundreds, which, on our approach, arose with a roar and settled again less than a half mile away. And again, when we went ashore on the shingle a mile below Bloody Island, another flock was seen on a bar just opposite, and although we were in plain view and not 300 yards distant from them, the ducks remained all afternoon while we made camp. The next day was the sixth of October, marked by a gale of wind and a torrid temperature. The water was so warm that our last swim of the season, taken that afternoon, was protracted. Nor did the high west wind go down with the sun, but it grew cooler, and the fire built before the tent was appreciated. Immense banks of black clouds came out of the north, but these passed away and the full moon shone in a clear sky at bed time. Imagine our surprise, therefore, when, long after midnight, the roar of wind and driving rain roused us. It came from the north and with terrific force; indeed, had it not been for the fact that our tent was supported by an unusually strong pole and pegs driven deeply into the gravel, while the upturned canoe was anchored fore and aft with huge stones, everything would have gone with the first blast. As it was we inspected our quarters

by lantern light, and finding that the ditches about the tent were turning away the flood of water, and that all was dry, we went to sleep again, to awake and find the sun shining in a clear sky, a cold north wind blowing, and the narrow channel covered with miniature whitecaps. On breaking camp we found that water had made its way under the tent during the storm, but the duck floor cloth kept it from wetting any of the contents. So heavy had the storm been that the river was rising rapidly when we put off that day, and although the high wind retarded our progress, we cared not, but idled along until noon, stopping for luncheon near a persimmon grove at Prince Edward's Island. For the balance of the day the wind was behind us, our course then being southeast. Snakes in hundreds were seen as we paddled along, and ducks, too, while we passed close to a gathering of turkey vultures which were sunning their feathers on Rice's Island. Camp was made under the big hickory tree near Upper Westphalia Landing, where we had camped our first night out, and it was well that we had decided to stop there, for the tent was hardly up when a terrific squall came out of an almost clear sky and blew for fifteen minutes in a fashion worthy of a young hurricane. In fact, the hickory nuts were driven out of the trees with such force that all hands were compelled to remain in the tent until the storm passed, although but few drops of rain fell. We had not until that time supposed hickory trees bore nuts in such abundance, but a welt or two at once convinced us. If the wonderful hailstorms one hears so much about in the West in summer are so severe as that hail of sharp-pointed hickory nuts, we trust they will not pass our way while we are cruising. Out from our camp the Osage was barely 300 yards wide, but in a few minutes immense seas were running that reminded us of a rough winter day on the Hudson River. An hour later the sky was clear and a deep red glow lighted the western hills. We went to sleep listening to the sweet music of hounds on the trail of 'coons.

On turning out in the morning we found that the river had been kind to us and was still rising rapidly, for where there had been a gently sloping shore on our arrival, necessitating a carry of almost fifty yards, now there was scarcely a third that distance to lug the heavy outfit and the accumulation of hickory nuts to the canoe. And while we were making ready to depart an inquisitive old farmer plied us with one question after another as fast as he could talk—and he was by no means slow. As usual, he began with the cost of the canoe—a stereotyped question of the Missouri backwoods concerning anything novel to the visitor. Most of his questions we parried, for your backwoodsman has during his uneventful life come in actual contact with so little cash that he doubts any statement involving a larger sum than he is accustomed to handling when "the crops" have been sold; but this old fellow put us through the mill in a fashion that would have made a fortune for him had he chosen the law instead of agriculture. Beginning with the vapor stove and going through the list of air beds, and blankets that were neither wool nor rubber, yet would turn water; my wife's camp chair, which was large and comfortable, yet he saw it collapsed and stowed away in the canoe like a bundle of slender sticks; an automatic rifle with a "spy-glass" to look through—it was entirely too much for him, and he went away to tell his wife about it. We could not hear what she said, for the wind was rustling the leaves of the trees under which she was picking hickory nuts, but if her gestures were as eloquent as they seemed to be, without doubt she believed the old man had suddenly parted with his senses. We could not help laughing over the pride with which he had informed us that the little stern-wheeler Romana, just departing for Osage, made two trips a day to Westphalia Landing.

The day was clear and beautiful, but with a strong northwest wind which made our progress slow. The Big Marais was ascended several miles, but it, too, was rising, and its usually clear waters were yellow with flood water. This is a stream well worthy the canoeist's investigation. It is navigable for miles, winds here and there, is shaded by many trees, springs, as well as fine camp sites, abound,

while squirrel shooting is above the average, and fishing for bass, crappie and jack-salmon is good until thick ice comes. Passing down again, we were fortunate enough to kill several ducks before making camp for the last time. A place less than two miles from Osage was chosen, but on the eastern shore, among the overhanging willows. That night the air grew cold and the morning saw white frost and a heavy mist. We had hoped for several heavy frosts to clear the woods of their dense leaves and make it possible to see the squirrels when they barked at us, but it came too late. When camp was broken every article was packed securely for shipping. Nomad was launched less than ten feet from the tent, as the rising river had covered all the slope that had intervened between the river's edge and our tent the evening previous, and when we paddled out into the stream it was to find a goodly current and a mass of floating drift hurrying toward the Missouri.

At Osage all the negroes in the village lined up on the piles of railway ties on our arrival and helped carry the duffle to the station. There Nomad was again wrapped in burlap and shipped home by express, together with the four bundles containing our duffle, and two duffle bags filled with hickory nuts. These two, on being weighed, reminded us that we had gathered an immense quantity of nuts, which accounted in part for the slow speed of Nomad against head winds, ballasted as she was with so much dead weight. The agent at Osage deserves a far better position with the railway company than he at present holds. He was kind, considerate, and obliging to us in many ways. Not every railway station agent can say as much.

In conclusion, this cruise, though not a long one, was most pleasant in many respects. We did not kill much game, as some persons measure their success, but we had enough. It was rather a feast for the eyes—and a bountiful one, too—for in few places can the woods lover find more of the things beautiful in nature than along this same old Osage. There is an old Indian legend to the effect that if, on leaving the Osage for a journey, one will lie at full length and drink of its waters, he will live to come again to its shores. If you, brother canoeists and lovers of God's own temples, visit this charming waterway, follow the advice of the Osages; for that you may see it again and still again is the wish of three persons who so lately found rest and happiness on its bosom and its shores.

### Red Dragon C. C.

THE twentieth annual meeting of the Red Dragon C. C. was held at the Hotel Hanover, Philadelphia, Pa., Friday evening, January 8. There was a large attendance of members and the following officers were chosen: Com., J. C. MacLister; Vice-Com., W. C. Thompson; Purser, W. H. Logan, Jr.; Quartermaster, H. W. Fleishmann; Fleet Surgeon, F. O. Gross, M.D.; Meas., Harry Blumner; Correspondent, Will K. Park; House Committee, W. H. Wolstencroft, M. D. Wilt, P. F. McMichael, and H. E. Davis; Trustee for three years, Joseph Edward Murray. A number of new members have joined the club within the past three months, and the Red Dragons were never in a more flourishing condition. Several new canoes have been added to the fleet, and next season's cruises are already being planned. A run down the Delaware in May will have a large gathering of canoeists, and Commodore MacLister promises several short cruises of an interesting nature.

The Red Dragons have been quite active at the club house during the past month or two, new sleeping quarters being prepared and other improvements added to their home.

The trap shooting contingent have found additional enthusiasm in the advent of new blood, and the traps on the end of the wharf are in use every pleasant Saturday afternoon.

The annual club mess was held at the club house at Wissinoming on the Delaware on Saturday evening, January 16. W. K. P.

### Cruise of Mblem.

BY GEORGE E. DARLING.

The Story Which Won the Second Prize of \$50 in "Forest and Stream" Cruising Competition.

(Concluded from page 51.)

At 2 o'clock called Sam, and just to show that we were well and happy we had a good square meal, hot coffee and plenty of it, as the night was cool, huckleberry gingerbread, cold corned beef, etc. Passed Shelter Island at 2:15 and made a new course to pass east of Cape Ann. At 4:30, broad daylight, Thatcher Island lights were about six miles away, three points on our weather bow, and we swung her off south by east for Cape Cod light. This gave us the wind abeam. Put a reef in the spinnaker, and using the pole for a bowsprit set it as a balloon jib, and maybe she didn't dust for "Home Sweet Home." Heeling to a breeze that must have been made to order, she flew on past Thatchers and out to sea. Evidences of Boston shipping were many, coasters bound to

the northward, a liner just in from across the pond, and a tow of barges from around the Cape, beside a half dozen fishermen, made quite a line of "sail" in sight. Two of the fishermen had evidently sailed from Cape Ann that morning bound around the Cape. We were within three miles of them for a long time, both sailing the same course. With everything set they looked yachty and beautiful.

At 10 o'clock we made out the sandy beach of the Cape through the haze on our weather bow, perhaps four miles away, and a half hour later Cape Cod light opened up dead ahead. Off the light we ran into a doldrum, absolutely no wind, and getting tired of hearing the sail slap, we lowered it and waited for a breeze. It was past 2 o'clock before it came southeast, and we began beating to windward down the beach. At 4 o'clock the wind changed to southwest very light, and we were able to lay our course without tacking; but it is a long road around the Cape, and I don't wonder that many a fine craft with her sturdy crew has found it a death trap. Looks innocent enough with smooth sea and wind off

shore, but fifty miles of sand bank is a long stretch to weather. Off the wireless telegraph station we met four fishing schooners bound for Boston with fresh fish. Everything set, including bunting; this was a race for fair, and a beautiful sight. Just before we met, two of them had a luffing match. The hindmost quickly won her point and passed clear of the others and showed them her heels in great style. We wondered at this until we were abeam of her when we heard the familiar puff puff of an engine exhaust under her quarter. She was bowling along throwing a wash like a steamboat while her brawny crew took life easy. We made Chatham bar at 8:30, and as I had had some experience with its treacherous bars and shallow channel, anchored off the beach a short distance to the north of the bar for the night.

July 18.—Saturday morning we took a good long sleep and did not get up until past 9 o'clock when we got under way. Sailed in over the bar and picked our way up the crooked and shallow channel to Pleasant Bay, and anchored off the Pleasant Bay Y. C., glad to again rest quietly in smooth water. Went ashore and entered for

the race of the afternoon. Two friends whom we met shipped with us to make up a crew. We took out the heaviest of our cruising dunnage, and had the boat measured. Had a fine dinner on shore, and at 1:30 made sail for the race. A strong southwest wind was blowing, so we tied in one reef and lined up at the start with the pick of Chatham's fleet of seventy-five catboats. These boats go fishing off the Cape, and the men who sail them know what it means to sail for bread and butter and for life. Usually starting at 3 to 4 A. M. out of their snug harbor, they steer off shore southeast with the prevailing summer southwest wind abeam, and run from twenty to thirty miles, fish the tide and catch from a few fish to a solid boat load, depending on conditions. But mind you, when they go out over the bar and steer southeast, they leave home behind and have nothing but the ocean and Spain ahead, and after catching their fish they must sail back again. Imagine getting caught thirty miles off shore in a twenty-five foot boat loaded deep with fish, and your only harbor a bit of a hole in the sand one-eighth mile wide, with the waves breaking ceaselessly on the bar. I speak of this that you may appreciate the fact that we were up against real sailors that day. Their boats were not out and out racers, but neither was mine. They were

Penobscot River at Sandy Point, Maine.

clean and slick, and had cross cut sails. The way they were handled was perfection.

At 1:30 preparatory gun was fired. We start in ten minutes. As we ran down for the line before the wind, figuring the time down to seconds, three others lined up abeam of us and we four crossed with the crack of the gun, practically neck and neck. Mbleme began to show herself immediately, and in the run to the first mark opened up several lengths on our friends. We gybed around, trimming the sheet as the sail flew over for the reach to the next mark; continued to draw away and passed the second mark  $1\frac{1}{2}$  m. ahead of second boat. Always holding to windward of the others, we worked back to windward, tack for tack, and finished the round  $3\frac{1}{4}$  m. ahead. We finished the race 5 m. 25 s. ahead of second boat, and as evidence that we went fast, I will give you a clipping from the Boston Sunday Globe of July 19:

#### THE MBLEM A FLYER.

TWENTY-FIVE FOOT KNOCKABOUT BEATS THE THIRTY-FOOTERS IN THE PLEASANT BAY CLUB'S REGATTA.

CHATHAM, July 18.—To-day's Pleasant Bay Club race was sailed twice around a six-mile course in a fresh south-west breeze.

Interest centered in the phenomenal speed shown by the new 25 ft. cat knockabout Mbleme, built by D. & C. Crosby, of Osterville, and owned by George E. Darling, of Providence, which on corrected time proved herself faster than the large knockabouts.

The old rivals, Thelma and Selma, had a fine race, the former winning decisively, however.

The sharpie race was won by A. B. Chase's Gladys, this being the first leg of a series of races in the sharpie class for a special prize of \$25 in gold, in addition to the regular club prizes, and for a second prize of half that amount. The Florence was second and the Leslie third, there being an intense rivalry between these little craft. The summary:

30-ft. Knockabouts.	Elapsed.	Corrected.
Thelma, G. W. Brown.....	1 14 01	0 58 08
Selm, S. W. Winslow.....	1 14 45	0 58 34
First Class Cats.		
Mbleme, Geo. E. Darling.....	1 16 50	0 57 54
Winged Arrow, W. H. Rogers.....	1 22 15	1 01 33
Hazel, C. Y. Mayo.....	1 23 38	1 03 10
Pearlie, T. C. Nickerson.....	1 24 15	1 03 33
Second Class Cats.		
Iona, L. G. Powers.....	1 32 05	1 08 57
Dolly Varden, G. A. Griffin.....	1 33 52	1 08 13

We tied up at the wharf, and it was a pleasure to see the folks who came aboard size Mbleme up. I felt that I must get back to Providence Sunday night, so at 5 o'clock we ran down the harbor and out over the bar. We had a fair tide, and figured that we could get to Cottage City by 10 o'clock, and while the weather was not all that could be desired, none of the Cape Cod people seemed to think that bad weather was coming. We found a strong breeze outside and put in three reefs, but a half hour later it dropped to almost a flat calm, and we shook out the reefs and drifted down the Monomoy shore. At about 8:30 the breeze freshened, and we were able to make very good headway. Passed the Point at nine and followed the ship channel for Cottage City. About 9:45 it began to rain and grew very dark, and shortly after an ugly puff of wind from the southeast made me wish we were back at Chatham. We immediately put in two reefs, and soon found that we had all the sail we could handle, so rather than run any risks, pulled down again and put in the other two reefs. The weather was growing worse, and in another half hour we were driving before the wind with all we could smother to, and it took careful handling to keep the boom clear of the seas, though we had it topped up high in the air. The southwester of the afternoon had left quite a chop, and the wind we now had was rapidly stirring up a worse one. By 10:30 it was a howling gale, and we lowered and lashed the jaws of the gaff

to the boom, lowered the peak part way, pulled the boom in and lashed it solid in the crotch, and with just the peak of the sail showing, made great headway. The wind continued to gain strength, and between the spray she was throwing and the rain, it seemed as though the sail was full of water at times. It finally became so bad we had to take in what little sail we had up. At that time we were within three miles of Cross Rip light vessel. We tried to hold our course for Cottage City under bare pole, but found it impossible, and it was now a case of anchor and ride it out, or drift across the sound and go ashore somewhere in the neighborhood of Succonesset, which would have meant disaster to all concerned, as the seas by this time were running very high. We got out a new warp 300 feet long with a 28-pound fisherman's anchor that I bought on Cape Cod, and after running off clear of the ship channel, sounding as we went along, dropped the anchor in about 40 feet of water and threw all the rope after it, being careful that there were no kinks or twists in it. This gave the anchor a chance to get well settled on the bottom before the boat brought up on it, and when she did it was a great relief to feel it hold and swing her into the wind. About the first sea she jumped over, however, whipped the warp out of the chock and it came down across the port chain plate. It took all my strength to pull it away far enough to get the calf of my leg in between so it would not cut off. Then we put rope chafing gear everywhere it touched the boat forward. Next thing to look after was the mast, for she was jumping about in a terrible way. We put both back stays on, and pulled top lifts and halyards as tight as we could. Even then it seemed as though she would either pitch it out of her or split her bows open. The tide turned to the eastward about midnight, and while it was bad enough before, the tide running against the wind caused a fearful mixup of a sea. Our good little ship was leaping and rolling and squirming out through and over the waves in a wonderful way. Occasionally the top of a comber would come over her bow and make a clean sweep over the cabin into the cockpit. Then as she went down between the seas the tide would throw her around sideways to the wind, though we had the centerboard pulled way up and tiller hard a starboard. Occasionally a breaker would catch her broadside, and when they did salt water was about the only thing in sight. I examined the chafing gear every little while, and about midnight found that it would not hold much longer, so after thoroughly greasing the warp, bound a large flat pillow stuffed with cotton around it and lashed it down to her bow. This made a fine shield for the rope and held until morning, though there wasn't much left of the pillow by that time. Such a night I hope never to pass again. Between the rain and the spray the air seemed full of water. It was impossible to look the wind in the face, for it would cut like hail. I realized that the anchor warp was our main hope, and examined the chafing gear every little while all night. Before morning it seemed quite a task to go forward. Incidentally I took several dives through the seas that came over her bow, while I hung on for dear life. Cape Cod people told me that the anchor I had would "ride my boat to the bottom," and at times I almost expected it would. It was a great relief about 3:30 to see that it was growing lighter, though the wind was howling as industriously as ever, but as daylight came on it gradually lessened in force. By 5 o'clock we were feeling quite comfortable, though a squall about that time swept the tops off the waves as it went driving past, a sight I will

Mbleme at her moorings, Pawtuxet Cove, R. I.

never forget, though it did not feel as bad as the squalls we had passed through during the darkness of the night. A tear in the leach of the sail showed that we carried sail the night before up to the last minute. It was a wonder that it had not ripped clean across with the start it had. About 6:30 things had quieted down so we were able to get under way, though "tall water" was yet very much in evidence. By taking in on the anchor warp as she went into the trough of the seas and holding fast as she rose over them, we were able to get it after a long pull. When we took the anchor aboard we found the stock bent, and the shank that had been buried in the sand polished as though it had been filed. We kept our four reefs in and started for Cottage City, but by 8 o'clock it came in thick fog and the wind changed to southwest, so we made a course for Wood's Hole instead, and tied up at the fish commission wharf about 11. Quite a number of seamen from various crafts looked us over, and when informed where we spent the night wondered that we ever lived through it. The wind had held a velocity of about 60 miles an hour from 11 till 4, and shipping of all kinds was in trouble. One four-master lost her sails off Nantucket; another two-master was dismantled off the Cape; the New York Y. C. had a mixup in New London Harbor; the Sound steamers were delayed, etc. Cape Cod residents and life-saving men expressed wonder that we were alive, and later sent me word that never before, to their knowledge, had a boat of Mbleme's size lived through such a gale on Nantucket Shoals. (See copy of letter attached.)

Mbleme went through this blow without leaking, or apparently straining any part of her, and all her rigging held hard and fast. The way in which the paint was scoured off her deck and the front of the cabin trunk, however, was good evidence of what she had been through. Among other things, I learned one lesson, never go on a long cruise with the idea that you must get back at any stated time. When night time finds you in a safe harbor, stay there, especially in Cape Cod waters, as harbors are few and not of the best.

July 20.—Monday morning with a light southerly wind we made sail for Pawtuxet. The tide had just turned north through Wood's Hole, so we ran into Buzzard's Bay. It was noon before we passed Sakonnet, and as we had a fair wind up the river it was very nice sailing with the spinnaker set, and our rough experience seemed like a bad dream. We had figured on reaching the bridges at Tiverton earlier, and when we did arrive there the tide had turned. It took all the power there was in the sail, in addition to our strength, pushing against the piers to get the boat through the draw. We succeeded, however, and a freshening breeze enabled us to make our mooring at Pawtuxet shortly after 6 o'clock.

Such a cruise as we enjoyed will always live in my memory as both a delightful and awful experience. Never

Owl's Head, Maine.

again would I from choice ride out a 60-mile-an-hour southeaster on Nantucket Shoals. The good little ship that carried us safely through it all is not for sale; she has earned a place as "one of the family."

The following copy of a letter which I received from a friend in Chatham who was for several years a sea captain and could appreciate what we went through that night, may prove interesting in connection with my story.

"CHATHAM, July 22, 1903.—Mr. Geo. Darling: Dear Friend—I want to congratulate you on your miraculous voyage from this place on the night of the 18th inst., for it seems to me nothing short of a miracle that any catboat could live on such a night in Nantucket Sound, for although she may be staunch and seaworthy, under ordinary circumstances, yet must she have been a mere cockle shell tossed, tumbled, and driven at God's mercy that night. She must have been an extraordinary boat, and an extraordinary boat handled with extraordinary consummate skill, to have weathered such a storm as that was. Your boat must certainly be a wonder, and all hats off to any man who could keep a catboat alive in such a gale among the dangers of Monomoy and Nantucket Sound. I got up at midnight and could sleep no more, for it seemed to me that you must surely be going to your doom. I told Mrs. N. that the only chance for you was that you had been able to weather Monomoy before dark and get into Hyannis before the storm came on. I called Monomoy Life Saving Station next morning and they said 'No boat passed Point Rip before dark,' and Hyannis said there was no boat answering your description there. I tell you it looked like rather a hard show for Mbleme. As I came up the street that was choked with trees and limbs that the gale had rooted up and broken, I said 'Poor old George, I don't know.' There must have been a little fellow sitting up aloft that looks after the sailor.

"Hoping that you may take many more cruises in the Mbleme (but none like that), I am,

"Yours,

"OSCAR C. NICKERSON."

#### English Letter.

THE prospects of class racing for the coming season are by no means brilliant, especially as regards the bigger vessels. A few months ago there were clearly defined rumors of a revival of the too long extinct 65 ft. class, but prospective owners have cooled in their ardor since the fall of last year, and little is now heard of the much talked of addition of two or three vessels to the 65-footer which has been lying half finished on the stocks at Fairlie for the Messrs. Connell for more than a year. As regards the first class racing, that appears to have utterly died out, nor is it likely to be revived until something definite has been done to provide effective restrictions as to scantling, and thus give a death blow to the extreme lightness of construction which has prevailed for the past decade, and which, though reflecting the highest possible credit on designers and builders, has proved one of the most fatal drawbacks to the popularity of the modern racer. As Mr. C. E. Nicholson, one of our foremost designers, pointed out in a letter to the Field, written some two months ago, people will not build in the big class because they see no prospect of disposing of their vessels at a reasonable price after their racing career is over. The extreme lightness of construction which, in default of proper scantling restrictions, has been brought to a fine art at the expense of strength and seaworthiness, makes it impossible for ex-racers to take their natural place among the handicap contingent, and continue racing in that class for years as in the old days, for the weakness of construction soon begins to tell, and constant patching up is required to keep them in a habitable condition. Leaky decks and topsides are by no means an unmixed blessing; the result is that many ex-racers which would have had a long and honorable career

before them as handicap boats had they been better put together, are hauled up or placed in mud berths until in course of time they fall into the breaker's hands.

The evil has become so pressing that the council of the Yacht Racing Association recently appointed a committee to inquire into the state of class racing and to suggest remedies which may tend to the revival of the larger classes. The report of the committee was exhaustive, but the two chief suggestions out of eight put before the council were (1) that the present rating rule encourages a bad form of bow, and that the method of measuring the length *L* should be reconsidered (that is, presumably, a tax should be put on excessive overhang forward); also that the minimum draft at the point where the girth measurement is taken be increased from half the beam to 0.6 of the beam. (2) That the Y. R. A. should impress upon the various yacht clubs the desirability of encouraging the Y. R. A. classes by offering better prizes. The committee also suggested the advisability of the adoption of the new Lloyds scantling rules for racing yachts.

Unfortunately the council did not see their way to readjusting the waterline measurement or interfering with the minimum draft for girth measurement, as the rule had been passed for seven years and has still four years to run; neither were they prepared to recommend the adoption of Lloyds scantling rules, as they did not have a two-thirds majority in favor of them, but they have instructed the secretary to sound present and prospective owners on the subjects, which will be brought up again at the general meeting on February 2. It is to be hoped for the sake of the sport that the Yacht Racing Association will not allow themselves to be too much bound up with their own red tape, for drastic remedies are certainly required to put class racing on a sound basis, and no half measures will serve any good purpose. Yacht owners want a good, sound, wholesome type of boat, especially in the large classes, and until they can be sure of getting a ship and not a bandbox they will refuse to buy or to build.

We regret to record the death at the early age of 44 years of Mr. C. L. Orr Ewing, M. P., after a short illness. Mr. Orr Ewing came of a yachting family, and had his first experiences of yachting with his uncle, Major Ewing, who owned and raced the famous 40-tonner Norman with such conspicuous success for so many years. During the season of 1880 Mr. C. L. Orr Ewing went the rounds with Norman, and the fine old ship won twenty first prizes out of twenty-three starts. Mr. Orr Ewing started yachting on his own account with the steam yacht Rainbow, in which he made several cruises to the Mediterranean. He subsequently owned the smart little Sibbick 36-footer Heartsease, which he raced with such success on the Solent that she had the wonderful record of 26 first prizes, 14 seconds, and 4 thirds out of 48 starts. His last vessel was the great Watson schooner Rainbow, considered by some critics a very handsome vessel, and by others rather the reverse. She had rather a short counter and an immense forward overhang, but whatever her looks, there was no doubt as to her great speed under favorable conditions. In her first match from Dover to Heligoland in 1898 for the German Emperor's cup, Rainbow is said to have logged over sixteen knots for a considerable period. She was laid up the following year, and has been since purchased by a German syndicate and renamed Hamburg. Mr. Orr Ewing was a prominent member of the Royal Yacht Squadron, and belonged to many other of the leading yacht clubs, and he will be sadly missed on the Clyde as well as in southern waters. Other prominent Clyde yachtsmen who have passed away during 1903 include Sir Michael Shaw Stewart, of Ardgowan, Commodore of the Royal Northern; Mr. John Scott, C. B., Commodore of the Royal Clyde, and Mr. James Stevenson, of Larigs.

The yacht builders are very quiet as regards new work. Very few new boats are on order, the most important being the new 150-ton yawl building at Southampton for Mr. M. B. Kennedy, and the 65-ton yawl building at Fairlie for Mr. A. K. Stothert, both from designs by Fife. These two boats will be up-to-date fast cruisers, and will take part in the handicap class races. It is stated that Fife has received an order for a schooner of about 300 tons for a German syndicate, but as yet the rumor has not been confirmed. If true, it will be a notable addition to the fleet of fine schooners already in German waters.

E. E. H. KELLY.

### Horseshoe Harbor Y. C.

THE Horseshoe Harbor Club, of Larchmont, was organized in 1889 by Charles A. Singer, its first president, assisted by Wm. Haigh, A. C. Fargis, D. E. B. Foote, George Plumb, F. E. Towle, all of whom are still active members of the organization.

In 1890 the club was incorporated by Charles A. Singer, John P. Hull, George G. Murray, and George Plumb, from which time it has steadily grown until in the present year it has a membership of 221, a full treasury, and a large fleet of sail and power yachts.

Its club house, which was the former home of the Larchmont Y. C., was presented to it by that organization, and with additions still serves to house it. The house was originally built for a church; the congregation, however, soon outgrew it; after this the Larchmont Y. C. soon outgrew it; and now the hope is entertained that some day a new house will be built for the Horseshoe Club on the rocky point which forms the southern entrance to the Horseshoe Harbor.

This club occupies a unique place in Larchmont, as it gives at small expense to many people the advantages of a landing stage, and a means of enjoying sailing, rowing, and fishing on the Sound.

Wives and daughters of members have full access to the club house and floats at all times, and thus many women are enabled to enjoy boating on the Sound and the privileges of the wide verandas.

Practically all the available water front within many miles of New York city is now owned by private persons, who naturally keep out other people not so fortunately situated. The Sound at Larchmont offers exceptional advantages for boating of all kinds, and those who can avail of them appreciate what a privilege it is to enjoy the advantages offered by this little club.

The Horseshoe Club has always made a great point of its annual regattas, which have been invariably successful. The club has for several years past had a full treas-

THE HOME OF THE HORSESHOE HARBOR Y. C.

The club house is on the left by the flag pole.

ury, and as a consequence has been able to give generously in prizes at its annual regattas and other special races. Its annual water sports and annual cruises have been very successful, and are now considered features of the summer amusements at Larchmont.

During the past season under a progressive board of officers and very able regatta committee, the club has reached practically its greatest success so far in point of membership, finances, and successfully conducted races.

#### Editor Forest and Stream:

The Horseshoe Harbor Club, of Larchmont, held its annual meeting at the Manhattan Hotel, New York, on Wednesday evening, January 13. Nearly fifty members were present. The treasurer rendered a statement showing the finances to be in excellent running order. The outgoing trustees and the club members presented ex-Commodore Crisman with a yacht case of knives, forks, and spoons. The officers elected for the ensuing year are: Com., William A. Marble, Nymph; Vice-Com., Lester H. Rilly, Ping Pong "G. G."; Sec'y, William S. Allen, Indra; Treas., L. A. Winship; Trustee, William Haigh, Yankee Girl.

Several matters of great importance to Larchmont sailors were discussed, and a committee appointed to assist, if possible, the endeavor being made to increase the protection afforded visiting yachts anchoring off the station, which is particularly exposed to storms driving over the Sound from Hempstead Harbor. The club served a collation, and Commodore Marble put a long splice in the main brace. Every indication points to a successful year during 1904.

FRANK E. TOWLE.

### Boston Letter.

BOSTON, Jan. 18.—Mr. Henry Bryant, one of the best known and most popular yachtsmen in this country, was found dead at his country place, Waquoit, Mass., on Wednesday afternoon, Jan. 6. The cause of death was apoplexy. Mr. Bryant was one of the first to realize the great possibilities of Cape Cod as a summer place of residence, and for many years he spent much time there. He built his residence in Waquoit four years ago, and, although having a residence in Boston, he spent the greater part of his time at his Cape Cod residence.

Henry Bryant was born in 1852, and was the son of Henry Bryant of the famous shipping firm of Bryant and Sturgis, which, in the '40s and '50s of the last century, opened up the great northwest coast of America, now known as Alaska, Oregon and British Columbia. Both he and his brother, Dr. John Bryant, also noted as an amateur yachtsman, inherited large fortunes made in the northwest trade.

Early in life he became devoted to the sport of yachting. He studied naval architecture and nautical science generally. He studied in this country, and then went to Glasgow to complete his nautical education. He had no superior in the amateur ranks in this country. He was a bright progressive man, a splendid mathematician and a yacht designer of ability. Two of his designs have been well-known in this country, the sloop Thetis and the schooner Alert. Thetis was said to be the first of her type in this country, giving him the honor of building the first compromise centerboard sloop in America. Alert has long been known as one of the finest schooners in the cruising class. Mr. Bryant had his own notions on yacht designing, and he struck out radically. His ideas have brought forth good results.

During the Spanish war Mr. Bryant was navigating officer on the coast defense vessel Hannibal, with Commander Colby. He volunteered as a clerk in Commander Colby's office when that officer was all but swamped with work on the coast patrol fleet. Mr. Bryant, student of ship building and navigation, took off his coat and worked with a will, and without pay, until matters had been straightened out. Then he took an examination, was commissioned Lieutenant, and served as navigating officer.

Mr. Bryant was always popular and ever ready to help out some struggling designer, although he always averred that he knew nothing about yacht designing. His funeral, held on Saturday, Jan. 9, was attended by yachtsmen of national reputation, who have been closely identified with the defense of the America's Cup. Up to the time of Mr. Bryant's death, he held membership in the Boston, Eastern and New York yacht clubs.

One new 22-footer has been heard from. This boat will be for Mr. Sanford C. Winsor, from designs by Mr. Fred D. Lawley, and will be built at the Lawley yard. The plans of this boat appeared in the last issue of FOREST AND STREAM. No expense will be spared in

making this boat all that can be obtained under the rules. Mr. Winsor's 22-footer Chief, has been sold to Dr. George G. Hayward. Dr. Hayward intends racing Chief at Northeast Harbor, Me., and so, while a new boat will be added to the class, it is not likely that the class will gain in numbers thereby. It is quite possible, however, that there will be more 22-footers in the regular races this season than there were last season, as some of the old boats are now being overhauled for racing.

Commodore H. H. Wiggin, of the Annisquam Y. C., it is stated, will go into the 15-ft. class, and will have a boat designed by Mr. Fred D. Lawley. It is understood that Commodore Wiggin was undecided between the 15ft. class and the 22ft. class, but that he has finally chosen the smaller boat. An effort was made to start the one-design class of 15-footers among members of the Annisquam Y. C., but, so far as is known, the class has not yet been started.

Last Wednesday evening the annual meeting of the Corinthian Y. C., of Marblehead, was held at the Boston Athletic Association, when the officers, announced last week to be ballotted for, were elected. At this meeting the recently organized class of 30-footers was proposed for adoption, but the club refused to accept it. One of the yachtsmen interested in the new class spoke in favor of adoption and nobody spoke in opposition, but on vote the sentiment of the silent members was brought out.

At the annual meeting of the Savin Hill Y. C., held at Young's Hotel, last Thursday evening, the following officers were elected: Com., J. E. Robinson; Vice-Com., A. Coombs; Rear-Com., F. W. Merrick; Sec'y, H. T. Washburn; Treas., C. A. J. Smith; Meas., C. H. Conant; Directors, E. S. Dorr and William Hoag; Membership Committee, W. R. Beetle, E. L. Bragg, W. S. Harvy, A. L. Kidd, Dr. M. F. Rogers, Guy C. Scott and C. R. Willard.

Messrs Small Bros. have designed a 24ft. speed launch for Mr. Muron L. Crowe, of Dorchester, with lines similar to those of Mr. C. D. Mower's Express. She will be of 4ft. beam and will have an 8 horse-power engine.

Mr. Fred D. Lawley has an order for a Seawanhaka cup challenger for a syndicate of White Bear Lake yachtsmen. This will make two Boston-designed boats for the trial races, the other being by Mr. B. B. Crowninshield. Both boats will be built in the west.

Mr. B. B. Crowninshield has an order for an 18-footer for Mr. Raymond Brackett, of Marblehead. She will be built by White, of Manchester. He also has an order for a steel three-masted schooner, to be used in the Mexican trade.

Messrs. Burgess & Packard have an order for a one-design class of 15-footers for members of the Wianno Y. C., of Osterville, Mass. They also have an order for a 21-footer, for a New York yachtsman. They have sold the yawl Elf, owned by Mr. A. P. Irving, to Mr. J. L. Trevor, of Ithaca, N. Y. She will be taken through the canal.

Wilson & Silsby have orders for suits of sails for the following yachts: 30-footer for Capt. Sprague, Beach Haven, N. J.; 30ft. cat, W. H. Cowperthwait, Beach Haven; Umbrina, W. H. Childs; Mavis, W. M. Lovering; Chanticleer, G. W. Weld; 18-footer for Hon. Chas. Francis Adams 2d; Ada, Fred H. Seavey; Medric, H. H. White; Thorina, F. B. Wales; six suits for Bay State Y. C. dory class, and headsails for the Wasp, Gordon Dexter.

Messrs Cousins & Pratt are at work on sails for the following boats: Yawl Brigand, Robert Saltonstall; 52-footer for J. H. Cromwell; schooners Baboon, Gerfalcon and Margaret; 21-footers for T. W. Rogers and Chester Bearse, designed by Burgess & Packard; 21-footers Bestey and Jenny Wren; 18-footers for J. W. Olmstead, R. deB. Boardman, Mr. Bowden, George P. Keith, Reginald Boardman and A. W. Finlay; 15-footers for Keith Pevear and A. P. Loring; 21-footer for Kenneth Stevenson, of Detroit, and the White Ribbon, ex-Hamilton, built for defense of the Canada's cup.

At the annual meeting of the Dorchester Y. C., held last Wednesday evening, the following officers were elected for the ensuing year: Com., Theodore W. Souther; Vice-Com., John P. Meade; Rear-Com., W. A. Rumpf; Board of Directors, Harrison W. Smith, Chas. H. Nute, Coolidge Barnard; Treas., Hjalmar Lundberg; Sec'y, William S. Mace; Meas., Clifton W. A. Bartlett; House Committee, William E. Richards, John E. Holt, Peter McKenzie; Regatta Committee, Louis M. Clark, John P. Meade, Theodore W. King, John E. Holt, Hjalmar Lundberg; Membership Committee, C. W. A. Bartlett, Albert F. Foster, John P. Meade, Stephen P. Perrin.

For a few seasons past, the young ladies of the

Marblehead summer colony have been seen sailing small boats around the harbor. Now they want a one-design class, to be raced only by ladies, and they are going to have it, too. Mr. John G. Alden has drawn lines for a boat 25ft. over all; 17ft. waterline; 7ft. beam, and 8in. draft, carrying 330 sq. ft. of sail under a knockabout rig. The class will be started with three boats, and it is believed that there will be more before the season opens.

Mr. Norman L. Skene, with Mr. Hollis Burgess, has designed a boat for ex-Commodore George H. Richards, of the Beverly Y. C. This boat will be used in Long Point Bay, Lake Erie, where Commodore Richards has a summer residence. She will be used for afternoon sailing, and for hunting trips. She will be 40ft. over all; 27ft. waterline; 9ft. 3in. beam, and 2ft. 6in. draft. She will be fitted with bilge boards which are characteristic of yachts sailed in that section. There will be a cabin trunk, under which there will be 4ft. 9in. headroom, with transoms that will sleep four people. There will be 750sq. ft. of sail, and the boat will carry only 1,000 pounds of ballast.

JOHN B. KILLEEN.

### Design for a 31ft. Hunting Launch.

THE accompanying plans show the hunting cabin launch Estella, owned by Mr. Geo. F. Nock, of Providence. This boat was designed to meet the requirements of the owner, who desired a boat with good cruising qualities rather than speed; she was to be a craft of moderate draft and to be supplied with two thousand pounds of ballast; while the addition of ballast does not tend to increase the speed, it certainly is an improvement where the boat is to be used for rough water, and the owner often makes trips from Providence to the westward, and if he makes up his mind to go to New London he generally goes irrespective of the weather conditions.

The cabin is large and roomy, and the cockpit large enough to accommodate quite a number of persons. The sides of the cabin house and cockpit coaming are of mahogany, as also all exterior woodwork, such as doors, slides, companionways, etc. The construction is rather heavy, the keel of oak sided 4in., frames are of oak 1 3/4in. by 1 1/2in., spaced 10in., planking is of yellow pine finished 3/8in.; deck is of clear white pine 1 1/2in.; cabin house deck is of 3/8in. cypress covered with canvas. The headroom at the after end of the cabin is 5ft. 10in.; 9ft. from the after end of the cabin house is a bulkhead, this allows of a berth on each side 7ft. 6in. in length, which are arranged to extend so that two persons can sleep comfortably on each side; the clothes presses at the after end are of ample proportions. Forward of the bulkhead on the port side is a toilet room, and the galley is situated on the same side; on the opposite side is a large ice-box and locker under a transom which can be used for a berth if desired.

At the forward end of the cabin is a large locker for provisions, etc., which extends to the bulkhead aft of the water tank.

The motor, which is a 14 horse-power Buffalo, is situated under the forward end of the cockpit, and hidden from view to the inside of the cabin by a flight of steps. When these are removed there is ample room to get at all parts of the motor; there is also a hatch in the cockpit floor to admit of further access to the motor. The gasoline tanks are of heavy galvanized iron, cylindrical in form, and situated under the cockpit well out on the sides. An awning that can be removed when desired affords protection from rain or sun.

Estella was designed by Mr. F. S. Nock and built at his yard in East Greenwich, R. I.

The dimensions are as follows:

Length—	
Over all .....	33ft. 9in.
L.W.L. ....	31ft.
Overhang—	
Forward .....	6in.
Aft .....	1ft. 3in.
Breadth—	
Extreme .....	9ft.
L.W.L. ....	8ft.
Draft—	
To rabbet .....	1ft. 10in.
Extreme .....	2ft. 4in.
Freeboard—	
Forward .....	4ft.
Least .....	2ft. 6in.
Aft .....	2ft. 9in.

### YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Three good sized boats are now being built by the Chase Pulley Company, of Providence. The largest of the trio is a speed launch that was designed by Mr. C. F. Herreshoff. This boat is 43ft. over all; 5ft. extreme breadth; and 6in. draft of hull. The point of greatest breadth is about 15ft. from the stern, and she is very fine forward. The hull of the boat is doubled planked, the outer skin being of mahogany. The frames are of oak. A turtleback deck extends back about 11ft. from the stem. Just abaft the turtleback is the helmsman's cockpit, with room for two persons. Aft of this are the engine spaces, about amidships, where the two 20 horse-power Rochet-Schneider motors are to be installed. Still further aft is the main cockpit, 6ft. long and 4ft. wide. The launch is expected to be finished in about three weeks and then it will be sent to New York to have the motors and other automobile equipment installed. After that it will be exhibited with others at the Sportsmen's Show at Madison Square Garden.

Another launch is being built by this firm. She is a smaller boat, designed by Mr. William H. Hand, Jr. She is 26ft. over all, 6ft. breadth, and 2ft. draft. The planking is of white cedar, fastened with brass screws and copper rivets. The sheer strake, decking and cockpit coaming are of white oak. The cockpit is 16ft. in length and finished in cypress. The motive power is a 6 horse-power Rhode Island motor, with a 20-in., three blade propeller.

The third boat is an auxiliary sloop, designed by

Messrs. Burgess & Packard, for Mr. G. F. Holmes, of Plymouth, Mass. She is 36ft. over all; 22ft. waterline; 10ft. breadth; and 2ft. 6in. draft. The cabin house is 12ft. long, and there is 5ft. 6in. head room under it at the after end. The boat will be equipped with a 4 horse-power gasoline engine, which is placed forward of the centerboard trunk. The propeller shaft will be just off the center line of the boat and will run along one side of the trunk. All the joiner work on the boat will be of mahogany.

\*\*\*

Invincible, ex-Intrepid, owned by Mr. H. R. Wolcott, left New York for Bermuda on the morning of January 8. From Bermuda Invincible will proceed to San Juan, where it is thought she will be joined by Atlantic, Mr. Wilson Marshall's new auxiliary. From there the yachts will cruise in company. Stops will be made at the Leeward and Windward Islands, Trinidad, and ports in Venezuela. On the return trip the yachts will visit Curacao, Santo Domingo, ports in Cuba and Nassau.

### YACHT CLUB NOTES.

At the annual meeting of the Williamsburgh Y. C., held a short time ago, at the club's city house, Manhattan avenue, Brooklyn, the following officers were elected to serve for the ensuing year: Com., Lawrence Rice; Vice-Com., Charles Hartman; Rear Com., D. Reynolds; Sec'y, James Spears; Cor. Sec'y, Thomas Doremus; Treas., James Schuessle; Meas., G. Schwarz. Board of Trustees: W. Long, Edward Padborg, G. Schwarz, J. New and A. Silk. Regatta Committee: Thomas Doremus and Charles Weiland.

\*\*\*

The Stuyvesant Y. C. held its annual meeting recently, and elected the following officers: Com., A. Eberhardt; Vice-Com., J. Babst; Rear Com., H. Ludwig; Cor. Sec'y, J. McCauley, Fin. Sec'y, W. C. Cartwright; Treas., C. S. Odgen; Meas., M. La Barre Moore; Fleet Sur., Dr. J. L. Hiller; Fleet Chap., the Rev. J. F. Scott. Board of Directors, J. McGregor, J. R. Cliff, A. Koebel, F. C. Kaiser, J. Kraus. Regatta Committee, J. O. Wright, C. H. Clapper, H. Berg, Jr.; M. Fauth, G. F. Zeller. Law Committee, R. C. Ten Eyck, F. P. Buell.

\*\*\*

At the annual meeting of the Indian Harbor Y. C., held at the club house, at Rock Neck, Greenwich, on Wednesday, January 13, the following officers were elected: Com., George Lauder, Jr., schooner Endymion; Vice-Com., Edward Shearson, schooner Quickstep; Rear Com., Wilbur C. Fiske, yawl Onawa; Sec'y, Charles T. Geddes; Treas., Richard Outwater; Meas., Morgan Barney; President of the Corporation, Charles T. Willis. Directors for three years: Charles T. Willis and Louis E. Alberter. Regatta Committee, Frank Bowne Jones, chairman; Charles E. Simms, T. J. McCahill, Jr.; E. Sterne Wheeler and George J. Bradish.

\*\*\*

At the annual meeting of the Harlem Y. C., the following officers were elected for 1904: Com., William Strauss; Vice-Com., Richard Webber, Jr.; Rear Com., William Shearer; Treas., T. B. Bates; Fin. Sec'y, H. B. McAllister; Rec. Sec'y, James F. Proctor; Fleet Sur., George H. Wilson, M. D.; Trustees, to serve two years, J. Surman, H. Merz, A. C. Block; Trustees, to serve one year, William Townner, F. McDermott and A. G. Austin; Meas., W. S. Sullivan; Chairman of Race Committee, John Wimmer.

\*\*\*

The Bensonhurst Y. C. held its annual meeting in the Johnson Building, Brooklyn, on Wednesday evening, January 13, and the following officers were elected: Com., A. C. Bellows; Vice-Com., A. W. Wells; Rear Com., C. E. Allen; Sec'y, C. H. Parsons; Treas., C. H. Clayton; House Committee, J. F. Eggert, J. E. Nicholson, W. T. Remmy; Race Committee, A. Mackay, G. D. Eggert, T. J. France, R. W. Rummell, H. L. Cummings; Auditing Committee, A. Semple, J. A. Assenheim, C. J. Schulz; Nominating Committee, W. R. Sainsbury, A. J. Boyd, W. W. Roberts, C. H. Hamilton, W. J. O'Neill; Delegates to Y. R. A. of G. B., A. Mackay, G. W. Waters.

\*\*\*

The annual meeting and dinner of the Corinthian Y. C. were held at the Bellevue, on Tuesday, evening, January 12. The following officers were elected: Com., Alexander Van Rensselaer, steam yacht May; Vice-Com., E. Walter Clark, Jr., sloop Irolita; Rear Com., C. Howard Clark, schooner Savarona; Sec'y, Addison F. Bancroft; Treas., George E. Kirkpatrick; Meas., Frederick J. Perry; Race Committee, Addison F. Bancroft, Harvey J. Mitchell, H. S. Jeanes; Committee on Admissions, Charles H. Brock, Alexander Van Rensselaer, Frank H. Rosengarten, Brereton Pratt, George C. Carson; Trustees for three years, Robert Toland and Robert J. W. Koons.

\*\*\*

The annual meeting of the Bay Side Y. C. was held in Literary Hall, Bay Side, L. I., on Saturday night, January 13, and the following officers were elected: Com., G. Waldo Smith; Vice-Com., Charles M. Gould; Rear Com., W. W. Cole; Treas., Hugh L. Webber; Sec'y, William H. Johns; Fleet Sur., Dr. Charles B. Story; Legal Adviser, Elmer G. Story; Meas., George H. Petit.

The club was organized a little over a year ago and it now has 80 members and 25 yachts in the fleet. There is enough money in the treasury to pay for the erection of the handsome club house now in course of construction, on Little Neck Bay.

\*\*\*

The annual meeting of the Seawanhaka Corinthian Y. C. was held at the City Club's new home, 45 West Forty-fourth street, New York City, on Tuesday evening, January 12. Some amendments to the by-laws were made, and the following officers were elected: Com., Arthur Curtis James, auxiliary brigantine Aloha;

Vice-Com., William J. Matheson, steamer Lavrock; Rear Com., Frank S. Hastings, yawl Peggy; Sec'y, Francis G. Stewart; Treas., Frederick P. Moore; Meas., John Hyslop; Race Committee, Henry H. Landon, Clinton H. Crane; Committee on Lines and Models, John Hyslop, A. Cary Smith and St. John Smith; Law Committee, Henry W. de Forest, William A. W. Stewart and William Low, Jr.; Trustees, class of 1907, Charles A. Sherman, John D. Barrett and Howard Smith.

The Race Committee submitted its report. It was rather interesting, and we publish it in part:

Jennings cup, presented by Walter Jennings; won by Merrywing.

Leland Corinthian challenge cup, presented by Chas. H. Leland; won by Sabrina, June 27.

Robert Center memorial cups, presented by Mrs. C. M. Ludlow; won by Mimosa, Merrywing and Sabrina.

Prizes for ladies' race (fifteen footers), presented by Rear Commodore Frank S. Hastings; won by Miss Agnes Landon, July 18.

Prize for ladies' race (fifteen footers), presented by Rear Commodore Frank S. Hastings; won by Miss Coffin, July 25.

Alfred Roosevelt memorial cup; won by Merrywing.

Corinthian challenge cup (fifteen footers); won by Cayenne.

Cup for America's Cup class, presented by the Board of Trustees; won by Reliance.

Corinthian crew prizes, presented by the contributors to the Founder's Fund.

A change was made last year by holding tournament races on Sept. 10, 11, and 12 for raceabouts and 15-footers all three days, and a race for 30ft. sloops on the last day. Rascal won the tournament in the raceabout class and Sabrina in the 15ft. class.

A special race was arranged on June 20, for the America's Cup class, Reliance, Constitution, and Columbia. The Reliance won by 4m. 15s. actual time from the Constitution, and 7m. 31s. from Columbia.

The Center Island cup series was changed to the 15ft. class, and brought out more boats than ever. The cup was won by Bobs, Cayenne second, and Sabrina third.

The Corinthian challenge cup race for 15-footers was most interesting and will extend over next year. The winner of 1903 was Cayenne, with Sabrina second, and Bobs third.

Thirty races were sailed last year, as against thirty-five in 1902, and 325 yachts started, two more than during the previous year.

\*\*\*

The annual meeting of the National Yacht and Skiff Club, of Toronto, was held on January 11. The following is a list of officers for 1904: Com., E. B. Collett; Vice-Com., Dr. McKibbin; Rear Com., William Downer; Capt., James W. Commeford, Jr.; Treas., H. B. Hudson; Meas., G. M. McTaggart; Ass't Meas., G. B. Martin; Sec'y, R. F. Fielding; Ass't Sec'y, Edward Witchall; Chairman of Executive, Thomas Riley; Executive Committee, John L. Lee, J. S. Ellis, John Johnson, William Ellison; Sailing Committee, Bert Archer, Art Winton, R. G. Low.

## Rifle Range and Gallery.

### Fixtures.

Feb. 27-March 5.—New York.—At Zettler's, championship rifle gallery tournament.

June 12-20.—National Schuetzenbund Festival, Union Hill, Schuetzen Park, N. J.

### Zettler Rifle Club.

NEW YORK.—The weekly shoot of the Zettler Club, Jan. 12, had more than the usual attendance of the club members, due in part to the fact that they were to contest for the badge of the National Rifle Association, which is one of the many that is given annually by the Association to each of the societies affiliated with the N. R. A.

This badge is supposed to be shot for by the members of each society, and the name of the winner returned to the secretary of the N. R. A., to be recorded in the annual report of the Association. In this contest the shooting committee decided to have the members use the bullseye target, one shot, and the best center to count. Wm. A. Tewes won with 43 degrees, H. C. Zettler and G. W. Plaisted were tied for second place, each with 47 degrees.

On the ring target, for the best 50-shot score, Capt. Tewes was again first, with a total of 1222.

Ten-shot scores, 25-ring target, distance 75ft.: W. A. Tewes 1222, E. Van Zandt 1219, L. C. Buss 1216, A. Kronsberg 1216, R. Gute 1212, C. G. Zettler, Jr., 1211, H. C. Zettler 1198, C. G. Zettler, Sr., 1193, W. A. Hicks 1192, Begerow 1190, Maurer 1187, B. Zettler 1187, H. Fenwirth 1170, G. J. Bernius 1134.

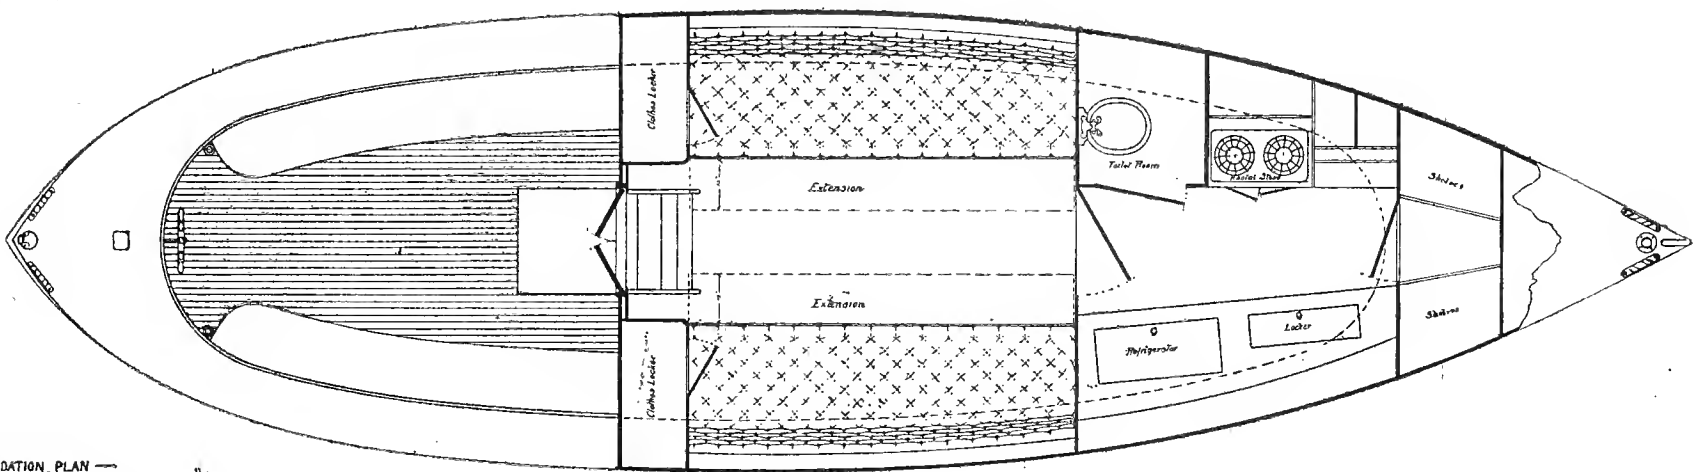

Bullseye target, 4in. carton, best center shot to count, N. R. A. badge, degrees: W. A. Tewes 43, G. W. Plaisted 47, H. C. Zettler 47, H. Kusters 53, A. Kronsberg 60, Begerow 65 1/2, B. Zettler 73, L. Buss 81 1/2.

### National Rifle Matches.

In Washington on Jan. 18 the Board for the Promotion of Rifle Practice held a meeting. Representatives of the Army, Navy and Marine Corps and National Rifle Association were present. Among the representatives of the latter body were Gen. Bird W. Spencer, of New Jersey; Major-General Charles F. Roe, of New York; Gen. P. Farmer Wanser, of New Jersey, and Major David S. B. Chew, of Pennsylvania. This Board determines upon the rifle and the regulations of the national contest. A sub-committee of the Board reported favorably on dropping, in future contests, all members of successful teams. This was earnestly opposed by General Roe, of New York. This rule, if adopted, would shut out the members of the New York team which won last year. General Spencer informed the Board that at its recent meeting the National Rifle Association, by resolution, opposed dropping more than three members of the winning team. The Board finally decided to make no change in this matter. No place has yet been fixed upon for the national matches. New York and New Jersey respectively desire to secure the contest, but the military members of the Board are in favor of holding the event in the Middle West.

## National Rifle Association.

THE National Rifle Association Board of Directors held its annual meeting in Washington on the evening of Jan. 16. General Bird W. Spencer presided.

Concerning whether or not the American team used an irregular rifle in the great International match at Bisley last year, there was a full discussion. Col. Leslie C. Bruce, captain of the American team, explained that the rifling of the rifles used by the American team differed from that used in the regular army, yet the use of the special barrel in no wise violated the conditions of the match. There was no attempt made to conceal that fact, and it was a commonly known fact, and no question was raised concerning it at that time. The English contestants used rifles of different rifling from those used by the regular army, and these arms were of special and expensive material. The conditions required that the rifles should be similar in pattern to that of the regular army of the country whence the team came. The use of special barrels did not make the rifle of a different pattern.

Gen. Spencer was authorized to send a reply accordingly to the secretary of the British Rifle Association.

The next meeting will be held on Sept. 1 to 10. The international match for the Palma trophy is to take place on Sept. 3.

Officers elected for 1904: President, Gen. Bird W. Spencer, of New Jersey; First Vice-President, Gen. George H. Haries, of District of Columbia; Second Vice-President, Gen. N. A. Haskell, of New York; Third Vice-President, Gen. L. Griggs, of Maryland; Treasurer, Lieutenant Reginald Sayre, of New York; Secretary, Lieut. Albert S. Jones, of New Jersey, who was instructed to invite the different foreign countries to take part in the international contest.

## Our Own Rifle Club.

HOBOKEN, N. J.—Some twenty odd members of the Our Own Club shot in the weekly gallery match on Jan. 13. A. Von der Decken was high man with 239.

Ten shot scores, 25-ring target, distance 75ft.: A. Von der Decken 239, J. H. Krouse 236, L. Levy 230, J. Ortlieb 230, Wm. Weiz 227, F. Buhler 227, Wm. Dilger 225, M. Appel 225, J. Trus 222, A. Brehler 221, M. Pfundheller 222, C. Drees 224, A. Gottlieb 215, J. C. Mehrtens 200, G. Justus 215, C. J. Mehrtens 210, C. Petersen 208, A. L. Weinthal 215, S. Fisher 202, L. Christ 214, G. Cordes 230.

## Miller Rifle Club.

NEW YORK.—At the weekly shoot of the Miller Club, Jan. 13, twelve members took part in the contest. There was a close race between four of the members.

Ten-shot scores, 25-ring target, distance 75ft.: F. Unbehaun 243, C. Bischoff 243, Owen Smith 242, D. Miller 242, D. Dingman 240, R. A. Goldthwaite 240, R. W. Evans 239, J. Bischoff 239, R. A. Blake 237, W. Wahlstrom 233, C. Bayha 233, C. Miller 232.

## Trapshooting.

## Fixtures.

Jan. 18-23.—Drenham, Tex.—Sunny South Handicap.  
Jan. 20.—Brown's Mills, N. J.—Match at 100 live birds each, between Fred Miller and Richard Lamb.  
Jan. 23.—Edgewater, N. J.—Shoot for L. C. Smith gun on the grounds of North River Gun Club.  
Jan. 30.—Bound Brook, N. J., merchandise shoot.  
Jan. 30.—Newark, N. J.—Shoot for L. C. Smith gun on the grounds of the South Side Gun Club.  
Feb. 2-5.—Omaha, Neb., midwinter tournament.  
Feb. 6.—Trenton, N. J., Shooting Association all-day shoot; merchandise prizes. J. R. Taylor, Gen'l. Mgr.  
Feb. 12-13.—Paterson, N. J.—Jackson Park Gun Club tournament; live birds and targets.  
Feb. 21.—Jersey City, N. J.—All-day shoot of the Hudson Gun Club. A. L. Hughes, Sec'y.  
Feb. 22.—Schenectady, N. Y., tournament.  
Feb. 22.—Schenectady, N. Y., Gun Club tournament. Valentine Walburg, Capt.  
Feb. 22.—Lexington, Ky.—Jefferson County Gun Club.  
Feb. 23-26.—West Baden, Ind.—Colonial Handicap. Targets and pigeons. Open. \$500 guaranteed. John L. Winston, Mgr.  
April 19.—Springfield, Mass., Shooting Club Patriots' Day tournament. C. L. Kites, Sec'y.  
June 7-9.—Sioux City, Ia.—Soo Gun Club's tenth annual amateur tournament; added money. W. F. Duncan, Sec'y.  
June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-manager, 219 Court Square, Pittsburg, Pa.  
June 27-July 3.—French Lick Springs, Ind.—Tournament of the National Gun Club. John M. Lilly, Pres., Indianapolis.  
Aug. 10-12.—Branford, Ont.—Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament. A. B. Cutcliffe, Sec'y.

## DRIVERS AND TWISTERS.

The Schenectady, N. Y., Gun Club has fixed upon Feb. 22 for a tournament.

The Soo Gun Club, Sioux City, Ia., has fixed upon June 7, 8 and 9 as the dates for its tenth annual amateur tournament. Added money will be offered. The secretary is Mr. W. F. Duncan.

Mr. L. Caunitz, of New York, and Mr. James Morrison, a member of the North River Gun Club, have arranged a match at 100 targets, for \$50 a side, to be shot at Edgewater, N. J., on Dec. 27.

The conclusion of the live-bird shoot, known as the J. P. Sauer & Son gun handicap, will be shot on Friday of this week, on the Guttenberg race track, N. J. Sweepstake events will also be shot. Shooting off the ties commences at 12 M. sharp.

The Hudson Gun Club will hold their next shoot on Jan. 24, and an all-day shoot on Feb. 21. Notwithstanding the many obstructive happenings of flooded grounds, a looted club house, and stormy shooting days, the members will continue their club shoots as energetically in the future as in the past.

The General Manager, Mr. J. R. Taylor, announces that the Trenton, N. J., Shooting Association will hold an all-day shoot Feb. 6, on the Interstate Fair grounds. There will be many merchandise prizes, for which the entrance is the price of targets only. Competition commences at 10 o'clock.

The main event of the Grand Canadian Handicap was at 20 live birds; \$500 cash guaranteed. There were thirty-seven contestants. It was won by Mayhew, from the 31yd. mark. Eight tied on the high score, 19. In the shoot-off, miss-and-out, Mayhew killed his fifth bird and won; Kirkover, shooting from the 32yd. mark, being runner-up.

The Pinehurst, N. C., Gun Club has arranged an attractive programme for the months of January, February and March. A shoot is held each week. The dates for the annual Pinehurst Gun Club championship trophy are March 31, April 1 and 2. Address the secretary, Mr. Herbert L. Jilison, Pinehurst, for particulars.

In a match at 25 live birds at Ledgewood, N. J., Jan. 15, between Messrs. F. Class, Jr., and L. Kerns, for \$25 a side, the latter withdrew at the twentieth round, the score then being 12 to 7 in favor of Class. In a match at Lake Denmark, same contestants and conditions, the scores were: Class 22, Kerns 10.

The trap editor of FOREST AND STREAM starts this week for an outing in Tennessee, where the quail are plentiful, where the bird dogs are of the best in the world, and where there are sunshine and moonshine of far greater excellence than there is in the North at this arctic season. Matter intended for publication should therefore be addressed to FOREST AND STREAM.

The Brooklyn Gun Club, Jan. 16, had a larger attendance than common, owing to a number of the Wanderers being present. The main event was the 25-target shoot for the L. C. Smith gun. In this event, six Wanderers competed. Mr. John Martin broke 21, and with his handicap of 5, made the possible 25. Without the handicaps, his score also was the highest.

Messrs. Wm. Hopkins and Geo. Conover have arranged to shoot a return match on Jan. 30, at Flatlands. The conditions are 100 targets, \$50 a side. The first match was shot at Aqueduct, L. I., and was won by Mr. Hopkins, the score being 78 to 74. If Mr. Conover should win the forthcoming match, the third match will be shot on the grounds of the Brooklyn Gun Club.

At Havre de Grace, Md., on Jan. 16, there was a trapshooting contest for the championship of Cecil and Harford counties. Harford county was represented by German, who killed 10, J. Poplar 10, V. Sentman 10, W. Poplar 10. Cecil county was represented by Miller, who killed 10, Bailly 9, Coale 9, Davis 9. Some miss-and-outs were shot, in which Mr. J. M. Hawkins, of Baltimore, was the chief winner.

At the shoot of the Crescent Athletic Club for Jan. 16, Mr. A. G. Southworth scored a win for the January cup with a score of 23 out of 25. Messrs. Marshall and Southworth scored a win in the two-man team contest for the Sykes trophy. Mr. T. W. Stake won a trophy contest after shooting off a tie with Mr. D. C. Bennett, who previously won a trophy event with a full score of 15. Messrs. Lott and Driggs also were trophy winners.

W. J. Rawlings, Chief of Police of New Britain, Conn., has sent out notice, as follows: "Taken from F. C. Monier, Jr., 147 Main street, Jan. 13, one Smith & Wesson pearl-handled 6-inch .32cal. revolver, six hammerless Ivor Johnson .32cal. revolvers, twenty hammer .32cal. revolvers, of three makes—Ivor Johnson, H. & R., and Tens. Six meerschaum pipes, in cases, twenty briarwood pipes, straight and crooked stems, in cases, \$5 in pennies. Please keep sharp lookout for these goods."

At the annual meeting of the Crescent Athletic Club, held in its city house, Clinton street, Brooklyn, Saturday evening of last week, the official reports showed the club to be in a flourishing condition. There are now 2,045 members, of which 1,695 are resident, 247 non-resident, 100 life and 3 army and navy. The income of the club last year was \$198,405.19; expenditures, \$153,974.04, thus leaving a surplus of \$44,431.10. The athletic expenses were \$5,130.20, divided as follows: Baseball, \$1,080.14; cycling, \$175; golf, \$1,347.20; hockey, \$196.83; lacrosse, \$1,761.33; lawn tennis, \$418.18; shooting, \$151.46.

The Ossining, N. Y., Gun Club is fortunate far above the commonplace in having a president who so generously and materially appeals to the friendly interest of the members. In the interesting report sent us by the captain, Mr. C. G. Blandford, is stated that on Jan. 16, the annual president's shoot was held, the prizes of which, two silver berry dishes, a silver soup tureen, a silver samovar, and a large silver pitcher, were donated by the president of the club, Mr. Franklin Brandreth, to which he appended the conditions that targets and shells were free; that lunch and cigars were hospitably a part of the pleasant event, all of which would indicate that if any one failed to enjoy that event his capacity for enjoyment was dull indeed. BERNARD WATERS.

## Bristol Gun Club.

BRISTOL, Tenn., Jan. 11.—The Bristol Gun Club held a shoot in honor of their distinguished guest, Mr. Fred Gilbert. After missing 4 birds in the first 35, he made 114 out of the next 115 targets. He made 85 straight run. E. K. Bachman made 42 straight run. Dr. S. W. Rhea made 28 straight run.

The weather was very bad. Still, a large number of visitors were on hand.

Some of the club members fell under their usual record. Mr. Gilbert will always have friends here.

Shot at. Broke.		Shot at. Broke.	
F Gilbert	150 145	E B Smith	125 102
E K Bachman	125 118	J M Berry	125 101

## Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Jan. 16.—Bad weather marred the weather conditions governing the shoot of the Keystone Shooting League to-day. Two events were shot. The first at 15 birds, 30yds. rise, with a \$5 optional sweepstake. I. W. Budd won first money alone, with a clean score. Charles Geikler and Richard Lamb divided second money with 14. F. M. Eames lost one dead out and missed a hard driver on his last shot.

I W Budd.....2222121122222-15 W Harrison.....\*21120222210211-12  
C Geikler.....222222222210222-14 E Coffin.....2102\*222222222-12

## Indianapolis (Ind.) Gun Club.

The first shoot for the Julius C. Walker & Son cup was held on Jan. 9. This will be shot in a series of twelve weekly contests, at 50 targets each, handicap of added targets to be adjusted according to previous record of each shooter. The scores:

Denny (14) 49, Moller (3) 45, Michaelis (0) 44, Allen (4) 43, Heaton (16) 43, Moore (1) 40, Bill (0) 39, Beckman (0) 40, Dixon (10) 39, Schwyer (10) 38, Hart (4) 38, Nash (0) 37, Lilly (10) 37, Pfaffler (6) 37, Albertson (32) 34, Morrison (14) 34. BONABA.

## Phellis Trophy Contest.

THE second contest between teams of the Urbana and Cincinnati gun clubs was held on Jan. 11. The teams were the same, except that Jack took W. Holding's place on the Urbana team, and A. Sunderbruch shot on the Cincinnati team in place of R. Trimble. This change in the latter team was made necessary by a new clause, which was added to the rules after the first match with Urbana, providing that members of teams contesting for the trophy must be bona fide residents of Ohio; and as Trimble hails from old "Kaintuck," he is barred from future matches.

A heavy storm of rain and sleet on Sunday night and Monday morning covered the ground with ice, and made the footing at the score rather precarious, until Supt. Gambell had a lot of dirt spread over the 16yd. path. The weather was cold and cloudy all day, and, although there was no wind, the targets were difficult to see; but some very good work was done.

The Urbana boys arrived about noon, and were greeted by a large crowd, which had assembled to shoot and watch the sport. After partaking of one of Mrs. Gambell's famous dinners, the Urbana team did a little practice shooting, and at 2 o'clock the first squad of four men, two from each team, faced the traps. The match was shot in two strings of 15 and one of 20 targets. At the close of the first round Cincinnati was 1 ahead, the score being 74 to 73. Urbana overcame this lead in the second round by breaking 80 to 75, and the match stood 4 in their favor. In the last round the home team pulled themselves together and smashed 103 to Urbana's 94, winning the match by 5 points, with a total of 252 to 247.

E. Holding, of Urbana, was high gun for the match, with 47, a much better showing than he made on Dec. 30, when he was not shooting in form. Barker was second high gun for the match with 45. He is a steady shooter, can be relied upon for consistent work, and does not get rattled when in a close competition. Sunderbruch was third with 43.

Gambell is entitled to credit for shooting at all, as he was only partially recovered from a severe attack of sciatic rheumatism, and was unable to get around without the aid of a crutch or cane. He showed great pluck in staying in to the finish, and every trapshooter knows that he is good for quite a number more targets out of 50 than he got here.

Judges: R. Trimble, C. Dreihls. Referee, D. Elliott. Official scorer, J. J. Faran.

The scores in the match follow:

Cincinnati Team.				Urbana Team.			
Gambell	11	12	16-39	Gross	11	13	18-42

	75	75	103 252		73	80	94 247

## Point Breeze Trap.

PHILADELPHIA, Jan. 16.—A sweepstake, miss-and-out, drew a large attendance of shooters and their friends on the grounds at the Point Breeze track to-day. It was an unusually large gathering in numbers.

The weather conditions were unfavorable to the shooters. The birds were about an average lot, poor and good. There were a number of the best shots which Philadelphia can boast, who participated in the competition. As to the handicaps, 30yds. and 27yds. were the limit. There were twenty individual shooters and forty-eight entries, several contestants shooting for other tickets besides their own.

Seven dropped out on the first round; six on the second; five on the third; three on the fourth, two on the fifth; two on the sixth; two on the seventh; seven on the eighth, and thirteen finished out the ninth round with clean scores, when the shoot was stopped on account of darkness and postponed until Jan. 22, in the afternoon.

A hammerless gun is offered as first prize. Scores:	
F Miller, 30.....22222222-9	H Fisher, 30.....22222222-8
John Morris, 30.....22222222-9	C Mink, 30.....22222222-8

## Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Jan. 14.—A strong wind blowing from the 9 o'clock quarter, and the temperature hugging the zero point were conditions not only unfavorable, but decidedly uncomfortable for trapshooting to-day. Under such conditions, however, the regular weekly shoot of this club was held, and as a result good scores were few. Several visitors were present and took part in the shooting.

In the cup event, P. J. Smith made highest score and was high gun as well. With the very unfavorable conditions considered, Pat "certainly had his eye" in this event. H. W. Marshall, in this same event, won both cups of last week in the shoot-off of ties.

Dr. Snow was present, and his gun, which was the most beautiful ever seen on the grounds, was the admiration of all present. The Doctor, being unused to the gun, did not shoot up to his standard. Scores follow:

### Wawaset Gun Club.

A CORRESPONDENT sends us from Wilmington, Del., Saturday, Jan. 9, the following interesting clipping:

The exhibition shoot given by Fred Gilbert, the world's champion, and Jack Fanning, of San Francisco; Hood Waters, of Baltimore, and Luther J. Squier and J. T. Skelley, of this city, at the grounds of the Wawaset Gun Club on Saturday afternoon was a big success, notwithstanding the disagreeable weather. As on the previous day, the men shot under unfavorable conditions, the biting southwest wind which blew interfering to a considerable extent, and making good scores a difficult matter. There was a big gathering of local sports, and the club house was unable to hold more than one-third of the number at one time. But the spectators stuck it out, and considered standing in snow and ice well worth the privilege of witnessing such a notable event.

The scores were not as good as those made at the grounds of the Wilmington Country Club on Friday, but Fred Gilbert again was high man, with 91 out of a possible 100. This score was 7 targets less than his record for Friday. By far the most exciting feature of the shoot was the rivalry between Gilbert and Hood Waters for first place. Gilbert had a bad start, missing his second target, and getting but 6 out of the first 10. At the close of the third round Waters led by 4 targets, but Gilbert going up for the final round broke his 25 straight, as the local sportsmen looked on with admiration.

Fanning did not shoot in his usual form, because of the cold, and Skelley took a slump, making but 66 against his 96 on the previous day. Squier did good work, making a total of 84. The score follows:

Fred Gilbert 91, Jack Fanning 70, Hood Waters 90, L. J. Squier 84, J. T. Skelley 66.

The official record of trapshooters recently issued proclaims Fred Gilbert still champion, and gives the number of points won. Twenty-four shots are on the honor list, including Luther J. Squier, of this city, whose number of points won is 215. The list of points won follows: Fred Gilbert 336, W. H. Heer 317, W. R. Crosby 294, C. G. Spencer 271, R. O. Heikes 262, C. W. Phellis 251, J. A. R. Elliott 241, Neaf Appar 236, J. M. Hughes 229, J. M. Hawkins 218, L. J. Squier 215, Ralph L. Trimble 211, Frank Faurote 204, E. D. Fulford 185, J. S. Boa 165, H. C. Hirschy 146, Turner E. Hubby 133, Max Hensler 132, Frank C. Riehl 134, Lou B. Fleming 125, Charles W. Budd 116, Russel Klein 108, Hood Waters 108, Harry Watson 100.

The following table shows L. J. Squier's record from January to August of 1903:

Mason, O., Jan. 27-28.....	395	882
Mason, O., Jan. 27-28.....	395	883
Pittsburg, Pa., April 22-23.....	350	917
Derry, Pa., April 29-30.....	360	840
Irwin, Pa., May 5-6.....	350	930
Wilmington, Del., May 7-8, 16-20 yards.....	350	911
Du Bois, Pa., May 13-14.....	350	952
Williamsport, Pa., May 27-29.....	555	888
Derry, Pa., June 30-July 1.....	360	886
Glen Rock, Pa., Aug. 6-7.....	400	975

### Wawaset-Baltimore.

THE following, taken from a Wilmington, Del., daily of Jan. 14, explains itself:

Much disappointment existed in local shooting circles last night when it was learned that the match shoot scheduled to take place between teams representing the Wawaset Gun Club and the Baltimore Shooting Association, in Baltimore, to-day, will not take place, owing to the fact that the Baltimore Association at the last moment backed out under the plea that some of its shooters are sick.

Sportsmen who have been looking forward to the shoot with considerable interest were much disappointed and were inclined to look upon the Baltimore team's reason for backing out as a flimsy excuse. Members of the Wawaset Club did not discuss the matter beyond stating the reason advanced by Baltimore.

In a match shoot between Wawaset and Baltimore in this city a few weeks ago, the Baltimore team was badly beaten, the score being 691 to 611. After the shoot the captain of the Baltimore team asked for a return match, and the Wawaset club readily assented. It was agreed that the shoot should take place within thirty days. Since that time preparations have been going on for the event, and the local shots were in readiness to go to Baltimore when the news came that the Baltimore Association had declared the shoot off for the time being. The captain of that team thinks it will be possible to hold it about Jan. 30. This will be the limit of the time agreed upon, and in case it is not ready by that date, it is not probable that the local shooters will agree to a further extension of time.

As the Baltimore Association has a large number of shots credited with good scores, it seems, nothing short of strange that the sickness of a few members should interfere with a shoot. Many are inclined to believe that the bad defeat which the local shooters inflicted upon Baltimore in the last shoot has something to do with the postponement.

The Wawaset club was in a position to send a strong team to Baltimore, having at least fourteen available shots at its disposal. The match shoot between Roser and J. T. Skelley which was scheduled to take place to-day has been postponed for a short time, as Skelley is absent from the city.

### Ossining Gun Club.

OSSINING, N. Y., Jan. 16.—Though a heavy snow squall somewhat marred that which promised to be a perfect afternoon for a shoot, sixteen shooters braved the weather and came out on invitation of the president of the Ossining Gun Club, Mr. Franklin Brandreth. This was called the "annual president's shoot," and those fair weather sportsmen who did not come should get together a "kicking squad" and take turns on each other. Here was what our genial president offered us, and, mind you, not a cent did it cost any one but the president. You couldn't even pay for shells or targets, or chip in for the trappers. Prizes: two fine silver berry dishes, a silver soup turcen with gun metal handles, a silver samovar and a beautiful silver pitcher with a capacity of at least two quarts of claret punch. With these thrown in were a lunch—eatables and drinkables—and cigars of good persuasion. Think of all this, fellow shooters, and envy us for the day we had.

The scores made were fair, considering lack of practice of the majority of the shooters. The handicaps were equitable, as the scores will testify. In making handicaps we aim to favor those who practice consistently. A man who has not shot a target for a year should not expect an allowance which would land him an easy winner.

Longest run of the day was made by Mr. F. Brandreth, 26 straight.

Practice, 5 targets: D. Brandreth 5, A. Harris 4, W. Fisher 2, J. C. Barlow 3, G. Hubbell 3, J. Hyland 2, C. Blandford 4, A. Bedell 3, J. Willi 2.

First trophy, 10 bluerocks, silver berry dish. Hubbell won on shoot-off:

	Yds. Added.	Tot'l.		Yds. Added.	Tot'l.
C Blandford.....	18	0	G Hubbell.....	16	1
A Harris.....	14	3	F Brandreth.....	16	0

G Hubbell.....	16	1	A Bedell.....	18	0
J Hyland.....	16	2	C Blandford.....	18	0

Fourth trophy, 10 bluerocks, silver samovar. Hans won on shoot-off, with 10 targets straight:

A Harris.....	14	3	I Washburn.....	16	0
W Smith.....	14	3	Hans.....	16	0
W Fisher.....	16	1	G R Schneider.....	16	0
J C Barlow.....	16	2	C Blandford.....	18	0
D Brandreth.....	16	1	A Bedell.....	18	0
F Brandreth.....	16	0			

Fifth trophy, 10 bluerocks, silver pitcher. Blandford won on shoot-off:

W Smith.....	14	3	J C Barlow.....	16	2
A Harris.....	14	3	C Blandford.....	18	0
W Fisher.....	16	1	A Bedell.....	18	0
D Brandreth.....	16	1	Hans.....	16	0
F Brandreth.....	16	0	G R Schneider.....	16	0
I Washburn.....	16	0			

### Florists' Gun Club.

PHILADELPHIA, Jan. 12.—The Florists' Gun Club held its regular shoot for class prizes at Wissinoming to-day. The weather was favorable, and should have drawn a larger attendance.

In the club race at 50 bluerock targets, from magautrap, Mrs. Park led with 46 out of 50, breaking the last string of 25 straight. Shew was second best with 45, Harrison third on 44, D. Sanford and State Champion Fred Coleman broke 42 each.

Several extras were shot, with no remarkable scores. Geo. Anderson had lost his form as well as his voice, but failed to recover either. The scores follow:

Targets:	25 25	Targets:	25 25
Mrs. Park.....	21 25-46	Geo. Anderson.....	17 20-37
C Shew.....	22 23-45	W. Park.....	18 19-37
W Harrison.....	24 20-44	E Coleman.....	18 18-36
D Sanford.....	23 19-42	W Massey.....	17 17-34
F Coleman.....	22 20-42	E Thomas.....	17 13-30
W Wescott.....	18 23-41		

### ON LONG ISLAND.

#### Brooklyn Gun Club.

Brooklyn, L. I., Jan. 16.—The shoot of the Brooklyn Gun Club to-day was well attended, there being twelve shooters present. The Wanderers were visitors and participants, and their club contest for the L. C. Smith gun was the main event. It was closely contested. Mr. John Martin was high with a full score of 25, and also high in the scores, handicaps unconsidered. The scores:

Shoot for Wanderers' gun, 25 targets:

#### Baden-Lick Gun Club.

WEST BADEN, Ind., Jan. 9.—Things have been rather lively in "the Valley" this week. On Wednesday Messrs. George and Logan Ballard shot off their tie for championship of Orange county, and the race was a nice one, as follows:

Ties at 25 targets: L. Ballard, 16yds., 17; G. Ballard, 18yds., 17. Second tie, at 25: L. Ballard 20, G. Ballard 14. L. Ballard won championship trophy.

On this day Rand put in an appearance. Of all the "busy" men we ever saw, Rand is the busiest. He immediately mixed us up and kept us going for three days. We want him to come back to the big handicap in February, and the writer will shoot that double race over again for \$1 a pair. The following scores will show what he did to us, 100 targets, \$20: Rand 88, Hasbeen 90.

Jan. 7, 100 targets, \$10: Hasbeen 87, Rand 84.

Jan. 8, 50 pairs, \$20: Rand 83, Hasbeen 72.

He beat us easily at our own game, one we love particularly well. Cause: Gone stale; too much shooting for one so old, and worn by expectancy, watching and waiting for those amateurs and factory boys who "can beat me easily, you know, only they don't shoot for money (unless they are sure they can get it), or their companies will not permit them to." Please, somebody, come. This is a delightful place to stop at; no expense.

That bunch of 250 dark blue hen birds is breaking me to feed and for "blanks," and the cup is a beauty. Rand thought he could, and then he thought he couldn't, much to our disappointment. And he has flown to Jamestown, but says he will come back to February handicaps and bring "a bunch" like himself. He will not, because he cannot find them. Rand tells us Hirschy is coming down to take the waters soon. Well, three days are all we want. Amateur? Of course, he's one. Doesn't he shoot like one these days?

Look out for our programme, to be issued on the 15th. It is plain and to the point. But study it out. It is a big one, and a money-maker to "a shooter."

A HASBEEN.

#### Rochester Rod and Gun Club.

ROCHESTER, N. Y., Jan. 13.—Possession of the Monroe county championship title and medal still remain with Mr. Harry M. Stewart, who successfully contested in their defense to-day. The weather was unfavorable.

Competition began at 2 o'clock, while it was snowing hard. There was a strong wind. It was sometimes difficult to see the targets. About two-score shooters were at the traps. During the afternoon several special matches were decided.

Eight men competed for the county championship, and the diamond medal. Stewart made a remarkable showing. He assumed the lead at the end of the second string, and thereafter he was never in danger. He finished with 25 straight. McCord and White each broke 24 out of a possible 25.

G. D. B. Bonbright filed with Secretary McCord, of the Rochester Rod and Gun Club, a challenge for the trophy. The challenge was turned over to Stewart, and he selected next Wednesday afternoon at 2 o'clock as the time at which he will be at Cobb's Hill to defend the title and medal. Scores follow:

Targets:	25 25 25 25	Targets:	25 25 25 25
Stewart.....	22 23 23 25-92	White.....	19 21 21 24-85
Snow.....	22 21 22 23-88	Clark.....	20 21 19 23-83
Adkin.....	21 23 22 21-87	Kay.....	23 18 22 20-83
McCord.....	21 24 23 19-87	Fraley.....	18 18 20 21-77

## IN NEW JERSEY.

## Trap at Guttenberg.

Guttenberg, N. J., Jan. 13.—The shoot for a Knockabout gun, managed by Mr. Gus Greiff, struck a popular and responsive chord in public appreciation. There were sixty-eight contestants. This contest appealed to all the shooters within a radius of about fifty miles of New York. New York and Connecticut were well represented, and as a matter of course, New Jersey was represented strongly. The conditions were made very generously. The gun was donated by Mr. J. P. Sauer. The entrance was only the price of birds. The handicaps were easy for the amateurs and hard for the professionals, the latter having the back mark of 33yds. Only one professional, Mr. Sim Glover, participated.

The conditions were 15 live birds, \$3.75 entrance; handicaps 25 to 33yds. A bird allowance was given as follows: 25yds., 2 misses as kills; 26yds., 1 miss as a no-bird, one miss as a kill; 27yds., 1 miss as a kill; 28yds., 1 miss as a no-bird. The handicaps were liberal. Many of the shooters had not had much experience in live-bird trapshooting, and a number claimed that they never had any at all.

The weather conditions were as unfavorable and uncomfortable as could well be imagined. A cold, steady rain fell all day. It was light in the morn'g, but steadily increased till early in the afternoon it was a steady downpour. The sky was heavily and darkly overcast, and there was a consequent dull, bad light. The grounds were covered with slushy snow. Consequent to these conditions, the birds took wing reluctantly. There was a very large percentage of sitters. The birds were a mixed lot, good and poor.

The shooting for the day ended at the eleventh round, excepting three, Mowry, Kisner and Westerfield, who shot at their twelfth bird. The remainder of the event was postponed to the following day, which was clear, cold and windy.

On Thursday, after the main event was finished, the tie competition was begun and continued to the fourteenth round. The conditions were miss-and-out, with the bird allowances to count as in the main event. At the fourteenth round, eleven contestants had used their allowances, and were on an equal footing. Three men had one allowance in reserve. One man had two allowance in reserve. Five men were out. The competition will be continued on Jan. 22, commencing at 12 M. The ties follow:

Mowry, 26	21021112221201	Martin, 27	2222221222222
Kisner, 25	22221111111222	Gerbolini, 27	1222212212111

## Riverside Shoot Association.

Carlstadt, N. J., Jan. 12.—The Riverside Shooting Association held a live-bird shoot on Outwater's grounds to-day. There was a small number of shooters present. In the fifth event "Garrison" killed 9 out of the 10 with one barrel. The scores follow:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	5	10	10	10	10	Targets:	10	5	10	10	10	10
G. Piercey, 30	10	5	4	7	10	10	Outwater, 30	6	5	9	10	9	10
J. Colquitt, 29	10	4	4	9	9	8	Hathaway, 28	9	8	4	6	9	9
Garrison, 27	9	5	10	7	9	9							

Miss-and-out: Piercy and Colquitt 7, Hathaway 6.

## Hudson Gun Club.

Jersey City, N. J., Jan. 11.—Following are the scores made by the members of the Hudson Gun Club, of Jersey City. This club has had very bad luck lately. First, the grounds were flooded so as to prevent shooting. The next thing that happened was not so bad. The house was broken open and everything worth anything was taken. Then followed two rainy shooting days. The rainfall was so heavy that few of the members attended. But the club is still very much alive, and will hold shoots as usual. Jan. 24 is the date for the next shoot. An all-day shoot will be held on Feb. 21. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	25	25	25	15	15	25	25	15	15	10
Schoverling	12	21	22	12	10	..	..	11	..	..

JAMES HUGHES.

## F. Class, Jr.—L. Kerns.

Lake Denmark, N. J., Jan. 12.—In the first match at 25 live birds to-day, between Mr. Frank Class, Jr., and Mr. Luther Kerns, for \$25 a side, young Class won on the excellent score of 22 to 10. He scored 18 birds with one barrel.

The scores follow:

F. Class, Jr.	22	121211110111111111111111—22
L. Kerns	10	0211000201010101002001000—10

Jan. 15.—The second match took place at Ledgewood, N. J., under the same conditions as to the number of birds and the amount of the money. Young Class again proved to be the victor, as the following scores show:

F. Class, Jr.	12	102010221200102002—12
L. Kerns	7	0200102020100200200—7

## Montclair Gun Club.

Montclair, N. J., Jan. 16.—There was a goodly attendance of shooters at the Montclair Gun Club to-day. Notwithstanding the fact that the snow fell fast and the afternoon was very dark, the scores show that something was wrong, and of course, it must have been the weather. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	10	10	10	10	10	10
Fitch	5	9	7	8	6	5	6	7	8	..
Fowler	4	1	..	..	..	..	..	..	..	..

Cockfair	7	8	6	7	8	..	..	..	..	..

## The Peters Re-Union.

CINCINNATI.—The traveling representatives of the Peters Cartridge Co. gathered in Cincinnati last week from all points of the compass, to attend the annual reunion and have a good time.

Friday, Jan. 15, was spent at the grounds of the Cincinnati Gun Club, where they were entertained at dinner by the company, and had all the sport they wanted at the traps.

A feature of the day was the exhibition of fancy shooting given in the afternoon by Capt. Bartlett and Messrs. Carter, of Montana; Leach, of Nebraska, who holds the record of 1601 targets broken with a .22 rifle; Hardy, of Arizona, and Wallace Miller, of Austin, Tex., all representatives of the company. This exhibition was witnessed by a large crowd. Capt. Bartlett took the lead and performed many wonderful feats with .22 and .30-30 rifles, breaking pieces of brick, walnuts and other objects thrown in the air. Sighting in a mirror, standing back to the mark; holding rifle upside down, and at arms' length over his head, using a mirror for sighting, etc. Capt. Hardy, who is especially expert with the revolver, broke 51 out of 53 targets thrown in the air, and allowed that if this was not a record he would make one. He also drew letters and figures on cards held by Mr. Carter, using the bullets from a .22 rifle as his pencil. His hardest feat was when he held the butt of the rifle on his breast, standing with back to the mark, walnuts placed on a box, then leaning over until his head touched the ground, he fired and broke them, the rifle being upside down.

Wallace Miller is an expert in the use of a shotgun. He placed gun on his right foot, threw two targets in the air, tossed up his gun with his foot, caught it and smashed both targets. He then held a target in each hand, grasping his gun also, tossed gun in the air, threw up the targets, caught the gun, and made dust of the targets.

Messrs. Carter and Leach performed similar feats to the others, breaking walnuts, balls, and hitting small iron washers thrown in the air, using a .22 rifle. It was unquestionably a fine exhibition of skill, and was warmly applauded.

Shooting at the traps was continuous all day, the principal events being a match between teams of representatives from the North, East, South and West, and two teams known as the "Has Beens" and "Would Be's." There was also an exciting match between Charlie Grubb, of Pittsburg, and Geo. Benjamin, of New York, which was won by the former with the phenomenal score of 2 to 0.

Maurice Kaufman staid in Cincinnati long enough to see the sun shine, and said he could go home to New Orleans happy after that strange event.

Del Gross was squad hustler, and kept the boys on the move. The trap boys registered a kick, as they got no rest between squads.

As is usually the case, genial Tom Keller was the life of the crowd, and kept every one in good humor. The scores follow:

North.	G King	16
L. H. Ried	Leach	16
French	Thomas	14
Richmond	Knouse	9—156
J. E. Ried	Would Be's.	..
Frohlinger	Kaufman	21
Tuttle	L. H. Ried	19
Myers	Richmond	17
Parker	Osborne	16
Lindsley	Porter	16
East.	Litzke	15
Apgar	Lindsley	15

D. Elliott	Myers	13
Bartlett	Thomas	12
Kirby	Keller, Jr.	10
Hardy	Krouse	9
Carter	Grubb	2—234

## Cincinnati Gun Club.

The following scores were made in the Parker prize gun contest of Jan. 9 by members who were unable to be present that day on account of the weather: Pohlar (35) 66, 100; Pfeiffer (40) 62, 100; Gambell (10) 91, 100; H. Sunderbruch (40) 55, 95; Dick (22) 73, 95; Davies (23) 70, 93; Grau (12) 86, 98.

Jan. 16 was the first day for many weeks that the weather has allowed of comfortable shooting. The day was clear and warm, with a fairly strong wind, affecting the targets a little, and twenty-eight members took part in the last shoot of the cash prize series. R. Trimble was high gun with 44, Medico second with 43, a little nearer to the gait he was shooting a while back; Gambell third with 39.

Among those present was Jack, who has been a stranger to the grounds for many weeks. Captain also took a hand in the game once more. Ackley was on hand, and we hope, as the weather gets warmer and pleasant, that he will be one of the regulars again. Phil leaves the city on Jan. 18, and the match with Mechanicsburg for the Phellis trophy is indefinitely postponed on that account. This leaves the field open to other clubs. Where is Dayton, Troy, Springfield? One of them should take the cup.

There was not much practice shooting done to-day, as it took nearly all the time until dark to finish the main event. The scores, distance handicap, follow: Buller's (16) 29, Ackley (16) 23, Perin (16) 32, Hake (16) 20, Jack (15) 33, Medico (19) 43, Block (18) 27, Williams (17) 32, Ahlers (18) 32, Barker (18) 37, Jay Bee (16) 34, Don Minto (16) 36, C. Dreih's 33, Linn (16) 31, Underwood (16) 23, A. Sunderbruch (19) 35, R. Trimble (21) 44, Gambell (16) 39, Herman (16) 31, Norris (16) 29, Harig (16) 33, Faran (16) 35, Captain (16) 31, Miles (16) 36, Lampert (16) 29, E. Trimble (16) 31, Osterfeld (16) 33, Boch (16) 22.

BONASA.

## SIDE LIGHTS OF TRADE.

Jan. 14, at Taylor, Capt. Clif F. Gilstrap, of the Taylor Gun Club, scored, in open competition, 95 bluerocks and 10 live birds, quitting without a miss. He shot "Infallible."

At the Linden, Iowa, tournament, Jan. 6, high average was won by F. Campbell. Jan. 8, at the Baltimore tournament, J. M. Hawkins won high professional average, and Mr. L. S. German amateur average. The annual live-bird cup competition was won by L. H. Shaab. Each shot Winchester factory loaded shells. Messrs. Hawkins and Shaab used Winchester repeating shotguns.

Penn Forest Brook Trout Co., Mauch Chunk, Pa., a firm which makes a specialty of brook trout for table and stocking purposes, has issued a beautiful calendar for 1904. It is in the form of a matted picture ready for framing. The picture, in colors, is a reproduction of a painting by Albert Lache, and is entitled "Geel A Whopper." It portrays an angler in an ideal trout stream, with bent rod and taut line, holding a trout steadily with his right hand, while with his left, he is gently using his landing net in the act of capturing; and on the angler's face is that benign expression which denotes that success is assured, and that the day is pleasant. It will be sent free to applicants.

## PUBLISHERS' DEPARTMENT.

## The Southern's Palm Limited.

Leaves New York daily, except Sunday, 12:40 noon, via P. R. R. and Southern Railway.

Is operated through from New York to St. Augustine, with the exception of one Double Drawing and Stateroom Sleeping Car, which is operated to Aiken and Augusta, Ga. The train is composed of Pullman Compartment Cars, Drawing and Stateroom Sleeping Cars, Club, Library and Observation Cars and up-to-date exquisitely appointed Southern Railway dining car, with service equal to any high class hotel.

Other Handsome Trains.—Two other first-class through trains, with elegantly appointed Pullman Sleeping Cars and up-to-date Dining Cars, speed between New York, Washington and Florida, making travel on the Southern Railway a pleasure and delight. Thus it will be noted that three high-class trains are operated between the East and Florida by the Southern Railway.

Round-trip tourist tickets are on sale at reduced rates to all the principal resorts of Florida and the South, which will allow stop-overs en route, thus enabling passengers to make side trips to other resorts, if desired. For further information call on or address New York offices, 271 and 1185 Broadway, Alex. S. Thweatt, Eastern Passenger Agent.

## Concerning the Proctor Playhouses.

It is a noticeable fact that, during the investigations of the newly appointed Fire Commissioner, none of the theatres controlled by Mr. F. F. Proctor, (the Fifth Avenue, Twenty-third Street, Fifty-eighth Street or One Hundred and Twenty-fifth Street) have been mentioned by him as requiring any additional precautions. The "Proctor Plan" appeals particularly to matinee audiences of women and children, and this has made Mr. Proctor additionally cautious in providing for any emergency. It is creditable that, although Mr. F. F. Proctor has, at various times, owned more theatres than any other manager in America, he has never, during the course of his career, suffered serious loss from a fire. This is not due so much to luck on Mr. Proctor's part, as to his appreciation of the possibility of conflagration, and his extreme care in providing for such emergency. Mr. Proctor was one of the first managers to introduce the fire drill, and the equipment of the auditorium and stage with an ample supply of fire hose, and his system of late years has been developed and amplified until the Proctor houses stand to-day the safest theatres in the country.

## Florida.

## Two Weeks' Tour via Pennsylvania Railroad.

The first Pennsylvania Railroad tour of the season to Jacksonville, allowing two weeks in Florida, will leave New York, Philadelphia, Baltimore, and Washington by special train on Feb. 2.

Excursion tickets, including railway transportation, Pullman accommodations (one berth), and meals en route in both directions while traveling on the special train, will be sold at the following rates: New York, \$50; Trenton, \$49; Philadelphia, Harrisburg, Baltimore, and Washington, \$48; Pittsburg, \$53, and at proportionate rates from other points.

For tickets, itineraries, and other information, apply to ticket agents, or to Geo.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 30, 1904.

VOL. LXII.—No. 5.  
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### THE BOONE AND CROCKETT CLUB.

THE Boone and Crockett Club, whose annual meeting was held in Washington last week, is not an old institution as things go in this country, having been founded only twenty years ago. Its original purpose was to bring together a number of big-game hunters for social intercourse, which would include an exchange of experience as to game localities, hunting rifles, and methods of travel—pleasant and profitable to its members.

It very soon developed that these objects did not satisfy the energies of the members of the club. Game had already begun to be scarce, and the need of its protection had been strongly emphasized by the practical extinction of the buffalo. It was felt that the taking of game should be regulated, and further that a local club could not accomplish much in this direction. The result of this was a great widening of the club's influence by the election of members from all over the country, so that its membership represents the West and South, and one of its vice-presidents is a resident of Wyoming and another of Colorado.

With the rapidly changing conditions as to wild life and wild regions in America, the activities of the club have become still more modified. While a proportion of its members continue to be hunters and explorers of little known regions from the Arctic Ocean to Central America, from the Atlantic to the Pacific, and in Africa and Asia, these members occupy themselves less with killing game than with the investigation of new countries and new game animals, and the bringing to scientific institutions material for study by the naturalist. In this way—as was said last year at a meeting of the club—it has changed from an association of destroyers of wild life to one whose objects are largely the protection of life—chiefly as represented in the great wild creatures of the land, as well as of the forests which they inhabit.

As the views of the club slowly changed, men were elected to membership who were in no sense hunters, but whose work in exploration, investigation, and the protection of the natural wonders of the United States for the benefit of the people had been noteworthy. Such men did their part with other members of the club in arousing public sentiment in behalf of the natural wonders, and the club's efforts largely influenced the passage by Congress of laws for the protection of the Yellowstone Park and all that it contains, with the result that to-day we have there the most interesting game preserve in the world.

Since wild life and all that goes with it appeal most strongly to the club, it has always appreciated the importance of interesting the great public—which has so little opportunity to see the wilderness—in nature as exemplified by the creatures which flourished there. For this reason the club, through a committee appointed by Mr. Roosevelt, then its president, established the New York Zoological Society and its park, which now possesses the greatest collection of wild animals in America. Members of the club have always been the moving spirits in that Society, and the good which they have done, and the pleasure which they have given in the greatest center of population on this continent, can hardly be overestimated.

Persons who know of the Boone and Crockett Club only by name, are apt to think of it merely as an association of persons who enjoy hunting and killing wild animals, but it is not this. A considerable proportion of its members now never hunt wild animals, but, looking to the future, are endeavoring to preserve for this country a reasonable stock of its indigenous wild creatures, which will be beautiful and historical objects for succeeding generations to admire. The club is deeply concerned in the adequate preservation of the forest reserves, and is heartily in favor of legislation at Washington which shall transfer the Forestry Bureau from the De-

partment of the Interior to that of Agriculture. This, it is believed, will give better protection to the forests and the wild things that inhabit them, and thus will conserve to this country a great source of wealth, together with many objects of interest and beauty.

The club fully realizes that no legislation can ever accomplish anything unless backed up by public sentiment in the localities affected by the legislation, and heartily indorses the wise words of President Roosevelt, its founder, who declares in substance that the efficiency of any legislation in behalf either of game or forests depends on making the public directly affected understand that this legislation is for their benefit, and favors their interests. Incidentally such localities should be encouraged to feel a just pride in the forests, the herds of game, or the natural wonders in the neighborhood in which they reside, and which will be affected by such legislation. The local population are the natural protectors of such wonders, and such a feeling of pride is the best guarantee of support of any laws that may be enacted. Where this feeling exists the work of protection is made much less difficult. Thus, Major Pitcher, superintendent of the National Park, declares that his work of protecting that interesting region has been made easy and pleasant by the hearty co-operation that he has received from the people of Montana and Wyoming.

During the years of its existence the Boone and Crockett Club has done much good work, and since its influence is constantly increasing, we may hope that it will long continue to be a power for good in the land.

### WHALEBONE.

A CABLE dispatch the other day reported from Dundee, Scotland, a sale of two and a quarter tons of whalebone for £3,000 (or over \$14,000) a ton; and it was added that there were only four tons of whalebone left outstanding in the market, all the other supplies, British and American, having been cleaned up. The price of whalebone has risen in seventy years from 13 cents to \$7 a pound. The rise has been due to a growing demand and a lessening supply. It has reached a point where a bowhead whale may be regarded as an animated marine gold mine. The bone yield of a bowhead ranges from 1,600 to 3,000 pounds. At ruling prices of \$6 to \$6.50 a pound, this means that a whale is worth from \$10,000 to \$20,000; and the bowhead fishery should be attractive if there are any bowheads left. In spite of the meagre returns in numbers of whale taken during the last few years, a diminishing of catch which has resulted in the rise of price, it has not been shown to the satisfaction of whalers that the whales have actually been exterminated. Some whalers hold that there are as many whales to-day, both sperm whales and bowheads, as there were in the palmy days, when the American whaling fleet numbered over 700 sail against the beggarly 40 of to-day. Whales breed as rapidly now as they did then, it is reasoned, and are less closely pursued; they must be as plenty to-day as ever; that they are not found is due to a change of their haunts. Victor Slocum, of this city, a whaler of experience, some of which he has related for FOREST AND STREAM readers, expresses the conviction that the bowheads are in Arctic waters on the Atlantic side of the continent waiting for the coming of American gun harpoons; and he is fitting out for an adventure in quest of whalebone. For this purpose he is building a ro-tonner, the Fox, at New Rochelle, building it himself from the keel up—a method which is calculated to give one confidence in his ship in time of stress. Next July, according to programme, he will sail from St. Johns, Newfoundland, for Hudson's Bay. Leaving the Fox there in safe anchorage he will make a sledge journey of 600 miles across the ice to Melville Sound, where his hunting camp will be established. The return will be made in September of 1905. "If the bowheads are there—," someone began. "The bowheads are there," interrupted the master of the Fox. If they shall indeed be found, Mr. Slocum promises that we shall have the story of the whalebone fishing of Melville Sound.

We print from advance sheets those parts of the report of the New York Commission which have to do with game. The deer statistics are of most interest. They show a continuation of the steady increase of deer which has been a feature of all reports since the present law was adopted.

THE report of Mr. Gifford Pinchot, United States Forester, to the Secretary of Agriculture, is an interesting and cheering document. No previous year has seen such progress in forestry as the last, which has shown a constantly growing interest and an increasing amount of practical forest work. The change in sentiment in the West is due partly to a growing realization of the importance of irrigation in the Western States, and the influence of the forests on the water supply is gradually becoming understood by residents there. The great lumber interests are expressing themselves in favor of the perpetuation of forests by wise use. Railroads are considering the future of their timber supply, and are disposed to take measures for its perpetuation. The States are more than ever disposed to co-operate with the Bureau of Forestry, and State forest problems are constantly being submitted to the bureau for opinions. While the tendency of the bureau is to devote its energies to Government work rather than to the assistance of private owners, the number of requests for such assistance from private citizens is constantly increasing. Such requests must be met, because the proper working of a small tract of woodland by its owner exerts a very strong educational influence in a community. The subjects cared for by the bureau are forest management, forest investigation, forest extension, forest products, and of course the preservation of the records of the office. Mr. Pinchot has unquestionably done more to popularize forestry and to help forward an interest in it than any other American, and he will do more.

WRITING from the Adirondacks, Mr. George L. Brown questions the reasonableness of our assumption that the residents of the North Woods want their bears protected. Instead of being regarded as a blessing whose growing scarcity is viewed with alarm, he avers that the bear is cordially hated as a sheep stealer, and that what the Adirondack farmers would have is not bear protection, but a good generous bear bounty. Figures are quoted to prove that there has been no decrease in the bear supply, and doubtless the anti-bear side would be strengthened if we had statistics of the pigs and sheep which the farmers have contributed to the support of the species. The situation, in short, is this: Certain sentimentalists who do not live in the North Woods would have the bear protected; residents of the country, who are of more practical turn of mind, demand the destruction of the bears that they may raise hogs and sheep. We are bound to say that the Adirondack farmers have reason on their side. Common sense demands that the preposterous measure now before the Legislature to protect the bear should not be permitted to become a law.

MUCH has been heard of Mr. George W. Vanderbilt's game preserve at Biltmore, N. C., and of the means taken to increase the original stock of game and fish in the territory. During the eight years the preserve has been established, trout and deer have been liberated, the quail and the wild turkeys have been fed, salt licks have been maintained to attract the deer, hundreds of traps have been kept at work in the woods for the destruction of wildcats, mink, 'coons, and other vermin; forest rangers have patrolled the tract; and in all these ways the covers and waters have been well stocked. All this has naturally given the public an impression that the owner of Biltmore is a sportsman; but the curious feature of the Vanderbilt game preserve is that its owner never touches rod or gun; and personally cares not in the slightest degree for fish and game.

At a special meeting of the Millinery Merchants' Protective Association, held in this city last week, it was formally resolved to abandon the fight against the laws forbidding the use of bird plumage in millinery. This step, it was explained, has been taken because of a change of popular sentiment as to the wearing of bird feather adornment; and the change has been brought about chiefly through the continued agitation of the question by the Audubon Societies and the American Ornithologists' Union. The dealers would be willing to keep up the fight against the law, and might hope to win, but there is no such thing as standing in defiance of popular feeling, in particular the sentiment of women.

# THE SPORTSMAN TOURIST

## The Tough Side of It.

BETWEEN the Seboomook and Northeast Carry region of the West Branch of the Penobscot on the west, and the tumult of the Hulling Machine Falls on the east, there is a stretch of shore that they still call the "Dark and Bloody Ground." In the old days before many of the rocks were blasted out it was of all river stretches on the Penobscot deadliest to drivers. And those who were killed in the breaking of the jams here or who were drowned and cast out of the vaporous throat of the Hulling Machine were buried right on the bank. There are now a score or more of up-ended stones or rude wooden crosses showing where these victims lie mouldering.

In those days the State law allowed employees to bury men where they died. Now the bodies must be shipped out to the nearest undertaker, who incloses it in a casket and sends it to the man's home. And more than that, it is incumbent on lumber operators to get their sick men out to town if it is possible, or else to get the physicians in to attend the ill and the injured in the camp. Such reformations as these have helped out some of the hard features of Maine woods' life in the winter, but there are still big welts on the seamy side. The man who groans because his doctor does not come slamming up to the door within ten minutes after the call is sent would find the lines in the woods pretty hard.

And for that matter, the physician who can only go about to his duties in an automobile or behind the French plate of a brougham wouldn't be an amiable man by the time he got to a woods patient.

I have a friend who is a physician in one of the Maine towns located up near the jumping-off place. Every now and then he has a hurry-up call from some one of the big lumber operators to attend cases in their camps, and he drops his practice and goes, for there is money in it as well as infinite fatigue.

One year it will be the grip that ravages the men in the camps and lays off scores out of the working forces. This year the smallpox has ducked over the line from Canada and is causing all kinds of trouble. Dozens of camps have been peppered with it, and some of the game wardens of the State have been quarantined up there to the great detriment of their vocation and their temper.

"I got one of those calls the other day," relates the physician. "First I jumped on the train and took a forty-mile ride to West Cove on Moosehead Lake. At the station were two brawny woodsmen, who approached me and asked if I were the doctor that had been wired for. When I owned up they said that they had been sent to take me into camp."

"Can ye skate?" asked one of the men, tucking back under the flaming, strapped wool jacket his plug, from which he had wrenched a bracing chew.

"Yes, I said."

"Well, then, p'raps ye'd like better to skate than to ride," said he, pointing to a moose sled pulled beside the station platform. He explained that when I got tired skating up the lake he and his chum would haul me on the sled.

"So we strapped on our skates and started away for a fifteen-mile spin up the west shore of the lake. I hadn't skated for some time, and I was hardly a match for those woodsmen, but I didn't let on that I wasn't."

"For that matter, they were a bit hampered, for one carried my medicine kit and the other my surgical outfit, and towed the sled between them. I did ten miles of it, and they said that I'd better take to the sled, for there were 'riffles' ahead, and the ice wasn't exactly safe. A raffle, you understand, is where the ice has buckled up into a sort of ridge. Sometimes it's all right to cross, and sometimes it isn't. You usually find out all about it after you get on to it. It's like eating toadstools, you know."

"I rode bundled up on the sled and the men went cautiously over the riffles, poking with long sticks into suspicious places. Once one of them went down clean to his middle, and I yelled in fear. But he only laughed at me. He had gone through a coating of shell ice on to the firmer ice beneath. But he admitted that half the time the hole went all the way to the bottom of the lake."

"That was the way Pete Labree found it. He skated down to the village of Greenville after the mail for the lumber camp where he worked, and when coming back went down into one of the raffle holes. The ice broke so badly around him that he couldn't get out and felt himself chilling to death. He struggled to the edge of the ice and though it wouldn't support him so that he could draw himself out, yet it would hold his cap and the letters. And even while dying there, he was thoughtful enough to leave the mail where passers might see it. I tell you, my dear fellow, that's true bravery that can think of others in the supreme moment of life."

"Well, we finally got up the lake shore to the outlet station of the Canadian Pacific Railroad that from here takes a direct line across the State to the Canadian line. Our camp was up the railroad twenty miles."

"There would be no train till morning. But the woodsmen got hold of a handcar and we started for a twenty-mile pump. You know how those cars are fixed. It's easier to stand up and pump at the handles than to sit and let your feet hang down. And also it's warmer when the thermometer is at zero and a little below. I thought

my back would give out before we got there, but by soldiering a little on the upstrokes I managed to make out."

"Then the men loaded me on to another moose sled and started away up a tote road for an eight-mile tramp—and a woods mile is an old linger. Whenever my feet got cold I got off the sled and hoofed it."

"And that's the way we got into that camp! It was well into the night when we came over the rise of land and gave them a 'Hullo!'"

"Nineteen men were sick there. Eight of them had smallpox and were isolated in the wangan camp. I worked all night, and though I was pretty near dead the poor chaps appreciated it. A woods cook is a pretty busy man, you understand, and he hasn't much time for messing up medicines. Ginger tea is the extent of his pharmaceutical attainments, usually, and he'll make that strong and hot enough to parboil a man from teeth to duodenum. You can readily appreciate that the men were glad to shift doctors."

"The cook had long whiskers and a squint eye. He got me a special breakfast after the well men had eaten and gone away into the woods. While I was stuffing cream of tartar biscuit into me and swooning up hot tea the cook stood there with his red hands rolled in his apron and regaled me with conversation."

"Quite a joke on me a few days ago," he said. "McConnell's tote team came down the road and the fellow pulled up out there and come in for a snack and a sip of something warm."

"He said he was going down to the station after a load of cracked corn and baled hay. 'Takin' down a sick man, too,' he said. 'It's one of them Foster boys of Shirley. He's been sick for a week or so with some kind of a fever—typhus, I reckon—an' he thinks if he can only get out of that old bunk and into his mother's feather bed with her to nuss him, he'll be all right. But he's tremendous sick to start off for a ja'nt like what's before him.'"

"P'raps he'd like a bite," says I.

"Mebbe," says he. So I took a pannikin o' tea and a new-laid doughnut and went out to the team. He laid there all wropped up and the blanket drawn over his face."

"Wake up, Foster boy," says I, 'an' take a soof of something good for your in'nards."

"He didn't say northin', an' so I drew down the blanket—an', as I told ye back along, it was a good joke on me. There I stood with my hot tea an' a doughnut, an' the cuss was deader'n a rail. Was all cold. Had prob'ly been dead a ha'f hour an' that driver never knowed northin' 'bout it. He took him right along, though, an' sent him home in the baggage car instead of the smokin' car."

"It struck me," went on the doctor, "that the woods idea of a jest was a little stout for the consumption of the squeamish."

"Early that morning two men from McConnell's camp came for me with a moose sled, for the word had gone abroad in that section that I was coming. There was no way of avoiding that call—ten men sick and one near to death. I found him dead when I got there. And before I finished with the McConnell camp the Petersons came for me, and I rode half a dozen miles further into the woods on a jumper drawn by a pair of horses who bumped us over stones and stumps at a great rate."

"I was up there five days in that country—about from camp to camp—and when you talk about busy doctoring! Say, it beat a week's run of stork cases all out and hollow!"

"One of the most pathetic cases that ever came under my observation was when I was on my way out. A couple of men from one of the Spencer Bay camps away up to the east of Moosehead brought out one of their comrades to take the train at West Cove. The man was loaded into the baggage car and some blankets were spread for him. I saw the men putting him in and I went forward. They were just shaking his hand in farewell and bidding him to be of good cheer. I think the two of them would have cried like babies if the crowd had not been standing around. One of them told me that he was afraid the trip out had killed Jim, but in their own defense he said that the man had begged and prayed so frenziedly in camp to be taken home so that he might see his wife again that there was no withstanding his appeals. The man anxiously wanted to know if I thought Jim would get there—a station about twenty miles down the line—before he died. The poor fellow was gasping then in most alarming fashion."

"I examined him and found that he was in the last stages of pneumonia. The excitement and the effort of the trip had set his heart to pumping in such a way that it was too much for even his rugged constitution. There was where the trouble was going to be—his heart. I pushed the strychnia to him and stayed right by him in the baggage car. As we drew near the station where he was to leave the train, I felt as much excitement as though I were at a race. And was it not a race—a race with Death himself?"

"In spite of all I could do or say, that fellow would bounce about and keep talking about his wife—how she would be at the station to meet him, and all that."

"In his poor weakness he got fairly wild with anxiety as the train went on. 'I'm going to see her—I'm going to see her!' he cried, and then blest if he didn't try to get up, under the spur of the medicine, and look out of the window. He gave one flop, and his heart stopped on him like that!" The doctor snapped his fingers.

"They loaded him out at the station, and tossed his dunnage bag after him, and when the train pulled away I saw a little woman kneeling on those old duds and weeping her heart out over the poor fellow."

"If ever you want to get next to the tough side of sickness and suffering and death, you just come along with me up into the woods some time. And yet the conditions are now paradise beside what they were in the days when a man died where he suffered, and was buried where he died."

HOLMAN F. DAY.

## In Old Virginia.

### XVI.—A Little too Close.

THE Esquire made an engagement for us to hunt with a young gentleman who was recuperating on a neighboring plantation, and a few days after the last trip detailed, we set forth early in the morning to go by for him.

I was not especially enthusiastic about going out with an untried shooting companion, as the more experience I have in the use of firearms, the less inclination I feel to get out with a man who may not exercise due caution in handling a gun. Looking into the muzzle of a loaded gun was never a favorite pastime with me, and it gives me little real pleasure to hunt with a man who, with any degree of frequency, affords such opportunities.

Our man came forth armed with a single barrel, 12 gauge, breechloader, and after the formality of introduction was got through with, we planned the course of our hunt. Eddie, as the Esquire called our friend, was a big man all round. A little less than six feet in height, and four feet in breadth, he was what the Irish would call a "broth of a boy."

"I have only been hunting squirrels and rabbits," he said, "as I have no bird dog, but I know where there are any number of birds, and as you have your dog we will go after them. Biggest covey I ever saw, about a hundred of them, get up with a roar like thunder every time I go through the field. Come on, now, and we will get them right up." Thus discoursing the young man led us to a small field of thin stubble between the orchard and barn that looked anything but a promising place to find either a large or small covey of quail. "Here we are," said he, approaching the fence at a low place, "right over in this field I see them every day, never fail."

The fence protested, but stood the strain without breaking, and we were soon lined out and crossing the sure shot preserve. The dog went straight across and back, and then back again to the far side, where he took the fence and went on to the next field.

Half across the field some doves flew up, and our young friend shouted enthusiastically, "There they are! See, there they go!"

We told him that the birds he saw were doves. He looked hard after them for a moment, and then admitted his mistake. A little further on larks began flying up, two or three at first, and then a great flock. "There!" he shouted. "Now you see them. Didn't I tell you it was a big covey? Call the dog back."

"They are field larks, Eddie," said the Esquire, kindly yet firmly.

"Field larks," was the reply, "well, I believe they are, now that I come to see them plain."

"Perhaps they are the birds you saw before and mistook for quail," I suggested.

"No, indeed," he insisted, "they were certainly quail that I saw. I have seen them here every day, a big flock. They fly up every time I pass through the field. I know they were quail, and they flew up and lit in the trees. Quail light in trees, don't they?"

"Not often," said the Esquire, dryly.

We found no quail in the field, and it was really pathetic to see the mental strain through which the young man passed in his effort to figure out the puzzle of why the birds had absented themselves from their invariable haunt on that particular morning; nor would he spare himself or give up the task. As we tramped mile after mile, and worked cover after cover where he "knew positively" the birds were, the only rest he gave his overtaxed intellect was the fitting of his excuses and explanations to new localities.

It was high noon when we finally concluded to give it up, and we had not seen a single bird. It really was a puzzle to all of us how we could cover as much good ground as we had and not find birds, and as our sanguine guide had exhausted the last shot in his excuse locker, we concluded to compromise by simply saying he was "Jonah." I have hunted small game for many years, and have walked more weary miles than I care to tell with the accommodating individual who knew exactly where they "never under any circumstances failed to find them," generally adding only to my fatigue thereby.

While seated on the fence in front of our friend's house, visiting and resting before going home, we heard a

sound like quail flushing back of us where the road passed through the woods.

Calling the dog, we went in the direction of the sound, and he at once struck scent on the roadside. As he seemed puzzled, the Esquire suggested that it was probably where the birds had flown from, and so it proved, for crossing the road and working out in the woods a little way, we struck the trail. The birds were running, and led us a long chase, refusing to lie to the dog. Seeing that the dog was close on the birds, we kept as close to him as possible, and finally, on the edge of a steep bank, the birds flushed.

I was immediately behind the dog, and as we were following a path the others were close in my rear, in single file. The birds went straight away, and I killed with my first barrel. The second bird I held on dropped, as did another in line with it some distance in advance, but whether I killed both, or either one, I could not tell.

Our heavy friend, from his position in my rear, took a hand in the shooting at this stage, and fired his big gun within a few inches of my ear, the result being to me about the same as though he had struck me on the side of the head with the flat side of a wide plank. Had I followed my first inclinations, I should have clubbed my gun and attacked him with spirit and vigor, but controlling myself as much as possible under the circumstances, I merely suggested that he had come very near putting me out of commission. "Birds up," was the response, in a jovial manner. "Everybody ought to get to business. I believe in getting into the game when anything is doing. Why did you not shoot, Esquire?"

And I was sorry the Esquire had refrained from shooting, as he was immediately in the rear of our broad friend, and could not have missed him.

By the time we worked down to where our birds were I had partially regained consciousness, and took pleasure in assuring our reckless friend that he had killed a bird—perhaps two. Was rather inclined to urge him to take all three birds and spare my life.

Following the covey we found them scattered in the woods beyond the branch to which they were making when we got on their trail. Roscoe located three birds, and two of them flushed wild, but not another one did we succeed in bagging. The cover was thick, and most of the shooting difficult, but several birds gave me perfectly fair shots, which I simply missed.

The big gun in the hands of my ever-ready friend was a handicap I could not overcome, and I paid more attention to him than to the birds. It was embarrassing to shoot badly as I was doing, but especially so under the circumstances; as after the first two or three misses I heard the Esquire explaining and apologizing for me, assuring our friend that I really was not a bad shot, as he would see when I "got down to business." But down to business I did not get again until we were entirely out of range of the gun carried by our reckless friend.

As we climbed the fence into the stable lot at home, the men were driving to the crib with a load of corn from the field. "Yo' dis come in time, suh," called out the driver. "Dey's a fine gang of birds out yonder and dah de big cherry trees. We des drove right by um, an' Chestah thowed as yeah com' at um."

Our experience of the morning had inclined us to ardent skepticism. I would not have put implicit faith in the shade of the cherry tree hero himself, if it was birds he reported on. Yet as the cherry trees (two very large ones standing side by side) were just outside the orchard fence, and but a few steps distant, we concluded to give the man the benefit of a doubt, and prove his story. The small boy and his mother joined us as we crossed the back yard, and accompanied us to see the sport.

Arriving at the cherry trees we put the dog out, and his actions at once encouraged us to put some faith in the news of birds near about. Undoubtedly there had been birds around the trees, but after working out the ground carefully and thoroughly, the dog gave us to understand that it was a case of "gone, but not forgotten."

"Those birds flew when the boys threw at them, and the rascals did not want to admit it," said the Esquire. "You all wait here a minute, and I will go get the straight of it."

He went back, returning in a short time with the information that the boys had admitted, under severe cross-examination, that the birds had flown a very short distance due south.

Doctors say that the weight of babies is the subject of more prevarication than any other one thing. Fishermen say it is the weight of fish, but the sportsman knows it is the amount and whereabouts of game. A covey of birds numbering eight to ten is never reported as less than twenty-five. Seen twice in the same neighborhood, they are always exactly in the same place "any time you go there." Scared up the day reported, they are always right where they flew from, although your informant has watched them fly half a mile. And all this is not confined to the local Munchausen, but to fairly honest, good-hearted fellows who really wish to help you to sport.

The boys had protested that the birds we sought had "des flew a little ways," but we did not believe them. However, as the field was level, the cover light, and the small boy and his mother eager to go on, we started off. About three hundred yards out the dog found scent, and was soon close on to the birds, which were running straight away. Walking fast we closed up on the dog, when the birds, probably under the impression that another fusillade of corn on the cob was imminent, flushed. They were rather a long shot away, but flew across to the right, giving a fair shot. As I was shooting before a lady who firmly believed me to be one of the best field shots in the country, I killed a bird with each barrel, and was as cool about it as though I never did otherwise, even when the shot was long.

Everyone was satisfied except the small boy, who insisted that I should have "dot a whole heap of buddies, taus dey was dare, taus I saw all of dem."

There was quite a sentiment in favor of following the covey, but as they had flown some distance, and I knew the cover into which they had gone, I advised against it.

Returning to the house I swung out to one side to pass through a bit of cover from which I had twice before jumped a rabbit. He was a rabbit with a peculiarity, as I had observed on the two occasions referred to, and this was his ability to change his course at acute angles while at full speed. His running resembled the flight of

a jacksnipe more than anything else I could liken it to. I found the rabbit at home at the far edge of the cover, and so jumped him practically in the open. The first load of shot went into the ground exactly where he would have been had he kept on as he was running when I fired; instead of jumping suddenly to the right, and my second load went where he would have been had he not jumped just as suddenly to the left. In all, first and last, I had either six or eight shots at that rabbit, in fairly open cover, and never so much as cut fur.

LEWIS HOPKINS.

## Natural History.

### Star Routers.

With a warm place always in my heart for a good horse I read with much interest what has been said in *FOREST AND STREAM* of trail horses. Every frontiersman could, if he would, say something good in that direction, although it is not everyone that has been blessed in the ownership of an animal gifted with the faculty of back-tracking. All horses can do it to a limited extent, but thoroughbreds to the business are never very plentiful. In camp parlance we know them as "Star Routers," and when a horse showed his ability in that direction life was always made easier for it. In what are known here as early times, in the arid southwest, such horses had a decided value above its fellows. Of the two to be mentioned here, one was a little black cow pony, quiet and gentle, but he was a thinker and a student of the country. I never knew him to make a mistake, but I have known him to hesitate and apparently work the subject over in his mind before reaching a decision, but when he did reach it his rider never had a misgiving. The other was a bay, of California stock. He was a bad tempered animal, but the king of any country he ever traveled over. He was all resolution and self confidence. I never knew him but once to seriously flinch from anything, and then, for a moment it looked as if the jig of life was over with us both. During the time I owned him he was not, to my knowledge, ever touched with whip, spur or currycomb.

Readers of the *FOREST AND STREAM*, unfamiliar with the life of a pioneer prospector in the arid southwest, can have but little idea of the hardships and privations gold hunters were compelled to face. I have heard it said many times, "There is no God on the desert." Sometimes it does certainly seem so. An empty canteen will turn a man of iron nerve into a gibbering idiot. But it is in the arid southwest that a man really learns to love his horse. It is his companion and his friend, his first thought in the morning and his last care at night. If there is any advantage to be given it must go to the horse and not to the man, for without the horse there can be no man.

I was one of the three to go into Death Valley, California, to look for a man that, crazed with thirst, had broken away from his companions. We found him stark naked, sun blistered and crazy, but holding to his horse. The instinct was still strong within him that the horse was his and must go with him. Where water holes are known, no matter how great the distance between them, provisions can always be made for reaching them, but in a new and unknown country a wise man will hesitate long before he cuts loose from a known supply. In early days the untraversed deserts and unknown mountain ranges of Arizona and northern Mexico were objects of great expectation to the daring adventurer. Above them the golden ball of fortune danced and shimmered in the sun. That others had been killed by Indians, died of thirst, or had narrowly escaped death were trifles easily explained away in the mind of the next adventurer. Some necessary precaution had been neglected, good judgement had not been used, and a thousand excuses were ever ready to satisfy a willing mind. Some of these places, even at an earlier date than the one in which the writer played his part, had undergone partial exploration and investigation, but others were wholly unknown. To explore such places required the best material there was in man and beast. It was never safe to get beyond the reach of one water supply until another had been located. Every canyon and promising spot on the line of travel is worked for water, and if none is found we must back-track to our water supply base. This back-tracking was nearly always done in the night time, and here is where the beauty and usefulness of a "Star Router" is to be seen. Night travel over an unknown country is always attended with danger and uncertainty. Great gorges and canyons slash the mesas from the valleys to the foothills, and frequently long detours have to be made before crossing places can be found, and some of them, when found, require the greatest of care in getting down. At night this class of travel becomes trebly dangerous and difficult. Any prospector with an average bump of locality has wit enough to know the general trend of the country, but that is not sufficient when one has to back-track at night a trail made all the way from two days to six months before, and the horse best qualified in that direction, whether saddle or pack animal, must take the lead. Night or day that was always the place for the bay, and he set the pace for travel. At times, when famished for water, his indomitable spirit had to be continuously held in check. He cared nothing for anything there was behind him. When water was reached his wants were always the first to be attended to. He soon came to regard this as his right, and would kick and bite at anything that dared to interfere with his prerogative. On the other hand the little black would invariably give a sigh of relief the moment his journey's end had been reached and his saddle girth loosened. I always thought that he understood fully the responsibility that rested on him. Another feature in back-tracking was the ever present possibility of bumping into hostile Indians, and it was no uncommon occurrence to find that they had been at the water during our absence. As a

rule the Indians of the southwest never make night attacks, and by star routing we avoided such little unpleasantness, but the one great reason for it was the hot sun. Under a heavy pack it will soon burn the life out of the best of anything.

Some horses are like some men, they need watching. So long as it is daylight they can follow directions, but after dark they invariably manage to mix things up and go wrong. I was once lost in a bunch of mesquite timber through the stupidity of the horse I was riding. He had been a stallion, and while smart enough in the day time, he was a dummy at night. The timber was probably a half mile wide, by ten miles long, but wider in some places owing to the configuration of the valley. It was during the winter season and the night was cold, rainy and black, but the road I was on was well worn and wound through the timber at its narrowest part. It was about ten o'clock at night when I struck the timber, and two o'clock the following morning when I was well clear of it on the opposite side. The brute persisted in leaving the road, and twice I succeeded in righting him, but in the end I made matters worse by cutting for the road in the wrong direction and was soon hopelessly lost. Although I had no business to be there when daylight broke, I twice unsaddled, but with each lull in the storm I again pushed on, my object being to reach the open country before the day broke, ride a few miles out on the mesa, seek the protection of a friendly bush and wait for the sun to come up before going further. Although I cannot be called superstitious, I was, shortly after getting clear of the timber, annoyed by the antics of a coyote. At a distance of about twenty feet it persisted running along, growling and snapping at me, and it was only after I had repeatedly tried to run the horse over it that it left me. I was not in very good humor with my horse, so when he hesitated to jump what, to me in the darkness, appeared to be a narrow gulch I forced him over, but instead of landing on the opposite side he struck it only with his fore feet. For a moment he struggled desperately to hold on, but slipped and rolled to the bottom. I was instantly out of the saddle, but this did not prevent me going down with him. Just how I escaped being seriously hurt in the mix up I do not know, but fortunately I did. As I was drenched with rain, bruised, and miserably cold, I concluded that we had better wait for daylight where we were, and we did. The wash proved to be between fifteen and twenty feet wide.

One of the most remarkable instances of back-tracking that I ever heard of is that of an old bell mare. She was driven with a band of horses from eastern Oregon to central Nebraska, a distance of about a thousand miles. In the following year she turned up at her old home with three others. She belonged to a Mr. Devine. He told me that he was five months in making the drive.

Since I commenced this letter I have been ruminating over the past and, according to my way of thinking, it is now twenty-seven years since I wrote my first letter to the *FOREST AND STREAM*, and off and on, have been a contributor to it ever since. I had gone to Tucson for supplies for my camp in the Santa Ritas, and while there, had bought a copy of *FOREST AND STREAM*. The regular price for all such papers was twenty-five cents. They were kept for sale by a worthy old pioneer by the name of Mansfield. Once I called his attention to the published price of Harper's Weekly being but ten cents. The old gentleman looked at me with well feigned surprise and said, "But, my dear sir, you forget the postage." At the time in question a controversy was going on in the *FOREST AND STREAM* over the merits of different guns for the killing of big game. I butted in to the effect that the efficiency of a gun depended largely on the man behind it. I had seen most all classes of guns tried, and knew pretty well what I was talking about. Well this is out of the line of back-tracking horses, so good-by for the present.

PAPAGO.

YUMA, ARIZ., JAN. 17.

### Her Heart was True to Missouri.

ALMA, ARK.—*Editor Forest and Stream:* I have read with some interest in some of the recent issues of *FOREST AND STREAM* of the "back-tracking instinct" in horses, and am reminded of a trait possessed by a large bay mare owned by my father when I was a small boy living on the old farm in the Ozark Mountains in Washington county, Arkansas.

My father was a Confederate soldier, belonging in a cavalry company; and when he with his command surrendered, he was allowed to keep his mount. He had purchased the mare from a party from Missouri, who had taken her from some point in Missouri to the Red River country in south Arkansas at the beginning of the Civil War.

She was about five years old when the war ended, and we kept her ten years, and to my certain knowledge never at any time did she gain her freedom but that she started north in the direction of Missouri, and traveled until overtaken and brought back. We tried all kinds of expedients to induce her to remain; but nothing but confinement kept her in Arkansas. In those days the grass was fine in the mountains, and all kinds of stock grew and fattened on it, with no cost but a little salt occasionally. But even after three or four of her colts were grown up and in the herd, and with a colt in the pasture, she would occasionally gain her liberty and start north on a fast trot, and had to be caught and brought back. And finally, when she had become old and of small value, one spring day my father ordered me to take her out and turn her on the range and let her go. This I did, and within ten minutes she began to feed out north, and I took one look at her, went home, and never saw her again.

### Winter Birds in Greater New York.

PRINCE'S BAY, Staten Island, New York City, Jan. 21.—The intensely cold weather of this month has been hard on the birds, and that was a good suggestion about it on the editorial page of *FOREST AND STREAM*. It costs nothing for people living in the country to feed the birds, and once they know where to get a few crumbs they will come again. All through this cold weather I have fed the song sparrows, and they seem to tell all of their relations, as more come every day. Meadow larks have had a hard time, and would come close to the habitations of man seeking food, and some have been fed. It is strange how apparently tame the larks are; but it is not tameness, it is from sheer necessity that they hover around the huts of their enemy.

I have seen in the past week fifteen to twenty English starlings eating frozen apples on a tree in my yard. I have thrown out cracked corn, wheat, buckwheat, etc., but they will not touch the grain; they seem to prefer the apples. At New Dorp, six miles from here, there are three starlings that roost with some tame pigeons every night. The other day a man showed me a bird he had found frozen in his hen house; it was an English starling, and if some can live through this winter I think the species will be well established in this vicinity. Bluebirds are here with us, and it seems a shame that they did not take Townsend's Seaboard Air Line for the south in the fall.

We have left a few quail that Teutonic blood did not destroy last fall, and we are feeding them. The quail

will pay all back in the spring when they say "Bob White." That's good pay with interest.

Even the muskrats have had a hard time around here; several have been seen along the roads with just life enough to walk; they appear to have been frozen out; perhaps some were frozen in. A man killed a muskrat the other evening that was sitting on the back piazza with the family cat. The rat was doing no harm, but the instinct to kill is so great in this man that if his grandmother had been there she might have suffered the same fate.

### Adrift.

BOSTON, Jan. 19.—The inclosed item about the body of a reindeer found afloat on a bit of ice off Nantucket seems to me of unusual interest.

NANTUCKET, Mass., Jan. 16.—The patrolmen of Coskata life saving station espied an object floating on an immense cake of ice about quarter of a mile from shore this afternoon, which was thought to be a human body, and a small boat was launched. The object was found to be a large Arctic reindeer, which had apparently been dead but a few days. The antlers were removed from the carcass and will adorn the interior of the life saving station. The deer probably weighed 200 pounds, and the ice on which it rested seemed to have been a portion of an iceberg.—Boston Herald, Jan. 17.

The papers a day or two ago had an account of the drifting of some natives from the Pelew Islands over

1,000 miles, and their stranding and rescue in a frightfully exhausted and emaciated condition on the island of Formosa. These natives were fishermen, and, having fishing apparatus, were able during their long and involuntary voyage to catch just enough fish to barely keep them from perishing. The account was circumstantial and seemingly true, and has much interest in connection with the problem of how the South Sea Islands, including the Hawaiian group, were themselves peopled, and how the continent of America may have been peopled from Asia by various occurrences of this kind, aside from the passage across Behring Strait in the far north. A.

### Animal Foods and Appetites.

NEW YORK, Jan. 18.—Editor *Forest and Stream*: Concerning cats eating corn, all the felines of my acquaintance share this taste, and whenever we cut green corn from the cob, the present family cat, like all her predecessors, watches the process with interest until the cobs are discarded, when she licks and chews them to get any remaining milk. Stewed corn is eaten with equal zest. I knew one cat with a passion for raw sweet potatoes and chestnuts, and several with a liking for raw white potatoes. All these cats were mighty hunters. I think what we call an animal's natural food is often merely the result of environment. I used to feed a succession of pet turtles on earth worms, and never learned until last year that they have an eager appetite for fresh lettuce. E. T. ROYLE.

### Report of the New York Commission.

From advance sheets of the Annual Report of the New York State Forest, Fish and Game Commission.

EVERY department—Forestry, Fisheries and Game Protection—is productive of some return, and in each case the income is greater than the appropriation made annually for its support.

The Adirondack forest, concerning which a separate and more extended report will be presented to your honorable body later in the session, is a source of great revenue to at least ten of the counties of the State, and the purchase of land in this region has been a most valuable investment. Up to January 1, 1903, the State had paid for Adirondack lands, exclusive of tax sales, \$2,329,101.60. The receipts from visitors to this region during the year 1903 amounted to \$3,999,139. This large sum of money was distributed directly to the people, and was spent by thousands of visitors who sought the forest for rest, recreation, or health.

Within the woodland territory in particular, and also in many other localities, are located almost innumerable lakes and streams which are stocked liberally from the system of fish hatcheries which the State has established. To these waters flock annually thousands of fishermen who are able and willing to spend money freely in pursuit of their favorite pastime. It is no longer disputed that the continual replenishing of our waters with fish is necessary to keep pace with the steady growth of our population. Without such attention as is given to public waters by the commission, it is conceded by those who have studied the problem that a most desirable and comparatively inexpensive variety of food would speedily be lost to the people—not to mention the loss of a form of recreation that finds favor with thousands of sportsmen whose requirements have created industries which produce goods worth great sums annually, and which give employment to an army of workmen. The hatchery system maintained at a moderate cost returned last year in the actual market value of the fish produced, more than three dollars for every dollar spent for its maintenance. The value to the people of the inland fisheries thus fostered amounts to hundreds of thousands of dollars annually, as the statistics show.

In the Department of Shell Fisheries, to which careful supervision is given by the commission, an even greater value is shown by the returns. The figures given indicate that the business done amounts to nearly seven millions of dollars yearly, that this results in the payment of over a quarter of a million of dollars in wages, and that vessels are employed in the work worth over six hundred thousand dollars. The amount of money spent by the State for the care of this great industry is very small in comparison with the results secured.

Similar remarks might be made with reference to the work of protection, which gives employment to a limited number of experienced men whose constant watchfulness is necessary to prevent infractions of the law, and whose work is productive of much good to all the interests concerned.

#### Moose, Black Bear and Beaver.

It will be a matter of satisfaction to all sportsmen to know that the statistics show a steady increase in the number of deer in the State forests. No better argument can be advanced in favor of the present system of protection, and it is believed that local interests are steadily

becoming convinced that the laws as they exist are for the good of all concerned. The eagerness with which information is sought as to the success of the hunters annually is an evidence of the widespread interest that is taken in these returns, affecting, as they do, a very large number of those who derive a considerable portion of their income from the sportsmen who seek a few weeks' recreation in the forest, as well as from the transportation lines, whose business is materially increased by the hunting season.

From the statistics furnished by the American and the National Express Companies, the following figures showing the shipments of deer have been compiled:

Year.	Carcasses.	Saddles.	Heads.
1900	1,020	89	95
1901	1,062	103	121
1902	1,354	113	193
1903	1,961	145	188

The percentage of increase in the shipments, which last season was about 30 per cent., is seen this season to be more than 44 per cent. over that of the previous year. Following the apparently reasonable rule that for each deer shipped out at least four others are killed in the woods, it can readily be seen how greatly the deer have increased under our present laws.

According to the carefully compiled figures of shipments furnished by Superintendent John L. Van Valkenburgh of the American Express Company, and Superintendent T. N. Smith, of the National Express Company, the number of deer sent out of the Adirondacks by hunters during the season just closed was as follows:

Mohawk & Malone R. R.	985	58	51
New York & Ontario R. R.	148	..	33
Utica & Black River R. R.	349	20	9
Rome, Watertown & Ogdensburg R. R.	45	9	1
Fonda, Johnstown & Gloversville R. R.	134	21	25
Little Falls & Dolgeville R. R.	17	1	..
New York Central & Hudson River R. R.	9	1	..
Rutland R. R.	10	..	16
Cranberry Lake R. R.	61	6	12
Delaware & Hudson R. R.	203	29	41
Total shipments	1,961	145	188

Some of the larger deer mentioned in the shipping receipts indicate a growth that is highly gratifying. Among the shipments were these:

#### Some Notable Shipments.

R. R. Station.	Consigned to—	Dressed Weight, Pounds.
Clear Water—F. S. Smith, Auburn	.....	200
Fulton Chain—J. McGuire, Utica	.....	200
Long Lake West—H. Walters, New York	.....	200
Loon Lake—M. Keefer, Utica	.....	200
Loon Lake—Charles Keaton, Rosendale	.....	250
Owl's Head—Kate Buttrick, Malone	.....	200
Owl's Head—E. W. Savage, Moira	.....	250
Pierceland—W. McKim, Saranac Lake	.....	210
Potsdam—J. F. Kelley, New York	.....	203
Benson Mines—W. Richardson, Canton	.....	200
Harrisville—R. Harding, Syracuse	.....	207
Newton Falls—W. Heims, Oakfield	.....	200
Newton Falls—H. Mathews, Syracuse	.....	200
Oswegatchie—E. W. Eissig, New York	.....	200
Port Leyden—F. Price, Great Bend	.....	200
Prospect—J. W. Seator, Utica	.....	200
Prospect—Arthur Martell, Utica	.....	200
Derrick—John Kimball, Utica	.....	200
Derrick—W. M. Bell, Long Lake West	.....	200
Derrick—C. Naylake, Tupper Lake Junction	.....	210
Derrick—W. Jarvis, Big Moose	.....	210
Santa Clara—E. Walsh, New York	.....	220
Northville—J. Bartholomew, Amsterdam	.....	210
Northville—John Creed, New York	.....	237
Northville—J. Kinnear, Albany	.....	200
Northville—R. M. Evans, Johnstown	.....	210
Northville—B. D. Smith, Johnstown	.....	200
Northville—J. H. Easton, Fonda	.....	200
Northville—F. S. Dunn, Albany	.....	200

Northville—E. Shannon, Amsterdam	200
Northville—N. Brownell, Amsterdam	205
Onekio—F. M. Jackson, McKeever	250

In addition to these interesting figures, a correspondent of *FOREST AND STREAM*, on November 21, mentions several large deer as having been shot within his knowledge. His list included a 230-pound 10-pronged buck, shot near Minnehaha by George Benton, of Utica; a 250-pound buck shot at Horn Lake by Seth W. Pride, of Holland Patent; a 250-pound 7-pronged buck shot near Star Lake by Schuyler S. Bardlong, of Chicago; a 250-pound buck shot near Booneville by Captain William Connor, of New York; a 250-pound buck shot by J. F. Dorrance, of Camden; a 247-pound buck having 15 prongs, shot near Alpine by Edward Floyd. The last weight given is specifically mentioned as being dressed weight. A number of other deer shipped out by the express companies weighed over 200 pounds, but unfortunately the name and address of the successful hunter was not given.

In connection with the deer season it is a matter of satisfaction to be able to note that very few casualties were reported this year. The number of minor accidents was inconsiderable, and the number of fatalities so small as to warrant the belief that the warnings of previous years have had a salutary effect.

#### The Elk and the Moose.

The effort to restore elk and moose to the Adirondack forest which was begun by the State with the co-operation of a number of public-spirited citizens two years ago, continues to be a subject of much interest. The restoration of the elk thanks to the continued generosity of Hon. William C. Whitney and others, has progressed so rapidly since the first consignment of 22 was liberated at Raquette Lake in June, 1901, as to have passed already almost beyond the experimental stage. During the year just closed 73 elk were liberated at various points in the woods, the work being superintended by Mr. Paul Smith, the veteran hotel proprietor, Dr. F. E. Kendall, of Saranac Lake, and Ernest H. Johnson, the superintendent of Mr. Whitney's Adirondack estate. These elk were all contributed by Mr. Whitney.

The total number of elk which have thus far been liberated in the Adirondacks is 140. The number of young which have been born in this region during the past two years has been approximated at 50. Of this total of 190 elk, four have been accidentally killed by trains, and eight are known to have been shot. Allowance should also be made for perhaps ten deaths through natural causes since June, 1901. There would thus remain at large in the Adirondacks 158 elk, which estimate probably represents very closely the actual number in the Adirondacks to-day. When first liberated the elk seem disinclined to roam far from the immediate locality in which they had been set free, and for months could be seen at almost any time grouped together within a few miles of the spot where they had first been liberated. But as the young were born and the animals became more accustomed to their surroundings the herds began to split up into families of three or four, and to move off into the deeper forest in every direction until within the past few months their presence has been reported in seven out of the ten Adirondack counties. Wherever they have been seen they have caused much admiring comments on the part of summer tourists, many of whom have found great pleasure in photographing the animals. It is probable that as the young elk gradually take the place of the older ones, these animals will again become as truly a

wild denizen of the Adirondacks as naturalists tell us they were in the past.

Without a continuation of the appropriation which lapsed last year nothing further can be done toward restocking the Adirondack region with moose. Thus far the animals liberated have done well, and have scattered widely through the forest. Three have been shot by unknown persons, and no natural increase has thus far been reported. If the experiment is to be continued, it will be necessary, in the opinion of those who have given attention to the problem, to procure and liberate at least fifty or preferably one hundred more of these animals in the Adirondacks. The commission stands ready to carry out the instructions of the Legislature in the matter, and undoubtedly that body will respond to the public sentiment which makes itself apparent.

The Black Bear.

The commission has previously recommended, and again suggests, the passage of an act giving to the black bear of the State some measure of protection. The trend of modern sportsmanship is toward the pursuit of large game, as is shown by the great number of hunters who annually visit Canada, the Rocky Mountains and the southwest, and who even cross the ocean to hunt still larger and more savage game. Could the black bear of this State, an animal absolutely harmless to human life, yet affording the keenest sport to its pursuers, enjoy for a few years the protection of a close season, it would be possible to introduce bear hunting as a feature of Adirondack life, even as it is now carried on as a profitable sport in many parts of the West and South. The commission recommends that as the bear is commercially valueless during the summer months, his pursuit be prohibited at this season of the year, and that suitable regulations be provided as to trapping.

The Beaver.

This most interesting of North American fur-bearing animals, which formerly existed so abundantly in this State, is on the brink of extinction within our borders. "No animal," says Dr. C. Hart Merriam, "has figured more prominently in the affairs of any nation than has the beaver in the early history of the new world. Its influence on the exploration, colonization, and settlement of this country was very great. The trade in its peltries proved a source of competition and strife not only among the local merchants, but also between the several colonies, disputes over the boundaries having frequently arisen from this cause alone. Indeed, on more than one occasion jealousy of the beaver trade led to serious difficulties in the struggle for supremacy between the three rival powers—the Dutch, English, and French."

How great the number of wild beaver in this State once was may be inferred from the statement of the Dutch author quoted by Merriam, who, writing in 1671, states that at that time the colony of New Netherlands furnished "full 80,000 beaver a year." As late as the year 1815, we learn from DeKay that the beaver still existed in such plentiful numbers in the Adirondack region that it was possible for a party of St. Regis Indians who that year ascended the Oswagatchie River, in St. Lawrence county for the purpose of pursuing these valuable animals, to return after an absence of a few weeks with 300 beaver skins. In 1895 Mr. Wilbur C. Witherstone, of Herkimer, shot a beaver in the outlet of Madawaska Pond. About the same time two beavers were caught by trappers from Saranac Lake. These are the last wild beavers that are known to have been taken in this State. The following winter the Legislature passed a law absolutely prohibiting their pursuit under a severe penalty.

While the beaver to-day is practically extinct in the State, there are known to exist one or two small families in the Adirondacks. The commission is of the opinion that as the Adirondack region is a natural beaver country, and as the beaver multiplies rapidly, a small appropriation is desirable to procure several colonies of these interesting and valuable animals for the purpose of eventually restoring them to the woods.

Mongolian Pheasants.

Reports received from the foreman of the Pleasant Valley hatchery, at which place these birds are reared, and where the stock is kept, indicate that the past season was not favorable to them on account of the prolonged cold, wet weather which prevailed during the hatching period. The total output, however, was approximately equal to that of the previous year, being 208 birds all told.

The stock of pheasants in western New York is largely increased each year by the number of birds raised and liberated by citizens interested in their culture and by game clubs. Reports have been received showing that 350 pheasants were liberated during the year by Hon. W. A. Wadsworth, of Genesee, and 20 by members of the Chautauqua County Sportsmen's Association.

The distribution by the State is shown in the following table:

	Cocks.	Hens.
1902.		
Nov. 3—George F. Scriba, Constantia.....	3	3

" " F. W. Medcraf, Utica.....	1	1
" " 13—C. Crittenden, Rochester.....	2	2
Total Output.....	103	105
Total distribution for the year.....		208
Old birds on hand.....		72
Young birds on hand.....		168
Total Stock.....		240

The foreman in charge reports that eight of the old birds were lost during the season, and is of the opinion that the number of stock birds should be increased at least four cocks and twelve hens more from the young birds on hand. This would cut down the number of birds available for distribution during the coming spring, but would correspondingly increase it next season. He also favors exchanging a number of the State's birds with other breeders of pheasants with a view to improving the stock.

Adirondack Bears Not Blessings.

ELIZABETHTOWN, N. Y., Jan. 18.—*Editor Forest and Stream:* With a profound sense of sympathy for those who have suffered and are still suffering from the effects of uncalled for and unwarranted legislation in the State of New York, I quote the following from the FOREST AND STREAM of January 16, 1904:

"Blessings brighten as they take their flight. The bear of the Adirondacks has not been regarded in the past as a species deserving protection, but the growing scarcity has created a sentiment favorable to the preservation of the remnant. A bill has been introduced into the Legislature making a close season for bears from June 1 to September 30, limiting the 'catch' to one bear by any one person, and protecting cubs under one year of age."

Having been born and raised in the central portion of Essex county, N. Y., in the very heart of the bear section of the Adirondacks, where the sheep raising and wool producing industry has been practically knocked out by bears, it is difficult for the writer to determine just when "bruin" became a blessing. Certainly the farmers of the Boquet Valley (where the writer was born and raised) who kept over 2,000 sheep thirty years ago and who do not keep over 300 to-day because the bears are, and have been, so destructive, do not feel like voting "bruin" anything in the way of pension.

When the pioneer settlers reached the Adirondack region they found a country abounding in all kinds of game, large and small. Wolves, bears, and panthers were numerous here in early days, being fierce and daring to such an extent as to make it unsafe to go about unarmed. The early settlers made it their business to kill off the large wild animals, aiding themselves temporarily and incidentally laying the foundation for the present race of hunters and trappers scattered throughout this region. The result of the persistent warfare waged by the early settlers was a marked change in the habits of most of the large animals. Panthers grew more cowardly, and after a while became scarce. The influx of the white man and incident civilization exterminated the native moose and, "cornered" the cunning beaver. Wolves, too, detected danger in the sound of the settler's ax and gradually fell back before the advancing wave of civilization, until few, if any, exist in the Adirondacks to-day.

Bears, however, have held their own in the Adirondacks with much greater success than either wolves or panthers. One of the reasons for this is that bears are omnivorous, being able to eat almost anything and live, and their liking for fresh meat does not run away with their judgment where man is directly concerned. As a rule the black bear of the Adirondacks flees from man with a stealth and rapidity almost marvelous when the size and apparent clumsiness of the animal are considered. In walking, the toes of the fore feet of the bear are slightly turned in, while the use of the nether limbs is so human as to appear like a burlesque on *genus homo*; but if the casual observer be thus struck, the anatomist or student of nature recognizes in this exaggerated formation the means supplied by nature to ascend trees, escape enemies, or earn support.

The presence of the bear here in large numbers to-day justifies one in saying that it is a case of the "survival of the fittest," for the bounty, together with the liberal prices paid for the skin, not to speak of the destructive propensities in the line of sheep and cattle killing, the loss of apple trees, and product, etc., have combined to make bruin an object much coveted and sought after by hunters and trappers in general. The chief reason for the flourishing condition of the bear is that he is a shrewder, more cunning and calculating animal than the others. Bears learn fast, and are progressive, though those unacquainted with the animal give "bruin" credit for one merit only—brute strength. Men who have had experience hunting or trapping bears are alone competent to measure bruin's prowess.

And now, lest those who back the "growing scarcity" theory charge the writer with misstating facts and conditions, I propose to do what they have not done and cannot do, give official figures to support my contention as to "bruin" holding his own down to the present time—at least so far as Essex county is concerned.

A careful examination of the Journal of the Proceedings of the Board of Supervisors of Essex County from 1877 to 1902, inclusive, a period of twenty-six successive years, shows that 931 bears were killed here during that time. In 1877 21 bears were killed, \$5 bounty being paid on each. In 1878 45 bears were killed, the bounty being \$5 on each. In 1879 18 bears were killed, in 1880 30, 1881 27, 1882 50, 1883 53, the bounty on all these being \$8.

However, on Nov. 16, 1883, Darwin L. Weeks, Supervisor of Schroon, moved that on and after January 1, 1884, the bounty on bears be fixed at \$10 for each bear killed. The motion was adopted to 7. And it will save time and space to say that from January 1, 1884, to the present date (over twenty years), Essex county has, without shadow of turning, paid a bounty of \$10 on each bear killed. In 1884 there were 41 bears killed, 1885 57, 1886 39, 1887 26, 1888 38, 1889 31, 1890 51, 1891 51, 1892

46, 1893 40, 1894 55, 1895 20, 1896 33, 1897 39, 1898 29, 1899 25, 1900 34, 1901 21, 1902 35.

Dividing the twenty-six years into halves, it will readily be seen that during the thirteen years from 1877 to 1889, inclusive, 463 bears were killed, an average of 36 5-13 each year. By a similar process it is found that during the last half of the given time, from 1890 to 1902, inclusive, 478 bears were killed, an average of 36 10-13 each year. It is thus proved by official figures—public records ever open to inspection and scrutiny—that bruin has not only held his own, but has, apparently, shown a slight increase during the past few years. And that bruin is having the opportunity to increase may partly be accounted for by the fact that Elijah Simonds, "Sam" Sanders, Max Tredo, and several other noted and successful bear hunters, have been called to the "happy hunting ground" within the last few years!

While the figures are not at hand for the year 1903, I can state positively that bruin was never more in evidence throughout this section during my residence here of thirty-eight years than last summer, no sign of the "growing scarcity" being detected.

Various writers have stated that the close season for bears should be from May 1 to September 30 because the fur is worthless. Such writers are, of course, unaware that fur is good on a bear up to July 1, and that some of the best bear skins are obtained in June.

The writer notes that at the eleventh annual meeting of the Adirondack Guides' Association held at Saranac Lake, January 13, a resolution favoring the protection of black bear was adopted by a vote of 23 to 12. There were 50 guides, or rather members of the association present. Questions: Why did they not all vote? If they had all voted, would the resolution have gone through? And again, the Saranac Lake region is not noted for sheep raising. And if the majority of the guides or rather members of the association then at Saranac Lake favor protecting bears that is their business, and they have a perfect right to vote as they see fit.

Now, it is well known that a lie will travel further than the truth. However, it is equally true that "truth crushed to earth will rise again." It may be that men who spend a few days in the Adirondacks in summer time know more about existing conditions than those who have lived with bears all their lives. The city boys say Essex county is the only county in the State which pays a bounty on bears. This bounty paying, however, is Essex county's business. It is home rule exemplified.

The writer is the owner of wild land inhabited by bears, but lest he be accused of working on "commercial grounds," he will here state that no bear has suffered at his hands since 1886. This is simply a recital of plain, unvarnished facts about existing local conditions, standing up for home rule, something the writer believes in from the word go. The people of this section are overwhelmingly opposed to protecting bear at this stage of the game. Lastly, don't jam this bear preservation business down our throats against our will. If you must have the black bear preserved in other sections, please exempt Essex county, as we have too many for comfort or convenience now. If the bear preservation bill become a law, taking in Essex county, I won't answer for the consequences. The anti-deer hounding law, kept on the statute books of the State in spite of the almost unanimous protest of the people living in the Adirondacks, has been violated without stint during the past few years. This ought to be a lesson. Don't outrage home rule again and thereby place a premium on perjury and invite the violation of law, because a farmer who catches a bear killing one of the few sheep he has left will do what he can to protect his dwindling flock—law or no law.

GEORGE L. BROWN.

The Birds of Nantucket.

NEW BEDFORD, Mass., Jan. 22.—Inclosed may interest you. It is part of a letter from Woods Holl, Mass., in The Morning Mercury of this city, and of this date.

F. L. P.

The sea fowl and birds that make their homes about Nantucket are suffering from starvation, according to reports received from there this morning. Hundreds have been found dead along the ice-bound shores of the island, and they are suffering for food so badly that they fly into the houses, and many have been picked up nearly dead in the main streets of the village.

Even the crows have suffered for food, and several of them have been found frozen in the streets. Two big ones were found in front of a store there a few days ago. One of them died of starvation, while the other survived, after being tenderly cared for, and is now in a big cage in the shop window.

The sea fowl present a pitiful sight as they limp about on the ice in the harbor, which covers their feeding grounds. Hundreds of them are being shot as a matter of mercy, to end their sufferings. These birds must obtain food from the harbor bottom or along the shore in order to sustain life, and so general is the freeze-up that they cannot find an open spot through which they can dive for nourishment.

The quail and rabbits which are found in large numbers in the moors of the island it is believed will be exterminated if a thaw does not soon follow. Already large numbers of them have been found on the outskirts, and the residents say that the birds cannot endure the extreme cold much longer. The whole island is covered with a glare of ice, something which was never before known there. Owing to the great scarcity of grain on the island, it is impossible to feed the quail, which do not take kindly to the food on which the sparrows and other birds could sustain life.

It is feared that the quail and other birds about here will all die of starvation as the result of the extreme cold, and the ice covered woods and fields.

Sea fowl in great flocks may be seen all along the shores of Buzzard's Bay seeking the few open places in the ice, and the gunners have killed hundreds of them.

In a small opening in the ice, near the Buzzard's Bay bridge, this morning one gunner counted 75 "whistlers," and he said that for two weeks past the place, which has been open by the swift running tide, has been alive with them.

## Boone and Crockett Club Meeting.

THE annual meeting of the Boone and Crockett Club was held in Washington, Saturday, January 23, at 4:30 P. M., at the residence of Mr. Arnold Hague, 1724 I street. President Wadsworth was in the chair, and there was a good attendance of members. The report of the secretary showed that during the year there had been but one death among the members—that of Mr. Chas. E. Whitehead—and that the membership of the club at present was full.

The report of the treasurer showed the finances of the club to be in a satisfactory condition. The publication committee reported that the new volume was under way.

As officers for the ensuing year the following gentlemen were chosen: President, Major W. Austin Wadsworth, Geneseo, N. Y.; Vice-Presidents, Chas. F. Deering, Illinois; W. B. Devereux, Colorado; Howard Melville Hammond, Ohio; Col. W. D. Pickett, Wyoming; Archibald Rogers, New York; Secretary, Madison Grant; Treasurer, C. Grant La Farge; Editorial Committee, George Bird Grinnell and Theodore Roosevelt; two members of the executive committee to replace Messrs. Gifford Pinchot and Caspar Whitney, whose terms have expired, and to hold office until 1907, Messrs. Arnold Hague and Winthrop Chauler. The other members of the executive committee who hold over are Dr. Lewis Rutherford Morris, Dr. John Rogers, Mr. Alden Sampson, and Mr. Owen Wister.

The meeting then adjourned.

The annual dinner was held at the Metropolitan Club, in Washington, at 8 o'clock the same evening. Mr. Wadsworth presided. Among those present, either as guests or members, were Messrs. D. M. Barringer, W. J. Boardman, Capt. Willard H. Brownson, W. B. Devereux, Madison Grant, De Forest Grant, Arnold Hague, C. Grant La Farge, James H. Kidder, Geo. Bird Grinnell, Dr. Lewis R. Morris, Henry May, Lyman Nichols, M. G. Seckendorf, Alden Sampson, Casper Whitney, James S. Watson, Mr. A. P. Gordon Cumming, Mr. Gordon Cumming, Dr. C. Hart Merriam, Prof. Henry F. Osborn, Mr. Chas. D. Walcott, of the Geological Survey, Hon. Joseph Cannon, Speaker of the House, Mr. Frank Mondell, Representative from Wyoming, and a number of others.

At the close of the dinner the President of the club entered the dining room with the President of the United States, who was also the founder of the club. He was received with much enthusiasm by his fellow members. Mr. Henry F. Osborn delivered an exceedingly interesting address on the preservation of game, referring incidentally to the forests, as typified by the big trees of California, the great Sequoias, which are threatened with destruction by the lumber interests, and for the preservation of which efforts are now being made. Mr. Osborn made a strong point of the antiquity of these various types—the trees and the great wild animals. It has taken millions of years to develop these, yet within fifty years they have been almost swept out of existence. A very little more carelessness on the part of the people and legislators will witness their complete extinction. Estimates made by the most competent authorities put the age of some of these big trees at 4,000 years. Thus they were perhaps 1,000 years old when Homer wrote the Iliad, and 2,000 years old when Christ walked upon the earth; yet for a few dollars to be paid for shingles and boards the commercial spirit of the age is willing to utterly destroy these monuments of antiquity. If Westminster Abbey were to be leveled to the ground money could reproduce it, but one of these huge trees destroyed could by no possibility ever be restored.

Mr. Osborn's address was listened to with interest, and was punctuated by frequent applause.

President Roosevelt listened with close attention to the address of Mr. Osborn, and at its close President Wadsworth proposed the health of the President of the United States, which was drunk. Mr. Roosevelt acknowledged the toast, at first in humorous fashion, referring to his participation of this meeting as a holiday from the toils that occupy him the most part of his time. He told something about what might be done by the establishment of game refuges, as shown by his visit to the National Park last spring, of which he gave some brief account. The elk, the bears, and the mountain sheep were referred to, and a story or two told about the way in which the tourists and the bears mingle in the Park. He told of a telegram received by Major Pitcher from the superintendent of a hotel there, which read somewhat as follows: "Please send detail of soldiers down here to protect the bears. My tourists insist on throwing things at them, and an accident is sure to happen." The ferocious grizzly which in the time of Lewis and Clark and later frequently tore men to pieces, has now become a semi-domestic animal to be chased about by the women and children who visit the National Park.

The President urged the members of the club to realize that it was useless to seek for Federal or State legislation in behalf of great game, unless the people living in the country affected could be made to recognize that such legislation was wise and for their own best interests. Nothing can be more ineffective, and so more foolish, than to assume an attitude of hostility or of superiority toward the people to be most directly affected by such legislation. He referred again to a point brought out last year, that game protection by Federal and State legislation is truly democratic, since wealthy men can secure great areas of land, and are able to stock them and so to have their own game and their own shooting directly under their own hands, while the game and the shooting of the poor man, or the man of moderate means, must be cared for by the Government.

The strong common sense of President Roosevelt's speech was very impressive, and was heartily applauded. At the close of his address, the President again expressed the pleasure he had had in attending the meeting, and left the room. He was followed by Mr. Frank Mondell, of Wyoming, who declared himself opposed to game preserves, and who was frequently interrupted by shrewd questions by Speaker Cannon. The speaking was kept up to a late hour.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Foxhounds and Foxes.

THE old-fashioned New England foxhound is getting scarce in this section. Now and then a good one can be found, but is seldom for sale. There are so many qualities that a really good fox dog (for our New England manner of hunting) should have, that a dog having them is very hard to buy.

I never care to use but one dog at a time, if I want to shoot a fox. I want the dog to work alone and pay no attention to other dogs he may hear. A young dog trained to hunt foxes in company, gets in the habit of joining other dogs he may hear, and it is almost useless to try and break him of it. Again, a dog which runs well will not have the right voice, and a fox seems very much afraid and will run over a great deal of ground, often running out of hearing and not come back during the day. While with another dog with a different voice the same fox will fool around over a small space and seem to enjoy it. I owned just such a dog some years since, and killed a good many foxes with him, many of them standing looking back at the dog on their trail, not over fifty yards away.

With the passing of my old fox dog (from old age) last winter, I thought I would give up hunting foxes. In the early part of last December the sight of quite fresh fox tracks nearly every morning, within a quarter of a mile of my house, rather stirred me up, and I have been looking for a fox dog. Have tried three and none suited. Have now the fourth. This dog is of medium size; two years old, well marked, black, white and tan. Has the long ears I like in a foxhound. He has been hunted a few times, and two foxes killed with him. He looks to be all right, but a trial will show what he can do. Just at present we are having a streak of about the only poor fox hunting weather of this winter. Several inches of snow with a crust which holds a fox.

As to the foxes, they are not as numerous as in some years. During the early part of last December, I saw quite a number of tracks where two or three foxes had crossed during the night, quite near to my house.

Occasionally a fox, other than red, is reported being seen. During the years that I hunted them, I killed something over three hundred, and I have seen four gray ones, killing two of them. A number of years ago I saw what I am quite sure was a black fox. The fox was some two hundred yards away, came into the open field and sat for some time on the snow. On that day I was trying a fool of a foxhound, which did most of his running on old or back tracks. I hunted a good deal afterward in that section with a good dog, but never saw the black fox again. During the first part of last December, there were a few days when there was a few inches of crusty snow with half an inch of dry snow on top. A neighbor telephoned me one morning, saying, "I saw a black fox this morning in the road, near your old saw mill." The man said he saw the fox plainly some thirty yards away, and he was willing to bet all he had that it was a black fox. I did not have a dog at the time, and could not get one anywhere near. I found the fox had crossed a field near my house and I followed the trail a long time and finally lost it in quite a tract of small pines. The following afternoon, about sunset, I went to the field and waited; as it was getting dark a fox came into the field and I shot it, a red one, of course. I see every few days a fox track crossing the field pretty near where the black one was said to have been. Should the dog I now have, prove to be a good one, I mean to give that fox a chance to get killed.

There is a certain attraction connected with our New England way of hunting foxes which lasts. A man who has done such hunting and killed a few foxes, usually dislikes to give it up. After one gets the knack of knowing where to stand, and has the patience to stay there, he usually becomes much interested.

Foxes and rabbits furnish our only hunting during the winter months. I would just as soon sit in my door yard and shoot chickadees as to hunt rabbits. The latter are too easy, and (to me) of no use after being killed.

C. M. STARK.

DUNBARTON, N. H., Jan. 15.

## Massachusetts Quail.

BOSTON, Jan. 23.—*Editor Forest and Stream:* Dr. W. C. Woodward, secretary of the newly organized sportsmen's club of Middleboro, writes this week that "the quail are suffering terribly at this time, and we have commenced to-day (Jan. 18) to feed them, having different members of the association distributing barley, cracked corn, ground oyster shells, and wheat in different sections. A good number of bevies," he says, "were left over, and some of the birds have been found so weak one can pick them up, being unable to fly."

This is anything but pleasant news for our quail hunters, although not surprising, in view of the heavy snows and unusually cold weather.

The North Attleboro Association has made a special appropriation to feed the birds. Scenes have been witnessed on the shore side of Boston the past week right within less than a mile of the South Union station such as were never before observed in the life of the oldest inhabitant. On the South Bay persons walking on South-ampton street (formerly Sweet street) saw hundreds of ducks swimming around, many of them within less than a hundred feet of the street. One eye-witness says "they were as thick as bees about a hive in summer." As there is a city ordinance which prohibits the discharge of firearms within the city limits, the birds were not molested.

On Friday evening the formation of a new club called the Middlesex Sportsmen's Association was celebrated by a banquet in Menotomy Hall, Arlington, where about 125 devotees of rod and gun gathered about the tables. Flanking the president right and left were the State Commissioners, Mr. C. W. Dimick and Dr. Heber Bishop, of the State Association; Dr. D. W. Well, of Watertown, and Dr. F. M. Lowe, of Newton. The association secured its charter the 10th of the present month, among the charter members being President Napoleon J. Hardy, of Arlington; Vice-President Abbott S. Mitchell, of Lexington; Treasurer James R. Mann, of Arlington

Heights; Secretary John W. Bailey, of Arlington. The club already has 100 members, and a large waiting list. Among the speakers of the evening were Capt. J. W. Collins, the Rev. J. C. Jaynes, of W. Newton, who is, as you know, Mr. Editor, one of the most entertaining of after-dinner speakers to be found anywhere; Dr. Well, and Dr. Bishop. Of the exhibition of trophies, hunting and fishing outfits, curios, etc.—one of the best amateur collections ever shown in the State—I may write at another time.

CENTRAL.

## Washington Duck Shooting.

SEATTLE, Wash., Jan. 20.—Inland duck shooting in western Washington has been a dismal failure this season. Why this should be so is a difficult matter to explain. It may be due to the long spell of comparatively warm weather and absence of the usual amount of rain, yet the fact remains that even when the waters of Puget Sound have been swept by severe storms no ducks have appeared on the lakes and sloughs. In making this statement I do not mean that there is an entire absence of waterfowl. Of course there are a limited number of mallards, teal, and widgeon, but the skill with which they avoid the decoys would seem to indicate that they are not birds of passage.

In past seasons the shooting has almost invariably been good after storms, but this year there has been little doing, no matter what happened. Take for instance the storm which wrecked the steamer Clallam; that wind was unusually severe, and it kept up for several days. It is true that it was not cold, yet one would naturally suppose that some of the birds would be driven inland.

What was the actual condition? Sunday all the hunters went down White River Valley south of Seattle. Thirty or forty of them came home on the night train, yet there were not ten ducks shown for the entire day. Hunters sat in the blinds from morning until night and freely confessed that they did not get even one shot. The same conditions existed on Squak Slough. High up in the air quite a number of mallards passed over; there were also several large bands of sprigs, yet no one got any shooting.

Close to the salt water conditions were somewhat better, the Swinomish Club reporting good sport. It would appear, however, from different statements made that even along the salt water sport was not invariably good. It should have been, just the same, because all conditions conducive to a good flight were present.

PORTUS BAXTER.

## Artists Who Didn't Know it was Loaded.

*Editor Forest and Stream:*

Several didn't-know-it-was-loaded accidents reported in the papers of late impel me to make a few notes on the subject. I wish to call attention to the mistakes of illustrators in this line. G. O. Shields poses for his picture leaning on his rifle. Of course, paper guns do not go off and kill people any more than game shot with a fountain pen lessens the supply; but the one incites to carelessness, the other to slaughter. Again, in one of his extra good group pictures, Oliver Kemp has his central figure leaning on his gun. In the Youth's Companion about a year ago was a picture illustrating C. A. Stephen's story of a camel hunt in southern Arizona. The men have been alarmed by the yell of an Indian, and are standing with rifles at ready. The hunter in front has his gun presented at the woods, but those behind are each leveling their weapons at the next in line. Should the rear man accidentally discharge his gun the whole line would surely be killed. In a current rifle advertisement is a man and a boy going to the rifle range. "Boy trots on ahead and man has gun leveled at boy's back. Countless others could be cited, but I think a very little discussion will correct this careless handling of guns by artists.

Of course, where a group of trained hunters meet to talk it over, there are no loaded guns in the crowd; but this does not show in the picture. Neither should precaution cease with taking the shells out of your gun. Never let your gun point at any human being. Practice this for a while and it becomes second nature, and comes as natural as it does to take the shells out when you enter a house or stop to talk with a friend. After you are used to it, it looks frightful to see a man leaning on his gun, or swinging it about and pointing it at any one and every one in sight, even if you do know that it is not loaded.

THE PARSON.

## Ohio Quail and License.

MACOMB, Ill., Jan. 8.—*Editor Forest and Stream:* The quail season ending December 20 was in most respects a good one. The one trouble seemed to be that the birds would not lie well for the dog. My own score, with another shooter each day was 32, 19, 22, 25, 16, and 20. There are plenty of birds left over, and unless we should get a killing snow before spring, there should be plenty next year. The new game law "graft" worked very well as far as the graft is concerned, but as for protecting the game any it failed in this section. If the State had used the money collected for licenses for protecting game instead of using it for "political graft," it would have been a good thing; but as it is, it protects only the few game wardens, so called, by giving them a good job. Besides this they have the law in such a muddle that it cannot be enforced.

EN AME.

## Exhibition of Shooting Sketches.

SPORTSMEN residing in New York and vicinity will be interested in an exhibition of original drawings and sketches by Mr. Dwight W. Huntington, which are to be on exhibition from Wednesday, January 27, to February 13. They will be at Messrs. D. B. Butler & Co., 398 Fourth avenue, one block above the Madison Square Garden, New York.

Mr. Huntington's sketches, in reduced form, are familiar to all readers of Scribner's Magazine, the Century, and Mr. Huntington's capital book, "Our Feathered Game." Some of those to be exhibited have appeared in the publications named, and sportsmen will be interested to see them in their original form.

## North American Association.

PROBABLY the most successful meeting yet held of the North American Fish and Game Protective Association was the fourth annual convention which sat at the New Falmouth Hotel, Portland, Maine, on the 20th and 21st inst.

The utmost interest was manifested in the proceedings of the association by the sportsmen and fish and game officials of the Pine Tree State, and among those in attendance were the Hon. L. T. Carleton, Chief Commissioner of Fish and Game, president of the association; Vice-President H. O. Stanley, of Maine; C. H. Wilson, of New York; J. T. Finnie, of Quebec Province, and General F. G. Butterfield, of Vermont. Among the members of the executive committee present were Charles E. Oak, ex-Fish and Game Commissioner, and ex-Land Commissioner of Maine, and D. G. Smith, Fishery Commissioner of New Brunswick. The absent officials all sent excuses. Among them were J. Fottler, Jr., Boston; Ivers W. Adams, of Boston; R. E. Plumb, of Detroit; Hon. A. T. Dunn, of New Brunswick; Hon. J. H. Seymour, of New York; S. T. Bastedo, of Toronto, and C. E. E. Ussher, of Montreal. Ex-Presidents the Hon. S. N. Parent, of Quebec, and the Hon. F. R. Latchford, of Ottawa, also sent their regrets. Messrs. L. O. Armstrong and H. G. Elliott, of Montreal; Thos. F. Allen, manager of the Tobique Salmon Club, Andover, Maine; A. T. Bassett, of Norway, Maine; Dr. C. W. Bray, of Portland; Chas. F. Burhans, of Warrensburg, N. Y.; Mayor Baxter, of Portland; Chas. W. T. Goding, president of the Portland Board of Trade; J. Waldo Nash, Portland; G. H. Richards, of Boston, and Hon. F. G. Sprague, Harry P. Virgin, George F. West, Colonel F. B. Boothby, Hon. B. F. Chadbourne, Hon. A. R. Nickerson, and others of Maine, were among the many who were present.

Fish and game protective objects are engaging so large an attention at the present time that the president, in his opening remarks, enlarged upon the opportuneness of the association meeting just now in Maine, where, he said, the great present need is the dissemination of correct information upon fish and game subjects. He warmly approved this part of the programme of the association, as well as its recognition of the value and importance of newspapers and magazines as the great educational force of the United States and Canada. He gave it as his opinion that there will be no difficulty in these two enlightened nationalities securing all needful laws and appropriations for the proper protection and propagation of fish and game, when the people shall understand the value in dollars and cents of these allied interests.

Particularly timely references to the importance of these subjects were also made by Mayor Baxter, President Goding, of the Portland Board of Trade, and ex-Mayor Charles F. Libby, who officially welcomed the members of the association to Portland.

The annual report of the association shows a gratifying increase in both its membership and financial condition. Three deaths in the membership were reported by the secretary; those of L. Z. Joncas, first secretary of the association; Hon. H. T. Duffy, treasurer of the Province of Quebec, and John W. McGear, of Burlington. By its recommendations, the association succeeded last year in having a bounty placed upon wolves by the government of the Province of Quebec, and also in securing the abolition of spring shooting of ducks in the same Province. The influence of this latter action will doubtless prove to be very widespread, since the protection of the birds in the breeding season must have an important effect upon the shooting wherever the ducks are hunted during their annual migrations. It is in studying the needs and requirements of North America as a whole in the matter of fish and game protection, instead of those of one State or Province alone, and in using its large and constantly increasing influence accordingly, that is to be found one of the chief elements of the usefulness of the association. Its recommendations to the Dominion Government to so change the provisions of the fishery act as to facilitate the prosecution and conviction of poachers found in possession of spears or nets when and where they cannot legally be used, was not so successful, however, the minister at the head of the department declaring that it would not be wise to make the change.

Both the papers read at this convention and the resolutions adopted by it are of considerable importance. The papers are to be printed in the official record of transactions. Almost all of them were of quite a high order. Reports of the condition of the protection of fish and game and of the legislation affecting it were presented from all the States and Provinces represented in the membership.

For Maine, Mr. H. O. Stanley made report. He referred to the great change in the sentiment in regard to protection which had come over the people within the last thirty years. Over \$25,000 was now annually spent in Maine in the cause of protection, but the return which this expenditure yielded was almost beyond calculation. Mr. Stanley spoke out very plainly in regard to the talk about damage caused by deer and partridges to growing crops. He believed them to be greatly exaggerated. He went into the subject at considerable length, giving instances which he had personally investigated, and in which he had found very ridiculous claims.

Mr. G. H. Richards reported for Massachusetts, showing that some advance had already been made in legislation concerning fish and game during the last year. The sale of trout had been forbidden, except of those artificially cultivated within the State. The act protecting deer had been renewed for another term of five years. He reported an increase of deer in the western part of the State, but thought that the number upon Cape Cod remained about stationary because the Indians there killed enough to compensate for the natural increase.

Mr. D. G. Smith, of Chatham, N. B., reported for New Brunswick. He reported a great increase in both fish and game, and entered somewhat into the relative value of salmon and trout, objecting to those salmon fishermen who wished for the destruction of the brook trout, upon the score that there are fifty trout fishermen for one salmon fisherman, and that it was the duty of fish and game commissions to consider the greatest good for the greatest number. Since the principle of licenses had been established in his Province it had proved a valuable asset, while the large gain in the number of hunters was illustrated by the fact that last year the increase of receipts in the fisheries and game department amounted to \$6,073.53. Mr. Smith reminded the American members of the association that each of the Canadian Provinces enacted its own game laws, so that it was not correct, as was often done, to speak of the laws of one as the Canadian laws, when that one Province might have a law which could not be found in any other.

Mr. C. H. Wilson, of Glens Falls, in reporting for New York, said that the laws of that State had been very much improved during the last year, among the new amendments being found some prohibiting the spring shooting of web-footed wildfowl, with the exception of brant on Long Island, and the sale of grouse and woodcock killed in the State. He made mention of the various bills affecting fish and game interests now before the House, and to the liberation of large game by Dr. Webb, a member of the association, and by Mr. Whitney.

Dr. John T. Finnie, of Montreal, reported for the Province of Quebec, rejoicing at the legislation of last session, which placed a bounty of five dollars per head upon wolves, and prohibited spring shooting of wildfowl. Large game was very plentiful in the Province, but he had to deplore a decrease in partridge and woodcock. Dealers continued, in some instances, to circumvent the law prohibiting the sale of partridges, despite the watchfulness of guardians, and it was quite a question whether the Government should not altogether prohibit the killing of the birds for a term of years. As for the decrease in the number of woodcock, he much feared that it was largely due to the killing off of the birds when they went south to breed. Dr. Finnie is in favor of shortening the present season for big game in the Province of Quebec, which has at present the longest of any State or Province.

Within the limits of the space which one issue of FOREST AND STREAM might afford, it is scarcely possible to touch upon all the matters of interest which came before the association in one shape or another. Several resolutions and recommendations of considerable interest were adopted after reference to the executive committee. A protest was adopted against the issue of licenses for netting game fish in any waters, but upon the strength of an interesting paper entitled, "What to do with the Pike," read by Mr. L. O. Armstrong, of Montreal, and which may be referred to in a future issue of this paper, the association, in which *Esox lucius* seems to have no friends, resolved that the best thing to do with him was to destroy him.

The entire Canadian delegation to the association was appointed to urge upon the Federal and Provincial Governments harmonious action with the Governments of the States of New York and Vermont in the regulation of the disastrous netting in spawning time that is now permitted in Missisquoi Bay and at the entrance of the Richelieu River.

The Hon. C. E. Oak, of Maine, read a very important paper upon the relations of wild land owners to fishing and hunting interests, urging that if even it became necessary to sacrifice the fish and game, it was absolutely essential that the forests be protected against fire. He claimed that this should be the first consideration in the framing of all fish and game laws. His appeal in this direction was a very eloquent and forcible one, and the association felt it to be so, and the following resolution was unanimously adopted:

"WHEREAS, The outing interests of North America have assumed such vast proportions, and are constantly increasing, and whereas, the great areas of wild land are of fundamental importance, not only to these interests, but to all moral and material interests, and

"WHEREAS, The large influx of people into these forests on excursions—canoe, fishing, and hunting trips—are a source of more or less danger to the forests, from carelessness on account of fire;

"THEREFORE, Be it resolved by the N. A. P. F. & G. A. in annual meeting assembled, as follows:

"First—That we will by example and precept do all in our power to spread intelligence broadcast of the great necessity of absolute and perfect carelessness on all outing excursions and trips; that all camp-fires must be entirely extinguished; cigars and pipes should only be used

while at rest in camp, and all cigar stubs drowned; we will on every occasion give prompt notice to the authorities of any carelessness in this respect on the part of anybody that comes to our notice, and will recognize no one as a sportsman who does not comply to the letter and spirit of these resolutions.

"Second—Resolved, that we will favor no legislation that jeopardizes the great forest interests of North America."

Col. Boothby delivered a twenty minutes' talk on "Maine as a Vacation State," eloquently describing the beauties of Maine, and her great advantages over other States for tourists and fish and game sportsmen. Col. Boothby said that Maine has 1,620 lakes and 5,151 rivers, and the great majority of these waters are filled with gamy trout and salmon and many other kinds of fish such as sportsmen like to catch. For game Maine can stand up with the rest of them, as the number of moose, deer, and bears killed each year well showed. He said in 1897 there were killed during the season in Maine 136 moose, 3,556 deer, and in 1902 266 moose, 6,885 deer, and 61 bears. During 1903 with the famous license law in effect, there were shot 266 moose, 5,677 deer, and 26 bears. Maine has steadily gone to the front as a hunting and fishing State, as all statistics show. Col. Boothby told of the immense amount of money that was brought into Maine by tourists and sportsmen, and said that many people were getting their entire living through this ever-increasing business. He spoke of the Rangeley and Moosehead lakes regions as great hunting and fishing resorts, and mentioned many other places in the State of Maine of almost equal fame. President Carleton, as chairman of the Inland Fish and Game Commission, supplemented Col. Boothby's remarks with many additional facts proving conclusively that Maine has no second in the hunting and fishing and vacation field.

This afforded the opportunity evidently watched for by representatives of the farming industry to complain of the alleged destruction of crops by game birds and big game.

"Farmer" William H. McLaughlin, of Scarborough, who was present, rose and requested the privilege of asking some questions, and President Carleton granted him the floor.

"Do the deer in the north destroy the crops?" he asked President Carleton.

President Carleton asked Hon. Charles E. Oak, of Bangor, as one from that section of the State and thoroughly familiar with the subject, to answer the question.

Hon. Mr. Oak replied that he did not believe they did. Mr. McLaughlin then asked Mr. Oak if he had heard of the complaint of S. A. Parsons, of the Rangeley region.

Mr. Oak said that he had, but that he believed the greatest amount of Mr. Parsons' damage had been from slight freshets from the Dead River, and not by deer. He thought the danger from destruction of crops by deer was more imaginary than real. He said that Land Agent and Forest Commissioner E. E. Ring had investigated several of these cases, and he had reported that deer "do not nip and bite all through an oat field, but in only occasional places."

"Have farmers," asked Farmer McLaughlin, "ever been arrested in the State for shooting deer found destroying crops on their land?"

"Not to my knowledge," replied President Carleton. Mr. McLaughlin then wanted to know why there was no bounty on bears, and why it had been repealed.

President Carleton in reply to the question regarding damage by bears, said he had had several claims of this kind, and in the cases where actual damage had been proven, the owner of the land or crop had received payment from the State for the amount of injury done.

President Carleton announced that the game commissioners were willing and anxious to meet the farmers on the same level and hear any complaints or suggestions which they might have to make. He said it was wicked to have the farmer and sportsmen arrayed against each other, and denounced in withering terms the demagogism that was at the bottom of the insidious attacks upon interests that were largely the mainstay of the State.

An extremely valuable paper upon "Accidental Shooting in the Woods," was read by the Hon. J. F. Sprague, of Monson, Maine.

That upon the history and prospects of the lobster industry in Maine by Hon. A. R. Nickerson, Commissioner of Sea and Shore Fisheries, is a most interesting addition to the literature of the subject, and encouraging, moreover, in the views expressed as the future of the supply.

### Election of Officers.

The newly elected officers of the association are as follows:

President, J. Tweedle, Prime Minister of New Brunswick; Secretary and Treasurer, E. T. D. Chambers, Quebec, Canada; Vice-Presidents, H. O. Stanley, Dixfield, Me.; W. F. Hinman, Boston, Mass.; R. E. Plumb, Detroit, Mich.; A. T. Dunn, St. John, N. B.; C. H. Wilson, Glens Falls, N. Y.; G. A. McCallum, Dunnville, Ont.; J. T. Finnie, Montreal, Quebec; Gen. F. G. Butterfield, Derby Line, Vt.; C. S. Harrington, Halifax, N. S.; S. A. McGrath, Franklin, Pa. Executive Committee, J. F. Sprague, Monson, Me.; George H. Richards, Boston; H. G. Elliott, Montreal; Henry Russell, Detroit, Mich.; D. G. Smith, Chatham, N. B.; J. H. Seymour, New

York; S. T. Bastedo, Toronto, Canada; F. L. Fish, Vergennes, Vt.; H. M. Wallace, Halifax, N. S.

It was voted to hold the next annual convention at St. John, N. B., the last week in January, 1905.  
E. T. D. CHAMBERS.

## Trout Killers.

BY EDWARD A. SAMUELS.

It is essential that owners of trout preserves shall be ever on their guard against the numerous enemies that are constantly pressing upon the treasures which have cost them much labor and sometimes the expenditure of considerable money.

A number of instances of the extirpation of trout in waters that were supposed to be well protected have come to my knowledge, and the foes when discovered were proved to have been enemies whose presence had never been looked for.

In all periods of their existence there is always something ready to prey upon them, and it has always seemed to me a piece of strange good luck that the troutlets reach and pass the fingerling stage.

When the fry leaves the egg it is a delicate, helpless little creature; indeed, it is then incapable of moving quickly to escape its enemies, and consequently it falls an easy victim to their rapacity.

The spawn of the parent trout is usually cast in brooks, streams, and other running water, although there are, of course, exceptions to this rule, a notable one being the famous spawning beds of large trout in Lake Mooseluckmagantic one of the Rangeleys series, but whether in the more or less shallow water of the streams, or the deeper water of the lakes, the predaceous insects which are ever on the alert to seize the helpless fry are almost numberless; among these the larvæ of the dragon fly, the horned corydalis or helgramite, dytiscus beetle, or water tiger, are most destructive; these are all active at the season of the year when the fry emerges from the egg.

If by good fortune these enemies are escaped from and the fry attains the length of an inch, it is generally able to elude these insect foes, but it now is obliged to face dangers from another source.

Living in the same waters as those in which the fry are hatched are the young of the predaceous yellow perch, which is an active and relentless enemy, the pond fish (*pomotis*), and different species of minnows, which, acting on the principle that "turn about is fair play," devour great numbers of the fry, and in their turn fall victims later to trout of a larger size.

If all these enemies are avoided and a still larger growth is attained, the troutlings are pursued relentlessly by older and larger relatives, for the trout, about whom so many lines of romance have been written, is a most incorrigible cannibal, and if the fingerling stage is reached, other foes such as sheldrake, kingfishers, frogs, turtles, eels, and various rapacious fish, are ever on the qui vive to capture these delicate tidbits.

I have found that horned pout, whose homes are often made in waters inhabited by the trout, capture troutlings of an inch to two inches in length. I first became acquainted with this fact a number of years ago while fishing in the Liverpool River, Nova Scotia. Our canoe was anchored near the mouth of a large brook which emptied into the river, and while I was engaged in casting the fly my guide was busy with a short rod and line, using for a lure a common angleworm; he succeeded in pulling up one or two trout, and finally threw into the boat a good sized hornpout. The abdomen of this fish was so distended that it attracted our notice, and later, on opening it, we found that it contained a small yellow perch, two or three snails, and a young trout about three inches in length.

I had until then believed that the pout was a slow moving bottom grubbing fish, and feeding mostly at night, but that such is not its nature I then became convinced.

Since that time I have proved this fish to be quite active and predatory in its habits.

On one occasion I was fishing for black bass in a pond in Plymouth county, Mass.; we were using minnows, helgramite, and young frogs, and we found that all these baits were seized by the pouts, no matter how rapidly they were drawn through the water. In fact, it was next to impossible to get one of these baits down to the bass; they were seized so quickly by the horned marauders. I tried the experiment of skittering, or rather quickly dragging just below the surface of the water one of these baits, and it was invariably seized by the pouts, who darted for it as quickly as would a good sized trout.

The numbers of young trout that are captured by sheldrake, mergansers, and other fishing ducks, are by no means small, and if the owner of a trout preserve sees any of these birds in his water it will be well for him to shoot the intruders at the earliest possible moment.

I once knocked over a sheldrake that incautiously permitted me to approach within gun shot of it, whose stomach when examined was found to contain over forty young salmon.

The kingfisher is also very destructive, and, together with the various herons, are a constant menace to the preserves. After the fingerling stage is past, the young trout having become experienced in avoiding the foes that surround them are able to take care of themselves fairly well, although a large proportion of them fall victims to other depredators; among these the mink, another wholesale destroyer, is much more common than most people are aware, even in pretty thickly settled sections of the country. It destroys more fish than it can possibly eat, and seems to kill simply for the sake of killing; this may be readily seen when I state that on one occasion I saw a mink capture in less than an hour's time five trout, each of which was nearly a foot in length.

Eels are also among the most destructive foes to trout preserves; for, although they are ordinarily bottom feeders, they can, when in pursuit of other fish, move with the greatest rapidity; I have, on several occasions, seen them dart into a school of smelts, and they were almost always successful in seizing one. Living, as they often do, in trout waters, they have every opportunity for capturing the spotted beauties.

I once killed an eel in a lake in Nova Scotia—the headwaters of Indian River; this eel was a monster in size, being quite three feet in length, and at least three inches

in diameter at the middle of the body. On examining the contents of its stomach I found they consisted of several small salmon, a frog, and two small trout. I have also at various times examined the stomachs of other eels, and found them to contain, among other food, shiners, perch, and other small fishes, and in waters which contained trout, these were often proved to have fallen victims to the destroyers.

From these facts it will be seen that owners of trout waters should spare no effort to place these slimy depredators under subjection, and this may best be accomplished by keeping a number of eel pots, or traps, in constant operation.

The otter is also an irrepressible trout killer, and if one succeeds in attaining access to a preserve, he quickly depopulates it; for, like the mink, he often kills more than he can possibly eat. I once had a good opportunity for observing the otter's rapacity.

A number of gentlemen who had formed a fishing club owned a series of small trout ponds which, at the beginning of their occupancy, were well stocked with good sized fish; these waters were not at any time over-fished, but in some manner they became less and less fruitful, the large fish disappearing with unaccountable rapidity. Efforts were made to capture the poachers, at whose doors the mischief had been laid; but the attempts to detect them failed, and it was only when the tracks of an otter were discovered in a light fall of snow that the robber was located. The animal had undoubtedly traveled a considerable distance to reach these ponds, and finding them well stocked, he took up his residence in a thick covert near them, and until he was trailed and shot "he lived in clover."

That the great snapping turtle destroys trout I have proved conclusively. While the trout is ordinarily a quick moving fish and usually an active one, it has its periods of indolence in which it remains almost motionless on or near the bottom of the river or pond, sometimes for hours at a stretch; on such occasions it often falls a victim to this reptile. Every angler has at times taken trout with large deep gashes in their bodies which were undoubtedly made by the turtle.

Trout also often fall victims to the lamprey eels, particularly in rivers which empty into the ocean. I have taken several of these fish with lampreys attached to them; one of them, which ought to have been a good two-pound fish, having been so reduced in flesh that it was hardly more than a moving skeleton; the lamprey was fastened to the trout near the gills, and had sucked out the life blood of the unfortunate fish.

In treating of the habits of the lamprey, George Brown Goode says: "They cling to the side of the fish beneath the pectoral, and suck its blood until the flesh becomes as white as paper. There can be little doubt that to the lampreys may be credited an immense destruction of the various food fishes which enter estuaries and rivers. It is by no means uncommon for fishermen to find them attached to halibut and other large species caught at sea. Lampreys are found far inland, ascending most of the creeks and rivers of central Europe and of temperate North America far toward their sources."

The structure of the mouth of the lamprey as described by Blanchard and quoted by Prof. Goode is as follows: "This is completely circular and forms a great sucker enormously capacious, surrounded by a fleshy lip studded with tentacles and supported within by a cartilaginous framework. This mouth is covered over its entire interior surface with strong teeth arranged in concentric circles, some single, others double, the larger occupying the central portion, and the smaller forming the exterior rows. A large double tooth, situated above the aperture of the mouth, indicates the situation of the upper jaw; a large cartilage, supporting seven or eight teeth, represents the lower jaw. The tongue also carries three large teeth deeply serrated upon their edges."

Mr. Chambers, in a recent number of *FOREST AND STREAM*, in describing the perils by which the ouananiche is surrounded, mentions among its destroyers the fresh water cusk, often called the burbot, eel-pout, etc. While these fish are not, as a rule, numerous enough in waters inhabited by the trout to be a serious menace to those fish, that it preys upon them if opportunity offers I have proved.

A number of years ago while stopping at the little village of Gilead, Me., I went out several evenings "cusk-ing" with one of the natives in the Androscoggin River near by. We caught several of the uncanny looking fish, and on examining their stomachs I found they contained with other food several small chubs, and one or two trout four or five inches in length.

What those small trout were doing in the river, which at that time contained many pickerel, can only be conjectured; but as the Wild River empties into the Androscoggin near that place they may have come down from that stream.

I suppose that a trout in that neighborhood would nowadays be a rarity, particularly in the Androscoggin, for Bethel, the summer home of many from the great cities, is but a few miles distant, and every inch of the water in the river is fished most industriously every season; in fact, so strenuously is it ransacked that pickerel which formerly were very abundant are now scarce anywhere near the town; as to the cusk or burbot, I have no means of knowing how abundant it is there at the present time, but imagine it is now quite scarce.

## On the Florida East Coast.

MELBOURNE BEACH, Fla., Jan. 16.—*Editor Forest and Stream:* Major Graves has lent me "Uncle Lisha's Shop" to read, and I want you to mail a copy of it to the inclosed address. Sea trout have been rising freely on to our 700-foot dock two weeks past till day before yesterday, when a norther sent them to deep water, where they still remain with their feet in the mud, hands in their pockets, and mittens on their ears. We expect them back at sunrise this morning; for the thermometer says 48 and rising at quarter past five, the moment of this writing. Lots of fun here for boys of 72, and thereabouts. We troll casting phantom minnows off the dock. I got one Monday morning that weighed exactly 7 pounds. Led him to this beach, walking the ends of the planks, and landed him on the dry sand. We find plenty of oysters here in our front yards.  
Q. G.

## American Fisheries Society.

APPLETON, Wis., Jan. 19.—*Editor Forest and Stream:* At the meeting of the American Fisheries Society at Woods Hole, Mass., July 21, 22, and 23, a special committee on location of next meeting was named, consisting of the president, Frank N. Clark, of Northville, Mich., vice-president, Dr. Tarleton H. Beam, of New York, and secretary, Geo. F. Peabody, of Appleton, Wis.

This committee met at the Auditorium Hotel, Chicago, on Friday, January 15, and selected Atlantic City as the next meeting place. Date of meeting July 26, 27, and 28.  
GEO. F. PEABODY.

## Megantic Club.

THE seventeenth annual banquet of the Megantic Fish and Game Club, of Maine, will be given at Delmonico's on Saturday evening, January 30, and a very large attendance of members and their friends is assured. Some of the trophies of some of the members of the club will be exhibited.

## The Kennel.

### St. Augustine's Bloodhounds.

From the St. Augustine, Fla., Record.

SULLEN and disconcerted, with two ferocious bloodhounds close to his heels, a white prisoner who escaped from the work gang yesterday morning shinned up a pine tree and waited the arrival of the sheriff and his deputies.

The man gave his name as Shine when arraigned in the court some time ago, charged with trespass. He, with nine other prisoners, was sent to work on the road near the Catholic cemetery yesterday morning, but evidently did not take kindly to the employment assigned to him, and when officer Taylor, who was in charge of the gang, was engaged down the road a little way, the prisoner slipped into the bushes and quietly sneaked away.

Shortly afterwards the officer missed the man and searched the woods in the vicinity without finding trace of him. He immediately rushed to New Augustine and telephoned the sheriff, and the latter notified his deputies. The bloodhounds, one owned by Mr. Jos. T. Pacetti, and the other by the county, were leashed and taken to the scene of the incident. When the trail was discovered, Deputy Snowden took charge of the dogs, following them on foot, while Sheriff Perry, and Deputy Sabate drove along the road in a wagon. The trail led into the woods, through scrub and forest, marsh and creeks. The dogs warmed to the work and followed without the slightest difficulty the scent of the fleeing prisoner. Again and again the trail left the woods and led down the high road. The man, with great cunning, kept to the middle of the road in the horse path, presumably for the purpose of confusing dogs by having his trail obliterated by passing teams, but the dogs were not fooled, and were close behind him when his track led across the road near the Reyes place at Moultrie. On striking into the woods again the dogs headed for a creek near Fort Payton, and the officers arrived just in time, for the man's further progress was blockaded by the creek, and the dogs were almost upon him. He sped for the nearest tree, and up he went, while the loud baying of the dogs notified the officers that their quarry was run to the earth. When the prisoner saw the officers he was unable to hide his chagrin, and submitted in sullen silence.

Deputy Snowden has not yet recovered his breath after his strenuous ten mile sprint, and the muscles of his legs are afflicted with that tired feeling. He believes the prisoner is an old hand at the game of hide and seek with a pack of bloodhounds, from the skillful attempts he made to elude his pursuers. The prisoner on his way back told the officers that he had hoped to spend his Christmas in the woods, but would not make another attempt, as the race for liberty called for too much exercise.

Shine is out with other prisoners to-day working on the Moultrie road.

Sheriff Perry, in conversation with a Record representative relative to the training of bloodhounds, said the dogs forgot allegiance and friendship when on the trail, and the fugitive had better take refuge in a tree or some other secure place. In training the dogs he sends some one off on a sprint and when sufficient time has elapsed to insure their safety, the dogs are turned loose and guided in their work. In remarkably short time the sagacious brutes learn what is required of them, and will follow the scent without encouragement.

On one occasion the negro cook at the jail made a wager that the hounds, which he fed every day would not molest him if placed on his trail. The wager was taken, and the test made. The trail was warm and easily followed, and a large bloodhound galloped over it at full speed, catching sight of the fugitive as he was jumping the jail fence after a long circuit. Instead of following the trail further, the dog took a short cut through a gate and attempted to cut the man off. The darkey sprinted as he never had before, and fled by the sheriff, who came to the rescue, escaping the dog by a few feet. With difficulty the brute was beaten under control; he wanted that nigger, and wanted him bad, and would have got him but for the timely arrival of the sheriff. That night when the cook went to the yard for wood, the dog made a dash for him, and the officers were compelled to tie it up before the terrified cook dare venture into the yard.

The cook had always fed the dog, and had every reason to believe he was immune from its ferocious instincts, but he does not make any more wagers to that effect now.

## In Southern Seas.

### A Cruise Around the Island of Oahu.

BY ALLAN DUNN.

The Story Which Won the Third Prize of \$25 in "Forest and Stream" Cruising Competition.

THERE are few places where the American yachtsman can better enjoy his sport than in the Territory of Hawaii. From a catboat to an auxiliary two-sticker, from the smooth inland waters to the deep chested billows of the open sea, all varieties of the enjoyment that comes from the combination of a stick, a sheet, and a sail, are his; with the addition of a year long season, steady breezes, perpetual summer and infinite variety of sea and land. Let me tell the tale of a simple cruise amid Pacific Island waters, where the Stars and Stripes flies dominant, that may give a faint and fleeting glimpse of yachting in Hawaiian seas and, perhaps, tempt some brother sailor to come down and share our pleasures.

It was bully summer weather in the last week of September; there is always a trade blowing and a summer sun shining in the Territory of Hawaii, U. S. A., as we ran down in the train from Honolulu to the Peninsula, Pearl City, where, on the shores of the big inland waters, so soon to become a famous anchorage and site for a U. S. naval station, the club house of the Hawaii Y. C. is situated and many of its craft are moored in the brackish waters.

The almost completed schedule of the season's racing had brought forth many pleasant cruises and close contests, but the present occasion was the first real holiday of the year and the most important cruise. The owners and regular Corinthian crews of three of the first-raters of the fleet had long contemplated a cruising race around the Island of Oahu, a total distance of 108 nautical miles on various points of sailing well calculated to test the best qualities of each competitor, but business engagements had hitherto stalled off the date. Now, however, all was arranged and the eleven o'clock train took down the captain and crews of La Paloma and Gladys, with the members of the regatta committee appointed to their boats, to moorings at the club house at the head of the Pearl Harbor lochs, four miles from the sea. The owner of the Helene was detained in town until the last minute and all had agreed to meet off the recently dredged channel to the harbor, and make the start from that point at five o'clock in the early evening with the expectation of

verted schooner, now a sloop. Her displacement is 22 tons, and her sail area proportionate. Her mast was placed, on conversion, in the original stepping of her foremast, and she carries one working jib. Before the wind she sails a ten to eleven knot clip in the regular trades. On the wind she is speedy, but sags to leeward. It is in working to windward that the smaller yachts of her class even matters. In a heavy sea the Paloma shoves her nose well into it and pitches with a perseverance worthy of a better cause.

The Helene, 12 tons displacement, is not a racing type, but her owner, Fred Whitney, who has sporting proclivities, has fitted her with racing canvas and in a good breeze she makes good time of it, being considerably stiffer than La Paloma. Her work-a-day canvas includes a gaff topsail and two jibs.

But it is of the Gladys, the little 8 ton, cruising knockabout Gladys, owned, designed and built on

transoms, is a locker for double burner Primus stove. Opposite, an ice box, clothes locker and Sands folding wash basin. Forward of the mast is a large space for storage of ropes, anchors, etc. Full 6 ft. of headroom under carlins.

At the forward end of the cockpit is a full deck 28 in. wide, and under this a Sands marine toilet is located. The lazarette is very roomy with plenty of space for spare ropes, sails, anchors, sea anchors, and the general dunnage of a cruising yacht. On the starboard side of the cockpit is a water tank, which is piped to the washstand and galley.

The boat is of generous displacement, and constructed very heavily, giving her all necessary strength for crossing wind-swept channels and heavy seas. She is equipped with an Edison screw steerer, and an Enos windlass. The waterways between the house and the rail are 22 in. wide, giving ample room for crew maneuvers. She was built in San Francisco, and shipped to Honolulu on the deck of a sailing vessel. This is her fifth season in Honolulu, and she has given great satisfaction to all who have sailed in her company. She has withstood all kinds of weather equally well; once being out under trysail in a gale of forty, increasing to sixty miles registered velocity. She has never lost an off-shore race.

Little work was done before we were summoned to lunch by Mrs. Commodore, and our last meal ashore for several hours was discussed on her broad verandahs with healths to each other and mutual promises to show the way in. After lunch we jumped to work, while the referee's wife, who takes the wheel herself at times and is well enough up in sailing tactics to be severely critical when the mood strikes her, superintended our efforts. The first nine miles of the race constituted a run before the wind, so the spinnaker was brought from its bag and carefully pleated and stopped on the grassy lawn, leaving free the clubs at clew and tack. Spinnaker halliards were reeved, out-haul and sheet got in readiness and the boom set in the goose neck, clamped, and carried up by the mast in readiness to set as soon as the start was declared. Inspection of the water tanks and bilge came next, with stowage of provisions, overhauling of the tool chest, filling the stove and the binnacle and side lights, setting the life buoy in the cockpit, oiling the wheel, winding the timekeeper, putting handy the chart, marked with compass course of the trip, setting up the dead lights in the stays, overhauling every sheet and block and stay, and putting the night glasses, heaving lead,

La Paloma.

modern lines for our first commodore and inaugurator of our club, T. W. Hobron, that we sing. Designed as a wholesome cruising type, she sailed around the San Francisco fleet before coming to Honolulu, and has since beaten the home fleet in all kinds of weather, all conditions of water and all distances, sailing on even terms without asking for time allowance, even from the big La Paloma. There were two of us labeled Gladys on the way down to moorings, the skipper and the committeeman, who was also to act as crew, to be joined later by one more stalwart Corinthian on the afternoon train, and later in the race by the manager of the big sugar plantation who regularly seeks surcease from the cares of crystallization reports by going a-sailing.

The train landed us close to the club house and near the commodore's country house where, at his private wharf, the Gladys and La Paloma lay moored. With pleasant jest and prophecy all walked down the jetty, and the Paloma's spacious cabin swallowed up our rival's crew. The club house in on the southwest and lee side of the big peninsula that splits the inland waters into separate lochs and the moorings are ideal. The Gladys was swinging clear of the wharf with lines out fore and aft, and before boarding her the skipper and the committeeman, known on the trip as Mr. Referee, stopped for a minute to admire her as she lay on the quiet waters. Diminutive she looked by the side of her big rival, but we know her qualities and were used to viewing the Paloma's bows over our taffrail. With the emerald slopes of cane and the jagged range of dead volcanic mountains for a background, she looked, to a critical eye, the embodiment of speed with her sweet lines and modern bow, "shark-nosed," the natives call her, clean as a whistle and as snowy as a swan.

The Gladys is a keel knockabout, designed by V. D. Bacon, of Barnstable, Mass. The owner desired a craft capable of going anywhere about the islands, and the outcome was a boat of the following dimensions: L. O. A. 37 ft. 7 in.; l.w.l. 25 ft.; beam 10 ft.; draft 5 ft. 3 in.; least freeboard 2 ft. 6 in.; displacement 14,900 lbs. Total sail area 850 sq. ft.; iron keel 6,000 lbs.; inside ballast for trimming, about 1,000 lbs.

The cabin contains two bunks on either side, full length with a 3 ft. aisle between. Forward of starboard

Gladys.

making the first leg of the race by early daylight the next morning and there spending the day ashore.

The Hawaii Y. C. has eight craft whose over all length reaches 30 ft., and four of these have been placed in the first class, the Helene, La Paloma, Gladys and Bonny Dundee. The last named is a cutter designed by Fife, and sent out to the islands several years ago. The heavy seas encountered in mid-island channels and on windward shores, effectually debar her from entering for any deep sea trips. On such attempts as have been made, her crew has had the doubtful privilege of going below and viewing the scenery to windward through the weather planking. La Paloma, the flag ship, owned by Commodore Macfarlane, is a con-

Gladys Wins.

megaphone and pump where they would be handy. The spinnaker, carefully replaced in its bag, was safely stowed, and by 3:30 mainsail cover and gaskets were off, jib snapped on, sheets rove and every thing ready for the arrival of the third member of the crew.

The afternoon train soon came in with our man and another member of the Paloma's crew, Prince Kuhio Kalaniana'ole, Hawaii's choice for delegate to Congress, a yacht owner and enthusiastic all around sportsman. This completed the muster of the Paloma, seven in all. Our new acquisition, an old time yachtsman, and well used to the Gladys, shall be dubbed the "giant" for this cruise by virtue of his inches and physique.

At four o'clock up went the mainsail and, with Mrs.

Commodore and Mrs. Referee waving good-bys from the lawn, we drifted out of the lee of the land into the breeze. La Paloma cleared off a few minutes later, and we came about and waited for her, sailing in company with started sheets down the loch, past the club's cruising quarters at the entrance, through the channel recently scraped by order of Uncle Samuel to admit of the free entrance of battleships and so to the open sea. A steady northeast trade was blowing and some three miles to windward, half way from Honolulu, the Helene was seen bowling along to meet us.

Starting orders read that the committeemen should compare watches as the three competitors lay abreast with bows to windward. At the word "Go" from the Gladys, Mr. Referee being the chairman of the racing committee, it was up to the yachts to drop their spinnaker booms, come about, set their spinnakers and start. This was carried out with a beautiful start, the Gladys winning the windward and shoreward position by clever handling. The skipper and the referee ran forward to set the spinnaker, which had been laid out on the house while waiting for the Helene, and the giant took the wheel. Outhaul and halliards were quickly attached, the sheet taken aft to a cleat on the cockpit rail, the boom set to starboard and kept from soaring by a lashing to a scupper mouth and up went the big sail, breaking out to perfection. The big crew of the Paloma had their sail drawing before we did, but we beat out the Helene and its crew of five men and a boy.

The race was on. The Paloma's bigger spread of canvas and the fresh breeze soon caused her to forge ahead, but our time was coming later and we were content to see the Helene on our lee quarter unable to gain. All the sheets and halliards of the Gladys come into the cockpit, and the steady steering before the wind soon saw us disposed in comfort and talking over the course. A half moon, horns up, was in the sky as we started at five minutes after five, though the western horizon was only just glowing to sunset. The moon was due to keep us company for five hours. Past Barber's Point, nine miles away, where a lighthouse is placed, there was a prospect of using a balloon jib for another twenty-five mile stretch to Kaena Point. The skipper calculated on hauling the spinnaker boom forward and passing the sheet around the head stays, thus using the spinnaker as a balloon jib

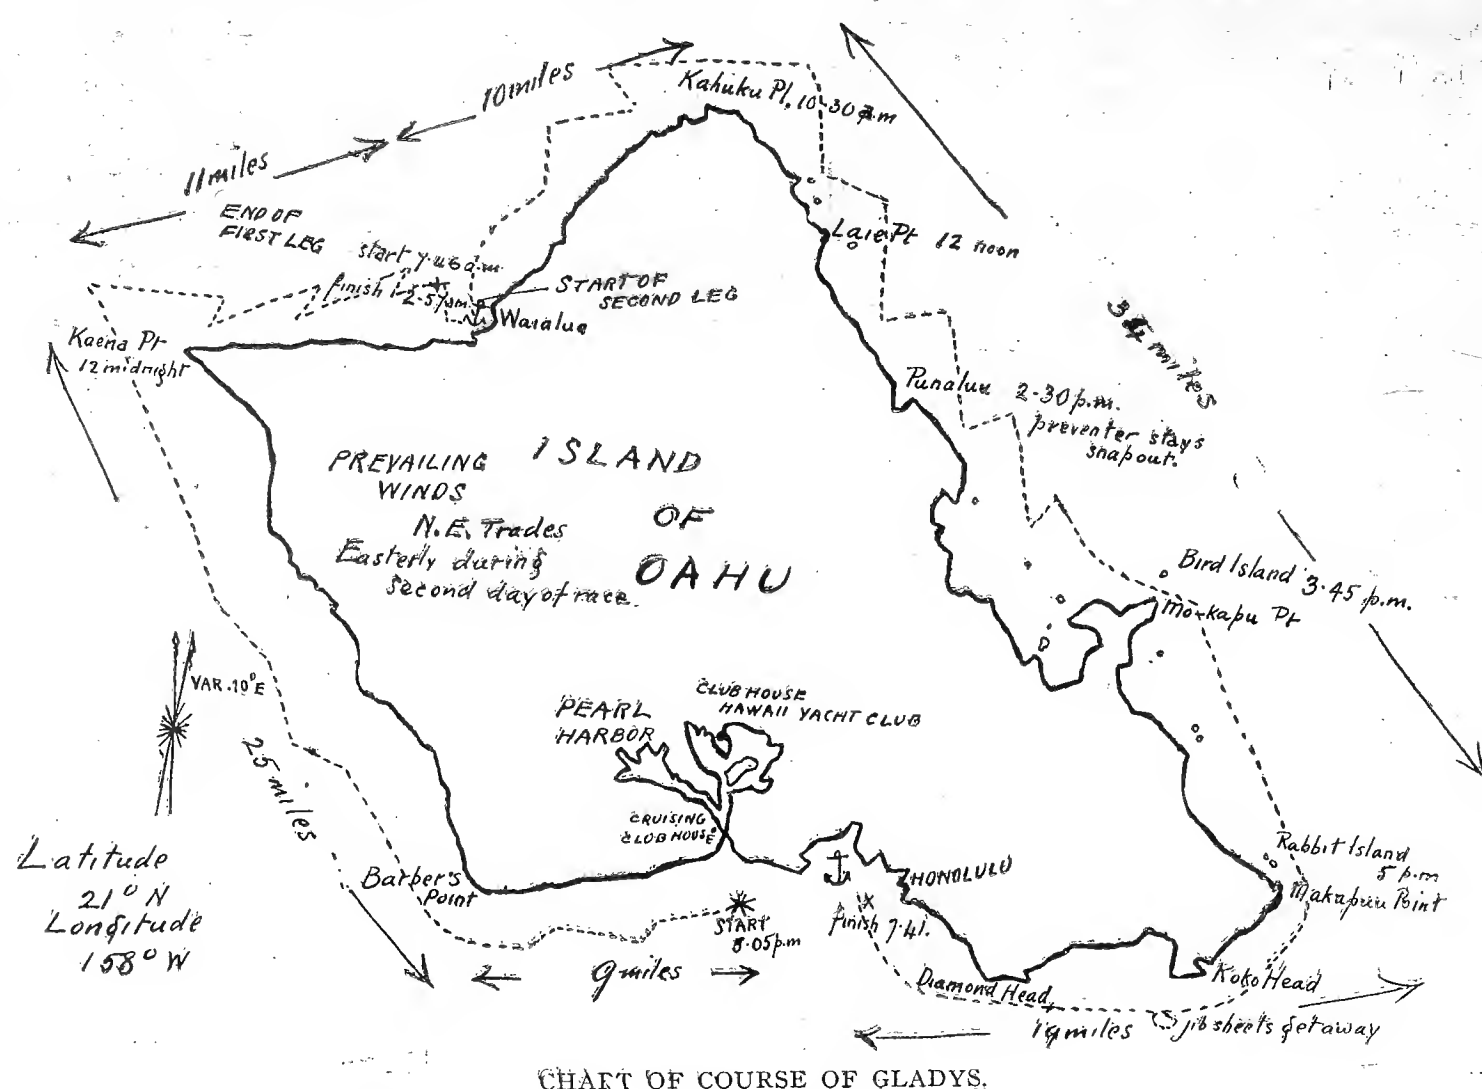

Gladys's Anchorage at Pearl Harbor.

Under the lee of the volcanic cliffs which form the western coast of Oahu, winds are uncertain, however, and going out to look for a breeze would lose us the sure benefit of a three or four knot current that sweeps around the points. Considering the size of his crew, the skipper thought it would be the wiser plan to take in the spinnaker before moonset, unless the breeze seemed particularly favorable. The last stretch of this first half of the race was a fourteen mile thrash to windward with the prospect of plenty of wind; just the weather for the Gladys to get an hour or two ahead of the rest.

The western sky was soon gleaming like a topaz, and while light lasted we determined to eat. First, however, we established our lubber's mark and screwed the compass to the deck. The yachts were still in the same relative position, the Paloma steadily drawing ahead. The skipper went forward to set the side lights in their screens, and then we tackled our cold supper of fruit, meat, macaroni and cheese, pickles, bread and beer. After supper the skipper decided to let the Helene, which had been trying to get on our weather quarter and blanket us for the past fifteen minutes, have her way while we stood out a little further to sea. Into the tawny sunset we sailed with the Helene on our starboard beam, her port light opposite our jealous eye of green, the Paloma ahead with her cabin lights aglow for supper. An inter-island steamer came up from Honolulu and overhauled us slowly, it being well on towards midnight before she dropped her lights below the horizon. The lighthouse on Diamond Head, the well-known promontory hard by Honolulu, shone like a gleaming eye, paling a solitary star that floated overhead.

All this so far was easy sailing, but hard work was coming at eight bells, so we took our ease as it came to us. The referee lit a cigar, and the giant and the skipper swapped shark stories as the moon slid down the western sky. The Paloma was, as we found later, well inshore, the reef running in close enough to let them hear land noises very distinctly. The shore is here very barren and precipitous, and only an occasional fishing village shows signs of habitation. The Gladys was well around Barber's Point by seven o'clock and the wind proving abeam, in came the spinnaker, the boom being lashed along the starboard rail. La Paloma we saw nothing of after this until the next morning, though she saw the Gladys from time to time, until our "lights went out" on her as we passed them at midnight. Our sheet was hauled in and the jib trimmed, but the breeze proved fitful. The Helene was ahead and to leeward

like a gray shadow. Doldrums were split by little squalls that came down the steep ravines, but the calms were frequent and at times we scarcely held steerage way. It looked for a while as if we would never make Kaena Point before daybreak, a tantalizing thought in view of the almost certainty that there was a half gale waiting for us once we got round the cape. The Gladys was getting the best of it in what breeze did happen along, however, and later comparisons showed that we were fortunate in finding wind that did not reach the others.

The water was brilliantly phosphorescent with promise of fine weather, the bubbles slipping past the sides like semicircles of blue flame. A school of porpoises churned the sea into liquid fire as they chased their supper. The moon was getting very low as we drifted, and the lights in the shrouds gleamed like "claret and creme de menthe," to use the simile of one bibulous minded individual, as we tacked in the hope of a better breeze. Just after ten the moon dropped into a bed of clouds and in her good-night greeting, across the waters we saw the Helene a mile to leeward and abeam. With alternate calms and windy spells, we glided along toward Kaena Point, steering N.W. ½ N. course by the card. Before rounding we caught a promise of the wind awaiting us, as the sea, quiet as a millpond for two hours past, became white capped, swirling in phosphorescent foam from the bows into a gleaming wake.

Committee figures later showed that the three boats must have rounded the cape within a few minutes of each other and midnight, but with the wind in her teeth, the Gladys soon bid them all good-by, fortunate in having reached Kaena Point on even terms. From now ahead for the rest of the cruise there was no lighthouse until Diamond Head, at Honolulu, and we were cruising in unknown waters. Somewhere, eleven miles ahead in the darkness, lay the finish of the first leg at Waialua where there was a harbor, a

Celebrating Victory at Waialua.

small one with a narrow entrance, as yet unvisited by any of the competing skippers. The harbor is seldom used, and the range lights have long since disappeared. The manager of a fine hotel, built for tourists, had agreed to hang a prominent light in the grounds, and mutual agreement made the finish at a point with the light abeam within a limit of two miles from shore, the light abeam being judged by the committeemen from the after line of the house on each yacht, the direction of the yacht's course and that of the shore being fixed. They also adjudged the two mile limit.

The wind strengthened, and the Gladys, tired of sailing in light winds on an even keel, bucked into it with her lee rail under. Water never gets into her cockpit except when windblown, and though she heels until a glance over the weather rail discloses the state of

her copper paint; her well planned design spills the wind at the critical moment, and there is no thought among those who know her of any danger from cracking on. Like any femininity, however, the Gladys is capricious. She has a fixed determination to eat up the wind and a touch of weather helm works miracles. Her steering calls for constant attention, a glance at a rival astern by the man at the wheel, meaning time lost, before you get her head back to it. She is very

Dewey—A San Francisco Type.

tender on her helm and, while a marvel in stays, is a marvel at getting away from you unless you anticipate every movement. A tyro at the wheel is very liable to find the Gladys looking at him to see what he is doing, and even an average sailorman unused to a modern type will find it hard to get the most out of her ladyship until after long acquaintance. The skipper knew the Gladys and her whims, however, and there was very little lost effort in that thrash to windward.

The water boiled in intense phosphorescence as Hobron kept her always moving. It surged over the rail at the shrouds, flashed into spray that flew like a swarm of fireflies, died in the glare of the sidelights and rushed along the deck over the quarter into a luminous wake like a steamer's trail. Beads of fire fell on the sail and rolled to the boom glowing until it seemed as if they must burn the cloth. Eyes were masked with the salty spume as with a cast, as a lookout for crossing boats was kept. Spray tried to penetrate the oilies, get through the hard closed ports and put out the lights. The trades were abroad with a 4-5 velocity, and the sailing was glorious. Every one in turn attempted a turn below in the cosy little cabin, but it took more than weather boards to keep a man in his bunk, and sleep was not forthcoming. The skipper and the giant shared the helm until midnight, when Hobron took charge for the rest of the night.

The course was set S. E., and we fought our way to the finish with short inshore tacks. Hard on two o'clock lights were seen where the laborers of the big plantation, near the hotel live, and soon afterwards a big star flashed, out over the port bow under the club of the jib. It was, fixed and brilliant, and it was in the right place. A shout from the skipper brought the referee on deck from a vain attempt at a snooze, and with all three jubilant, though wet, straight into the wind went the staunch little craft with the big seas smacking her bows like a drum, straight for the mark.

At 2:30 the light was well abeam and thought to be within the two mile limit as the lights of the houses and the hotel were plainly seen, but the referee wanted to make assurance doubly sure, and ordered another tack. At 2:57 he was satisfied, and duly registered the time. Distance, 45 miles; time, 9h. 52m.

Two hours to daylight yet remained to kill, and the skipper suggested heaving to under a storm trysail, but a glance at his wet and diminutive crew, left it merely a suggestion, and the mainsail remained up. About she came, and out to sea with a free sheet and a pleasant conviction that the Paloma and Helene were still

digging their way, bowsprits under, well in the rear. The bows of the Gladys enable her to breast the big seas with ease and slide on to the next wave without sousing her jib or making apparent effort. An occasional mother wave hits her like a cooper sounding a barrel, but there is little jar and no fuss or setback, only a lift along and a friendly slap by way of encouragement, as it were, from Neptune.

The first warning of dawn found us well out to sea, though some four miles to windward of the anchorage, and we stood in for the shore anxiously waiting to catch a glimpse of our competitors. Finally the rising sun struck the sails of a sloop well down to leeward, and the glass revealed two head sails, the Helene, hours behind. Still the Paloma remained invisible, only some small Japanese fishing sampans standing out from shore. At last the sun bleached her big mainsail to white, and we saw her close in shore, and to leeward of the harbor. This looked like a bigger boat than it turned out afterward when we found that she had made the light a short time before dawn, but had since drifted down the coast with the current, now against her as the tide changed.

We all were eager for anchorage, and started for the harbor, recognizing it by the big hotel. It seemed to be a close thing as to who would anchor first, ourselves or the Paloma, but of course the time mattered nothing. A mile off the entrance we struck a calm, the Paloma finding it a few minutes later. There we floated round, while the Helene came in from the sea with a spanking breeze. The referee took the helm and the giant whistled for a puff which finally came. The chart showed a very narrow entrance between two nasty reefs, so the skipper went up to the spreaders to con the way in. The anchor had been made ready forward, and the giant took the helm, while the referee hauled in the windward jib sheet and went forward to smother the sail as the giant let go the halliards. The Gladys got in first, and the skipper, with an eye to getting out on the morrow, picked out the best berth. "Stand by, forward," he yelled, and over went the sixty pound anchor as down came the mainsail between the lazy lines, and we anchored in three fathoms at 7:15. The Paloma dropped her hook at 7:40 and the Helene at 7:48.

[TO BE CONTINUED.]

## Interlake Yachting Letter.

CLEVELAND, O., Jan. 24.—Small boats are increasing in popularity in this section of the lakes, and the latest to be adopted is a 16ft. class, by the Detroit Boat Club Yachtsmen, of Detroit. A similar class has been in existence for some time on Lake Ontario, and has been very successful, which had some influence in prompting the step taken by the Detroit organization. Of course, there have been 16-footers, and also 15-footers built, but there has been no uniformity of design or type, and it is believed that the adoption of this class, according to its rules and restrictions, which will produce a staunch and seaworthy little craft, will do much toward promoting interest in small boat racing. It is one of the ideas of the boat club yachtsmen in adopting this class to pave the way for inter-club racing among 16-footers, as well as inter-association racing. A 16ft. class was supposed to exist in the Inter-Lake Y. A., but it was sadly deficient, lacking in vital particulars, that which is essential in producing a good wholesome type of boat. The boats are to be of the knockabout order, having a small cabin, with sufficient accommodations to stow dunnage and afford shelter in bad weather, and will also comfortably sleep two men. Following are the restrictions governing the class:

Maximum L.W.L., 16ft.; maximum draft, 4ft.; maximum sail area, 350 sq. ft.; minimum beam (L.W.L.), keel, 5ft. 7in.; centerboard, 6ft. 2in.; minimum area largest immersed vertical cross-section, 6.125 sq. ft.

The centerboard opening shall be included, and the centerboard itself excluded in measuring the said immersed vertical cross-section. There shall be but one centerboard and rudder.

The angles of the exterior outline with the vertical center of the vessel above the outside ballast shall at no point be less than 90 degrees. Minimum freeboard, 17in.; keel, 18in. Cabin trunk, with not greater than 70 per cent., nor less than 50 per cent. of the greatest beam on deck. Cabin trunk height at least 2½in. for every foot of greatest beam on deck; stem, oak, sided at head, 2¼in.; overhang timber, oak, forward, 1½in. thick; aft, 1½in. thick; frames, oak, sectional area, 1 sq. in.; frames, maximum spacing, 9in.; floors, oak, ¾in. thick; clamp, sectional area, 2¼ sq. in.; bilge stringer, oak, sectional area, 2¼in.; deck beams, oak, sectional area, main, 2¼in.; do., auxiliary, 1½ sq. in.; do., half, 1 sq. in.; deck beams, maximum spacing, 9in.; planking to finish full, 11-16in. thick; deck to finish full, ¾in. thick; cabin house deck to finish full, 7-16in. thick; crew, maximum, 3. Wood centerboards in centerboard boats, weighted only sufficient to overcome flotation. Metal centerboards not to exceed 3-16in. in thickness. Solid spars only. Sails to be cotton. A yacht using a centerboard to increase the area of lateral plane, and drawing at least 3ft. length of keel, shall be considered a keel boat.

Rear-Com. E. F. Lloyd has ordered a boat for the class, and two members of the club have signified their intention of building, but as yet have not placed their orders. Several members of the County Club and the Detroit Y. C. have expressed themselves as highly pleased with the idea, and it is probable that from six to eight boats will be built in time for next season's racing.

The Detroit Y. C. held its annual election of officers at the Hotel Ste. Clair, Detroit, on Monday evening, Jan. 11. The following were elected: Com., W. J. Funke; Vice-Com., E. A. Greening; Rear-Com., Wm. R. Shapland; Sec'y, J. K. Moore; Treas., A. G. Kramer; Fleet Surgeon, Dr. A. C. Lee; Directors, H. C. Kendall, S. S. Weinman, Otto F. Barthell, C. Teal and G. W. Willebrands. The secretary's report showed a membership of 391.

The Cleveland Y. C. held its annual election in the club house on Monday, Jan. 11, and the following were elected: Com., Geo. Worthington; Vice-Com.,

Capt. C. E. Benham; Rear-Com., E. W. Briggs; Sec'y and Treas., E. E. Pettibone; Fleet Captain, C. W. Kelly; Fleet Surgeon, Dr. J. M. Ingersoll; Meas., O. P. De Mars; Ass't Meas., F. A. Krauss. The following committees were also elected: Regatta Com., E. E. Pettibone, A. Triever and Geo. Marty; Entertainment Com., C. R. Hills, E. W. Briggs and M. C. Willis. Directors, M. J. Lawrence, John Barth, E. W. Briggs, F. G. Overbeck, Dudley Perkins and Albert Triever.

A new yacht club has been organized at Detroit by about thirty members and the following organization committee was appointed: J. O. Teagan, chairman; Fred Van Fleet, John Schweikart, Gus Moebis and E. A. Conyone. The committee on membership is as follows: John M. Sweeny, chairman; H. C. Glidden, Geo. Engel, A. N. Weber, J. Martin and James Hardy. It is the intention of the new club to erect a club house somewhere in the vicinity of the Water Works Park, which is a beautiful site for a yacht club. A name has not been decided on for the club, but will be done at its next meeting, to be held within a week.

C. W. SCHMIDT, JR.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

From the reports that have been received about the wreck of the auxiliary schooner Roamer, Capt. George D. Campbell owner, on Rum Cay of the Bahamas on Dec. 10 last, it would seem that the black inhabitants of these islands have inherited to a marked degree the buccaneering and piratical proclivities as well as the inclinations of their ancestors.

The yacht left Baltimore on Nov. 30. Col. Campbell and his wife were the guests of his son, who was in command of the boat. The crew consisted of a mate, a steward, and five seamen. After leaving the Florida coast the yacht worked her way in and out of the islands until she arrived off Rum Cay on December 9. Captain Campbell decided to land on the island. The mate kept the yacht jogging along in the offing. When Captain Campbell hailed the yacht and stated that he was coming aboard again, the mate headed the yacht toward the shore in order to avoid those in the small boat from having a long pull.

When the yacht was well inshore an effort was made to bring her about. She missed stays in the heavy sea that was rolling in and she was carried in on the reef. An effort was made to work the yacht off shore with the aid of the engine, but this was not powerful enough to stem the sea and a strong current that was setting shoreward. After striking the yacht soon sprung a leak, and it was decided to abandon her.

The news that there was a vessel ashore spread like wildfire among the natives, and they swarmed down to the shore. The black wreckers and pirates, many of whom were women with little or no clothing on, proceeded to strip the yacht and rob the Campbells and the crew of the few things they had saved from the wreck.

Col. Campbell, who went on the cruise for his health, suffered greatly from the shock that the wreck caused him. The natives were indifferent to the castaways, and did nothing to relieve their distress and suffering unless they were well paid for it. They even charged for water which was brackish and hardly fit to drink. In order that the wreck should be properly stripped and nothing overlooked and the unfortunates should be systematically robbed, the wreckers appointed a master, who was afterward arrested and punished by the British authorities at Nassau, N. P.

The steamship Orizaba brought Col. Campbell, his wife, and Captain Campbell, as well as the crew, to New York from Nassau. Col. Campbell died after reaching New York as a result of the hardships encountered.

Captain Campbell states in an interview after reaching New York:

"The black rascals pretend to live by raising pineapples and coconuts, but they really subsist on wrecks. There wasn't anything left of the Roamer when we got away from the island aboard a little mail schooner from Nassau that touches the keys. The schooner was crowded and my father and mother had to sleep on deck. We were seven days on Rum Cay and eleven days waiting at Nassau for the Orizaba.

"Fortunately the stewardess of the Orizaba, Miss Margaret Nelson, is also a trained nurse, graduated four months ago from the New York Hospital. She gave my father as good care as he could have had under a doctor.

"The Roamer was a hoodoo yacht. She was built for Clifton Perry at a cost of \$22,000, and he died aboard her. She was sold to a man who found he didn't want her, and then I bought her. I had an insurance on her of \$4,000 on a valuation of \$10,000."

Mr. Hollis Burgess has sold the 18ft. knockabout Chance, owned by Mr. Reginald Boardman, of Boston, to Mr. Gustav E. Kissel, of New York. Chance will be raced next summer at Islesboro, Maine.

Harry Tracey, one of the best known of the inland lake yachtsmen, died at Toledo, O., on January 19. He was sixty-seven years of age.

Endymion, owned by Mr. George Lauder, Jr., sailed from New York for Charleston on January 17. The owner will make a cruise to the West Indies, and at Charleston he will be joined by his parents and his sister.

The new auxiliary schooner Atlantic, owned by Mr. Wilson Marshall, left New York for Bermuda on January 24. Mr. Marshall has as his guests Vice-Commodore Fred M. Hoyt, of the Larchmont Y. C., Messrs. C. B. Seeley, Morton W. Smith, H. A. Bergmann, William Gardner, Hubert Vos, W. K. Major, and Warren Demarest.

Conditions were agreed upon January 14 for the match race for a two-thousand dollar cup between the automobile boats of Hollander & Tangeman and Smith & Mabley. The conditions are:

Over all length of boats to be not over 45ft. and not under 30ft. Each boat must contain at least two persons when racing. Boats may be raced with or without mufflers.

The two thousand dollar trophy shall be won by the boat winning two races out of three. The course shall be triangular and thirty miles in length. The date of the race shall be between May 1 and June 1, the exact date to be settled before April 15.

Both boats must be equipped with reversing gear and two life preservers. Each boat must contain in its tank at least twenty-five gallons of gasoline on crossing the starting line.

The match to be held in conformity with rules regarding time allowance, to be mutually agreed upon by both sides, and this with the intention and desire of testing said rules as regards their fitness for future contests for the trophy.

There is building at W. P. Kirk's yard, Tom's River, N. J., from designs by Mr. Henry J. Gielow, an auxiliary yawl for Mr. R. Galloway, of Memphis, Tenn. It was essential that the boat be of light draft, as she will be used for cruising on the lower Mississippi River and its tributaries, and the shoal bayous and lagoons along the Mexican Gulf coast. She will be 80ft. over all, 65ft. waterline, 17ft. 6in. breadth, and 3ft. draft. The engine will be 25 horse-power, which, it is expected, will give the boat a speed of eight miles in smooth water. The arrangements below deck are very unusual, the owner's quarters being forward and the crew's aft. The sail plan is moderate, and is made rather lower than ordinary on account of passing under several bridges where the clear head room is limited to fifty feet.

The Electric Launch Company, of Bayonne, are building from their own designs a large gasoline boat for Mr. James Corrigan, of Cleveland, O. She will be 95ft. over all, 16ft. breadth, and 4ft. draft. The frame is to be of heavy oak, and the planking long leaf yellow pine, copper fastened throughout. The raised pilot house and the long, low trunk cabin will be of mahogany. The roof of the cabin house will be arranged for a promenade deck with an awning and accommodation for chairs and settees.

The interior will be in mahogany, white and gold. There will be a large private stateroom with a double berth for the owner, and eight swinging Pullman berths aft divided off by portieres, accommodating as many guests. When the berths are up the space provides a large saloon, which will be used for a dining room.

The yacht will be fitted with a 200 horse-power Standard engine that will give her a speed of between 17 and 18 miles. The yacht will carry 2,000 gallons of gasoline, which will give her a wide cruising radius. An electric light plant will be installed, with storage battery auxiliary power, furnishing electric lights in the cabins and a powerful searchlight on the pilot house. Two tenders will be supplied, one to be equipped with a 1½ horse-power engine. The yacht will carry a crew of three men, and will be ready for delivery April 15. She will be used on the St. Lawrence River and on the Great Lakes.

Members of the Winthrop Y. C. have decided to rebuild their club house that was destroyed by fire on Dec. 28.

The Automobile Club of America has decided to interest itself in power boating, and has appointed a committee to look into the matter: Messrs. Peter Cooper Hewitt, chairman; John Jacob Astor and William K. Vanderbilt, Jr., are the committee.

The Milton Point Shipyard, of Rye, N. Y., has received an order for ten sharpie catboats from Mr. C. H. Southard, president and treasurer of the newly organized Hempstead Bay Y. R. A. The boats were designed by the builders, and will be ready for delivery on April 1. They are 24ft. over all, 18ft. waterline, 7ft. 8in. breadth, and 1ft. 3in. draft. The boats will carry 340 square feet of sail. They will be well built in every way. The keels, frames, deadwood, transoms, etc., will be of selected oak, the deck fittings of bronze, the spars of clear spruce, the running rigging of the best manila rope, and the standing rigging of the best of steel, set up with bronze turnbuckles. The boats will be owned by the following gentlemen: F. K. Walsh, Woodmere, L. I.; I. R. De Nyse, Hempstead, L. I.; W. H. Tracy, Rockville Centre, L. I.; W. P. Miller, Freeport, L. I.; C. H. Southard, New York city; J. H. Cruikshank, New York city, and H. L. Mason, New York city.

Commodore E. T. Affleck, of the Toledo Y. C., has purchased the auxiliary yawl Hussar II. through Messrs. Macconnell Bros. from Mr. George H. McNeely, of Philadelphia. Owing to the yacht's beam it will be impossible to take the yacht through the Erie Canal, and it will be necessary to sail her up the coast and through the St. Lawrence River and Welland Canal.

## YACHT CLUB NOTES.

The Orum Y. C. has elected the following officers for 1904: Com., Anthony J. Schriener; Vice-Com., John Gross; Rear-Com., Herman Schnorr; Record, Sec'y, William Wentz; Finan. Sec'y, E. Sauer; Treas., C. Sauer; Meas., H. Gebhard; Regatta Committee—William Wentz, H. Gebhard, and E. Sauer.

The thirtieth annual meeting and dinner of the Knickerbocker Y. C. was held at the Hotel Manhattan, New York city, on the evening of January 20. The following officers were elected: Com., James N. Norris; Vice-Com., W. B. Beam; Rear-Com., Dunham Wheeler; Treas., George H. Cooper; Sec'y, J. C. Lenkenson; Meas., W. C. Leiber; Fleet Surgeon, Dr. G. D. Hamlen; Directors, H. Stephenson, Rodman Sands, G. Edgar Allen, F. H. Stillman, and C. W. Schlessinger.

## N. Y. Y. C. Measurement Rule.

Editor Forest and Stream:

It appears from Mr. Lawton's communication in FOREST AND STREAM Dec. 26 ult. that the writer was mistaken in assuming that D was used as a divisor in the formula of the New York Rule in order to influence form. Whether that was the purpose or not, the history of racing rules shows that without exception they have had the practical effect of barring out from successful racing all but one peculiar form especially favored by the rule. And there seems to be no reasonable doubt that the present rule will develop its peculiar winning type as the others have done.

Mr. Lawton's letter, coming from one who was a member of the committee that prepared the rule, is especially interesting, because it states authoritatively the theory on which the rule is based, viz.:

The principle is accepted that within economic limits opportunities for speed vary in different vessels as the square roots of their respective lengths (provided they have the necessary motive power). Then it is found that the necessary power will be supplied, if sail area be allotted in proportion to displacement. Under these conditions speed will be proportional to the square root of length.

There is some discussion of the relations between sail, bulk (power to carry sail), and resistance; but there is nothing in the letter to explain how the amount of sail necessary to produce the required variation of speed was determined. Thus the theory is stated, but it is neither explained nor justified. Both explanation and justification seem to be required because the theory of the rule is apparently a novelty, and in conflict with generally accepted theory.

According to text-books of naval architecture, in theory the resistance of a vessel at low speed is wholly due to skin friction, and varies (1) as the wetted surface, (2) as the square of the speed.

If, then, a yacht's wetted surface is increased, say, by enlarging the model or design, in order to maintain her original speed sail would have to be increased proportionally to the increase of wetted surface. But according to the rule her speed would be increased by reason of the added length.

Nearly the same results would follow if the yacht were lengthened without increasing displacement and sail. In this case also the theory of the rule calls for an increase of speed proportional to the increase of  $\sqrt{L}$ ; but according to generally accepted theory, there would be not only no increase of speed, but a small decrease on account of the larger wetted surface due to lengthening the hull. If in either case there were to be an increase of speed as the rule calls for, resistance would further increase as the square of the speed, but the rule provides no increase of sail to meet this increased resistance. At low speeds, therefore, assuming the water to be smooth, according to orthodox theory, speed will not vary as  $\sqrt{L}$  as the rule requires, but will be constant when sail is proportional to wetted surface.

At higher speeds, when wave-making resistance is encountered in addition to that of skin friction, the only theoretical way of comparing the resistances of vessels of different length and displacement, at different speeds, known to the writer, is by Froude's law of corresponding speeds; and then the vessels must be similar in form, i. e., made from the same lines, one being simply an enlarged model of the other. That law provides that if the speeds vary as the  $\sqrt{L}$ , then the resistances will vary as the cube of the ratio of the linear dimensions. Thus if one be 2 times as long as the other and have 4 times the wetted surface, her resistance will be  $(2)^3=8$  times as large when her speed is  $\sqrt{2}=1.41$  times as great; and she would therefore require 8 times as much sail. But, according to the New York Rule, she would require only 4 times as much sail, having only 4 times as much wetted surface.

At all speeds, then, the New York Rule seems to be at variance with commonly accepted theory.

There are some observations which show the variation due to increase of length when displacement is kept constant. Froude towed two yacht-shaped models (that is without parallel middle body) representing ships of equal displacement, one 318ft. and the other 368ft. long, the longer boat necessarily having the larger wetted surface. Up to 16 knots the resistance of the shorter vessel was the smaller, the saving in skin friction being more than sufficient to offset any loss by wave-making resistance. According to the New York Rule the resistance of the larger vessel should have been the smaller.

The precise applicability of text-book theories of resistance to the case of racing yachts is not here urged. It is only attempted to show that, tried by those standards, the theory of the committee seems to be a novelty, and to need further justification. Froude's experiments were made with models of large vessels which would probably be little affected by such waves as yachts commonly encounter in racing, whereas every yachtsman knows that ordinary summer waves do largely affect the speed of the smaller yachts at least. But if any new theory is to be substituted for the old; or if that is to be modified to suit changed conditions, the changes should be explained and justified. The problem requires quantitative solution; but there is no attempt in Mr. Lawton's defense of the rule to prove the quantitative relation set forth in the theorem.

The truth seems to be, as nearly as the writer can make it out, that the hydrodynamic relations governing the resistance of yachts of different size and shape moving at different speeds through waves of varying dimensions, are so complex that any measurement rule based on theory can give but roughly approximate results. Mr. Hyslop, who well understands the theory, who has had much practical experience in making rules, and who, moreover, is a friendly witness, testifies to this in his remarks on Mr. Popr's criticism of this rule. And if any further proof were needed that the rules of this type are empirical, notwithstanding protestations of their scientific basis, it is afforded at once by the fact that they who make the rules proceed at once to discount their theoretical results anywhere from 20 to 60 per cent. when applying them in practice.

There is little or no use of refinement in methods when the probability of error varies from 20 to 60 per cent.

15-FOOT KNOCKABOUT—SAIL PLAN—DESIGNED BY E. A. BOARDMAN FOR COLONEL ISAACSON.

and it would be better to get approximate results by simpler methods. If yachts be classified by length and taxed for sail area alone, they will soon be built either to the head or the foot of their class, and be of substantially uniform length. This will eliminate all uncertainties concerning resistance arising from differences of length.

If freak forms be barred by suitable restrictions, the difficulties arising from difference of form will also be eliminated; and then SA will be a reasonable satisfactory measure of speed until yachtsmen decide to abandon time allowances altogether. The objection commonly made to this plan is that it does not give the designer sufficient freedom, and tends to a uniformity of design. The answer is that the designer should have no freedom to go outside the limits that surround desirable forms; and that there ought to be a tendency toward one form; namely, the fastest—the form of least resistance. The more nearly yachts are matched in speed, the greater the interest for spectators, and the sharper the zest of skipper and crew which arises from the personal factors in the contest. Imagine, for example, the effect of allowing time in trotting races for heavy wagons, drivers, or other load.

SEXTANT.

### Design for a 15ft. Knockabout.

We publish herewith the plans of a 15ft. waterline keel knockabout that was designed by Mr. E. A. Boardman for Colonel Isaacson, of Halifax, N. S. The yacht will be used as a day boat and for racing in Halifax Harbor.

The design shows a nicely turned little boat of substantial construction that should make a durable and satisfactory craft.

Her dimensions are as follows:

Length—	
Over all .....	27ft. 10 in.
L.W.L. ....	15ft.
Overhang—	
Forward .....	6ft. 1 in.
Aft .....	6ft. 9 in.
Breadth—	
Extreme .....	6ft. 6 in.
L.W.L. ....	6ft.
Draft—	
Extreme .....	4ft. 6 in.
Rabbit .....	1ft. 2 in.
Freeboard—	
Forward .....	1ft. 11½ in.
Least .....	1ft. 4 in.
Aft .....	1ft. 6 in.
Ballast lead .....	1,000 lbs.
Sail area, total .....	304 sq. ft.

Messrs. H. I. and J. T. Pratt have ordered two motor boats built, and it is expected they will develop high speed. One will be a rigged screw boat, 60ft. long, with a 110 horse-power engine, while the other will be a twin-screw boat 90ft. long, with a 500 horse-power motor. Messrs. Gardner & Cox will design the boats' hulls.

\*\*\*

The first club house of the New York Y. C., which stood on Elysian Fields, Hoboken, for many years, is to be used in the future as the club station at Glen Cove, L. I.

## The Scale of Time Allowances.

Editor Forest and Stream:

I am glad to see that Mr. Lawton has opened up this subject. The tables in use, with the various forms of the length and sail area rule, are so crude and erroneous that it is impossible to justify them except by pleading extenuating circumstances, the commonest being that in class racing boats are so nearly of a size that the allowances are too trifling to affect the result of a race. In some places—Lake Ontario, for instance—it has been found quite feasible to abolish time allowance in class racing, and there is no doubt that such an arrangement, where it can be fairly applied, gives better and more interesting sport. But there are always events which demand that two or more classes must sail together; and so long as conditions exist that require the use of time allowance it is only just that the fairest and most accurate system should be used.

The explanation of the "Table of Time Allowance," as set forth in the books of clubs using the length and sail area rule is not only curt but incomplete; and probably few yachtsmen have ever taken the trouble to find out what it means. The introduction of a formidable looking algebraic expression, and the extension of the actual allowances to hundredths of seconds, convey an appearance of great care and accuracy to the casual reader; but these are no better than fine polish on rotten timber. But let us go into details. The rule books say, "The allowances in this table are based upon the rule accepted by naval architects; that, within economic limits, opportunities for speed vary in different vessels as the square roots of their respective lengths."

Applying this to two yachts, A of 25ft., and B of 36ft. length, we infer that their possible speeds vary as 5 and 6. If they are to race together, one way of putting them on an equality would be to lay out a course of, say, 10 miles for A and 12 miles for B, and the first to complete her course would win the race. This plan is quite out of the question in practice, and is mentioned only as a simple illustration of the principle involved. An alternative is to require each yacht to sail, say, 12 miles and to make the allowance to the smaller in time. And as time and speed are in inverse ratio, the allowance should be one-sixth of the time of the larger, or one-fifth of the time of the smaller yacht. This involves the selection of one or the other as a standard; but with only two yachts, which are well matched, the choice is not important, and the rule in this form is workable. With more than two yachts in a race this method would lead to complications, and the calculations would be tedious, although a proper table of allowances could easily be arranged to minimize the latter difficulty. In practice both have been overcome by the use of the startling assumption that  $\sqrt{L}$  length (in feet) equals speed in miles per hour.

On this basis the allowances per mile are shown in terms of time, all of which is very handy and decidedly wrong.

I do not know who first propounded the above speed formula, nor am I able to explain its persistent omission from the theoretical explanation of time allowance published in the books of the various clubs. It is an essential link in the chain of reasoning which the curious yachtsman is allowed to deduce from the

15-FOOT KNOCKABOUT—LINES AND CONSTRUCTION PLANS—DESIGNED BY E. A. BOARDMAN FOR COLONEL ISAACSON.

context. Originally it may have been left out by accident—the mistake of a clerk or a printer—and the omission has been perpetuated in all the books I have seen. But, as to the facts of the case—can we regard five knots as a fair average speed for a yacht of 25 ft. length, sailed with fixed ballast over a triangular course, with one leg to windward? It is certainly a high average, and the fact is more apparent in the case of yachts of 50 or 60 ft. corrected length, to which the rule is made to apply. At the best, it represents a maximum speed over average courses in strong steady winds, and many good races are sailed in light to moderate winds, at speeds far less than those assumed in the rule. In such cases, it is unfair to the yachts which receive time, but so far from attempting to allow for this, the rule goes off on the other tack, and says: "As strong winds are required, however, to give to larger vessels the full extent of their advantage in size, and as such a scale of allowance is not adapted to ordinary summer racing, 50 per cent. only of the allowance due to the rule is given in the table." Some clubs have used more than 50 per cent. and some less; but I do not know of any case where the full allowance has been used. But why should there be any discount at all?

Perhaps the original framers of the rule owned large yachts, snugly rigged for general work, and consequently at some disadvantage in light winds. But at the present time large yachts (say of 70 ft. or over) are usually good performers in light weather; that is, assuming that they are really racers. The mere height of their sails above the water gives a distinct advantage in fluky winds, while their increased size and displacement steadies them in a dead roll, enabling them to hold their course with sails asleep, when smaller craft are tossing up and down without steerage way. The moment it breezes up away goes the big yacht, and the small craft has no chance at all with the existing allowance of time. Even assuming some special concessions are occasionally required by large yachts, why should a whole system of time allowance be cut down until it becomes an absurdity? The assumed speeds are, if anything, too high for racing in strong breezes, and consequently the differences or allowances in time for distance are too small and unfair to yachts receiving them in any case. The slower the speed the longer the time, so that for light winds they might reasonably be doubled. But just at this point the rule introduces a factor which has nothing to do with the original prin-

ciple, and reduces the allowances just when they should be increased; and the mutilated figures are made to apply to all cases, the actual weather conditions of a race being wholly disregarded. Thus the speed formula actually assumed in compiling the tables on a 50 per cent. basis would be:  $\sqrt{L}$  (in feet)  $\times 2$  = speed in miles per hour. For a 36-footer this assumes a speed of 12 knots, and for a 100-footer, 20 knots!

Leaving aside the question of whether "larger vessels" ever require special concessions, it is perfectly clear that there is no necessity for anything of the sort between yachts nearly of a size. Yet, under the rule a 51-footer is assumed to be a "larger vessel" than a 50-footer, and unable to realize on her "advantage in size," except in "strong winds." Now, under the L. and S. A. rule they may be almost identical in length and other hull dimensions; but the 51-footer may measure more owing to a larger sail plan. Such a thing would be exceedingly common with a classification by waterline length with allowances based on corrected length. The yacht with the larger rig would probably be a light-weather boat, and a rule that increased the allowance according to the elapsed time of a race would be fair to all parties. But the present rule as-

sumes that she wants "strong winds" in order to use her big sails! There was an Irishman who on his first voyage expected the captain to reduce sail when the wind fell light. "With so little wind," he argued, "not much sail is needed to catch it." Perhaps this man eventually became rich enough to keep a yacht and join a club. There are some things in the rules that suggest that he was a member of a committee on measurement.

In practice it is frankly admitted that existing allowances are too small. Every designer understands that it is more blessed to give than to receive—time. Every yacht owner wants the biggest yacht in the class. The application of a correct time scale would do away with many existing abuses. No new principle is involved; no complicated measurements—merely the courageous application of the principle which has been admitted as the basis of time allowance for a quarter of a century. The remarkable thing is that the subject has not received attention before. It is fair to assume that the original time scale was tentative and experimental, and that it would be revised from time to time, in accordance with the actual results of practice. The 50 per cent. arrangement has become fixed, and its faults attributed to something else. If elapsed time were taken as the basis, present allowances would be doubled, even in strong winds, and perhaps quadrupled in light weather.

The suggestion made by Mr. Lawton that the present scale could be used, is very good, but it would be simpler to compile a new table based on time alone.

A yacht of large size could be taken as a standard of elapsed time expressed as unity. Thus if L represents the large yacht, L—x represents a smaller yacht;

then the formula  $\frac{\sqrt{L}}{\sqrt{L-x}}$  gives the relative elapsed time for the smaller yacht. This divided into her actual elapsed time, gives her corrected time. A table of relative elapsed time for every size of yacht, with the logarithm of each number printed in a parallel column, would be useful.

The present tables of time allowance—on a 50 per cent. basis—assume that the speed of each yacht is equal to twice the square root of her length.

To use them on a purely time basis, I think it would be necessary to take the difference for one mile and multiply it by twice the square root of the largest yacht or scratch boat. This would give the allowance per hour of elapsed time, and would be multiplied by the actual elapsed time of a race.

In practice I think the elapsed time of the first yacht to finish in her class could be taken as the standard, and for convenience in working it might be expressed in hours and tenths, every six minutes being a tenth, and the nearest tenth being used. Thus, for an elapsed time of 3 hours 19 minutes, 3.3 would be used as a multiplier of the allowance per hour. This work would be no more tedious than the present method of multiplying by the distance sailed.

One of the first effects of the proposed system would be to check the extravagant growth of sail plans on a given length. The same end has been attained by classification by corrected length; but this plan has not come into very common use, and its sudden introduction always disarranges existing classes. It might be found that a proper assessment of large sail areas would lead to the use of moderate rigs, which in turn would modify many of the extreme features of design in general. The adoption of a just time scale is a most proper and reasonable expedient, which can be instantly put into practice, and a trial, even in a few races, might develop important and unexpected results.

WM. Q. PHILLIPS.

## Sachem's Head Y. C.

BY W. E. PECK, COMMODORE SACHEM'S HEAD Y. C.

ABOUT fifteen miles east of New Haven lies a rocky projection named Sachem's Head. It is a romantic spot, where in 1837, according to history, the chief of the Pequots was beheaded by Uncas, the chief of the Narragansetts. At the same time the entire band of Pequots was exterminated on the present bathing beach, known ever since as Bloody Cove. According to tradition, the Narragansetts left the head of the dead Sachem mounted on the top of a pole fixed in the rocks, and hence the name "Sachem's Head."

About ten miles east the promontory of Hammonasset stretches its emerald crest far out into the bosom of the sea, while two miles to the west lie the romantic and picturesque Thimble Islands. Until about 1865, when it was destroyed by fire, a large hotel stood at Sachem's Head, with accommodations for some 500 guests, who were brought to the hotel either by steamboat or tally-ho coach from New Haven, and later, after the completion of the Shore Line Railroad by omnibus from Guilford. After the destruction of the hotel there were no accommodations for summer guests excepting in the few farm-houses scattered about the Head until the erection of the Sachem's Head House in the summer of 1878. Within a few years from 1878 some forty cottages, quite simple and inexpensive, were built, and in later years many of these have been enlarged or supplanted by summer homes of a more pretentious type, and new sites have been occupied, until the visitor driving from the station through the woods suddenly has a bird's eye view of a crescent-shaped village almost surrounded by water, and an unobstructed view of the Sound stretching east and west as far as the eye can see, and south for twenty-two miles to the bold sand shores of Long Island.

The growth of cottages naturally attracted summer residents who were desirous of sailing and fishing, the type of boat mostly used being what is known as the Connecticut River drag net sloop. It was but natural that the owners of these boats should race them home from the fishing ground, or meet in impromptu races on a pleasant afternoon. These frequent brushes in the waters about Sachem's Head and the Thimble Islands were so productive of interest and good fellowship that a yacht club resulted. The club was organized in 1896 by four summer residents "for the purpose of encouraging the Connecticut River type of sloop and holding a regatta each Labor Day." So keen was the interest shown in

the first season's racing that at the first annual meeting, held on the porch of one of the cottages, on September 6, a committee was appointed to draft a constitution for adoption in place of the existing articles of the association, and later on a building committee was appointed. Owing to the genius and indefatigable work of Mr. E. C. Seward, the club's first fleet captain, the small island known as "Chimney Corner" was purchased, largely on faith, and a pretty club house was completed and ready for occupancy on the opening of the club season, June 18, 1898. During the same winter another committee devised a uniform and cap device, which, with only slight changes, have been adhered to since the season of 1898.

Captain Oliver N. Brooks, of Guilford, keeper of the lighthouse on Faulkner's Island from 1851 until 1882, became the first superintendent of the club house.

The Shore Line Times of June 24, 1898, contained the following description of the club house:

"The building is located on a large rock known as Chimney Corner at the extreme western end of Sachem's

thanks in behalf of the club, and at 12 M. the opening gun was fired, and the club pennant run up to the mast-head by that old veteran, Captain O. N. Brooks, amid hearty cheers."

The season of 1898 was so successful that an addition was erected during the spring of 1899, containing a dining room and kitchen. In the spring of 1900 a boat house was erected, equipped with lockers, toilet and dressing rooms, and other conveniences besides a work bench for repairs. This building has been most serviceable to club members, but it was the only building erected where the building committee were not foresighted enough to erect a building large enough for the requirements of future years.

On January 8, 1901, the executive committee decided to have a dinner at the Arena in New York, in order that the club members in that vicinity might meet together socially and discuss the question of asking the corporation to erect a new building for sleeping accommodations for members and their guests. The meeting was appointed

Sachem's Head Y. C. House, Chimney Corner, Sachem's Head, Conn.

Head, and is one of the finest locations for the purpose along the Connecticut shore, as it has deep water all about, and in the bay is deep, safe, and sufficient anchorage for a fleet of the largest yachts. After the formation of the club the desirable advantages presented by this location inspired the thought among many of the yachtsmen that a club house would greatly add to the interests of the club and the attractiveness of this popular resort. With this end in view six of the wealthy gentlemen of the club associated themselves into a corporation with the result that Chimney Corner was purchased, and the new club house erected and furnished and a bridge and dock constructed, resulting in a rendezvous which is a monument to the aforesaid gentlemen's progressiveness and generosity. The house and grounds are to be leased to the club at a nominal annual rental sufficient to cover interest for the expenditure.

"The building is very attractive. The interior consists of one room 25 by 40 feet and surrounded by a veranda 10 feet wide with a clear view of the water from all sides. The interior is furnished with comfortable chairs and small lunch or card tables. In one corner of the

for January 26, 1901, and twenty-four members were present. The consensus of opinion as expressed indicated that the members present were ready for such a building, and plans were immediately drawn for a new structure, which was ready for occupancy on the opening day in June. Now there are ten bed-rooms at the disposal of the members and their guests, and each room commands a pleasant marine view and each is tastefully furnished, while the new dining room is commodious and cheerful. Although the club house has been built piece-meal, the edifice on the whole is a pleasing one, and most admirably adapted for the purpose for which it was erected.

### RACING.

The Sachem's Head Y. C. has earned the reputation of being one of the sportiest clubs on Long Island, as there has been a series of six club races each season in addition to the ladies' race and the annual open regatta. No sort of weather has interfered with the starts, the captains having always shown themselves ready to face a threatened calm or raging tempests. Each year an increased number of racing boats have been attracted to

Harbor of Sachem's Head.

room is a large sideboard of black oak of antique design. Upon this is a complete tea service for the use of the ladies of the club who will hold afternoon teas occasionally during the season.

"In the center of the room is a heavy oak writing table with chairs to match and a supply of writing material.

"At the south end of the room is an elevated stage 8 by 10 feet, upon which is a piano. On the east side is a large open fire-place and chimney, the fire-place being about 3 by 8 feet and constructed of cobble stones in the rough. Large double doors provide exit from the sides and large airy windows look out upon the sea.

"The reading table will be provided with several daily papers, also weekly illustrated and sporting periodicals.

"The house and grounds will be open to members from 8 A. M. to 10:30 P. M. No games of chance will be permitted on the premises. Religious services will be held in the club room whenever application is made through the committee, when the church pennant will be displayed from the masthead.

"There is a dock 35 feet long and 6 feet wide for the accommodation of yachts and small boats, with a depth of water of five feet at low ebb.

"When the hour arrived for formally placing the house in commission, those present gathered on the western veranda, and interesting remarks, flavored with humor, were made by Vice-Commodore John Elton Wayland, of New York, who, in behalf of the corporation, formally turned over to Commodore A. A. Hull, the house and grounds for the use of the club. Commodore Hull, in a few well-chosen remarks, accepted them with many

Sachem's Head, and a generous number of prizes have been provided and promptly awarded. In the first club race on July 5, 1897, twelve yachts competed, and in the first annual regatta on September 6, 1897, there were seventeen entries, the yachts competing in five different classes. In the first races the yachts that competed were of a nondescript class, so much so that it took a mathematical expert to figure out the time allowances, but the tendency of late has been towards one-design racing, and during the past season nine of the original Seawanhaka knockabouts owned by club members competed in the club races; another class being the Sachem's Head one-design knockabouts, having a 17-foot water-line and a sail area of 360 square feet. This class was designed and built in 1902 by Wyckoff Brothers, of Clinton, Conn., and the class has been quite successful.

The captains have been very neighborly, and have not only competed every year in the races of the New Haven Y. C., Pequot Association, and Hartford Y. C., but they have occasionally gone further west and competed at Bridgeport and Port Washington. In September, 1902, the club sent a team of five Seawanhaka knockabouts to Oyster Bay to contest for a \$100 cup put up jointly by the Sachem's Head and the Seawanhaka-Corinthian Y. C.'s. The Sachem's Head Club suffered rather a bad defeat, owing largely to inexperience in team work and lack of knowledge of action of tides and currents in these strange waters. It is to be regretted that a return race could not have been sailed in the waters off Sachem's Head, as the experience of the captains at Oyster Bay was most valuable.

The racing spirit of the Sachem's Head captains is shown by the fact that to compete at Saybrook in the

regattas of the Hartford Y. C., they are obliged to start very early in the morning; sail eighteen miles, compete in the races, and then sail home again. Up to last September the weather conditions have been each year so favorable that the Sachem's Head has been able to get down to Saybrook in time for the regatta and return before sunset, not only competing in the regatta, but racing both ways. Representatives of the fleet have also contested for prizes at Shelter Island, New London, and other ports. A gentleman who spends his summers at one of the hotels on Fisher's Island happened to meet one of the members of the Sachem's Head Y. C. last August, and made the following remark: "We have had some very pretty views of a racing fleet last week. A yacht club with boats all alike has passed Fisher's Island four different times racing hard as long as they were in sight." The gentleman addressed said: "Well, the fleet you saw was undoubtedly that of the Sachem's Head Y. C., which passed Fisher's Island four times during the last annual cruise, always racing."

Sachem's Head Y. C.—Start of First Division, Annual Regatta, Labor Day, 1900.

#### CRUISING.

Until 1900 there were not enough cruising yachts belonging to the club and available to insure a successful cruise, but as an experiment to find out what results could be obtained, Commodore E. C. Seward, on August 1, 1900, issued general order No. 3, directing the fleet to assemble at the club anchorage on Saturday, August 11, for a run to Saybrook and return. The start was made at 11 A. M., and by 2 o'clock twelve sloops flying the club burgee were at anchor at the Hartford Y. C. anchorage. Some twenty members of the club sat down to a mess dinner in the evening at the club house of the Hartford Y. C. The return sail was made Sunday morning, the fleet leaving Saybrook at 7:03 A. M., and the last boat anchoring in Sachem's Head at 11:51 A. M. This little experimental cruise was so successful from every point of view and so enjoyable to the captains, that it was believed by the Commodore that the club would be justified in arranging for a week's cruise in subsequent years.

In 1901 a squadron was started from Sachem's Head on August 5, and made a run to New London, where a

Sachem's Head Y. C.—Start of Second Division, Annual Regatta, Labor Day, 1900.

mess dinner was held at the Pequot House, thirty members of the club enjoying the sumptuous spread. The squadron sailed in two divisions, the first division being made up of the knockabouts and the second of the larger sloops and schooners. From New London the fleet proceeded to Shelter Island, Stonington, and Block Island, and thence to Sachem's Head. The run from Block Island to Sachem's Head was a most exciting affair. On Saturday morning, after a dense fog lifted, the first division started for home while the second division decided to only attempt Fisher's Island. A short distance from the island the fog again lowered, and charts and compasses were resorted to. Off Montauk Point the wind began to blow a gale, increasing to a hurricane off Gardiner's Island. The Gloria and Thelga hove to, the former having lost her tender and broken her tiller. Only three of this division finished, viz., the Senta, Midge, and Thelga, in order mentioned, the first two making the run from Block Island to Sachem's Head with one tack in seven hours and forty-five minutes, a record for boats of their class. The remainder of the fleet arrived Sunday noon. This second cruise was in every way a success, and spoke well for the enterprise and energy of so young a club. The yachting spirit of the Sachem's Head Y. C. is illustrated by the fact that sixteen yachts out of the fleet of such a small club took part in a week's cruise, and the racing every day was of the hottest kind. The success of the 1901 cruise settled the ability of the club to conduct a creditable annual cruise, and the captains have been almost unanimous in the opinion that the best route for the club is in eastern waters, deep and clear, where

squalls are infrequent, the annual itinerary to include New London, Shelter Island, Stonington, Block Island, and West Harbor, Fisher's Island.

The third annual cruise, conducted by Commodore John Elton Wayland on the flagship Pawnee, was started on Monday, July 21, 1902, and the mess dinners, which had proved so enjoyable a feature of the previous cruises, were repeated at three of the hotels visited.

The annual cruise is now a feature of the club life, and has come to stay.

#### SOCIAL LIFE.

From the very start the club members have recognized the necessity of having the co-operation of the ladies to make the club a success, and their co-operation has contributed largely to the successful seasons. Every Saturday night the club house is thronged with ladies, and unlike the situation at most summer resorts, all who go take part in the dancing. For a year or two the dancers were satisfied with piano music, but to-day they would

determination of the incorporators of the club has done what little nature left undone, and the club is a success because its affairs have been handled in a just and liberal spirit, while in racing the rules governing racing have been strictly enforced.

With its superb location on a small island, with its

Sachem's Head Y. C.—Interior View.

broad verandas, from which all the racing can be seen, with the beauty of its surroundings, the club, if as well guided in the future as in the past, will continue to be known as one of the sportiest, most social, and most successful on Long Island Sound.

## Designing Competition.

\$225 in Prizes.

Two designing competitions have been given in FOREST AND STREAM. The first was for a 25ft. water-line cruiser; the second was for a 15ft. one-design class. Both competitions were very successful. The great interest taken in those competitions has prompted us to give a third one, open to amateurs and professionals. The prizes which will be given are as follows:

First prize—\$100.

Second prize—\$60.

Third prize—\$40.

Fourth prize—\$25, offered by Mr. Theodore Zerega for the best interior plan.

The designs are for a yacht conforming to the following conditions:

I. Centerboard cruiser, 40ft. l. w. l.

II. Boat must not draw over 6ft with centerboard up.

III. The lowest freeboard to covering board must be 3ft.

The design must be modern in every particular, without containing any extreme or abnormal features. The conditions have been made as simple as possible, that competitors might have all latitude and scope in working out their ideas. We wish to produce an able and comfortable cruising boat, one that shall have ample accommodation for two or three men living aboard for a period of several months, and one that can be easily managed at all times by two or three paid hands. The draft is restricted to 6ft. in order that the boat may have access to nearly all the desirable harbors, and may, thereby, widely increase her cruising field.

#### Drawings Required.

I. Sheer plan, scale  $\frac{3}{4}$ in.=1ft.—showing center of buoyancy, center of lateral resistance and center of effort of both rigs.

II. Half breadth, scale  $\frac{3}{4}$ in.=1ft.

III. Body plan, scale  $\frac{3}{4}$ in.=1ft.

IV. Cabin plan, inboard profile and at least one cross section, scale  $\frac{3}{4}$ in.=1ft.

V. Two sail plans, scale  $\frac{3}{4}$ in.=1ft.; one as a yawl; one as a pole mast sloop.

In the case of the yawl rig the position and height of the mast and length of gaff are to be the same as in the cutter rig. Plans must show working topsail and size of light sails.

VI. All ballast outside on keel except amount necessary for trimming.

An outline specification must accompany each design. The drawings should be carefully made and lettered. All drawings should be on white paper or tracing cloth in black ink. No colored inks or pigments should be used. The designs must bear a nom-de-plume only, and no indication must be given of the author. In a sealed envelope, however, the designer must inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than March 1, 1904. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all of the designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, who passed upon the designs submitted for the 25ft. with great care, has again consented to judge the designs and make the awards.

#### By Way of Postscript.

Opinion of a Michigan Civil Engineer:

As I have said before, FOREST AND STREAM is a better paper than I had supposed could be made along those lines.

Opinion of a Michigan Physician:

I have been a constant reader of FOREST AND STREAM since 1876, and your Christmas issue was the finest number that you have ever published; indeed the finest specimen of any journal devoted to rod and gun that I have ever seen. It was superb in its way.

A California opinion:

That was a great Christmas number. Pray, accept my congratulations; though belated, yet none the less hearty.

the continuance of any religious service the church pennant is hoisted on the ensign staff. These services are in charge of a church committee, and at many of the services sermons have been preached by the club chaplain.

The club house is everything in Sachem's Head, and if the statements of visiting yachtsmen are to be believed, there is no other one on the Sound where the members and their guests find greater enjoyment.

This article would not be complete without some reference to the social life at Sachem's Head outside of the club. The cottagers find amusement in croquet, tennis, fishing and sailing, and the links of the Pine Orchard Country Club near by offer an opportunity for golf over a most picturesque course. Many of the club members own islands of the Thimble group, or else reside on the numerous little capes of Great Harbor. Exchange of visits is therefore necessary by launch, and it is rather unique to attend a dinner party at one of the island homes where all the guests travel in launches. As the guests depart for their homes after such a party it is a pretty sight to see a half dozen launches with their red and green lights leaving the landing stage for other islands and points along the shore some three or four miles distant.

Last August the Commodore of the Hartford Y. C. paid the club a visit, and while on a tour of inspection standing on the Nantucket balcony, which commands a magnificent view of the Sound and the coast line from New Haven to Hammonasset Point, remarked to a club member: "No wonder that the Sachem's Head Y. C. is a success; nature has done everything for you." The

## Cruise of the Red and the Green.

A Canoe Cruise in the Lake Temagami Region.

BY ARTHUR L. WHEELER.

The Story which won the Third Prize of \$15 in "Forest and Stream" Canoe Cruising Competition.

THE region about Lake Temagami is probably the finest in the world for the canoeist. For some years we four had been trying to "take to the woods" together in that country, and in the present year the impossible came to pass: we were all able to go when the appointed time arrived. The time was July 1. On the evening of that day we took the night express from New York, over the Rutland Railroad, and landed in Ottawa the next day in time for lunch. Shifting then to the Canadian Pacific we reached Mattawa in the evening of the same day.

Mattawa is a town that once enjoyed a "boom." The "boom" has departed and left the town in a half developed condition, with a large French Catholic Church, apparently far too splendid for the town, and a remarkably full collection of large boulders evidently removed from the roadways. A good deal of business is, nevertheless, transacted, for the town lies at the confluence of the Ottawa and Mattawa rivers, and is the point of departure (by means of a branch railway) for Lake Temiskaming and the newly opened farming country to the north of that lake. Indeed, the stampede into that very rich region may bring back its lost "boom" to Mattawa.

Rising early and donning our outing clothes we found our supplies all ready for us in the store of L. H. Timmins, to whom we had sent our order by letter, and who can be recommended as a thoroughly reliable and intelligent outfitter. Practically everything was packed in two wooden boxes of convenient shape for our canoes. With these boxes and the rest of our personal outfit, we boarded the train on the branch line for Temiskaming, which we reached at about noon. Temiskaming lies at the foot of the very long and narrow lake of the same name. At this point the lake narrows and a short distance below begin the rapids of the noble Ottawa River. In fact, Lake Temiskaming is so narrow for forty or fifty miles above these rapids that it seems but a widening of the river.

To Temiskaming we had sent on ahead our two canoes, and our first move was made on the freight house. If the canoes were not there, it meant vexatious delay. We were soon set at ease, however, for we soon found them, the Red and the Green, and they had come through from Old Town without a scratch. Then followed a dash for the hotel, where we stored away a good dinner with the serious thoroughness born of the knowledge that it was to be our last civilized meal for nearly a month.

Early in the afternoon we took steamer up the lake for the mouth of the Montreal River, and while the steamer is plowing her steady way northward between the high cliffs of Lake Temiskaming, stopping now and again to drop a mail bag at some lonely landing, I shall have time to describe in detail the canoes and the outfit with which we made our trip.

The two canoes, which were christened the Red and the Green, on account of their respective colors, were made by the Old Town Canoe Company. They were 16ft. long, with an extreme beam of 32in.; depth, 11½in. The construction was the well-known canvas over cedar, gunwales of spruce, posts, decks, thwarts, and seat frames of white ash. Weight, about 65 pounds. Cost, \$30 each.

These canoes proved thoroughly satisfactory in every way. They are much faster than a birch canoe, and yet are much safer, for they have a very full bilge, which gives them great steadiness in the water. They never leak unless very roughly used, and are easily repaired in case the canvas skin, by any chance, is broken. We had but one leak to repair on the trip, and that a very slight one. They will stand a surprisingly heavy sea (we were often out when the white caps were rolling), and though heavier than a birch canoe, we found one a perfectly comfortable load for one man on a portage. Through some misunderstanding the canoes came without center thwarts, but we managed to carry them very well with our tump lines. The thwart and paddle method is, however, more convenient.

Our supplies were as follows: 35½lbs. bacon, 11lbs. salt pork, 20lbs. shanty biscuit, 30lbs. flour, 15lbs. rice, 35lbs. granulated sugar, 5lbs. macaroni, 5lbs. corn meal, 6lbs. coffee, 2lbs. tea, 9lbs. evaporated peaches, 3lbs. baking powder, ¼lb. pepper, 5lbs. salt, 10lbs. maple honey (in can), 12 cans evaporated cream, 5 cans condensed milk, 6 small jars McLaren's cheese, 10 small tins of chicken, 4 small tins of tongue, 4lbs. raisins and prunes, 2 pails lard, 5lbs. butter (in can), 6lbs. sweet chocolate, 6lbs. bitter chocolate, 2lbs. Baker's cocoa, 1 bottle vinegar, 1 pail strawberry jam, 1 package self-raising flour, 3 glasses orange marmalade, 4 bars soap, matches, both in boxes and bottles.

This list shows that we had a good variety. It

should be added that part of the supplies were purchased at the Hudson's Bay Post, on Temagami Lake, viz: 20lbs. of sugar, 10lbs. of biscuit, 5 cans of condensed milk, besides a few luxuries like eggs, fresh yeast bread, and a little milk. We were, therefore, somewhat lighter at the start than the list would indicate.

It is never possible to estimate exactly what a party will eat in a given time unless its members have been on a similar trip before. We proved to be a trifle overstocked with bacon, lard, and rice, but a little short of condensed milk and cream. The rest of the supplies proved to be pretty closely estimated. The butter was, of course, not intended to last over a week, and the 6lbs of bitter chocolate was a mistake—it was ordered as sweet chocolate. The total weight of the supplies was about 250lbs., and we carried them in two pack baskets and the two wooden boxes furnished by Timmins. These boxes were of convenient size for the tump lines, and were thrown away when emptied.

The cooking and miscellaneous outfit consisted of 1 large water pail with cover, 4 small pails (4 quarts or less), 2 aluminum fry pans with adjustable handles, 5 tin cups, 4 tin plates, 4 each of forks, and spoons (each man carried a sheath knife), 1 aluminum baker (collapsible), 8 or 10 wire pot hooks of varying lengths. All these articles, except the baker, nested in the large pail which was carried on one of the pack baskets.

a small cotton bag which, when stuffed with extra clothing, made an excellent pillow. Going without a coat was an experiment which I had no cause to regret. A jersey is quite as good and much lighter.

We took no guide. Two of our party had been in the country before, but it should be added that even on the first trip they had no guide, and nothing but a railroad folder for a map. Nor did we follow their route all the way. We went with a desire to get the physical benefit and enjoyment that came from doing all the work, and there is a joy about going into a new country on one's own resources—something approximating the pleasure that an explorer feels. It would be difficult for one who knows the woods to get lost in that country, especially since he will invariably meet fire rangers every day or two. But I advise no one to go without a guide unless he knows exactly how hard the work is, and is prepared for the results.

And now I must return to my narrative. About forty miles above Temiskaming on the western shore the two rivers, Montreal and Metabetchouan, enter the lake. These are the two gates to the wilderness, the Montreal to the northwest and the Metabetchouan to the southwest, and through the latter we had decided to enter. The steamer slowed down and stopped. Our duffle was lowered into the large dory, used for landing purposes, whither two of us followed, the other two being needed to take the red canoe ashore. Al-

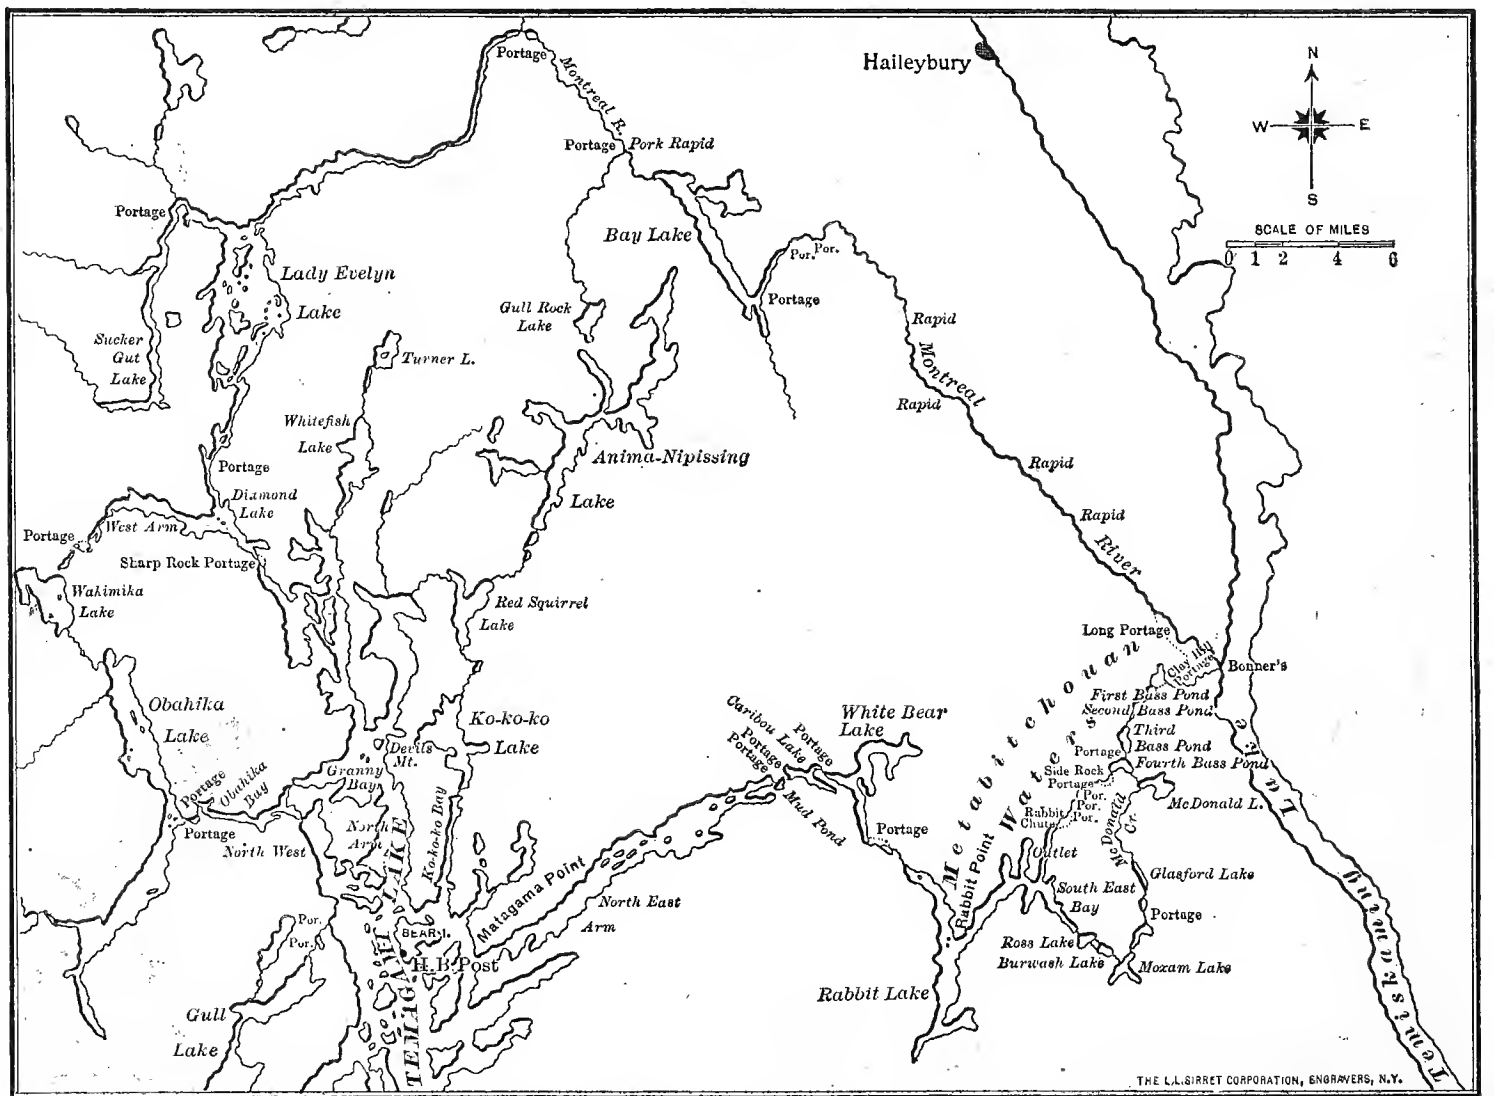

CHART OF COURSE OF THE RED AND GREEN.

I wall tent (gift. by gift.) without fly, provided with ropes, 4 rubber blankets, 4 woolen blankets, 1 inner mosquito-proof tent of fine tarlatane, this was fastened up to the outer tent by safety pins and tape. 4 personal kit bags of water-proofed duck, 2 large water-proofed kit bags with carrying straps, 2 axes, 2 braided cotton tow lines about 30ft. long, 5 paddles (one extra), 4 rods and fishing outfits, 1 folding pocket kodak, 3/4 x 3/4, 1 map (Geological Survey of Canada, sheet No. 138).

The large kit bags each held two small personal kit bags, two woolen and two rubber blankets. When thus packed, each would weigh 40 or 50lbs. The personal kits varied so much that no one will serve as an exact type of all. But I will give my own in the hope that it may prove suggestive: 1 waistcoat (no coat), 1 pair double seated, woolen knickerbockers, 2 pairs heavy woolen golf stockings, 1 heavy felt hat, 1 heavy flannel shirt, 2 pairs heavy woolen half hose, 1 pair heavy cordovan shoes, hob-nailed, 2 suits light cotton underwear, 1 suit heavy woolen underwear (for night wear), 1 heavy blue sweater (for night), 1 blue jersey, 1 pair old flannel trousers, 1 pair rubber soled tennis shoes. Small articles, handkerchiefs, toothbrush and powder, comb, soap, nailbrush, sheath knife, water-proof match safe, pipe, tobacco, book, note book, pencils, etc.

I could have dispensed with some of these articles, and should do so in a tramp trip, but in a canoe one need not be quite so careful about weight. I carried

most before the steamer came to a stop the green canoe was leaping through the water, propelled by the skilful strokes of an Indian who was landing at the same point, and who wished to do us a service and at the same time try the new canoe. Once on the beach it was but the work of a few minutes to load the canoes. We were soon paddling along the shore of the lake to the inlet at the double river mouth. Leaving behind the few houses which constitute the meager settlement, we passed the waters of the Montreal, tumbling down a long rapid on our right and entered the swift current of the Metabetchouan. A brisk paddle of two or three miles took us to the foot of the famous Clay Hill Portage leading to Bass Ponds. The sun was near its setting, we had to rearrange our duffle, and so we camped on the left bank of the river opposite the portage.

Attempting nothing elaborate in the way of a supper, we bent our combined energies upon the erection of the tent, which was soon up, and luckily so, for one or two of the showers which are always prowling about that country visited us almost immediately. The lower course of the Metabetchouan is notorious for its insect pests, and our inner gauze tent received at once a thorough test. To our great satisfaction we found that the ubiquitous mosquito was absolutely excluded. In the morning hundreds were vainly butting their bill-nosed heads against the outside of the net, while their angry chorus was a cheering sound, indeed, to us who had so often been forced to bury ourselves in

blankets to avoid its sure accompaniment. Now we could breathe freely, and sleep undisturbed. A few midges succeeded in beating their way into our boudoir, but by covering the opening of the outer tent with a double piece of tarlatan, we excluded these little demons also. Thereafter, we were immune from the attacks of these scourges of the woods. What a boon this was all campers will understand.

We were now fairly started and, to bring order into the following account, I will add in their proper places brief logs of the route and the distances traversed whenever we were moving. Thus, the various stages of our trip can be easily followed on the map by anybody who may be interested. The distances are approximated, but I have tried to over estimate rather than the reverse.

July 5. Over Clay Hill Portage to First Bass Pond. Through First, Second, and Third Bass Ponds. Camp at the head of the Third Pond, on right bank of inlet; distance, about five miles, of which the portage is nearly a mile.

We were up early, and were soon making our preparations for the first portage, while the clear-voiced whitethroats uttered their matin calls all along the river. Clay Hill is reckoned one of the hardest portages in that country. Starting on the right bank of the Metabetchouan, it crosses an elbow of the river, which is too rocky for canoe work, and runs up over a steep hill, the river exposure of which is very soft and sticky. The woodsmen all speak of it with respect; and it is a stiff argument for one whose muscles are flabby from the flesh pots of civilization. But we were in for it and at it we went. We had in all more than eight full loads besides the paddles, axes, and small stuff. It was necessary, therefore, to make more than a double trip. Carrying a canoe was new work for two of the party, and they were surprised to find it not nearly so hard as they had anticipated. A 65lb. canoe is a heavy load for a man weighing 140lbs., but the weight rests entirely on the shoulders, the lungs have free play, so that it is probably easier to carry a canoe than it is to carry the same amount of weight in the form of a pack.

It was on this first portage that we had to invent some method of carrying our canoes which, as has been said, had no center thwarts. We discussed the feasibility of putting in the necessary thwarts, but as we did not have the requisite tools, we could not have done a neat piece of work. Finally somebody suggested the tump line. These we found long enough to go twice about the canoe amidships, and we tied them so that the broad part of the strap rested on the shoulders. A little experiment taught each man just where to place the strap to suit his idiosyncracies on a carry, and we found the scheme so satisfactory that we used it throughout our trip.

The tump line, in its proper use, i. e., when attached to boxes and packs, was a new method of carrying to all of us, and I cannot say that I look back with glee upon those heavy boxes riding on the small of my back, and supported by the broad strap across my forehead. Only one of the party professed any love for this style of packing; but it sufficed, and we yielded to the inevitable.

On the whole, the terrors of Clay Hill proved not so bad as they had been painted. We even had time to note the presence of many veeries, olive-backed thrushes, and whitethroats, in the woods by the trail. By noon we had transported all our stuff, and we lunched at the foot of the First Bass Pond before proceeding on our way. Hardby an Indian family was encamped, man, wife, and two small children, but a brief "Quai" was the only conversation that passed between us. After lunch we had a most delightful paddle of three or four miles to the head of the Third Pond. These lakelets are expansions of the Metabetchouan, and are very picturesque. The Second Pond in particular has some fine, high cliffs along its eastern shore. They are narrow, nowhere much over half a mile in width, and are separated by short runs of swift water up which it is not difficult to paddle. The water, as everywhere in the Metabetchouan region, is of clear amber tint.

As we paddled lazily along, a trolling line was unwound and the spoon was soon fast to a 2-pound bass. Shortly after another was taken. But there were other sights even more welcome than that of the bass. As we passed the point of an island, a family of sheldrakes went skirling away before us, the little ones not able to fly, but able to make prodigious speed for all that. Just before the end of our voyage, a deer was sighted feeding in a marshy inlet. Without a sound we crept upon her, and the camera was snapped at a distance of thirty or forty feet.

It was our custom when moving, to stop and make camp at about four o'clock. Sometimes we halted earlier, if a favorable place presented itself; sometimes we would push on in search of something better, but usually we were busy making camp by four o'clock. This gave us plenty of time to fish and enjoy the country through which we were passing; for in July the daylight lasts in that country until nine o'clock. Four men make camp in very quick time, if the site is a suitable one. Our tent required nine poles for its proper erection; two uprights, a ridge pole, four corner posts, and two side poles to which the stretching ropes were tied. While one or two men were busy cutting these, the others laid out the tent, arranged the packs, and got out the cooking outfit. When the poles were cut, the tent was raised, the corner posts driven at the right points, the side poles lashed to them, and the stretching ropes made fast. This completed the raising of the tent, except in exposed situations where winds were to be feared. In such places we usually guyed the tent fore and aft to some friendly tree or stone.

I have spoken glibly about "driving" corner posts. But in reality that country is composed of a sheet of rock so solid that rarely can the poor camper find a crevice into which he may insert a tent peg. Only once were we able to drive all four of the corner posts. On that occasion we were nearly prostrated with surprise. Generally, one or two, sometimes all posts, had to be propped up with rocks or guyed to trees.

But to return to making camp. As soon as the tent was up, two or more would set to work picking boughs; for a good bed is a necessity to those who are making a hard trip. The others, meanwhile, busied themselves with the cooking arrangements. Two forked uprights, with a cross piece on which to have pot hooks, were erected and a supply of wood was collected. Fortunately, good wood is nearly everywhere very abundant in that country, and we seldom had to go far for it. This completed our arrangements for the night, and the whole operation rarely consumed more than two hours. Then, while one or two remained to cook supper, the others could explore the neighborhood and catch the necessary fish.

July 6. The camp on Third Bass Pond was so pleasant and the initial portage had been so hard that we decided to lie over a day, for ours was a leisurely trip. We found the fishing good, and caught plenty of pike and wall-eyed pike or doré, together with one yellow perch, the only one taken during the trip. Bass were not so plentiful, although one nice one was taken on the fly at the foot of the swift water just above our camp. A fire ranger called on us, and we saw five Indians going in to Temagami, in a big birch canoe which carries the weekly mail. Verily, we seemed to be on a well beaten highway. The fire ranger, however, is omnipresent in that region, and you may expect to meet him anywhere. The country is divided into districts through each of which one of these rangers is expected to paddle each day, watching for fires and warning all camping parties to be careful. It is an admirable system, and there have been no serious fires since its adoption.

July 7. From head of Third Bass Pond to Fourth Pond, to southeast arm of Fourth Pond, and up the creek. Portage on right bank (half mile), to Cooper or McDonald Lake. Across west end of McDonald Lake to McDonald Creek; up creek (one short portage and a good deal of wading) to Glasford Lake. Camp on west shore of Glasford Lake. Total distance, about six miles.

The night passed with no more exciting experience than the visit of some playful being to our camp. Someone addressed him in a rude way with the command, Skip!—and he skipped. This incident we discussed at breakfast, and also our itinerary for the day. From Third Pond we had the choice of two routes to Rabbit Lake. The nearer and more usual way leads straight up the Metabetchouan, but as there are five portages, one of which, the Side Rock, is a mile in length, and as the other route is hardly ever used, except by an occasional ranger, we decided to take it as described above.

We got off before nine o'clock. The stage of water was such that we did not have to portage into Fourth Pond, although a portage is marked on the map, but were able to tow the canoes up the swift water, one man going ahead with the tow line and the other fending the canoe off the rocky shore with a forked pole. The swift water covers but a short distance, and we were soon afloat once more on Fourth Bass Pond. Paddling into the southeast arm, we entered the creek, and not far up on the right bank we found the portage. The trail, which passes an old lumber camp, about half way up and ends at an old dam in the lake, presented no great difficulties and we had packed our outfit over before noon.

Once launched in McDonald Lake, we met a strong south wind and had a stiff paddle but luckily a short one, until we reached the mouth of McDonald Creek. Indeed, this was especially fortunate, for we left a coat behind at the dam, and one canoe had to return for it. But just before we discovered this loss, we made another discovery—a huge bull moose feeding in the dead water at the mouth of McDonald Creek. We first saw his antlers swaying above the tall marsh grass. Then, with camera cocked, we stole noiselessly upon him, nearer and yet nearer, until we were within twenty or thirty feet of him. Then at last he lifted his dripping muzzle from the marsh and regarded us with so much interest that we might have secured a second picture of him—but we were at the end of the film.

McDonald Creek is not, in general, an attractive stream; it is dirty brown in color, full of rocks, narrow, and has none too much water. Not far above the mouth we made a short carry on the left bank, and we had to do a great deal of towing and wading. The old colonization road, long since abandoned, runs not far from the creek, and just before entering Glasford Lake we passed under one of its old bridges, now but a heap of rotten logs. On the west shore of Glasford Lake, which is somewhat over a mile long and very narrow, we found an excellent camping place on a little rocky point. Mosquitoes were numerous, as they were all through the lower Metabetchouan region; but the bass were numerous, too, and with the latter we spent a pleasant evening.

[TO BE CONTINUED.]

## CANOEING NEWS NOTES.

Mr. H. Lansing Quick, of Yonkers, N. Y., is desirous of securing a copy of the year book of the A. C. A. for 1890. Anyone having a duplicate copy or one they would be willing to dispose of is requested to communicate with Mr. Quick.

## Rifle Range and Gallery.

### Fixtures.

Feb. 27-March 5.—New York.—At Zettler's, championship rifle gallery tournament.  
June 12-20.—National Schuetzenbund Festival, Union Hill, Schuetzen Park, N. J.

## United States Revolver Association.

THE annual meeting of the United States Revolver Association was held in New York, Jan. 18. In the absence of the president and vice-president the meeting was called to order by the secretary-treasurer. Dr. Sayre was elected as temporary chairman. The following members were present: R. H. Sayre, Christopher

Hartley, J. F. Silliman, W. W. Scheffler, T. E. Schulz, C. H. Chapman, B. F. Wilder, R. S. Scudder, W. J. Coons, C. V. Berg and A. L. Himmelwright.

The chairman of the committee on incorporation stated that all legal conditions and requirements had been complied with, and the certificate of incorporation had been duly issued and was ready to be recorded. The constitution as printed in the 1903 edition of the booklet of the Association was adopted. The report of the treasurer was read and approved.

The ballots received by mail for the election of officers were tabulated by the secretary and reported as follows:

For president, A. L. Himmelwright, 31; vice-president, P. A. Becker 36; secretary-treasurer, J. B. Crabtree, 30; executive committee, B. F. Wilder, 30; E. L. Hophan, 16; E. H. Kessler 8. The members present then cast their ballots, which, with five written proxies of absent members, gave the following as receiving the majority of the votes cast: President, A. L. Himmelwright, New York, 47. Vice-President, P. A. Becker, San Francisco, 32. Secretary-Treasurer, J. B. Crabtree, Springfield, 46. Executive Committee, B. F. Wilder, New York, 31. E. P. Kessler, St. Louis, 33. The chairman thereupon declared the said five candidates elected to constitute the executive committee for 1904.

Mr. Himmelwright then took the chair and Mr. Sayre acted as secretary of the meeting. On motion of Mr. Scudder the chair appointed Messrs. Wilder, Crabtree, and Sayre to serve on a committee to revise the constitution and adapt it to the new conditions resulting from the incorporation of the Association.

The questions submitted on blank forms by members of the Association were then considered. The practicability of increasing the number of vice-presidents and having them serve as members of the executive committee was discussed at some length, but without reaching a satisfactory conclusion. Mr. Scudder moved that the number of vice-presidents and local officers of other designated names be reported to the committee on revision of the constitution, and that such committee shall be advised that the preponderance of expression by mail seemed to be in favor of having such representation of the Association. This motion was seconded by Mr. Silliman and carried.

Mr. Chapman moved that question No. 2, in regard to changing the three distances of the military championship match to one distance, namely, 50yds., and question No. 3, in regard to the time of holding the annual championship matches, be referred to the executive committee, with replies of those members who had mailed answers to these questions. Motion was seconded by Mr. Wilder and carried.

Mr. Wilder moved that a committee be appointed to draft resolutions on the death of Mr. A. C. Gould. Motion was seconded by Mr. Silliman and carried. The chair appointed Messrs. Wilder and Silliman to serve on the committee.

It was voted on motion of Mr. Wilder that the secretary-treasurer be instructed to send a communication to the Massachusetts Rifle Association, thanking them for tendering the use of their range to the United States Revolver Association for the Franco-American revolver match, and that the new conditions of the meeting and the scores be entered into the minute book of the Association.

### Zettler Rifle Club.

New York.—Thirteen members were present and took part in the weekly gallery contest, Jan. 19. L. C. Buss was high man for the best hundred shots; also for the best 50 shots.

Ten-shot scores, 25-ring target, distance, 75ft., 110 shots: Louis C. Buss 2448, Geo. Schlicht 2415, C. G. Zettler, Sr., 2319, Aug. Begerort 2357.

Fifty shots: C. G. Zettler, Jr., 1213, Aug. Kronsberg 1210, E. Van Zandt 1207, B. Zettler 1194, Hy. Fenwirth 1188, H. C. Zettler 1186, W. A. Hicks 1199, Geo. J. Bernius 1139.

The Zettler Rifle Club's annual gallery tournament and championship match, which will be held on the Zettler ranges on Feb. 27 to March 4, will be one of the most successful of any of these annual affairs that have taken place in the past. The prize list in the 100-shot individual championship match has always been augmented by donations from manufacturers and friends of the club. This year the donations are coming in in greater numbers than in previous years. Up to the present moment they are: Stevens Arms and Tool Co., Chicopee Falls, Mass., one schuetzen rifle, .32-40, No. 52; Peters Cartridge Co., Cincinnati, O., gold trophy; the W. H. Davenport Fire Arms Co., Norwich, Conn., a No. 2 Crest hammerless, single shotgun; Colt's Fire Arms Co., Hartford, Conn., repeating rifle; Empire Rifle Club, New York City, silver cup; Rufus Hurbert, No. 161 West Twenty-third street, New York, meerchaum pipe; Horton Mfg. Co., Bristol, Conn., steel fishing rod; Syracuse Mfg. Co., Middlefield, Conn., set Lyman rifle sights; Ideal Mfg. Co., New Haven, Conn., Ideal loading machine; D. W. King, Jr., Denver, Colo., four patent triple bead sights; E. Van Schaick, 157 West Twenty-third street, New York, bronze ink stand; American Field, Chicago, Ill., one year's subscription.

### Lady Zettler Rifle Club.

FOURTEEN members of the Lady Zettler Rifle Club, accompanied by their gentlemen friends, met at the club's headquarters, No. 159 West Twenty-third street, on Saturday night, Jan. 23. It was the regular monthly prize shoot. A number of visitors, friends of the ladies, and members of the Zettler Rifle Club, called at the gallery during the evening. Harry M. Pope, of Springfield, Mass., was among them. At the February meeting the club will give a reception to their gentlemen friends and members of the Zettler Rifle Club. After the close of the shooting programme the evening will be devoted to music, dancing and refreshments.

The scores made on Saturday night are as follows:

Ten-shot scores, 25-ring target, two scores to count, muzzle rest: Miss Kate Zimmermann 239, 246; Miss Millie Zimmermann 242, 242; Mrs. Harry Scheu 243, 240; Mrs. G. J. Bernius 239, 241; Miss F. Muller 241, 237; Miss W. Hart 234, 236; Mrs. H. Fenwirth 236, 234; Miss A. Koch 236, 233; Mrs. J. Watson 230, 234; Miss M. Laut 230, 232; Miss T. Eusner 229, 233; Mrs. L. Turbert 221, 235; Mrs. B. Zettler 212, 231; Mrs. J. Laut 176, 205.

### New York Central Corps.

NEW YORK.—Twenty-nine members of the Central Corps attended the practice shoot in the Zettler gallery, Jan. 20. The high score on the ring target was made by R. Gute. On the bullseye target B. Eusner was first.

Ten-shot scores, 25 ring target, distance 75ft.: R. Gute 247, 240; F. Kost 237, 241; D. Scharninghaus 238, 233; H. D. Muller 230, 239; Geo. Viemeister 232, 232; F. Brodt 231, 228; J. N. F. Siebs 227, 231; J. N. von der Lieth 223, 228; F. Jaegers 218, 233, Wm. J. Daniel 230, 220; Fred Schroeder 229, 217; Wm. Wessel 220, 226; Fred Baumann 227, 218; J. Feldner 210, 234; B. Eusner 224, 216; Aug. Rohde 220, 216; F. Ritterhoff 216, 219; J. von der Lieth 212, 223; F. Schiller 223, 210; H. Schrader 215, 211; C. Tietjen 214, 205; F. Roffmann 210, 208; J. Spickmann 172, 220; C. Gerken 201, 205; H. A. Ficke 177, 194; H. J. Chkoff 191, 171; J. Winters 157, 184, F. Engelking 213, 208; G. Pettloff 133, 135.

## Cincinnati Rifle Association.

CINCINNATI, O., Jan. 17.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading Road. Conditions, 200yds., off-hand, at the German ring target. Hasenzahl was champion for the day with the good score of 225:

Hasenzahl	225	225	223	221	216
Payne	223	214	212	212	200
Roberts	222	220	214	205	204
Strickmeier	218	211	206	206	201
Nestler	217	216	211	211	206
Lux	217	209	208	207	205
Burns	213	208	208	204	203
Freitag	199	195	192	191	184
Hofer	197	190	189	189	186
Trounstein	195	190	188	186	177
Hoffman	185	176	173	151	...

## Italian Shooting Society.

NEW YORK.—The Italian Society held the second shoot of the season on Jan. 1. Twenty-five members, of whom several were new, were present. As yet the new members have had little or no experience in gallery shooting. N. Gallina led with a total of 241, E. Minervini second with 239, P. Selvaggi third with 237.

Ten-shot scores, 25-ring target, distance 75ft.: N. Gallina 241, E. Minervini 239, P. Selvaggi 237, L. Reali 232, Branchi 232, S. Gallina 227, D. Felice 223, Coppellina 224, B. Vigilino 222, De Salvo 211, Fontenella 198, C. Orsenego 201, S. Fontanella 196, A. Orsenego 195, N. Ciancimino 188, E. Zucca 187, A. Konchi 181, Corbyone 180, Saldarini 179, Lampugnani 174, Mastropaolo 168, Piantanidas 163, Mercalli 119, Malnarti 104, G. Raimondi 104.

## New York City Corps.

NEW YORK.—This corps held its bi-monthly shoot in the Zettler gallery, Jan. 21. There was some sharp competition for high scores. Aug. Kronsberg finished in first place.

Ten-shot scores, 25-ring target, distance, 75ft.: Aug. Kronsberg 244, 238; Otto Schwanermann 236, 243; Capt. R. Busse 236, 242; R. Bendler 229, 236, J. Facklamm 233, 230; R. Schwanermann 227, 231; C. Wagner 227, 228; B. Eusner 223, 227; F. Kiele 223, 203; C. Coplan 210, 208; H. Vogel 202, 219; G. Schrotter 196, 213; W. Hiel 213, 193; J. Keller 215, 206; E. Sonner 194, 202; A. Wiltz 189, 202.

## National Bund.

THE executive board of officers of the National Bund held a meeting at headquarters, No. 12 St. Mark's Place on Jan. 21. There was a large accumulation of matter before the board to be disposed of, principal among which was the examination of the tender for furnishing to the bund for the coming festival the gold and silver medals, king medal, the festival cups (silver), and the miscellaneous matter of printing, etc.

There was a great array of drawings, designs and samples from which the board are to decide upon and select as the most acceptable.

## Miller Rifle and Revolver Club.

TEN members of this club were present at the weekly shoot on Jan. 20. Five of the ten had scores of 240 or better. First, C. Bischoff, with 245, R. Evans and D. Dingman were tied for second place with 242. The scores are appended:

Ten-shot scores, 25-ring target, distance, 75ft.: C. Bischoff 245, R. W. Evans 242, D. Dingman 242, H. Bahn 240, F. Unbehauen 241, O. Smith 239, P. O'Hare 237, E. Doyle 236, C. Bayha 233, C. Miller 226.

## Trapshooting.

## Fixtures.

Jan. 30.—Bound Brook, N. J., merchandise shoot

## DRIVERS AND TWISTERS.

In the return match at 100 live birds at Browns Mills, N. J., Jan. 20, between R. Lamb and Fred Muller, Lamb was defeated.

On Jan. 16 the Slackwood, N. J., Gun Club held a successful shoot. Seven events were shot. Messrs. Taylor, Page, Herbert, Farlee, Cole and Vialkovitch were the chief winners.

The Jefferson County Gun Club, Louisville, Ky., announces a tournament for amateurs, to be held on Feb. 22. Manufacturers' agents cannot compete for purses. Mr. Emil Pragoff is the secretary.

The balance sheet of the New York Athletic Club, Dec. 31, 1903, shows the assets of the club to be \$1,567,572.11, with total liabilities of \$636,571.11. The real estate at Travers Island, where the shoots of the club are held, is listed at a valuation of \$125,000; buildings, \$23,291.61, and furnishings, \$19,910.51.

Mr. H. M. Stewart, of the Rochester, N. Y., Rod and Gun Club, successfully defended his title to the Monroe county championship on Jan. 20. Mr. G. B. D. Bonbright tied with Mr. Stewart on 92 out of 100. In the shoot-off Mr. Stewart made the extraordinary score of 99 to 91.

Under date of Jan. 23, Sporting Life has the following: "Fred Coleman and his backer called at the Sporting Life office on Monday last and accepted, on behalf of Coleman, the defi of Fen Cooper, and posted with Sporting Life \$100 to bind the match. Coleman names the Keystone Shooting League grounds, in this city, and suggests Friday, Feb. 12, as the day, or any other date before that time, the stake to be \$500 to \$1000 a side, loser to pay for birds, winner to take entire gate receipts; the match to be shot at 100 live birds, 30yds. rise, under Interstate Association rules; the final stakeholder and referee to be decided upon mutually as soon as forfeit is covered. It is now up to backers of Cooper to cover forfeit, which is now in Sporting Life's hands, and the match will be shot on the grounds and date above mentioned."

## IN NEW JERSEY.

## North River Gun Club.

Edgewater, N. J., Jan. 23.—The following scores were made by members of the North River Gun Club, and the Wanderers:

Events:	1	2	3	4	5	6	7	8

\*Denotes Wanderers.

JAS. R. MERRILL, Sec'y.

## Trap at Reaville.

Jan. 16.—In a live-bird match at Reaville to-day the scores were as follows:

Ten birds, prize \$15:  
Reed .....222222222—10 Van Marter.....1211111\*22—9  
Henzerl .....1222-10222—8 Lott .....\*11221122—9

Seven birds, prize \$10:  
Reed .....2202222—6 Van Marter .....211\*120—5  
Henzerl .....11\*2210—5 Lott .....0112111—6  
Reed and Lott divided.

## Trenton Shooting Association.

Trenton, N. J.—In the shoot of the Trenton Shooting Association, held last week, Messrs. Taylor, Jules and Farlee did the best work. Two two-man team races were shot, besides several practice events, as follows:

Team race, 10 targets: Farlee 6, Gould 5; total 11. Taylor 7, Wesley 5; total 12. Jules 8, Carson 6, total 14.

Team race, 10 targets: Farlee 8, Gould 4; total 12. Taylor 8, Wesley 3; total 11. Jules 8, Carson 4; total 12.

## Montclair Gun Club.

Montclair, N. J.—The Montclair Golf Club, one of the strongest clubs of the kind in the country, has leased grounds across the road near the club house, and formed a gun club, put in three traps, carefully screened, and good platform and gun racks for twenty-five guns. As yet they are only protected from the elements by a tent. However, the enthusiasm is very keen, and a suitable shelter will soon be provided.

A committee has been appointed consisting of Mr. Walter Brown and Mr. E. H. Fitch, to arrange for a series of handicap cup shoots. These sessions will be begun at a very early date.

On Saturday, notwithstanding the bad weather, there were present E. H. Fitch, Geo. Batten, A. R. Allen, H. A. Eaton, W. T. Cross, Walter Brown and R. F. Abercrombie. Mr. T. E. Batten, of FOREST AND STREAM, was a guest of the club.

Scores of Jan. 23:	10	15	10	15	10	15	10
Targets:	6	8	5	9	3	9	4
Winslow	7	10	9	11	8	12	...
Babcock	6	10	10	14	7	10	7
Wheeler	...	9	8	8	9	14	9
Cockfair	...	5	4	9	4	9	7
Crane	...	...	...	...	...	...	...

Weather, rain, dark and cloudy.

## Trap at Guttenberg.

Guttenberg, N. J., Jan. 22.—To-day was the day set to shoot off the ties for the Knockabout gun, a \$20 gold piece and a \$5 gold piece donated by J. P. Sauer & Son, gun-makers, of Suhl, Germany. The readers of FOREST AND STREAM will no doubt remember this shoot, as the scores of Jan. 13 and 14 were published in the last number. Out of the original number of sixty-eight shooters, fifteen were left after the second day's shooting; but only thirteen appeared for the shoot-off.

The weather was very disagreeable, as it had been raining all night before, and to make conditions worse a heavy fog came up. The birds were an excellent lot of flyers.

Messrs. Whitley, Martin and Gerbolini had still one of their allowance to their credit, and Mr. Kissner was the only one with a 2-bird allowance. All others had missed theirs and were scratch:

Mowry, 26yds.....	111212*
Rush, 25.....	20
Kissner, 25.....	122220221122222222202121*
Smith, 25.....	222*
Burns, 26.....	2211222*
Martin, 27.....	00

Ferrell, 25.....	2221222111111221212122212221222
Danser, 27.....	211212122222222111111211222110

Mr. Wm. Ferrell, from Clarksburg, N. J., won the Knockabout; Mr. W. C. Danser, of Millhurst, won the \$20 gold piece; Mr. J. Whitley, of Jersey City, won the \$5 gold piece.

## The Interstate Association.

PITTSBURG, Pa., Jan. 23.—Kindly announce to the readers of FOREST AND STREAM that the Interstate Association will give a tournament at Winona, Minn., July 4, 5, and 6, under the auspices of the Winona Sportsmen's Club.

ELMER E. SHANER, Sec'y-Mgr.

## ON LONG ISLAND.

## Sheepshead Bay Gun Club.

Sheepshead Bay, L. I., Jan. 21.—The following scores were made to-day by members of the Sheepshead Bay Gun Club in its club handicap shoot for gold medal. Gewart won on shoot-off:

## Chicago Trap Shooters Association.

CHICAGO, Jan. 24.—Editor Forest and Stream: The trapshooters of Chicago have been for some time looking for a suitable location, where convenient grounds might be secured. Mr. John Watson, being compelled to close up his shooting part at Burnside because of the crusade against pigeon shooting in Chicago, the shooters at once set out to secure the park as a home for the scattered target gun clubs of Chicago and vicinity.

The buildings in the park were purchased from Mr. Watson by the newly formed Chicago Trapshooters' Association, which was launched at a meeting held last Friday evening. This Association is at present composed of twenty-five members, representing nearly every gun club of Chicago and its suburbs. At the meeting the following officers were elected: President, F. W. Mrick; Vice-President, C. C. Hess; Secretary and Treasurer, E. B. Shogren. Board of Directors, Fred H. Lord, H. W. Vietmeyer, Geo. Eck and D. A. Hanagan.

The other members of the Association are Oswald Von Lengerke, J. H. Amberg, Dr. C. W. Carson, Dr. R. B. Miller, C. E. Willard, J. B. Barto, L. C. Willard, J. G. Parker, Jr., S. T. Kinney, M. J. Weber, John Edwards, G. H. Steenberg, Samuel Young, H. Walsh, L. H. Wilson, and J. W. Coakley.

The object of this Association is to maintain the Watson Park shooting grounds for the benefit of all the gun clubs that will locate at the park. Each club will have its own set of traps, over which they will shoot their club contests. The Association will employ a superintendent, who will reside in the park, and who will look after all the arrangements of handling the traps and see to the comforts of the shooters.

The Association will hold its inaugural tournament on Feb. 20, 21 and 22, which will be strictly an amateur shoot. All well-known high class amateurs will be handicapped to shoot from the 18 to 20yd. mark. There will be added money for high averages.

Programmes will be ready in a week, and same can be had on application to E. B. Shogren, Room 940, First National Bank Building, Chicago, Ill.

## Poughkeepsie Gun Club.

POUGHKEEPSIE, Jan. 21.—Six men faced the elements as well as the score to-day, and did some good work, disagreeable and unfavorable conditions notwithstanding. Capt. Traver made highest score in single event by breaking 25 straight. Marshall was a close second for this distinction, with 24 to his credit, and shot in the best form of any one present by breaking 45 out of 50 shot at. Smith, too, "had his eye," as scores in cup event and shoot-off will show. Marshall has for some time back been handicapped with an ill-fitting gun, but did some good work nevertheless. His work to-day shows how much better the gun works since its faults were corrected.

Events:	1	2	Events:	1	2
Targets:	10	10	Targets:	10	10
Traver.....	8	...	Hans.....	7	9

\*Re-entry.

Shoot-off:

Smith.....21	5	25	*Traver.....25	0	25
Marshall.....24	5	25			

\*Shot along.

## New York Athletic Club.

TRAVERS ISLAND, Jan. 16.—The weather was not such as shooters like. It was of the kind which prevents the making of high scores. Early in the afternoon rain fell and later it changed to snow.

The main event was for a handsome trophy donated by Capt. J. N. Borland. It was won by Mr. G. Bechtel.

Main event, 100 targets, handicap allowances added: W. J. Elias (20) 53, 73; J. D. Foot (32) 31, 63; G. E. Greiff (10) 74, 84; Dr. De Wolf (16) 52, 68; G. Bechtel (20) 64, 84.

Ties: Greiff (3) 14, 17; Bechtel (5) 20, 25.  
Event at 25 targets, handicap allowances added: Bechtel (5) 20, 25; Greiff (3) 14, 17; Elias (5) 17, 22; De Wolf (5) 15, 20; Sauer (8) 9, 17; Marble (0) 11.

Score of N. Sauer in main event, 40 out of 100.

## Rochester Rod and Gun Club.

ROCHESTER, N. Y., Jan. 20.—The weather conditions were unfavorable for good scores, it being stormy. The main contest of the Rochester Rod and Gun Club was for the Monroe county championship, which was held and successfully defended by Mr. H. M. Stewart. The event was at 100 targets. Mr. Stewart tied with Mr. G. B. D. Bonbright on 92, and in the shoot-off at 100 targets, Mr. Stewart made the extraordinary score of 99 to Mr. Bonbright's 92. The scores:

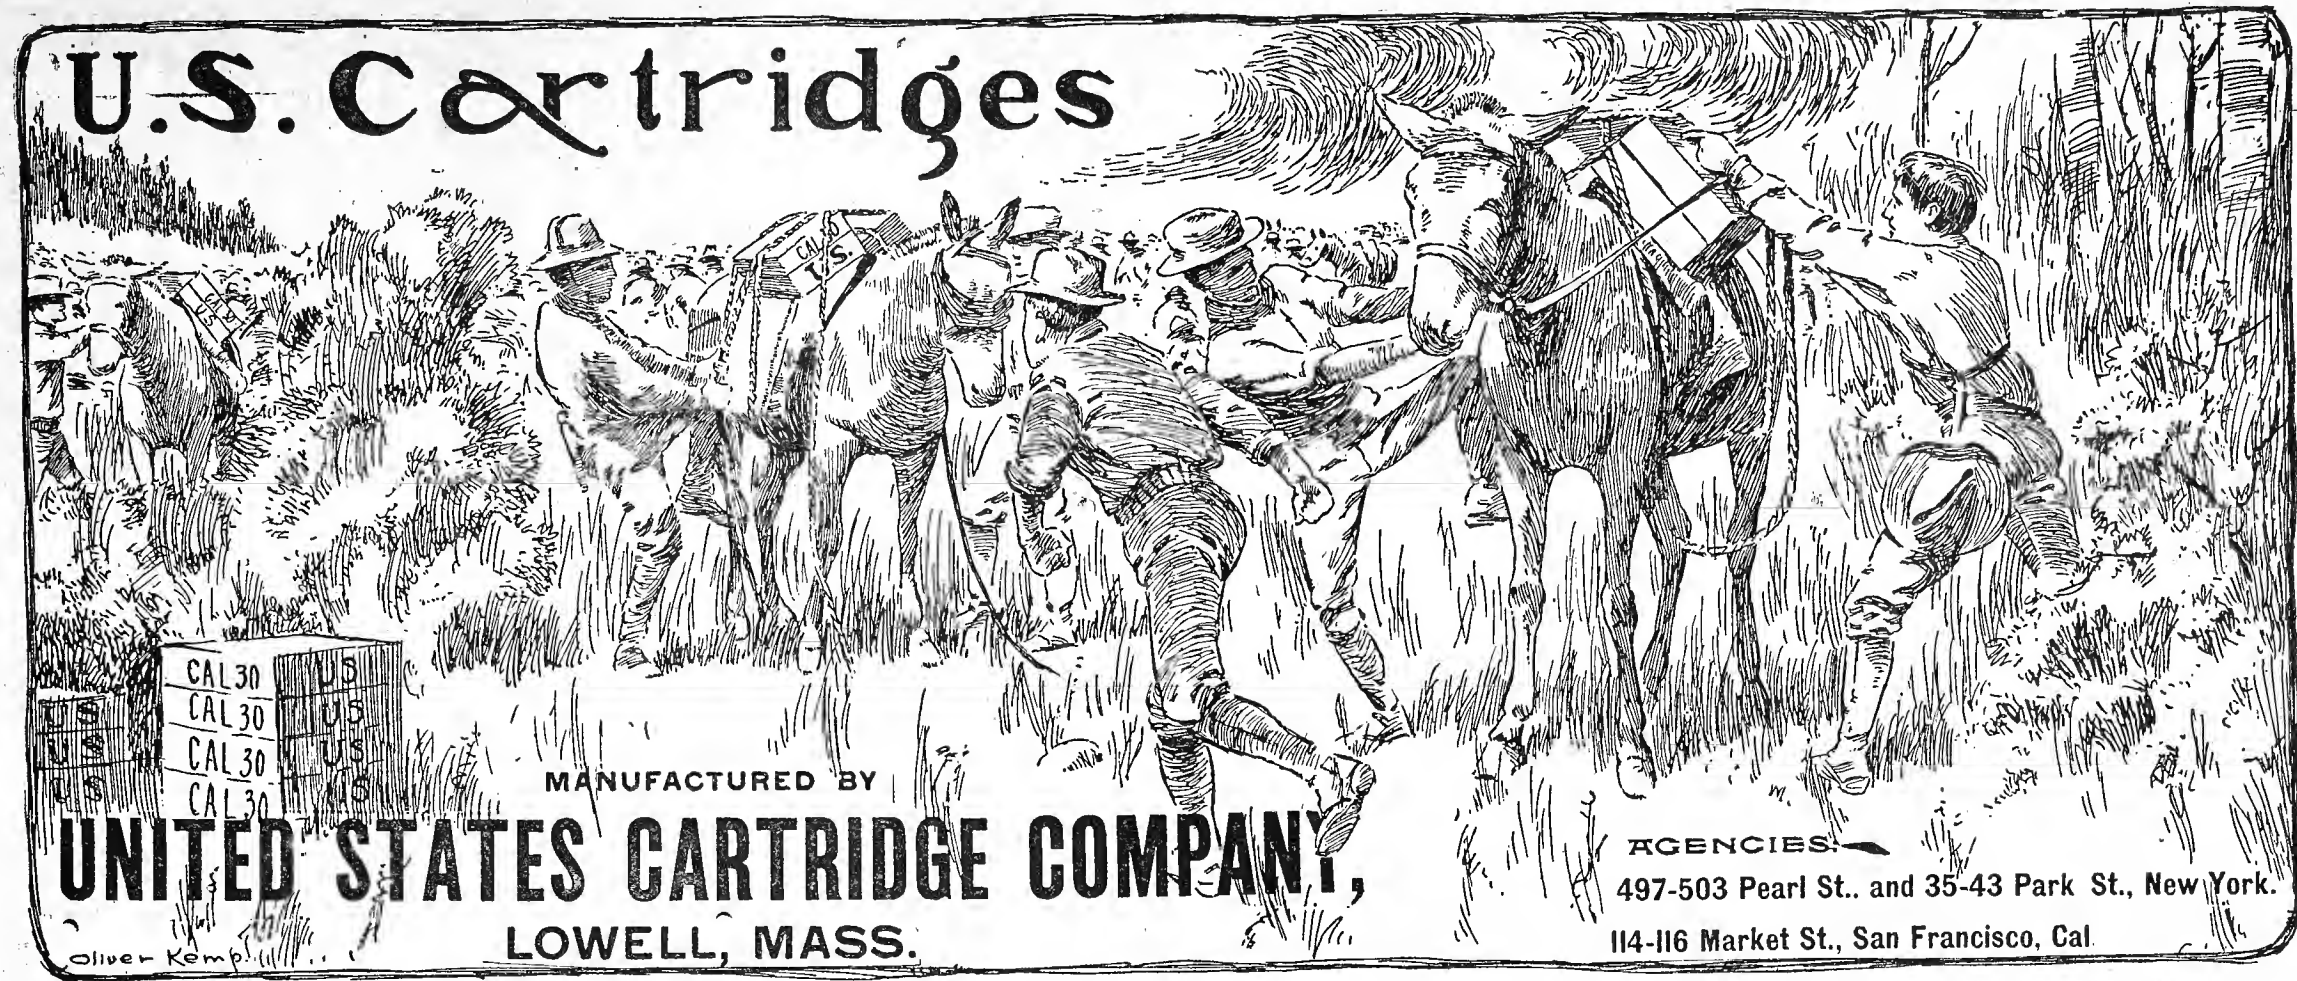

Monroe county championship:					
Stewart.....	23	23	24	22	—89
Bonbright.....	24	23	21	24	—82
Kay.....	22	23	22	23	—90
Clark.....	18	18	19	18	—73

Shoot-off:

Stewart.....

Hamilton Gun Club.

HAMILTON, Ont., Jan. 16.—The Hamilton Gun Club held their fourteenth annual tournament and Grand Canadian Handicap at live birds on Jan. 12, 13 and 14. About fifty shooters attended. The weather was all that could be desired, with the exception of the second day, when it snowed all day. The manufacturers' representatives present were: Messrs. F. H. Conover, A. W. du Bray, J. H. Cameron, J. S. Boa, R. Watson, J. S. Cole, M. Hensler.

Herewith are target and live-bird scores:

There was a 10-live-bird event each day, and the 20-bird event commenced on the first day and was to be run from day to day till finished. In the main event at 20 birds, there were thirty-seven contestants. The conditions were, \$500 cash guaranteed, \$100 to high gun; \$400, Rose system, 5, 4, 3 and 2; surplus added; handicaps 26 to 33yds.; \$15 entrance, including birds. The live-bird scores follow:

Ruffsedale Rod and Gun Club.

RUFFSDALE, Pa., Jan. 19.—The Ruffsedale Rod and Gun Club held their second annual banquet on

a little surprise on Mr. F. C. Tuttle, the treasurer of the company. He was invited down to Harmony Hall, a room especially provided for the assembling of the salesmen, and was there presented with a handsome gold watch by the salesmen of the company as a mark of their great appreciation of his treatment during the year. Mr. L. R. Myers made the presentation speech on behalf of the men, and Mr. Tuttle was taken completely by surprise, but responded feelingly, thanking the donors for the evidence of their good will and friendship.

### The Tourist Trapshooters.

THE U. M. C. Southern Squad is composed of five of the best-known shooters who have the honor of holding a place in the shooting fraternity. They are T. A. Marshall, F. C. Riehl, William H. Heer, C. W. Budd and Turner E. Hubby.

Shortly after the New Year they started on this Southern trip, which is as unique as it is original. Their whole purpose is to meet the members of the various gun clubs, and the people who are interested in shooting. They having spent most of their lives in shooting, are interesting those who are not as old and experienced in the trapshooting game as they. Consequently all lovers of this gentlemanly sport welcome this genial squad, many of whom have attained honors abroad as well as much fame at home for their ability as marksmen.

The first exhibition was given at Jonesboro, Ark., Jan. 6, F. C. Riehl taking the honors with a score of 96 out of 100. Capt. Marshall won the honors at Pine Bluff with the same score. At Little Rock, Ark., Wm. H. Heer scored 98 per cent., while the squad's average for the day was 95½ per cent. Jan. 12 they were entertained at Texarkana, Texas, going from there to Paris, Texas, thence to Denison, Dallas, Fort Worth and Brenham, where they attended the Sunny South Handicap as the guests of the Brenham shooters.

Large crowds came to witness their exhibitions on all occasions, and no one has gone home unrewarded for his trouble, as the scores mentioned above show.

They will continue their trip through the South, which is being arranged for by Mr. J. L. Head and Mr. F. E. Butler, after the Brenham shoot, and will return to Indianapolis in time for the Grand American Handicap.

The shooting performances of some of the members of the squad are as follows: At Fort Worth, Texas, Jan. 16, W. H. Heer out of 50 broke 50; C. W. Budd and F. C. Riehl 49 out of 50.

At Dallas, Texas, in a 100-target event, Jan. 15, the scores in a strong wind were: Budd 90, Marshall 89, Riehl 88, Heer 85, Hubby 81.

At Denison, Texas, Jan. 14, shooting averages were: Marshall 98, Heer 96, Budd 94, Riehl 92, Hubby 88.

At Paris, Texas, Jan. 13, the averages were: Budd 98, Marshall and Riehl 96, Hubby and Heer 92.

Jan. 12, at Texarkana, the shooting averages were: Riehl 95, Marshall and Heer 93, Budd 92, Hubby 89.

At Camden, Ark., Jan. 11, the high averages were as follows: Riehl and Heer 96, Marshall 93, Budd 84, Hubby 79.

### Cincinnati Gun Club Banquet.

On the evening of Jan. 19 the members met at the Stag Cafe and enjoyed a supper, and a few hours' pleasant entertainment. The committee having the affair in charge consisted of Mr. H. M. Norris, chairman; Dr. A. B. Heyl and Mr. J. E. Maynard. The following members were present: J. B. Mosby, president and toastmaster; A. B. Heyl, Thos. A. Logan, E. O. Hurd, J. E. Maynard, Geo. H. Krebbel, Mr. Miles, T. Eveland, Jas. J. Faran, A. Donnally, John W. Coleman, Jos. E. Block, R. F. McComas, Ralph L. Trimble, E. G. Trimble, H. F. Jergens, Oscar H. Grau, W. E. Swift, J. L. Strauss, W. R. Randall, Morris Crawford, W. L. Garber, Jas. McQueen, Louis F. Ahlers, John Falk, H. Van Ness, E. B. Barker, Frank L. Heffner, Frank W. Holz, H. Osterfelt, A. C. Dick, Anthony Kramer, Henry Rosenthal, F. D. Alkire, Dr. E. H. Thompson, A. K. Andrews, Louis F. Mooner, Arthur Gambell, Chas. Meninger, Jr., G. H. Merkle, Louis J. Merkle, Dr. R. R. Wilkinson, H. Seinsheimer, G. W. Schupler, J. P. Weller, B. W. Weller, Dr. Brooks, F. Beebe, Jos. Coyle, Col. Robt. A. West, H. M. Norris, Milt. Lindsley.

Mr. A. B. Mosby was the toastmaster of the evening. Hon. Thos. A. Logan gave some "Reminiscences of Early Trapshooting in Ohio." Mr. Mosby spoke of the growth of the club, both numerically and financially, since its organization, and of its need of larger grounds. He also urged those members who were not in the habit of visiting the grounds to come out. He then introduced Mr. Ralph L. Trimble as one qualified to draw a comparison between the Cincinnati and other clubs. Mr. Trimble said there were only three clubs in the country, the Indianapolis, Parkersburg, and Cleveland, to be compared with it. He said that the general impression among all shooters is that the Cincinnati club stands first, and all are well pleased with the shooting facilities and business methods of the club. The club officials and Supt. Gambell, by their business methods and attention to all details at the ground, have made the club what it is to-day.

At this point Mr. Joe Coyle made an attempt to deliver a carefully prepared address, but as he uttered the first word, the boys began to sing "It's a horrible death to be talked to death," and his voice was lost in the melody.

Col. Robt. A. West spoke on "Pigeon and Field Shooting." His closing advice was "Never mind the distance, but be sure of your bird."

Mr. H. M. Norris, chairman of the committee, was then introduced as "the gentleman who got you into all this trouble," and responded in a happy vein.

Mr. Milt Lindsley, who manufactured the first smokeless powder in the United States, gave an interesting and instructive account of the advancement of this powder from the invention of gun cotton to the present day. He was associated with Ditmar, who made the first smokeless powder in the United States, and manufactured the powder which Capt. Bogardus used on his trip in England.

Col. West, known to some as "the man who kills 'em with a wagon spoke," explained how that expression came to be applied to him. Continuing in a more sober vein, he advocated uniformity in the game laws of the United States, and urged the members to work with this end in view. In order to accomplish this object a large fund will be needed, he said. He believes that doves, migratory birds, should be placed on the list of game birds, and proper open seasons provided. He referred to a bill prohibiting quail shooting for three years, which is to be introduced in the present Legislature.

Mr. Mosby spoke of the inconsistencies of the law which permits the killing of English sparrows in every way except at the traps.

Mr. G. W. Schuler related the amusing experiences of himself and party while duck hunting in the marshes near Peoria, Ill., last fall.

Mr. J. E. Maynard gave interesting reminiscences of early clay bird shooting. Mr. Maynard has been a member of most, if not all, of the clubs which have existed in Cincinnati and vicinity, and shot at the Ligowsky clay pigeon, the first manufactured. He urged that club shoots should be purely a matter of sport, and the money making idea in connection with them should be entirely eliminated. He said that this had broken up clubs in the past and would do so in the future.

Other speakers were Supt. Arthur Gambell, on "What I Know about Targets"; Mr. F. D. Alkire, Woodlyn, O., one of the original members of the club, and Mr. H. Van Ness, who was asked to tell "How it happened."

A vote of thanks was tendered the committee for the entertainment furnished, and the meeting adjourned.

BONASA.

### Cincinnati Gun Club.

Cold weather with a strong wind and snow flying in the air a portion of the time on Jan. 23, played havoc with the scores in the Parker prize gun shoot. Williams was high gun in actual breaks with 79. Only two were credited with full scores (handicaps included), Pohlar and Pfeiffer. The attendance was good, about thirty being present, though only sixteen shot through the main event. Not as much practice shooting was done as usual, and before dark most of the crowd had gone home.

Barker and Gambell put a chip on their shoulder and announced that they would shoot any two amateur members of the club a series of ten matches, 100 per man each, 16yds. rise. One race to be shot each week, Saturdays excluded. The challenge has been accepted by Sunderbruch and Medico, and a hot race is looked for.

Mr. S. Leever, pitcher for the Pittsburg Baseball team, was at the grounds to-day. He can't shoot quite so well as he pitches, but he don't do so bad at that. It was hinted that the Goshen, O., Gun Club had an idea they could lift the Phellis cup, and a challenge may be forthcoming very soon.

Maynard was on hand after an absence of several weeks. His hand is getting in good shape, after the surgical operation, and he will soon be able to handle his gun as well as of old.

The scores follow:

Parker prize gun shoot, 100 targets, handicap of added targets:									
Targets:	20	20	20	20	20	Broke.	Hdcp.	Tot'l.	
Jay Bee	3	12	12	10	8	55	25	80

### Cash Prize Winners.

Following are the scores made in the cash prize contest, which closed on Jan. 16, by those taking part in ten or more of the series. Sixty-two members have participated in this contest, but all did not shoot in the required number. The table gives the total number shot at and broken, with per cent. and average distance of those who shot at 500 or more:

Shot at. Broke.				Av. Dist., Per Cent. Yards.			
R Trimble	1200	990	825	21			
Gambell	900	722	802	19			
Ahlers	750	597	796	19			
Medico	1200	946	788	18			
Randall	500	394	783	17			
A Sunderbruch	900	695	772	18			
Barker	1150	880	766	18			
Maynard	950	702	739	18			
Linn	700	489	698	17			
Williams	1000	697	697	18			
Faran	1100	764	694	17			
Falk	900	621	690	17			
McB.	650	448	690	16			
Block	950	650	684	18			
J B	1050	711	677	17			
Jack	900	599	665	16			
Capt	700	464	663	17			
Herman	900	585	650	16			
Ackley	850	534	628	16			
A M Norris	500	282	562	15			

Ten best scores in cash prize contest. The first column of figures shows the average distance. Prizes in each class are \$30, \$25, \$20, \$15 and \$10. High guns:

Av. Distance, Yards.				Total Per Broke. Cent.			
R Trimble	21	47	46	45	44	43	43
Medico	18½	48	45	43	43	41	41
Gambell	19 9-10	45	44	44	43	42	41
Maynard	18	46	43	42	41	41	40
Williams	17 7-10	41	41	41	40	38	37

BONASA.

### Schenectady Gun Club.

SCHENECTADY, N. Y., Jan. 16.—The first prize at the midwinter shoot of the Schenectady Gun Club to-day was won by Mr. John Sanders; second by Mr. B. B. Hull; third by Mr. H. H. Valentine. The latter gentleman was tied by Adams, but owing to the lateness of the hour the tie could not be shot off, so the win was decided by the toss of a coin.

There were three prizes. The first prize was a valuable cup donated by Messrs. Warnick and Greene; second prize was furnished by Mr. Rice, and third was furnished by Mr. Miller. A strong east wind, a blinding snowstorm and a zero temperature were the weather conditions.

In this 100-target race the members were handicapped by adding percentages of targets broken to their total score. The club was divided into five classes beside the scratch men, who were handicapped from 7 to 35 per cent. The magnificent shooting of Senator Warnick, one of the scratch men, who lost but 8 targets during the mtach, was a splendid exhibition of nerve and good judgment.

The club was honored by the presence of George R. Ginn, of New Haven, Conn., who is remembered pleasantly by the Schenec-

tady delegation who visited Poughkeepsie on New Year's Day.

The Schenectady Gun Club will hold a tournament on Feb. 22.

Below follows the complete score of the match:

	1	2	3	4	Total.
Sanders	7	100	89	6.23	95.23
Hull	15	100	82	12.30	94.30
Valentine	7	100	87	6.89	93.09
Adams	7	100	87	6.09	93.09
Miller	20	100	77	15.40	92.40
Cole	15	100	80	12.00	92.00
Warnick	sch.	100	92	.....	92.00
Jackson	15	100	77	11.55	88.55
Wallburg	7	100	82	5.74	87.74
Ferguson	20	100	74	14.20	85.20
A A Green	sch.	100	85	.....	85.00
Underhill	25	100	68	17.00	85.00
Murday	20	100	70	14.00	84.00
H E Greene	sch.	100	83	.....	83.00
Mead	35	100	61	21.35	82.35
Cruikshank	15	100	71	10.65	81.65
Christopher	20	75	49	.....	.....
Rice	15	75	43	Withdrew.	.....
Berg	7	25	16	Withdrew.	.....
Weatherwax	20	75	46	Withdrew.	.....
Stewart	15	75	58	Withdrew.	.....

Column 1 contains the percentage of broken targets added to the scores.

Column 2 contains the number of targets shot at.

Column 3 contains the number of targets broken.

Column 4 contains the percentage of targets to be added to the score.

### Ossining Prize Shoot.

OSSINING, Jan. 23.—The prize shoot of the Ossining Gun Club, held on these grounds to-day, was fairly well attended, there being twelve shooters on hand. Mr. F. Brandreth secured a win for the rifle and telescope with a score of 19 out of 25. The glare of the snow made shooting somewhat difficult, and the targets were thrown well over the 50yd. line.

Just as the last event was pulled off three cadets from Holbrook Military Academy, Ralli, Slocum and Wickes, came over to try their hands at the game. Considering the fact that they shot with strange guns, their scores were fine.

Events Nos. 1, 5, 6 and 7 were from 16yds.; No. 3 from 21yds., and No. 4, at 5 pairs. Figures after the names denote yards handicap, as applying in prize event.

Please announce in your paper and put date in your "Fixtures" column of a shoot at 100 bluerocks to be held here on Feb. 12 (Lincoln's Birthday). A ten-man team from Poughkeepsie will be on hand that day to shoot for a silver punch bowl given by the president of this club for a series of matches between the two clubs. The first 25 birds in the 100 target match will decide the team race. This shoot will be open to all amateurs. Professionals and trade representatives are invited to shoot along for targets only, shooting will commence at 1 P. M. sharp; \$5 entrance, money divided class, 35, 20, 15, 10, 5, and 5 per cent. If five or more professionals shoot a silver cup will be presented to the winner.

Ossining is only thirty miles from New York city on the N. Y. C. & H. R. R. R. Trains run every hour.

### Rohrer Island Gun Club, Dayton, Ohio.

THE club held its annual meeting on Jan. 20, a large number of the members being present. Plans for the coming year were made, and the following officers elected: Herman Nohr, President; John Schaefer, Vice-President; Wm. E. Kettle, Secretary; Joseph Hohm, Treasurer. Board of Trustees, Jas. A. Achey, C. F. Miller, Phil Wentz, Jr., Charles Smith, Phil Hanauer. The club will open its shooting season on March 2.

### SIDE LIGHTS OF TRADE.

At Hamilton, Ont., on Jan. 14, the Grand Canadian Handicap was finished. This match, which is the blue ribbon event of Canada, brought out forty-three entries. Each competitor shot at 20 pigeons. There was not a straight score made. Only eight men made 19, all of whom shot Parker guns. In the shoot-off Mr. M. M. Mayhew was first, and Harry Kirkover was second.

At Birmingham, Ala., Jan. 13, in an exhibition shoot, with conditions hard on account of the dark and snowy weather, Fred Gilbert broke 94 out of 100 targets with DuPont Smokeless. This shows conclusively that Gilbert is still maintaining his form in shooting.

"The Cricketers' Almanac for 1904," the forty-first edition, is published by Messrs. John Wisden and Co., 21 Cranbourn street, Leicester Square, London, W. C., England. It contains 492 pages of reading matter, statistical and descriptive.

### PUBLISHERS' DEPARTMENT.

#### Sunset Limited—California.

Via P. R. R., Southern Ry., A. & W. P., W. of Ala., and L. & N. The Sunset Limited annex car leaves New York daily at 4:25 P. M., on the Washington & Southwestern Limited, which train is operated between New York and New Orleans, and carries elegant Pullman Double Drawing Room Sleeping Cars, Club Cars, Library, Observation and Dining Cars, making direct connection at New Orleans with the Southern Pacific's Sunset Limited train, leaving New Orleans daily at 11:55 A. M., which train carries Palatial Pullman Drawing Room Sleeping Cars and Observation Cars through to San Francisco without change.

For full information call on or address New York offices, 271 and 1185 Broadway, Alex. S. Thweatt, Eastern Passenger Agent.

#### Sportsmen's Exposition.

THE taxidermists' exhibit at the Sportsman's show this year will be much more extensive than in any of the past shows. This branch of the exhibit will be of great interest to visitors. Several of the largest taxidermists in the country will exhibit their work and the result of their collection of record heads.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, FEBRUARY 6, 1904.

VOL. LXII.—No. 6.  
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### A COLD WEATHER SUGGESTION.

EVEN in northern latitudes, winter, with its cold and snow, its barrenness of insect life, and its scarcity of grain and seeds, is not without bird life. In the coldest, most blustering day, with the wind and snow, one may often see hurrying over the fields a whirling flock of snow buntings looking like an armful of leaves caught up by the gale. Visible but for a moment, they vanish amid the vanishing snow, but if the eye could follow them they would be seen to plunge down among the tops of some tall weeds which stand above the drift, and after feeding for two or three minutes in a hurried fashion, again take wing and fly to another feeding ground from which a few more seeds may be gleaned.

About barns and outbuildings, and often venturing into the woodshed, a few blue snowbirds seek shelter on bare ground. They are shy and retiring—timid if hastily approached, but quickly gaining confidence when they see no harm intended them.

If the barnyard adjoins wood or swamp, a brood of quail may venture into it during the winter, to feed on the grain scattered for the poultry, and thus to eke out the meagre subsistence which nature provides for them at this inclement season. Indeed, there are cases where the ruffed grouse has dared to associate with domestic fowls at a bird lover's home in the Adirondacks; as in the case recently recorded in FOREST AND STREAM, these birds have come up regularly to be fed by kindly hosts.

The depths of the wood have their feathered inhabitants as well. Over the treetops the red-tail and broad-winged hawks now and then flap their heavy way, while small congregations of noisy crows, which draw a fat living from the shocks of corn left in the field by the careless farmer, are often seen perched on the topmost sprays of the tall trees, or fanning their homeward way at night toward some forest of evergreens. The metallic clink of the bluejay is often heard, a few silent robins lurk in the depths of the swamp, and among cedars and deciduous trees alike troops of chickadees, with a small following of nuthatches and kinglets, work busily along tree trunks, and branches and twigs, prying into the smallest crevices in the bark, and throughout the season eating the eggs and cocoons of noxious insects, which, if undisturbed till next summer, would work woe to the farmer, and to all who depend on his products.

The birds which remain as our winter neighbors are not often seen by those homekeeping folk whose pursuits seldom carry them abroad into field and wood. Yet they are beautiful and interesting, and well worth seeing, and, if protected and their prejudices respected, they may be brought close to the house, so that women and little children may see them as well as hardy men and sturdy boys.

To the winter birds, food is the most important of all things, and if food is regularly offered them they will make daily journeys to the feeding place. Crumbs and seeds will attract sparrows of many sorts. Small grain will bring the quail, the doves, the jays, and the black-birds. Meat or fat will lead woodpeckers and chickadees and nuthatches and brown creepers and kinglets to become daily visitors to the home, and after they have learned the location of the food, they will continue their visits, even though now and then the supply should be forgotten and the visit be fruitless.

After the food has been put out for the birds, it may take a few days for them to discover it, and one should not be discouraged if immediate advantage is not taken of the proffered hospitality. For the food offered to the grain-eating birds, a place should be chosen which is sheltered and warm, and care should be taken that the supply be not covered up by snow, and that if devoured by the domestic fowls it shall be renewed. It will be found that after the birds have discovered the food, the

news of it will spread rapidly, and the number of those which come to eat will constantly increase. For the flesh-eating birds, strips of meat or bits of fat should be tacked up in the trees, and renewed from time to time, but often the red squirrel may discover these supplies before the birds do, and devour them with great relish. It may thus be necessary to choose between feeding the squirrels and feeding the birds, but the farmer usually has little liking for the red squirrel which destroys the corn in his crib in a most impudent and offensive way.

When the birds first come up to feed, they are shy and easily frightened away. Those who discover them at their repast should at first keep out of sight and show themselves little by little, instead of suddenly. It will not take long for the feathered visitors to become accustomed to their hosts, and to regard them no longer as enemies, but as kindly friends.

### LONG ISLAND LAWLESSNESS.

REPORTS from Long Island declare that duck shooting has been going on pretty continuously there since the first of January. During much of this time, it is true, the bays have been frozen over, but, on the other hand, there are air holes to which the starved and chilled fowl resort, and where more or less of them may be killed. The bitter weather and the ice on the flats has shortened the food supply, so that the birds have had little to eat, but while many of them have sought open water by going south, there are many others—poor bunches of bone and feathers—that still remain in these latitudes, striving to pick up a living, but spending most of their time either sitting on the ice or resting in the air holes.

Last year, when the bill to prohibit the spring shooting of wildfowl was under consideration by the New York Legislature, Long Island gunners and others made a heroic fight against its passage. It was a losing fight, and the side of game protection won. On the other hand, those who advocated the passage of the bill realized that, as brant stop on the south shore of Long Island only during the spring migration, and as brant shooting is a favorite sport with many men, it would be an added hardship to cut off the spring brant shooting. Therefore Senator Elon R. Brown, who had charge of the bill, expressed to the representatives from Long Island his willingness to so modify the measure that it should not apply to brant, which the Long Island gunners should thus be permitted to shoot in the spring.

With this concession there went—according to our understanding—an implied agreement that the Long Islanders in return should respect the duck law, and should see that it was not violated.

This understanding has not been lived up to. Off Patchogue, Bay Shore, and Islip, there has been much shooting on the bay since January 1, and anyone who cares to visit these towns may listen to the booming of the guns out over the ice, which shows that the miserable skeletons called ducks are being killed in violation of the law.

It may be said that State game protectors should put an end to this; but, on the other hand, Long Island is well named; its waters are large, and it is almost impossible for a small number of game protectors to police them.

We understand that considerable irritation is felt by a number of people over this disregard of the law. Citizens of Long Island feel that either they themselves should shoot, or should stop other people from shooting; while other men, active in game protection, consider that a failure to observe the law is a distinct breach of faith on the part of the Long Islanders. Some of these people even go so far as to urge that a bill be passed forbidding the shooting of brant after January 1, and that a special effort be made by game protective societies to aid the State in enforcing its laws on these waters.

Long Island people, as a rule, have a most praiseworthy respect for law and order, and abide by most of the statutes as well as any community in the world; but many of the bay men and others who have gunned there all their lives consider it a hardship that they should not be permitted to kill the fowl in winter and spring as they have always been accustomed to. Yet this is one of the conditions of our modern American life. Each year there are in the United States more people, less vacant territory fit for the habitation of wild creatures, more guns, more

shooters, and so fewer wildfowl, or wild creatures of any sort. We shall all be wise if we do everything in our power to hold our hands in time, before the stocks of the various wild species become so reduced that they can never re-establish themselves.

Time was, as we have recently shown, when the Labrador duck was not an uncommon species on Long Island waters. To-day that bird is extinct, and specimens of it bring hundreds of dollars, if offered for sale. There are other birds that are approaching the danger line, and we shall be wise if, all over the country, we shorten the time during which such wildfowl may be killed.

### THE GUN IN PICTURE.

WHILE among artists there are many good sportsmen, there are also many good artists who are absolutely ignorant of everything pertaining to the craft. At the same time, every artist appears to be ready to turn his hand to making a drawing of a duck, a deer, an elk, or an elephant. When, however, it comes down to detail, the pictures which some of these artists turn out sometimes cause those familiar with the creature or the scene portrayed to smile. Such blunders are seen continually in the illustrations of high class magazines and periodicals, as well as in books, and notable examples of this will suggest themselves to almost every reader. We recall a case where an artist of eminence put on an antelope that was running away the tail of a white-tail deer, making a curious nondescript beast, which, however, the legend of the picture announced was an antelope.

The correspondent who last week called attention to the careless way in which artists who do sketches of sportsmen make their subjects carry their gun, performed a real service, and the advice which he gave about handling guns is good.

The first piece of knowledge that should be drilled into the beginner with rifle or shotgun is that this implement is a very dangerous one, and that, under no circumstances, whether it be loaded or empty, should it be pointed at any living object. The way in which one carries a gun is a matter of habit, and it is just as easy to form good habits as bad. By frequently calling the attention of a young gunner to his carelessness in the matter of handling his gun, he can be led to form the habit of never pointing it in the wrong direction, and this habit he will at length come to put in practice without even thinking about the matter.

It is true that there are sportsmen of large experience who are careless about the handling of their guns, but this is no excuse for others being careless, and, indeed, these careless men of experience are often the very ones who find most fault with other people who are careless.

A gun is a dangerous tool and should be handled with extreme care. Accidents are far too common under present conditions, and no words of caution expressed to the inexperienced are wasted. Incidentally it would be a good thing if artists and illustrators who are trying to picture scenes in which guns are used would learn something about firearms and game before attempting to depict them.

THE essential vulgarity of the popular mind is evidenced by its complacent toleration of the vulgar advertising signboards which in town and country alike everywhere confront the gaze, proclaiming the merits of whiskeys, cigars, and soaps, breakfast foods, and pills. The existence of these monstrosities and atrocities in town demonstrates that we have no aesthetic sense; their presence in the country makes a mock of our pretended appreciation of the beauties of natural scenery. Governor Murphy, of New Jersey, has undertaken the task of suppressing by means of proposed legislative measure the billboards which line the railways of the State. We wish him success; but he will find, as other reformers in the same field have always found, that public sentiment rather favors than condemns the gaudy proclamation of quack wares.

THREE bills have been introduced in the New York Legislature to repeal the law passed last year preventing spring duck shooting. The opposition to the present law comes largely from Long Island, with an accession of strength from the central waters of the State. Might it not be the part of wisdom to give the law as it stands a fair trial?

# THE SPORTSMAN TOURIST

## Captain Sim's Swordfish.

BY GEORGE STORY HUDSON.

"What, never heard tell how Cap'n Sim Coffin harnessed a swordfish and coaxed the brute to tow him to port? That's strange, most everybody has—leastwise, round these parts."

When gear had been stowed below, and decks washed to remove traces of a successful fishing trip out on the Middle Ground, the skipper related to me the particulars of the singular adventure.

"Well, 'twas this way," began the skipper by way of introduction, "Cap'n Sim was a retired whalerman risin' 83, short and thick-set, stubby wool-colored whiskers from his ears down round his chin, no hair you'd notice on top his head, amusin' eyes, and fuzzy brows; that's Cap'n Sim from the ground up. He was the salt of the earth, too."

"I've ben blowin' round the world," Sim used to tell us boys when he gave up whalin' first-a-long, 'wallopin' whales till the bottom fell out of the oil market, and prices parted clean in the middle. Then I kedged onto a farm, hopin' to stay put."

"He built a cottage just back from the beach," the skipper went on, "painted it white, with green blinds and a red roof to match the trimmin's on the runt of a catboat he called the Commodore Perry. Sim set a powerful store by that boat, too, and had named her after an old sawed-off blubber hunter, tied up at Bedford. There was a barn in the shade of the scrub oaks, and the hen yard was a-quiverin' with chickens."

"It's as trim and fit a place as a man needs," Cap'n used to say. "There's the garden truck to feast on, chicken coops that don't need lashin's 'cause the seas don't fill the decks no more. The old hoss trots the gal and me to church and weekly meetin's, and there's no reefin' down and poundin' ice to keep the hooker afloat in a hard chance."

"Well, one mornin' Si Daggett came in from the grounds with some sizable swordfish. Cap'n Sim, with a plantain leaf under his hat, was a-hoein' in his garden, when Si's sonny trotted over to borrow some sinkers, and told Sim about the fish his dad had took, mentionin' they was the first run of the season. Sonny said to Si, afterward, that the cap'n acted real queer at mention of the swordies, leanin' agin the fence, cogitatin'-like. Sonny said he asked was there much of a flurry accompanin' the killin'."

"Them swordfish set Cap'n Sim to titivatin', and the boys along the beach suspicioned he got out his cobwebby whalin' gear directly Sonny had gone and looked it over. He'd brought it ashore when he quit as master of the old Narraganset, which is a barge now runnin' coal coastwise."

"In a day or so Sim's wife—he called her his girl, everybody else called her auntie, she was that homelike and motherly—was at the steamboat landin' dressed out rave for a visit. 'Sim always hated to have her go away, be it even for a short visit with the daughters over on the mainland. This time, however, he didn't look so thoughtful when the sidewheeler cast off and headed for the cape."

"Soon's the boat was a decent bit away, Sim climbed into his wagon without stoppin' at the store to hear the doin's. Dust rolled up in clouds from under the wheels he squared for home that smart over the sand roads."

"There's something writ somewhere," the skipper went on, "'bout the spirit of the sea whisperin' to people. The fishin' fleet always reckoned that if Sim ever heard any whisperin' 'twas relatin' to the swordfish Si Daggett ketched backside the island. Anyhow, as it turned out, Sim got a plank of sizable length and built a pulpit on the Commodore. A pulpit, you know, is the platform we stand on for steadiness, to job down at the fish that roll along on top the water when they are asleep or sunnin'."

"Well, as Bill Eldridge was bound over to Tarpaulin Cove a mornin' or two after auntie went away on her visit, he saw Sim pokin' away from his moorin's in the Commodore Perry. Bill's a likely feller to take notice, and he spied a big blue kerosene oil bar'l in the boat's cockpit that took up about all the space."

"Goin' after your winter's supply of oil?" Bill hailed, soon's Sim got handy."

"Sim hollered back he was goin' on a bit of a cruise and had the bar'l aboard so 's 'twould be handy to stow his catch in should he need it. Bill said the old chap chuckled and appeared real hity-tity as he pointed at the ends of the harpoon poles layin' out for'd along the bowsprit."

"Bill's course," continued the skipper, "was across sound, while the Commodore Perry stood along for outside. There was a pretty stiff wind stirrin', and the Perry's pulpit every now and then skittled through the tops of the seas. It was no small undertakin' for Sim to be handlin' the boat alone out in the picked water, for she steered uncommon awkward in the puffs, and was that hard on her helm she was all the time tryin' to look round at herself. It hurt Bill to see the old chap goin' foreign single-handed."

"When Bill was haulin' round the buoy at the mouth of the cove he met a mack'el jigger comin' out, and

told him what he 'spicioned Cap'n Sim was up to. The jiggers, knowin' Sim so well, at once got their glasses on him for a good look."

"Pretty soon," the skipper went on, "they saw Sim shoot his boat up into the wind, everything slattin', and as they watched, wonderin' iw anything had parted to disable him, Sim laid out along the bowsprit and slid into the pulpit. He raised a pole at arm's length, steadied himself to aim, and then jobbed straight down with all his might. Quick as a wink he came off the bowsprit, clumb along the cabin top and hopped into the cockpit and hove the big oil bar'l overboard with a splash."

"The jiggers were tol'bly sure Sim had struck a swordfish."

"Then it looked as if Cap'n Sim was havin' a peck of trouble, for he in with his sheet and bore down on the bar'l that acted mighty like a can buoy in a tide way. He'd be up for'd then aft quicker'n scat. All at once the Commodore Perry slewed round and headed to the east'rd at a good five-mile clip. Dead into the eye of the wind she was goin', her sail a-tremble, and her sheet trailin' astern, clippin' the tops clean off the cappers. Cap'n Sim had ben fiddlin' at somethin' up in the bows, but now he stood aft at the tiller. The blue oil bar'l was surgin' ahead, a mass of suds and foam rollin' up around it. Now it settled most out of sight and then bounded up like a rubber ball. Land o' plenty, but didn't the jiggers stare at the strange carryin's on."

"It was a swordfish that raised the racket, and Cap'n Sim had him fast, sure enough. You see he had jobbed at the sleepin' fish with his iron but missed, but he was so excited he didn't stop to see where the iron landed. Throwin' the bar'l over the side woke the fish up, and he just lunged at it and thrust his sword clean through the staves on both sides. That held him fast, for he couldn't pull his bony beak out of the wood."

"Then the fuss began," said the story teller. "Cap'n Sim had intended to use the big bar'l for a buoy to fasten to his harpoon line, because all his buoys he had at home had got that dry the hoops fell off and they wouldn't stay put. So he had a line fast to the fish just as if he had jobbed him, as he intended. He managed to get the end of his anchor wrap fast to the fish just above the flukes, and then paid out on it so the bitts on the deck of the boat took all the strain. Gettin' a clove hitch around the point of the sword where it stuck through the further side of the bar'l, he had a proper pair of reins that could be saw'd on to turn the swordie's head to starboard or to port."

"The jiggers managed to get alongside, just long enough to ask Cap'n Sim if he wanted to be taken off. He was madder'n a hatter, after all the pains he'd been to in harnessin' the fish, but, you see, the jigger chaps weren't rightly sure just what had been transpirin'."

"Sim recommended them to go 'long about their business; and when he wanted to be taken off he would send his flag in the riggin', as was proper in times of stress. The boys saw he was almost blowed, and his face was as red as a rock cod. They hauled on his wake, after seein' 'twas a swordfish he was fast to, and vowed they'd follow and see it out, bein's fishin' wasn't brisk."

"The course of the Commodore Perry," the skipper explained, "carried her over toward Lucas shoal, where a long patch of broken ground makes off the point just t'other side of Cap'n Sim's house. 'Twas breakin' bad across the reef, bein' no fit place for a small boat to get into, 'specially when she wasn't under control. The jiggers vowed there would be trouble should the fish manage to drag the Commodore Perry on top of the rocks, where she'd go to pieces in a jiffy, her plank, butts and timbers bein' that old and dozy."

"Cap'n Sim was attendin' strictly to his navigatin', and he wouldn't cut the line while there was a chance to save the fish. 'Twasn't his way of doin' things when he went whalin'. The tide had swept him down almost into the rip, when the old chap bowses in on his sheet, lets his centerboard drop, and stands full and by along the edge of the shoal for deeper water. It was hyperin', I tell you, and when the Commodore Perry got a move on she marched right out of the mess a-draggin' the swordfish and bar'l foot by foot into better water. The jiggers said to me after it was all over that Cap'n Sim maneuvered as if he was handlin' a 600-ton ship. He gripped to the tiller with one hand and leaned back to the coambin' to get a strong hold with the other. Foam laced along his lee deck, spray drenched his face and chest, seas smashed over his bows."

"She was a-goin' and the swordfish had to follow and no mistakin' it. 'Twant more than five minutes of that kind of sailin' before Cap'n Sim let his sheet run, up stick and bore round the buoy with a good three fathoms under him. He got for'd to give the half-drowned fish a couple of pokes with an oar to liven him up, and then headed the Commodore Perry into the cove and in the direction of his moorin's, a shorter piece to the south'rd."

"The steamboat from the mainland had been comin' up behind Cap'n Sim while he was too busy to notice. Cap'n Staghorn was in the wheelhouse wonderin' what the antics of the Commodore Perry could mean. Bill

Folger, the quartermaster, thought she must be crazy and didn't mind sayin' so. The passengers shook their heads, and hoped that Cap'n Sim hadn't been sunstruck so's he couldn't sail straight and, moreover, why was he chasin' a blue bar'l that didn't look fit to take aboard for firewood? Somebody was for declarin' Cap'n Sim (they all knew him a mile off) had ben secretly practicin' with some sort of a flyin' machine or submarine boat. There were all sorts of guesses."

"Strange to say, auntie was there among the passengers. She was comin' home earlier than she thought, and was bringin' a daughter with her."

"My, but wasn't auntie scared when she saw her Cap'n in such a dangerous muss. All a-tremble, she begged Cap'n Staghorn to put the steamer alongside the boat and take Cap'n Sim off. So the steamboat was headed right down on top the Commodore Perry; but Sim didn't see a thing that was comin'."

"The old chap was lowerin' his sail, thinkin' the fish would surely tow him the rest of the way in, when the brute takes a shy, and lambasted the Commodore Perry right into the bluff of the steamer's side. Auntie screamed and fainted. Lines were thrown, and a boat was ordered over, when out from under the folds of the sail that had fallen on him came Cap'n Sim, holdin' firm to the warp, fast to the fish. Over the bows he went with a splash, his bald head followin' in the wake of the flecin' swordie that had wrenched clear when the shock came."

"Cap'n Sim held on like a good one. He'd been stove more times than one while whalin', and I guess the old chap had his fightin' blood up. I'm not so sure he saw the steamboat at all till he was bein' whisked through the water, and making a bee line for his house on the beach."

"Next thing the people on the steamboat saw was Cap'n Sim haulin' himself along the warp toward the rapidly scullin' flukes. With the steamer close in his wake he finally got to the fish's back, grabbed the dorsal fin and managed to grip the sword where it entered the bar'l, with both hands. There he sat, a-straddle, soakin' wet, but mighty pert, I tell you."

"The upshot of it was that the steamer sent a boat to him, but he wouldn't leave his prize till he had it moored to the stake that his fish trap was hitched to. Then he waded ashore and the passengers sent up a rousin' cheer, auntie laughin' and cryin' all at once. The Commodore Perry had drifted easy on the beach, and wasn't hurt five cents' worth."

"That swordfish weighed pretty near 500 pounds, and Cap'n Sim gave it to some scientific fellows to exhibit in their fish pond over to the Hole," said the skipper, in conclusion."

## In Old Virginia.

### XVII.—The Up to Date Bird.

A CHRONICLE of this entire outing, recounting the days as they so happily sped by, would probably be monotonous reading, as the sport was, in the main, of the same general character."

There was abundance of variety in each day to the men behind the guns, but three or four weeks of bird hunting cannot be put on paper in an interesting manner by any one else than a genius. Never—even with rapidly maturin' pecuniary obligations—has time flown as it did then."

Out early Monday morning, with delightful anticipations of a whole week of sport ahead, it would seem but two or three days until Saturday night rolled around. In the rush I came to feel like the energetic old lady who, to stimulate her too easy-going household, would say: "Stir about now, stir about. Here it is Monday, to-morrow is Tuesday, next day Wednesday, and then comes Thursday, followed by Friday, with Saturday right after—the whole week gone and nothin' done."

Each day found us shooting a little better, and less broken down by the hard going in heavy cover."

The season opening late (November 1), did away with one feature of bird shooting which has always been a drawback heretofore—the finding of immature birds. Not a bird of all the coveys we found but was well grown and full feathered, whereas when the season opened thirty, or even fifteen, days earlier, it was no uncommon thing to find many of the coveys flushed composed of birds not more than half grown."

Then, too, the nesting season had been unusually favorable, and the food supply good, the result being a plentiful supply of well nourished birds. The Virginia bird averages larger than any other quail of which I have any knowledge (unless it be the quail of southern Illinois, which is an exceptionally heavy bird), but this season they seemed heavier than usual. This was especially noticeable in the case of two or three coveys that had a range near by that we often did some business with during my visit."

The most marked peculiarity noticed was the fact that when flushed they flew unusually low. They seemed as speedy as the average birds, but would skim away flying barely above the top of the grass, and incidentally furnishing variety in the shooting line, so far as my quail shooting experience extends."

Generally the majority of birds missed are under-shot, but it is a safe estimate, to say that two-thirds of those missed on this trip were over-shot. You cannot adjust yourself all at once to such a radical change as your bird skimming along the top of the grass instead of rising from ten to twenty feet before lining out.

The first morning we found one of these too-fat-and-lazy-to-fly-high coveys was memorable for more reasons than one. In the first place, it looked as though they never would get through boiling out of the thicket of briars on the creek bank where the dog finally found them; after a long search in heavy cover, so many there were. Then the shooting was so easy as the tremendous covey streamed up the hillside on to a level stretch of open pine woods; at least it looked easy. I carefully selected the doomed bird, victim of the right and left, and without confusion or undue haste, over-shot them both.

Surprised, but not discouraged, we followed on, and found them again upon a grassy flat among the pine trees, not in pine thickets, but among large trees sufficiently open for any man to shoot in, and here we had a half hour or more of sport to remember. We made—considering all things—a very poor average, but then there was no uncertainty about the reason therefor, or, in any event, it narrowed down very close, for it was undoubtedly either because the birds did not fly high enough, or else because we did not hold low enough. After I had shot anywhere from six inches to three feet over the first two or three birds, old Roscoe got impatient, and tried to run the next one down, and was crowding it close when he ran over one which flew from behind him, which I killed. This accident encouraged the dog, and he concluded to try me again.

The birds lay close in the heavy matted grass, and were hard to find, but one by one they were put up by the faithful dog, who worked beautifully. Gradually learning the peculiar tactics of these birds, I began to get meat, and found that I was killing well grown, full feathered young quail, and the largest of any I had yet found. I finally began to make my usual average, and even better, for several quite difficult chances were accepted. One of these, a double, was especially good. The dog, while going his usual gait full speed, had struck hot scent and frozen in his tracks on a long drawn out point straight as a gun barrel from tip to tail. When I came up to him, a bird flushed on each side of his head, showing that he had started to run between them, but stopped in time. The birds flushed simultaneously, and went away at about the same angle, so I took the easier shot, the one to the left, first. When I turned to the other it was just slipping behind a tree that was between us, and as its flight was only a slight angle, it was a long shot when it finally emerged to view. Sincerely hoping I would not strain the little gun, I drew close and carefully aimed with the hard shooting left, and at the crack of the gun the bird went into the grass.

Roscoe fairly wagged his tail up to his collar when he brought in the second bird and laid it by the first at my feet, and we were quite jubilant for the time being, knowing that it was well to rejoice in season, for the next bird up might cause a coolness between us. But my luck held, and the next bird—the most difficult shot of all—was killed. It was run over by the dog, who evidently thought about everything was up, and was a little careless, and flew across some thirty or forty yards in front of us. All but invisible as it slid over the top of the grass through the trees, I tried again and again to hold on it, and finally, when almost out of range, and flying through a little thicket of pines, shot where I hoped the bird was, and doubled it up most scientifically.

The Esquire—who was my companion—grew quite enthusiastic. "Tip-top," he cried. "That shot was worth a whole day's tramp to see. You certainly weeded him right out of the thick timber." Ah! a fine fellow was the Esquire, full of kind words and good deeds, and always ready with commendatory congratulations if anything like an opportunity offered, with never a suggestion of the remote possibility of anything but skill, science, and good judgment contributing to your successful shots; but ever ready and willing to expose the untoward and unavailable accident that caused you to miss. May his tribe increase in this vale of tears, and thereby make it a valley of smiles; for verily a little charity is a goodly—and all too rare—virtue.

Sportsmen are, as a class, artists and art lovers, and own pictures of more or less beauty and worth; but they have their rarest art treasures in memory's gallery, and these pictures grow more beautiful as the days go by. The soft lines grow clearer, and the harsh lines fainter when touched by the master hand of time, and by and by a picture that was originally painted hardship, toil, and danger, tones down to a masterpiece called a glorious outing. As the rugged, broken, rock-studded mountains, seamed with dark defiles, and crowned with storm-riven trees, grows soft in outline and beautiful in coloring when seen from a distance, so do the aches, pains, weariness, disappointments, and general hardships of an outing fade out under the gentle touch of time, leaving only the high lights of success, enjoyment, and unalloyed pleasure. But "*revenons a nos moutons*," for faithful old Roscoe has diligently covered all the ground once more, and is down on another bird—which proves to be the last of the covey.

He found this bird in an open spot, and it lay close while we moved up on the dog and got the lay of the land. I felt sure it would go straight away over the top of the grass, like the others had done, and determined to exercise great care and hold low, and I did so. The bird flushed from under my very feet, and went straight away on an incline of about thirty-seven degrees, the fairest shot a man could ask, and with deliberate care I fired the first and then the second barrel, remembering to hold low, and then stood and watched the bird fly out through the trees, across an open field and into a thicket of pines nearly a quarter of a mile away. I had finally flushed one of the old birds and it did not fly low. Turning round I found the Esquire regarding me in puzzled amazement. "What was the matter?" he finally gasped. "I wouldn't have given a frosted tobacco stalk for that bird's life."

"Well, it was like this," I said, in an effort to be face-

tious, "as soon as the bird flushed the fact that it was an old one was apparent, and as we did not want any old tough fellows to mix in the lot of young birds we have, I shot under it."

The Esquire was too considerate to say what I ought to have heard then, but later in the day he took occasion to remark, as one under conviction: "For a man who does make hard shots, you can miss some of the easiest ones I ever saw." The justice and truth of which remark I mentally acknowledged without qualification or reservation.

And now, as it is too near the close of this chapter to bring in another day's experience, it may be well, at this time, to relate some interesting observations in regard to the present habits of the Virginia quail, which have undergone marked and radical changes in the past few years. It is something like ten years since I first became acquainted with this bird, and not only by observation, but by reliable testimony of resident sportsmen, I know that its habits have undergone a change. If not found bunched and lying close, or not run on suddenly by the dog, many coveys will run from fifty to two hundred yards, with the dog and hunter following close on, before flushing; whereas they formerly lay close immediately on the near approach of the dog. Then you may flush a covey where you will, and they will fly to the woods, or to a heavy thicket, never to the open fields, as was formerly the case—at least occasionally. Of the many coveys found in all my hunting, never one but went straight for timber—large or small—on the first flush. And they lie much closer now as compared with former times. It was then the usual thing to get up most of the coveys a second time, one by one; now this is very unusual, and often you will cover the ground carefully with a good dog, and not put up more than two or three members of a large covey well marked down.

It was formerly the exception that birds used the woods, now the exception is a covey that uses the open, except to roost in. Their manner of flight has changed, also, for they now swing sharply to the right or left more frequently than formerly, and the covey breaks into small squads. These changed conditions militate against big bags, even to the expert's gun, and the tyro finds his average so low that it is an excursion in higher mathematics to determine it, and "quail on toast" continues to be a luxury.

The cause of all this is found in the number of guns that are daily afield in this section in the open season. The climate is mild, game abundant, and accommodations for the non-resident all that anyone could desire, which attracts each season a small army of sportsmen from less favored points to swell the large number of local gunners that follow the brown bird in Virginia. As a dead bird acquires no wisdom that it can impart, and as the birds are trained and led by their experienced fellows, it stands to reason that many of the gunners have done much shooting that resulted, to the birds, in valuable training along the line of applying the first law of nature.

It was no uncommon thing for us to hear guns in every direction during my hunting, and all too frequently we heard the rattle of a repeater, which is a gun that no self-respecting sportsman should use on birds, unless he limit his load to two cartridges.

Personally I rejoice in the higher education of the quail, and hope he will continue to acquire ways that lead to safety. I like to go after him, and enjoy bringing him in, but the more difficult the quest the more desirable the game.

That night around the evening fire the natives told me of some "snipe" that inhabited the low land down by the creek, and after hearing a description of the so-called "snipe," I retired to dream of that king of game birds, the woodcock.

Dr. Henry Van Dyke opens a chapter in his delightful book, "Little Rivers," with this original paradox: "A great deal of the pleasure of life lies in bringing together things which have no connection." Judged by this standard, I should have derived a vast amount of pleasure from the foregoing chapter.

LEWIS HOPKINS.

## Notes and Incidents of Travel.

RECENTLY a gray-haired man said to the writer, "I was born in New York city, and have never been further away than Newark, N. J., in that direction, and Stamford, Conn., in the other; that is the extent of my travels." Another man, a grocer, said: "I was born right here, and have never been over twenty miles from home." Neither of these men is rich, nor is either of them poor in the sense of poverty stricken. But poor they must be in a far higher sense or in this age of marvelous traveling facilities they could not have made such statements. Goethe's declaration, "Him whom the gods true art would teach, they send out in the mighty world," may be applied to all the life of man. And so the untraveled man is generally the untaught man, for, as Stoddard says truly, "Expansion, growth, broader experience, and wider charity, these are the fruits of that real travel which is of the mind." In the hope of stimulating the desire for travel, and so of helping others to enjoy its fruits, these notes and incidents are written.

In any journey it is important to travel as much as possible by daylight, and by conveyance that will afford best opportunity for observation. Accordingly we went by the magnificent Empire State express, and stopped off to see Niagara Falls. In the party was an English lady past seventy years old. She had never been over the route before, and the beautiful scenery of the Hudson and Mohawk Valleys, and the rich historical views afforded, gave her constant entertainment, while the speed and comfort of the train enabled her to say on alighting at the falls, "I do not feel at all tired." It is doubtful if elsewhere in the whole country so much historic ground, mid such beautiful surroundings, can be covered with so much ease as in going from New York to Buffalo. Hamilton, Washington, Arnold, and Andre live again as one passes the Palisades, Newburgh, and West Point, while yeoman honor and patriotism, and Indian valor waken delightful memories and fresh appreciation as the train speeds on. The imagination needs not the help of Cooper or Irving to fill the scene with the

people and incidents of the past, and poor indeed must be the heart that does not feel gratitude for that past and honest pride in the present. The scenic and historic elements are also inseparably blended.

### At the Falls.

Memories of Gen. Winfield Scott and other military heroes are here enlivened, and it is recognized anew that one of the great benefits of travel is that it enables one to realize the truth of history. The writer felt this when, standing on the wall of Windsor Castle some years since, he heard the exultant words of a warden who was serving as guide: "Do you see yonder field of green hard by that wood? Well, that is Runymede!" There the English people wrested Magna Charta from King John, and English history has been more real to me ever since that morning at Windsor Castle. It is always so in travel. History is vitalized—its truth realized. The impressions made by the falls vary with different people as much as the views produced by a poor camera in the hands of a bungler differ from those made by a well equipped and skillful artist. Two incidents will illustrate the extremes. Some years ago one of my friends took a busy manufacturer to see the falls. Knowing the practical, impassive character of his man, the host began at minor points of interest and gradually worked up to a climax at the foot of the American fall. Thus far not a word of appreciation had escaped the visitor. The host began to be stirred up, and turning to the visitor slapped him on the shoulder and asked, "Well, what do you think of it?" Cocking his eye the visitor drawled, "Well, I was thinking what an almighty waste o' power." He would not think so to-day. How different the remark of Prof. —, who, surveying the scene, exclaimed, "If there isn't a God there ought to be!" Surely, "The works of the Lord are great; sought out of all them that have pleasure therein."

### Almost an Accident.

While we were at the falls a lady in another party nearly lost her life by a single misstep. She was at the Three Sisters islands, and in going down a path among the rocks did not notice a turn and stepped off the plank into the rapids. For an instant her dress caught on a projecting willow root, but it was long enough for a gentleman of her party, as he expressed it, to pull himself together and pull her out. She did not seem worse for the experience, but will not again flirt with Niagara.

A day's ride over the Michigan Central brings anew the joy of travel. Quietly seated in the cars we cross the river to Detroit almost without knowing it. The whole journey of life is much the same way. We little realize how much is done for us, and how dependent we are. To the thoughtful mind a well managed railroad is not only one of the greatest conveniences, but an illustration and an instructor in higher things. Feasting the eye by day or resting in a Pullman by night, the careful plans and co-operative labor of others speeds you to your goal. Such is life.

### Chicago.

Like most large cities, is "as you like it." Waiting in one of its spacious depots, a stranger said, "My, but — street is fierce!" A few words further revealed that he had found what he was looking for—the under world. The writer had seen nothing of that world. But at Lincoln Park he had an amusing experience. In the Academy of Science a few words of explanation to some ladies regarding some of the collections brought forth inquiries about the comparative size and value of Central Park and its collections. The Chicago speaker seemed greatly disappointed when told that the Museum of Natural History in Central Park, and the floral and zoological displays in the Bronx, greatly surpass those of Lincoln Park. But he found solace in the thought that "Chicago is still young. Give her time and she will measure up to New York." Possibly New York may afford an object lesson to many people when in 1909 she celebrates the arrival of Hendrick Hudson three hundred years ago by a fair greater than the world has ever seen. We may be sure that whatever New York does in this direction will be as conspicuous as Mr. Potter Palmer's residence in Chicago. Strolling down the magnificent Lake Shore Drive, and inquiring for that residence, the writer was told, "You can't miss it, for it takes the whole block." To see this drive is worth a trip to Chicago. The city may be "still young," but she has made efforts for the preservation of local history, the cultivation of art, and the promotion of all that is highest and best in life that are in every way creditable. She seems to be drawing inspiration from her own Shakespeare statue in Lincoln Park. On one side of the base we read:

"What a piece of work is man.  
How noble in reason.  
How infinite in faculty."

On the obverse we see—

"He was not for an age, but for all time—our myriad-minded Shakespeare."

### Beyond the Mississippi

One feels himself in a new country. And the further south he is the stranger it all is. Minneapolis reminds one of certain neat and attractive New England cities. The detached and tasty dwellings, the lawns, the shade, and the cleanly streets, give a welcome air of homelikeness. One does not soon lose this feeling as he journeys west from there. But in southern central Iowa the case is different. The country is prosperous, but less tidy. Land has more than doubled in value recently, and with good reason. The abundant crops and the sleek herds of stock give evidence of its capacity. Cornfields a mile long and including some hundreds of acres are eye-openers to an eastern man. Far as the sight can reach the rolling prairie, like a great billowy sea of fertility, stretches out into miles of productiveness, and the fat cattle, sheep, horses, and other stock, prove it is not delusion. A surprise to the newcomer is seen in the "pond" and "cave" on most of the farms. The one is a small pool of stagnant rain water

impounded for watering stock, the other is an outdoor cellar for storing vegetables and for refuge from cyclones.

### One of the Pioneers

Was met on the train. He now lives in Washington, D. C., and was on a visit to his mother and other relatives in Iowa. His story was most interesting. Born in Delaware he moved to Iowa in 1849 with his parents. As a boy he did his share of pioneer work. He broke the prairie with a plow cutting a furrow 16 inches wide and 1½ inches deep, the plow drawn by twelve to sixteen steers. To feed his cattle he simply unyoked and turned them loose. The prairie bluestem grew thick in bunches and was higher than a man's head. At one hundred yards a man was invisible. Deer, wild turkey, and prairie chicken were plentiful and helped out the table supply. Except a few chickens these are now gone. In the winter he put on three pairs of trousers, as many shirts and stockings, and drew logs twenty-five to thirty miles for sawing into fence boards. He also drew farm products sixty to seventy miles to market. Pork was then worth 2½ cents a pound, and corn 6 to 8 cents a bushel at the farm.

Seeing a man riding a wheel plow drawn by three horses, the pioneer exclaimed, "He don't walk as I did." Then he spoke of other changes. In his boyhood schools were few and far between. After a few prosperous years his father sold the farm and moved many miles in order that the boy might have the advantages offered in an Academy. "Now," said he, "there is a telephone in nearly every farmer's house, he has the benefit of rural free delivery and a daily paper. Children are carried to graded schools in free public wagons, and under this graded system there are better school houses, better teachers, better supervisors, and better results, and all at less expense." After a short period at the Troy Academy, he had enlisted in the Union Army, July, '61, and was discharged August, '65. In all that time he was away from his company only twenty-eight days. How I honored the veteran! He was now 67, and at a familiar station went to the car door "to see if I can see any of the boys. Why, I feel here as if at home."

Another pioneer of Milton, Iowa, was just returning with his wife from a three months' trip in Idaho, Washington, Oregon, and Alaska. He had traveled intelligently, and was specially enthusiastic over irrigation in the Yakima Valley, Washington. He spoke of his trip "out West" as Eastern people do on going to the Mississippi Valley. He had probably seen more.

Southeastern Iowa as seen in going from Ottumwa to Burlington is attractive. The farm-houses are nearly all two-story, large and tidy, the barns are spacious, windmills pump good water for the stock from deep-driven wells, all the surroundings are neat, and the general appearance indicates intelligent thrift. One expects good looking towns and is not disappointed.

Crossing the Mississippi eastward at Burlington, the sportsman's eye is soon attracted to the large number of ducks in Crystal Lake and adjacent waters. He sees many club houses and boats, giving sure sign that the opportunities for shooting are appreciated. The writer longed to make the acquaintance of some of those clubs—and their game—but the "through express" did not tarry, and he could not. New York was reached on time, and the trip was over. But—

"As the dew to the blossom, the bud to the bee,  
As the scent to the rose, are those memories to me."

JUVENAL.

## Rummaging Down the Mississippi.

MR. SPEARS struck some old-time documents in a "deserted village" river town, and, shaking the dust of almost a century from them, exposed them to the interested gaze of the readers of FOREST AND STREAM.

I am on my way to New Orleans, and in fact am trying to forget that our train is four hours late by writing these few lines as we, while trying to "make up," are constantly running behind, as all late trains do.

I was rummaging in a river town a day or two ago. I walked into an unpretentious art store, and, following the advice given on Wren's tomb in St. Paul's, I looked around. The proprietor was a genial, clever man, and to my query as to whether he had perhaps an "old master" or two tucked away in a dusty corner, he went behind and under his counter and brought forth a seventeenth century Dutch master which he called a Wouvermann. Before I had scanned it even he suggested that perhaps I might tell him whether it was genuine or not. Now, one must be careful in such cases. It is certainly shocking when a man goes to his safe and from a drawer within drawers takes therefrom a diamond only to be at once told that it is paste.

So I turned to my art dealer and asked him if he really wanted to know just what I thought of his prize—in fact, the truth. He said he did, and would be greatly obliged were I to say just exactly what I thought. And then and there I showed him why it was not a Wouvermann, but a copy, and not a good copy at that. And, surprising to relate, my opinion was neither combated nor was it accepted with anything but the best of grace. "Are you fond of the old school of painters?" he queried.

"I am," said I, "passionately so."

"Well," said he, "there is an old gentleman in town who has about seventy-five old masters of all the schools—Spanish, Italian, French, Dutch, etc. He has a Murillo, a couple of Rubens, a Jordaens, a Vernet, three Salvator Rosas, a Hondekoeter, a Wouvermann, a Turner, and many others that I cannot recall. He has them stacked up in his home and has been a lifetime accumulating them one by one. I know he would be more than pleased to have you visit him and go over his treasures with him. If you would like, I'll give you his address and a card to him." And it was not long thereafter before I was knocking at the collector's door. The card and my statement that I collected such things myself were open sesame for me.

And seated in a sparsely furnished room I saw—faces to the wall and unframed—many canvasses that showed the dust, dirt, and grime of many years. The old gentleman had a way of introducing each painting. He would

take it up in his hand with the back towards me and play a sort of Wagnerian motif in words before he put its face towards me. For instance, holding a canvas 30 by 36, he began: "You know Rubens spent some time in Italy." "Yes, I knew that." "Well, whilst there he was influenced by the Italian masters to a certain degree. You will notice that in this painting," and suiting the action to the word he exposed the painting to my sight. "David, the Psalmist," a picture that enraptured you with the first gaze. The drawing and treatment certainly by and of Rubens, but the coloring of a Tintoretto, and I sat and drank in its beauties. \* \* \* And now here come some friends. An injunction is put upon my scratching on the train, and I must quit and swap fishing yarns with them, because to attempt to write further would be simply useless. So adieu to the "old masters" and au revoir.

CHARLES CRISTADORO.

## Natural History.

### One-Sided Statements.

Editor Forest and Stream:

I wonder why scientific writers are so frequently heedless—even reckless? By scientific writers I mean all who (whether scientists or not) attempt to contribute to our store of general knowledge.

In order to seem impartial, I must correct myself first; and then I beg to be permitted to attack the motes in some of my brethren's eyes.

First—In my first article on the "glass snake," I intimated that the reptile might continue unjointing until "only the head and neck" remained! I meant head, neck, and stomach—it cannot unjoint in or in front of the vital organs and live. I have no excuse for the mistake, saving that, as the creature is so nearly all tail I, for the moment, forgot that it possessed a body with lungs, heart, etc. I have felt much mortified since noticing the error, for I pride myself on my exactness, and desire, above all things, to be considered absolutely reliable.

Second—Some other writer (in some farm journal), quite a long while ago, in praising birds for their assistance to agriculture, in addition to giving them their well-deserved credit for destroying insects, added that they do equal good in eating weed seeds, thus helping to keep these also in check, for "birds never void undigested seeds." If he had said "seldom" instead of "never," I'd have felt better satisfied. They do, most of them (probably all of the seed-eaters), "void undigested seeds" occasionally—often enough and ubiquitously enough to scatter plants into places where probably not many of them would ever otherwise appear. Indeed, I believe they sometimes take seeds purposely as physic. But, "however or wherefore," by their means seeds that are not likely to be carried by other animals nor blown thither by the wind, are planted very thickly, not only in neglected places, high or low, but in well-tilled fields. Nor do I, although a farmer, hold this "agin 'em." Rather I rejoice at it. The up-to-date agriculturist does not consider weeds an unmitigated nuisance. Without them the world would soon become a desert, in spite of man's best efforts to retain the soil—yea, it would never have become the delightful old world it is to-day. True, we don't want to allow them their own way entirely; we must restrain them somewhat; but the labor of keeping them "down" is well rewarded. I do not refer to the benefit of compulsory cultivation, a threadbare and nauseous maxim; they loosen the soil, whether plowed under or left lying upon the surface, help to retain the moisture, and, by their decomposition, enrich and augment the soil. Take the world over, man could not procure nor manufacture fertilizers in sufficient bulk to take their place. But, as if this were not enough, they are undoubted blessings in other ways too numerous to describe. Not the least of their good offices, in my opinion, is their habit of furnishing food and cover for the soul-cheering and beautiful birds that plant them. I fear almost all birds would soon become extinct without them, considering their many and powerful enemies. Then, of course, the weeds would rapidly diminish also (for probably none of them are so vile but some insect can be found to eat them); and so would all cultivated crops, despite man's mightiest efforts with chemicals and implements! A lion cannot defend himself entirely from insects, however he may defy "a foeman worthy of his" teeth!

Third—But birds are not the only important destroyers of insects, as many writers seem to imply. Bats, toads, and all sorts of reptiles are mighty warriors against them. Besides, they have unrelenting enemies within their own kingdom—spiders and stinging insects chiefly; of whom the hornet is chief of chiefs. If I were asked to name, on my own responsibility, the particular creature most destructive of the greatest variety of insects, I would unhesitatingly and emphatically cry out "the lizard." And the reason I want it to glitter in the public eye in big capitals is because it is such a despised and unappreciated little creature. Men who are disposed to look upon it (like Mr. Hay) without prejudice, are very scarce. At first sight almost everybody fears or hates it. But the careful and just observer soon learns actually to admire and like it. See! it isn't half so much like a snake as you thought! It watches you with one eye and a fly with the other (a snake can't do that). There's a comical expression in the eye covering you, and you soon find yourself amused most agreeably, and wondering what is causing that swarm of flying ants to disappear so rapidly; hundreds of them are creeping out of the cells in that rotten stump upon which the lizard is so merrily bobbing up and down, yet very few of them fly away! Presently you are of the opinion that he must be snapping up several of the insects at every bob of his tireless head; but his tongue (very large though it be) is thrust out and in so rapidly—if the weather is hot, the hotter the better for the lizard—that you will seldom see it. And, unless frightened off, he will keep up his work so long that you will avow he has swallowed ten times as many as any bird of his size could have swallowed in twice as long a time! Unlike the snake, his digestion is so rapid that he seems never to need to stop and wait for either

appetite or capacity! And if you will let him go fishing with you, you will find that he is able and willing to defend you from flies or mosquitoes better than any other creature of any size—in daytime; at night you'd better cultivate the friendship of bats!

But this is the common gray lizard, the boldest and most sun-loving of the family, and if your favorite fishing haunt is dark with shade, I'd commend to you the chameleon-like *Anolis*, which is timid in unbroken light, and prefers shady shrubbery to sunny stumps. It is commonly a bright green, but I warn you that it may change suddenly to "old gold," bright, velvety brown, or a fiery red! This I consider the most remarkable of all our lizards. I sometimes call it "the flying lizard," because, whether with the aid of the crimson membrane at its throat (serving as a parachute) or otherwise, it sometimes executes the most prodigious leaps, or flights, from one bough to another, fearlessly alighting, maybe, on a single leaf that looks too frail to support the weight of a grasshopper.

Though a lively enemy to grasshoppers, he is perfectly harmless to man (this being true of the gray lizard also, which is often spotted like a rattlesnake, and the striped "racer," which is called "scorpion" by the superstitious), and deserves to rank even higher than birds in our estimation. He is not likely to be considered a grain or fruit "thief" even by the stingiest farmer, as he lives entirely, so far as I can find out, upon insects. The gray and green varieties, after being gently handled a few times, lose all fear of man, and will work wherever they are placed, if they have sufficient light and warmth, and no birds or fowls are in sight. They fear all birds, from the hugest gobbler to the tiniest hummingbird. Yet, so keen, quick, and unerring is their eye, I have never known one to mistake any butterfly or moth, however large or near-by, for a bird.

Our little nephew, Chester M., claims all the lizards on the farm—and in the forest, too—and will not allow even his dearest dog or cat to kill or worry one if he can interfere in time. He often brings them into the house and puts them in the windows to catch the flies. He is now nearly seven, but began petting lizards when about two. He is not one of your "morbid" kind; he has a natural and wholesome fear of snakes; but evidently sees no resemblance between them and lizards. He knows more about the latter than does many a man with a reputation for knowledge and culture.

Fourth—Someone has lately published the startling statement that "The lower animals have no sense of humor or play; true, kittens and puppies frolic a little, aimlessly and mechanically; but only human beings really play." I ought not to include this in "one-sided statements," perhaps, for from my viewpoint it is wholly error. And I sadly recall that I also—long ago—made a statement, in a paper with a very large circulation, that seemed to imply that I considered animals lacking in imagination. But I was arguing that man's imaginative power (instead of his mere material knowledge) formed the real basis of his supremacy over brutes; and I still adhere to that, but must insist that there can be no reasonable doubt that brutes do possess imagination and humor, although in less degree than man does. Not a few species, merely, but nearly all animals are playful when comfortable and free; and not only while in infancy, but often in full maturity, and occasionally even in old age. Some of them show quite respectable cleverness and ingenuity in their comic representations, stratagems, and deceptions; and successfully affect, or mimic, all the emotions common to man—rage, fear, bravado, joy, surprise, grief, shame, disgust, indifference. I can't understand how any close observer can doubt any of this. I hope to illustrate all this most convincingly in the series of animal stories I am at present undertaking—stories of "real life," too.

The chief cause of so much ignorance concerning animals is a "race prejudice;" there are many men—religious ones, too, more's the pity!—who seem to think it necessary to belittle animals in order to prove man's possession of a soul, and to emphasize the divinity of the Bible, and to excuse themselves for killing animals! Now I, a Christian—and a minister, too, if that counts—see no such need, and wonder day and night how any conscientious person can be so absurd. Man may be better or worse than a brute. At the creation God pronounced them all "good!"

L. R. MORPHEW.

HOT SPRINGS, ARK.

### "Not Science."

Editor Forest and Stream:

THE papers of Portsmouth, N. H., report the Rev. Wm. J. Long as recently lecturing there before the Grafton Club on "Animals and Animal Life." One hesitates to attach much weight to any newspaper report of what a man says, because the best of them may err, and the worst are sure to, but in the present instance the report is of so extraordinary a nature that it is certain some one has blundered, and it seems our right if "not to question why," to find out who has done it. If Mr. Long had not written over his own name so much natural history that, as he is reported to say, "is not science," and one has merely to cite his statement several times repeated in "K'dunk, the Fat One," recently published in the Outlook that the glowworm and the firefly are one and the same creature, we should lay this unhesitatingly to the reporter.

The newspaper (I suppose it is the Portsmouth Chronicle for Jan. 21, but the slip is sent me without date or heading) says: "He advanced the idea that they [animals] know no such thing as mental or physical pain, and that their existence is care free and happy." Now, while no one knows all that passes in the mind of an animal, it seems but fair to judge them by the same standard that we apply to a child too young to talk. When a child cries for its mother we admit that he feels mental pain; but who has not heard people say when a dog whines or howls when taken away from his home, "He is crying for his master?" Who has not heard a dog howl by the hour in a most lonesome, heart-broken way when the family are away, and he is left alone? Does he not feel mental pain? A young beaver will cry for its mother almost exactly as a child does, and for the same reason.

Now, as to physical pain. When you tread on a dog's foot why does he yelp if he feels no pain? Why does a rat squeal when the trap pinches? Why does a bear, when first trapped, often howl so that he can be heard half a mile away? Why are whips carried by drivers of horses if the animal can feel no pain? What man who has ever gunned our northern rabbits (hares) who has not heard them cry when wounded? I believe that every one who has ever had anything to do with animals knows that they feel pain just as men do, although the same cause might not in some animals produce the same degree of pain.

Again Mr. Long is reported as saying: "Animals are unable to recognize death." If this is so, what becomes of the many well authenticated instances where men's lives have been saved when attacked by animals because they were supposed by the animal to be dead? Who has not known of dogs showing plainly that they knew when their master was dead? Not only this, but I have known of animals showing sorrow for the death of other animals. Cows often show sorrow when the calf has been killed. I once knew a skunk whose young had been killed to come back and carry their little bodies, one at a time, a long distance to a spot where she could have her dead to herself. I have myself seen three separate cases where, when mink were in log traps, other mink had carefully covered their bodies with leaves and moss. As it is not the nature of the mink to hide or bury for future use, this would seem to indicate grief for the dead.

Again, the paper goes on to say: "The scientist," said Mr. Long, "will classify the oyster and the crab, but the lover of nature goes into the subject deeper. When the soft-shelled crab loses its shell it goes to the oyster, and the latter, instead of crushing it, as it would any other substance, opens its shell and admits the crab. When the crab wishes to leave its hiding place it goes to the mouth of the shell and the oyster, feeling it there, again opens its shell and permits it to leave. This would be repeated many times. Mr. Long believed that the existence of a deep feeling of friendship between the oyster and the crab was conclusively proved. This, he said, in dismissing the subject, is not science, but life."

Mr. Long is certainly correct in saying that this is not science! As the soft-shelled crab sold in the markets is the blue crab (*Callinectes sapidus* (Rathbun), *C. hastatus* (Simpson)), which has shed its shell, they cannot well shed their shells a second time to excite the sympathy of the oyster. If they had not already shed their shells they would still be the hard-shelled "blue crab." Moreover, they are so large (averaging almost six inches across the carapace) that no oyster could shelter one even if he should vacate his shell for the purpose. The crab which does live in the oyster's shell is the little oyster crab (*Pinnotheres ostreum*), which one sometimes finds in oyster soup. The female of this crab lives in the gill cavity of the oyster as a mess-mate, the male swimming free. The female enters the oyster when it is in the megalops stage, and remains there permanently, thus do-

ing away with the pretty fiction of not needing a latch-key when it goes in and out of the oyster's house. The feeling of friendship is probably about the same as that which exists between a dog and a flea, or a bot and a horse. I am glad to agree with Mr. Long on one point—that what he says is not science. But it is also not truth.

M. HARDY.

### Flight of the Flying Fish.

THE question how does the flying fish fly, has often been asked, and many replies have been made to it. A recent paper in the English Annals and Magazine of Natural History, by Capt. Barrett-Hamilton, records the results of his observations on the flight of the true flying fishes (*Exocoetidae*), which are interesting. The writer's belief is that in these fishes the great fins which act as wings are never moved as organs of flight. "They may vibrate or quiver, under the action of air currents or the shifting of their inclination by the fish; but the whole motive power is supplied by the powerful tail. The wings are a parachute to augment the action of this propeller. Their motions are in no way comparable to those of the wings of a bird." In other words, these broad fins act on the principle of the aeroplane, and the bird is supported on the air as it scales along, for the most part horizontally. This so-called flight is thus analogous to the "flights" of the flying squirrel.

### Two Familiar Characters.

AMONG our acquaintances there are two men whom we see so often, and who are so familiar to us that we seldom stop to consider that they are the ones who are largely responsible for the failure of the people of this country to secure the preservation of their forests, fisheries, and game.

One of these persons is the man who measures everything by the good it will do his own pocketbook, or whether it is good to eat, drink, or wear, or fill any of the wants he may happen to feel. For what is interesting or beautiful in nature he has no perception. He never notices a tree or a piece of woodland, unless to estimate the number of feet of lumber it contains, or without a desire to get at it with an ax. He considers himself a very practical man. Of course he is in hearty sympathy with the parties who wish to convert the big trees of California into lumber, for of what use are they as they are now? If there is any spot in his neighborhood of sufficient natural beauty or interest to induce people to visit it, he places a large sign advertising the article he manufactures in the place where it will disfigure the landscape the most.

He is a good business man, and he may be kind-hearted and generous, but you cannot interest him in anything which does not bear a trade-mark consisting of a capital S with two vertical lines drawn through it. If you are foolish enough to make any such attempt, his invariable remark is, "I don't see what is the use of it." And he really does not see. He is so narrow-minded that he cannot understand that he is not the most liberal and broadest minded man in the world.

The other person is very different. He is bright enough. His difficulty is pure unadulterated selfishness, and his invariable question is, "What difference does it make to me?" If he does not care about shooting, he is opposed to game preservation because it will do him no good; if he does care about shooting he opposes it also, for he thinks the game will last out his day, and what happens after he is gone will make no difference to him. He does not believe in Government parks such as the Yellowstone or the Yosemite, because they are a long way off from where he lives, and he does not have the opportunity to visit them. He looks out for number one first, last, and all the time. Do not waste your time and breath trying to arouse his public spirit, for he has not got any.

Both these types are so numerous—they live in every city, town, and village in the country—that they are responsible for a great deal of harm, or at least negligence. It is because they are such a large class that many of the abuses which go on year after year are allowed to continue. We blame the market hunter for his wholesale destruction of game. We blame the game wardens for negligence in enforcing the laws, and the judges who persistently refuse to punish offenders guilty of violating them. None of them get more blame than they deserve, but they are not the only guilty parties. The man who says "Oh, what's the use?" and the man who says, "What difference does it make to me?" have been as much the cause of the extermination of the buffalo and the rapidly approaching extinction of many of our birds and animals, as the hide-hunters and market-gunners themselves.

It is such people as those we have just described that are making it possible to have the passage of the bill creating the Appalachian Forest Reserve put off from one session of Congress to another, until the lumbermen have stripped the entire area of its forests. Then they

will graciously allow the Government to purchase it. It is largely the fault of our two friends that the spring shooting of wildfowl is still allowed to go on in most States. The people that actually commit and profit by such abuses are few, and they alone fight to be allowed to continue them. It is the indifference of the many that enables them to succeed. This indifference is but little better than actual participation in the offenses, for it is the only thing that makes it possible to commit them.

### Wyoming Wolves.

WELLS, Wyoming.—Editor *Forest and Stream*: Mr. Carney's remarks as to bear coloration reminds me that I never could make up my mind whether our bear here in the Rockies (other than the grizzly) were a black or a brown bear. They run all colors from a light yellow to black, and it is a rare thing to see a litter of cubs all the same color, or of the same color as the mother. I have seen but one such case, and that was a black she bear with two black cubs. Grizzlies also vary greatly in color, and I have seen some that were almost brown, but the long straight front claws of the grizzly are a distinctive mark. The black or brown bear has short, curved claws on the front feet. Grizzlies also have the inner fur darker than the long outside hair, while with black or brown bears it is the other way. I have seen bears that looked perfectly black, but on parting the hair have found the under fur brown. A silver-tip is nothing but a grizzly with dark under fur, the long hairs being tipped with gray. Nearly all grizzlies from a timbered country are silver-tips, while those from the open country have poor, ragged fur, and are much lighter in color—a grizzly gray.

We are now beginning to see the effect of the enlargement of the Yellowstone reserve on the game. One effect is that wolves, big and little, are increasing very fast. I have been chasing a big wolf which got away with a No. 4 trap and a twenty-pound clog, for the last three days. He cut the clog off all but about six inches, and being caught by but one toe, as I afterward found, could travel very well. He had two days' start, and three other wolves were with him all the time. They never left a tract a couple of miles square, and I learned a lot about wolf nature that I never knew before.

When I came up with the trapped wolf it was in thick jack pines, and I had left my horse. Finding that I could not outrun the wolf on foot, I started the dog after him, and went back for my horse. When I got back the wolf had jerked his toe off and Brig had him stopped in an open park. But in riding up my horse stepped in a hole, and we plowed a foot and a half of snow for twenty feet or so. By the time I found out where I was at the wolf had got to the timber, and the other three coming to his help, whipped Brig out, and he came back. By the way, Brig is the father of Turk, the fighting dog that Mr. Roosevelt tells about in the story of his lion hunt with John Goff. In his younger days Brig could whip any three-legged wolf, but he is old and stiff, and most of his teeth are gone, so he didn't have a fair show.

There is no doubt but that the reserve will become a breeding ground for wolves, coyotes, and cougar, and thus lead to greater friction between the reserve officials and the stockmen, and this friction is bad enough already, and has resulted in a demand by the Governor of the State for a change in the management.

As regards other game, the reserve is a benefit. Elk and deer are increasing, the elk being up to the limit of

the winter range. It is hard to say about the mountain sheep. Last season (1902) I thought that there had been a great decrease, but this year I found out that the sheep had left the higher ranges and were down in the timber right among the deer. In our hunt we found many deer and elk above the sheep, and never saw a sheep above timber line but once, when seven ewes went above the trees for half a day. And in the same country that we hunted in 1902 without success we found a reasonable amount of sheep, and got a good head, and could have killed more had the law allowed. The best sheep heads are away back in the Wind River Range. But no one should tackle them unless he has plenty of time, because the country is very rough, and other game scarce.

WM. WELLS.

### The Adirondack Deer.

As a person interested in the reasonable protection of game, both for the present and, at least, the next generation, and in "true sportsmanship"—and further as one who has noticed the virtual extermination of game in some parts of the United States, and has some property in the Adirondacks—I beg your permission to state some facts which have come under my personal observation regarding deer hounding and still-hunting, in reply to the article in your issue of January 23, entitled "Adirondack Deer Hounding."

The writer of the article suggests a basis of general agreement, viz., "a deer hunting law which will give the greatest amount of sport to the largest number of people consistent with the protection of the deer." I would only add "consistent with true sportsmanship," and "permitting of some increase in the number of the deer."

The addition of the words "consistent with true sportsmanship" has a very important bearing upon hounding, as it was generally practiced in the Adirondacks, and it is also true that such hounding did greatly tend to reduce the number of the deer, in two ways. Let me give one or two practical illustrations:

My experiences in the Adirondacks date from over twenty years ago. My first experience was with a hounding party. I had been standing on a runway, and my companion came up and said, "I have just murdered a deer in that lake." His description of the helplessness of the deer in the middle of the lake, pursued by himself and his guide in the boat, was so vivid, and his use of the word "murder" seemed so appropriate, that I then made up my mind that I would never so kill a deer, unless it was absolutely necessary for food.

During my second trip this matter was more fully illustrated. We had just pitched our camp on the lake, then called Albany, and though without hounds (our fine Lewis county guides did not believe in hounding either) had already killed one deer. The next day, looking out over the beautiful lake, we saw two men rowing, or paddling, after a swimming doe. They, of course, easily caught up with her. It was then in their power to shoot her with a gun, or a revolver, to cut her throat, or hit her over the head with an oar, but they did neither. They caught her by the tail and ducked her head under until she drowned.

My friend thought his shooting of the helpless deer at close quarters in deep water was "murder," and all sportsmen will agree with him. What was this drowning? It demonstrates, at least, the helplessness of a deer in deep water pursued by a boat, and the entire absence of true sportsmanship in this character of hunting.

It may be said that the above are exceptional cases. The second may be, but the first, unfortunately, was commonly practiced by many people who frequented the Adirondacks, and was even encouraged by men who leased, for short periods, small inns and hunting lodges for the profits arising from the accommodation of guests, and by certain guides. The slaughter of deer in this way was very great. The lessees did not care for the future of the country, or the deer, and the guides only considered present profits, not realizing that their future, as guides, depended upon there being deer in the woods and fish in the streams. A guide, I know, who once indulged in these practices has since seen his error and has become one of the strongest opponents to hounding in the North Woods. He now says: "One live deer in the woods is worth ten dead deer to me."

We decided to make a trip from our camp on Albany to see what was going on at the neighboring lake, as there were hounds in the woods every day. We found one of these little inns with half a dozen guests, and there were seven dead deer hanging in the woods (some of them spoiling) near the inn. They were putting out some six or eight hounds every day; the guests taking positions on the various lakes, or bays of the larger lakes, in boats with their guides. When the deer took to deep water in any of these lakes to avoid the hounds, he was—what shall I say?—"killed" or "murdered!"

The above is a fair specimen of the hounding of deer on lakes in the Adirondacks, and of the number so killed and wasted, and this occurred on many, many lakes, alas!

I do not mean to imply that all hounding is unsportsmanlike. Not at all. In many kinds of hunting it is necessary, and was practiced in the Adirondacks by some hunters in an entirely sportsmanlike manner. They took stands near a ford on some little river, or on a runway, and they used rifles, never shotguns. The number of deer killed in this way was comparatively small. I do mean to say, however, that if hounding is permitted in the Adirondacks, these unsportsmanlike practices cannot be prevented and, with the present greatly increased facilities of getting into the woods, the slaughter of deer would be so great that the number of deer in the woods would rapidly diminish, and the greatest sport for the largest number would last but a short time.

Hunters the world over have found that local interests are often careless, and look to immediate profits and advantages, that the protection of game by law is necessary to prevent its virtual extinction, and that proper protection gives the greatest sport to the largest number in the long run.

I wish to briefly mention two other matters relating to hounding and protection, and possible increase of deer, and to still-hunting:

Independent of the inevitable slaughter of deer where hounding is permitted in a country abounding in lakes, many experienced woodsmen believe that the running of deer by hounds seriously interferes with the does and prospective fawns; that hounding cuts both ways. From my own observation (this letter is too long to permit of further details), and my hunting has not been confined to the Adirondacks, the absence of hounding tends very greatly to the increase of the deer, and also to their comparative tameness and approachableness, making still-hunting much easier and, therefore, to be enjoyed by a larger number of people.

I know that I voice the feelings of true sportsmen, and of a large number of men who have property interests, or reside in many parts of the Adirondacks. Thoughtful consideration can but lead to the very general approval of the views set forth above, as they are not only in line with true sportsmanship, but will, in the long run, prove advantageous to the guides, permanent residents and regular visitors. Good hunting will hold the old frequenters and attract new visitors who will otherwise go to other parts of the country or Canada, where game is carefully protected, and the hunting (becoming) much better.

Keep the hounds out, let the deer have a chance to increase, and we shall not only enjoy better hunting ourselves, but we shall leave some for our children.

NAT. HENCHMAN DAVIS.

CINCINNATI, Jan. 25.

CANTON, N. Y., Jan. 25.—*Editor Forest and Stream:* The season is now open for game law tinkering. I see that a few who are interested express their opinions, hopes, and desires in *FOREST AND STREAM*, and will, with your permission and assistance, join the slender crowd.

First, is any amendment necessary? If not, why not let it alone? If change is needed, why, and what should this change be? If the supply of game is being maintained, why curtail the privileges of any person to kill? How can you tell whether the supply is being maintained or not? You cannot, except in a general way. If our chief warden keeps tab on all sorts of reports and information from year to year he can strike a sort of general average. More than this no one can do, as deer drift about. How far they drift I do not know, but I know that often a fresh track cannot be seen in a neighborhood where a few days previous the ground was cut up like a sheep yard, while one mile or five away the conditions will be reversed.

We legislate for the hunter, not for the deer. One hunter wants to kill early in the season. I do. I want to take my family to camp any time from August 15 to September 1. I want to kill a deer, hang it in the ice house, and loaf around until it is eaten. Then, if the party is large enough, I like to get another and do the same way with it. Then come home. I seldom bring any venison home. Now and then perhaps a piece to a friend who cannot go for it himself. I have not jerked a pound of meat in many years. I never sold any in my life. There are those who like to sell enough to at least pay a part of the expenses of the trip. There are others who wish to go to the woods later on. A jolly party of men, and they like to kill and eat, and then bring home one or two deer each. They want a late season to get a tracking snow. They will tell you that meat will spoil in Sep-

tember. Sure it will if not taken care of. But why not take care of it? Even if you have no ice you can keep it ten days if you but use a little care. How? Skin your deer, hunt out a dry place between the roots of some good sized tree, scrape away the leaves down to hard ground, spread your hide flesh side up on it, sprinkle a little salt over the hide; next cut the meat off the bones in pieces about the right size for jerking, toss them on to the skin, sprinkle the meat with salt, just enough for cooking purposes, draw the edges of the skin up around the meat, being careful meanwhile to have kept the flies off; be sure that only the flesh side of the skin touches the meat, tuck all the edges in with care, so no flies can get through, cover with moss, three, four, or even six inches deep, cover this with boughs, then with a bit of bark or sticks, not too heavy, but enough to keep the boughs and moss in place. Go to your cache in a week, and if you do not find your venison perfectly sweet (even though the skin may be spoiled), your experience will not be mine.

Schools begin about September 1. The law already cuts off teachers and students and parents whose children attend school. I send my school children home to board with the neighbors until the madame and I return. If you shorten the open season by cutting off the early part, you shut out everybody except the hardy men who like the chill November weather. That you can preserve the deer (if that is the object) by cutting off the November hunting, there is no doubt. The question is, is it necessary, and is it fair toward that class of hunters? I will not attempt to answer the question.

There is yet another class of hunters; one or more have spoken in your columns. These are the men who live on the borders of the woods, say within its borders. A large majority of these residents are honest, hard working men who seldom or never hunt. Now and then, mostly one or more in every backwoods neighborhood you find the exception. No use to legislate for him, for he goes his own way, and hunts whenever he pleases. In the legal open season he hunts openly, and sells his meat. During the close season he is close mouthed, and the game warden who catches him is a dandy. Perhaps he ought not to be caught. If he and his family endure the hardships and privations of the woods, maybe his violations of game laws ought to be condoned. Mostly it is, for it is pretty hard to convict him except on the most positive evidence.

In your last week's issue I notice that a gentleman from Essex county advocates a return to hounding. He asks that if the whole State does not want that, that certain counties, among them St. Lawrence, be given such a law. Since when, I would like to ask, has the gentleman from Essex been given authority to speak for the hunters of St. Lawrence? If he will but search the records of the St. Lawrence county Board of Supervisors, he will find that they prohibited hounding (under power given them by State law) long before the entire State became non-hounding. He will find that the first non-hounding law for the State was introduced by Gen. N. Martin Curtis, then a member of Assembly from St. Lawrence. He did it by request of a very large majority of the hunters of St. Lawrence. A year later the law was repealed, but at our special request St. Lawrence was excepted, and we have never had a hounding law since, and we never will if we can prevent it.

After St. Lawrence had a non-hounding law for a few years—the rest of the State meanwhile using hounds—we were overrun with hunters from other counties because we had deer while they had none. And I think if the gentleman from Essex could make the law (excluding St. Lawrence) he would be up in St. Lawrence looking for venison within the next five years. We will keep the dogs out, and if he does come he will find deer. I fancy, however, that there is very little danger of a hounding law.

J. H. RUSHTON.

Mr. Clarence L. Parker, of Norwich, N. Y., has addressed a letter to the Forest, Fish, and Game Commission relative to proposed changes in the New York law, in which he says, regarding Adirondack deer hounding:

Essex county's Board of Supervisors has passed a resolution asking the Legislature to allow the use of dogs for driving or hounding deer in that county. What effect and results can be expected in case it becomes lawful to use dogs for such purpose in Essex county?

It will largely counteract the good results already obtained by the law making the use of dogs, for these purposes, illegal in the Adirondacks. It will help, educate sentiment and public opinion for game protection and preservation in the wrong direction. It will be a large and harmful step backwards. Even allowing the use of dogs to run, drive, or hound foxes and rabbits will be harmful, for it gives an excuse for keeping dogs in the woods, and it follows that the temptation to drive or hound deer will be added to and actually done.

The State paid out thousands and thousands of dollars to get the wolves out of the woods. One cur dog will kill more deer in a year than a wolf in its lifetime. A wolf only kills to eat and satisfy its hunger; a dog kills for slaughter all he can reach, same as "sheep-killing" dogs do.

How about our large game—elk, moose, caribou, black-tail deer, etc.? Our State has bought and set at liberty some of these; public spirited gentlemen have furnished many more, and there is good reason to expect that, with proper and adequate protection, the Adirondacks may again become stocked with large game.

Give the right to use dogs for driving or hounding deer, even in one county in the Adirondacks, and it will largely, if not entirely, in the end destroy the expected increase of large game. One cause not always recognized is the large number of does which go "dry" or "barren" each season from the effect of having been chased and disturbed by dogs in the rutting season.

A deer which has been dogged, hounded, or driven by dogs until it is heated and tired out will plunge into a river or lake, where it is generally killed by those who wait to shoot it. Sometimes it is headed off from the shore by men in a boat and shot, or clubbed to death with an oar, or has its head held under water and drowned, or caught by the tail and its throat cut.

It seems none of these ways of killing appeal to us as fair or sportsmanlike; besides which the venison is not only unfit for food, but is poisonous and detrimental to health. If our butchers run, or worried, or heated beef and mutton in this way and sold it to us, we would take action against them in our courts.

Public opinion in the Adirondacks and through the State has been educated to a point where it approves laws which prohibit the sale of trout, partridge, and woodcock; also the prohibition by law of shipping the same, unless accompanied by parties who own them, and then in limited numbers and quantity only.

These laws, with the shortening of the open seasons, with not allowing jacking, killing deer at salt-licks, or the use of dogs to drive or hound deer, have resulted in a large increase of native deer in the Adirondacks, and of all these it seems quite evident that prohibiting the use of dogs in that section has been most conducive to this large increase.

The writer has had over twenty-five years' experience in the Adirondacks, has also had experience in the Southern States and in the Rocky Mountains, and in the Alleghany Mountains, as far back as the year 1867.

From personal knowledge and observation, as well as from the lips of experienced men in camp, town, and village, he can state there are more deer, many more, now than twenty-five years ago in the Adirondacks.

He believes no backward steps should be taken, no restrictions removed, and nothing in any way done which will tend in the least to retard the satisfactory increase of our native white-tail deer in our State; nor that will help to again exterminate the large game in the Adirondacks.

If one county allows the use of dogs it will cause much trouble, litigation, and shooting of dogs. Neither men, as a rule, nor the game, or the dogs know where the county lines are, and care less, as a rule, when at such so-called sport, and in the adjoining counties which do not allow hounding or driving with dogs the officers and those who oppose the use of dogs will be on the lookout to cause legal trouble and to shoot dogs.

## Some Alaska Moose Heads.

PEACE DALE, R. I., Jan. 20.—*Editor Forest and Stream:* Some time ago, about last November, you reprinted an extract from a Tacoma paper giving an account of moose heads brought down from Alaska this fall. As that was very incorrect I inclose a more complete list of those from the Cook's Inlet country.

Seven parties were hunting on the Kenai Peninsula for moose this fall, two of Americans and five of foreigners. The heads they brought out were as follows, as the Government allows but one moose head to a hunter to be exported:

Messrs. Fobes and Hazard, who hunted with the guide Emil Berg west of Kussiloff Lake, a 74 $\frac{1}{4}$  and a 72-inch head respectively.

Mr. Handbury, with the half-breed guide, Philip Young, from the same district, a 71-inch head.

Mr. A. J. Stone, with the guide John Kilpatrick, from Kachemak Bay, a 70-inch head.

Lord Elphinstone and Mr. Vanderbyl, who were with the Indian guide, Bill Hunter, on the second Kenai Lake, had a head of 44 points and 68-inch spread, one horn having a double row of points—shot by Lord Elphinstone—and a 69-inch head by Mr. Vanderbyl.

The others, except Dr. Maurer, who had a small head, took out heads from 66 to 69 inches.

Captain Radcliff bought for the British Museum a head shot last year (1902) by Andrus Berg, which he had measured 77 inches, but we only made 75 with a steel tape this fall. It was a twisted, irregular head. The four heads over 70 inches were all quite regular, with good palmation. Mr. Hazard's 72 had a 20-inch palm and 40 points.

Mr. Handbury weighed his moose by cutting him into small pieces, and found him 1,576 pounds.

J. W. FOBES.

## The Ducks and the Cheese.

*Editor Forest and Stream:*

I have just read a communication in your January 10 number, by Mr. Charles Cristadoro, under the caption "High Game." Mr. Cristadoro, whose articles are always read with relish, ends this one with a curious statement to wit, that an empty can that had contained Limburger cheese, having been carelessly thrown behind his duck blind, had caused the ducks to fly shy of that blind, which he attributes to the strong scent of the cheese assailing the olfactories of the flying ducks.

It is a question whether Mr. Cristadoro intends this for a joke or for sober earnest. Assuming the latter to be true, several objections to his theory present themselves.

First, it is my impression that a verdict has been rendered by investigators upon the question of the smelling capabilities of birds, with the result that their olfactory machinery has been pronounced non-effective; in other words, that birds do not possess the smelling faculty. The common impression that carrion crows and turkey vultures are attracted to dead carcasses by the effluvia sent forth is pronounced to be a fallacy, the powers of vision alone being brought into play to discover the quarry.

The second point I have to offer is that even had the ducks' noses been regaled by the rich aroma of the Limburger, they should not have associated the smell with the presence of men, or at all events live men, and dead men should have no terrors for ducks.

In the third place, Limburger cheese could hardly exert such a powerful influence on the surrounding atmosphere as to project its scent to the approaching ducks, as it is frequently tolerated in German eating houses without giving offense to the noses of promiscuous patrons.

And lastly, a tin can exposed to the view of the duck should sufficiently account for their shyness of the blind as I have known a white shirt collar worn by the hunter to have a similar effect, and have also found it necessary to smear mud over the freshly cut willow stumps, made in building the blind, to obliterate the whiteness.

COAHOMA.

### Night Hawk Shooting in the South.

ASHEVILLE, N. C., Jan. 22.—*Editor Forest and Stream:* In your issue of Jan. 23 our old friend Charles Hallock, in "Notes on the Night Hawk," mentions that in both Virginia and North Carolina the birds (night hawks) are shot at for practice, and are eaten in large quantities as game.

Such has been the case in North Carolina up till this past year, but our Audubon Society have entirely stopped the practice. "Bull bats" are protected now in North Carolina by a stringent law.

We well remember the slaughter of these birds the year Mr. Hallock visited us at Asheville (not that he participated, though). The tourists and visitors joined in with the resident and many birds were annually killed.

As president of the local branch of the Audubon Society of North Carolina, I did not hear of a single bull bat being killed last fall in Buncombe county.

We did not have near so many bull bats flying last September as is usually the case; certainly not over one-fourth as many as usual. I have no explanation to offer, but everybody noticed how scarce the bull bats were.

C. P. AMBLER.

### Ski Running.

AMHERST, Mass., Jan. 30.—*Editor Forest and Stream:* The present winter, with its snow-fall lying long on the ground without thaw, has given many of us an opportunity to practice on snowshoes, such as we have not had in a long time.

In past years I have been much interested by accounts given in *FOREST AND STREAM* of the use of the Norwegian skis in the West, and have often wondered why they were not more used in the East, where the Indian snowshoes seem to have been the sole means used to support the traveler over deep snows. Can you tell me where skis may be purchased, and whether there are any works on their use which might make it easier for a novice to learn how to run on them?

A. B.

[As our correspondent says, skis are very little used in the East, if at all, the obvious reason being the lack of snow in most parts of the United States. We presume these shoes may be had of sporting goods dealers, and believe that we have seen them in the shop of dealers here in New York. An excellent little manual of Ski Running is for sale by the Forest and Stream Publishing Company, price \$1.25.]

### A Bad Year for England.

BRENTWOOD, Essex, Eng., Jan. 5.—*Editor Forest and Stream:* Your Christmas number was very good indeed. The wild turkey picture was magnificent.

The season of 1903 was very bad for game birds. Nearly all over England we had a very unusually wet summer which drowned nearly all the young birds at hatching time. Both partridges and pheasants suffered alike. I have been a game keeper for forty years, and I have never experienced a worse year, both for wild and hand reared birds.

H. HICKMOTT.

### Redhead Ducks on Long Island Sound.

MILFORD, Conn., Jan. 19.—*Editor Forest and Stream:* I have received two fine redhead ducks (*Aythya americana*) killed in the Sound off Charles Island. Both were males, and delicious eating. Is this unusual?

MORTON GRINNELL.

[Quite unusual, we think. Although the redhead is often very abundant on the south shore of Long Island, it is very seldom reported from Long Island Sound.]

### Megantic Club.

THE annual banquet of the Megantic Club was held at Delmonico's, New York, Saturday evening, January 30, some 200 members and guests being present. President Jeremiah Richardson was toastmaster. Among the speakers were Gov. Chamberlin, of Connecticut; Hamlin Garland, William H. McElroy, and Job E. Hedges.

### The New York Legislature.

ALBANY, N. Y., Feb. 1.—Fewer game bills than ordinarily have been introduced thus far in the Legislature. As yet, neither the Senate nor the Assembly Committee on Fish and Game has held any meetings, except to effect an organization. Bills lately presented in the two houses are the following:

Assemblyman Hubbs', amending Section 103 so as to provide that the close season on Long Island for ducks, geese, brant and swan shall be from April 15 to Oct. 15, both inclusive, instead of from Jan. 1 to Sept. 30, both inclusive. They shall not be possessed from March 1 to Oct. 15, both inclusive, instead of to Sept. 30.

Assemblyman Dickinson has introduced a bill amending the following sections of the game law so as to make them apply to Cortland county: Section 13, providing that the close season for hares and rabbits shall be from Dec. 1 to Sept. 15, both inclusive; Section 15, providing that the close season for mink, skunk, muskrat and foxes shall be from May 1 to Oct. 31, both inclusive; Section 41, providing that the close season for trout shall be from July 16 to April 15, both inclusive.

Senator Bailey and Assemblyman Reeve have introduced in their respective houses of the Legislature a bill amending Section 103 of the game laws in relation to wildfowl on Long Island so as to provide that wildfowl shall not be taken from March 1 to Sept. 30, both inclusive, instead of from Jan. 1 to Sept. 30, both inclusive, as at present.

Assemblyman Reeve has introduced a bill amending Section 103 of the game laws so as to provide that brant shall not be taken on Long Island from April 15 to October 15, both inclusive, instead of from Jan. 1 to Sept. 30, as at present, or possessed from March 1 to October 15, both inclusive, instead of to Sept. 30, as at present. The law now prohibits taking or possession of brant from May 1 to Sept. 30, or taking them in the night between sunset and daylight.

Assemblyman Leggett has introduced a bill amending Section 73 of the game laws so as to provide that fish may be taken with nets in Lake Ontario in Niagara county, except within one-quarter of a mile of the shore, one mile from the mouth of the Niagara River and one-half mile from any Government pier in that county. The taking of black bass with nets in Niagara county is also prohibited by the act.

Assemblyman John F. Crosby has introduced a bill amending Section 80a of the game laws so as to allow fishing in that part of Cayuga Lake lying north of Canoga Point, and of the New York Central and Hudson River Railroad bridge across the lake, from Oct. 1 to April 30, both inclusive, instead of from March 31, as at present. In that part of the lake south of these points, and north of the line between Tompkins and Seneca counties, it shall be lawful to take fish from May 15 to July 15, both inclusive, with spear, except black bass, and also to take fish, except black bass, with gill nets.

### Meditations of an Angler.

#### I.—Memories.

Now that the world is frozen up tight and fast, with the mercury hovering around the zero mark, nothing remains for the disconsolate angler save a quiet corner beside the fire with his pipe—and perchance a few other comforting accessories—and one or two congenial souls, or, in lieu of the latter, simply the memories of those joyous days—departed all too soon—when the fields and the woods were green, and the waters in the brooks sang their pleasant melodies the whole day through. Your rods are packed away in their cases; your tackle box, with its reel and lines and flies and things, is thrust back ignominiously into the darkest corner of the closet shelf; your fishing togs are stowed away in some old chest in the attic; everything, in fact, that was part and parcel of yourself in those balmy days of last summer, when you went a-fishing, has been sent into winter quarters, there to abide neglected, though not forgotten, until the first warm day of early spring again stirs the old-time fever in your veins.

The memories of so many delightful excursions to Elysian haunts, while indulging in my favorite pastime, crowd in upon me in such riotous confusion that they tumble over one another, as it were, in their desire to find expression. As they come to mind, so shall they be recorded; and even as the "softly purling brook glides on through silent vales," following untrammelled ways, so shall I ramble at will among the scenes and happenings pictured by these fond memories, as the winds and the waves and the fishes dictate.

Nothing but memories, 'tis true, and mayhap the worldly minded and those outside the pale of our brotherhood will laugh me to scorn. Yes, nothing but memories; but ah! what a host of them there are—a host of jolly troopers; not one of them that you would banish if you could, not one that could be bought with all the gold of Midas, for these be treasures that wealth cannot procure.

The pleasures that money alone buys and sells must of necessity be of some tangible form, and the memories begotten of these pleasures—these tactile, frothy sweets of life—are seldom welcome companions, and never less welcome than at a lonely fireside when the winter winds are howling wild outside and moaning in dismal tone down the chimney, for in their train such memories always bring remembrances of something we regret, or if not wholly a regret yet something we hasten to forget.

Can you recall a single day—a single hour—when you followed the windings of some tuneful brook, and angled for the wary trout, of which you would alter one jot or tittle if you could? True, perchance you failed to land that big 3-pounder that time he rose and seized upon your frayed Parmachenee-belle when you cast it so lightly in the shadow beneath the alders at the deep bend. *Male dieu!* so did I; moreover, it was the last day of the

season, and there was no hope of trying him again the next day.

He leaped high in the air, this lunger of mine, displaying his full length (even now I can close my eyes and see the gleaming sides, the deep red belly, the wide protruding jaw), and with a loud splash gained his freedom. His broad tail waved me a scornful adieu as he disappeared from view beneath the black surface of the pool, while I stood with mouth agape gazing at nothing.

All the sorrows, all the griefs and disappointments, all the woes of life were as nothing to that agonizing moment. "The earth was without form or void, and darkness was upon the face of the deep." I could have wept; but, man-like, I merely swore, and swashed around generally. ("Swashed around" in this sense is purely an anglean term, meaning, "To splash water about," "To make a great noise;" I did both), and then the hope that lies in every human breast, but doubly strong in every angler's breast, whispered soothingly in my ear, "Cheer up, he'll be here when you come again, or if not he, why then some other lunger in his stead. Patience, my boy. Remember, there are just as good fish in the sea as ever were caught."

So the world became the good old world once more, and Dame Nature smiled kindly while the brook laughed and gurgled noisily, and I waved my hat, in lieu of a tail, in the direction in which he had disappeared, and cried in scornful tone, "Au revoir, old top, au revoir, and bon voyage," which being interpreted signified, "I'll see you later, and I pray that you may live until you die by my hand." The "old top" was inserted to denote a friendly unconcern non-existent and wholly impossible under the circumstances.

But to pick up the line where it broke when you lost your 3-pounder, was not this one of those defeats that oftentimes proves a victory? Had you landed your fish he would be numbered among the dead by now. He would have served his allotted time, and the halo that now surrounds him with such ever-increasing brightness would have faded and grown dim. It is true that he would grow in weight as the years rolled by, whether "in corpore or in spiritu." It is in the nature of fishes so to do. But the fascinating element of doubt that makes of our piscatorial art a joy lasting and great would be scattered and destroyed by the cold breath of absolute certainty.

In the years to come you can tell your grandson that you once fought for an hour with a 6-pound trout, and failed to land him. You can embellish this tale with all the glowing colors that your fancy can depict, and tell it without a blush, and hardly feel that you are trifling with the truth. Had you really landed your fish, and had you seen the scales register three pounds and no more, you might—in a rash moment—tell your grandson that you once actually landed a 6-pounder, and expatiate over the feat, but you would have to smoke many pipefuls of your favorite brand even to make yourself half believe yourself. And then would come a time when

the youthful scion of your race would attain to the skeptical age called "man's estate," when the bare and naked truth would stand forth robbed of the fanciful garb of your flowery imagination, and he would sigh in half admiring half regretful tones: "Grandfather was a fine old man, but grandfather was an awful liar," and upon your family escutcheon would thenceforth be emblazoned a bar sinister, with an Ananias rampant on a field azure; and your posterity, even unto the third and fourth generation, would rise up and call you liar.

No, it is just as well that you failed to land that trout. At the time it was a disappointment, perhaps, but there is no such thing as real disappointment in an angler's life—I mean the disappointment that leaves a sting behind to irritate the soul, and sour your disposition.

It is the fish that one does not catch that spurs a man on, and adds zest to the sport of angling. You have fished streams—we all have—where every cast of the fly meant a strike, where the creel soon became heavy, and you paused half ashamed at the slaughter you had indulged in.

"A fine catch," you said to yourself, as you emptied your basket on the bank and gloated over its contents. "A fine catch, but they run small; I'll just try to land two or three lungers to top this off with."

And then you started on down stream with an eye for the deep pools only, where the big trout lie. But the big trout—like everything else in life worth getting—are the hardest to get. It requires skill and a nice touch of the rod to lure one of those "venerable men" from his hiding place. The smaller fry are not so fastidious. As your numerous efforts seemed productive of naught but failure, the pride you felt awhile back in your heavy laden creel dwindled correspondingly. Anathemas and invectives were fast becoming the order of the day, when suddenly the mighty splash sounded, the line grew taut, the supple rod bent like a reed, and the critical moment had arrived.

After the first electric shock, which paralyzed every nerve of your body for the moment, and made your heart jump into your throat and then descend as rapidly to the soles of your rubber boots, you braced yourself and prepared for the coming struggle. You would have sacrificed every fish in your basket rather than lose this 2-pounder; and when, after a battle royal, something all at once gave way, and you realized that the fish was gone—that you had lost the fight—well, it was worth the struggle after all; and whenever you shall tell of that day's fishing, the burden of your song will be—not the creel heaped to overflowing, though this will serve to embellish the tale—but the great fight with the "biggest trout you ever hooked;" and the memory of it will always stay with you, to cheer you on your way, long after old age has stiffened your limbs and bound your muscles, when the good old fishing days are past and over, relegated to that shadowy realm of "once upon a time."

Verily it is far better to have fought well and to have been vanquished by a worthy foe, than to strut about in the feeble glare of many petty victories.

I used to go a-fishing with a man named William—commonly called Billy. No matter what. Billy was a good fellow, but serious minded withal. Billy and I were one time fishing on a stream called Lunch Creek. Why Lunch Creek this deponent sayeth not. Probably because there was no place within seven miles of the stream where one could get a bite to eat.

On the day I have in mind, Billy and I had taken our luncheon with us. We hesitated at a farm-house because we espied a pump on the premises. Now, the farmers in that particular part of the country through whose land Lunch Creek meandered were averse to the society of anglers. In their creed there was no good angler save a dead angler, consequently we were obliged to employ diplomacy in our dealings with them. The golden rule which they all carefully observed appeared to be, "Give nothing unto others unless they give something to you." As we entered the gate of this particular farm yard, a yellow dog of nondescript character, seemingly all teeth and no tail, constituted himself the reception committee. His greeting was cordial, very—in fact, it might almost be termed effusive. A little more reserve on his part would have been appreciated. Obviously he was seeking to create an impression upon us. Being of a retiring disposition, Billy directed his nervous step toward the barnyard, escorted by the dog. He circled a corn-crib once and a reaper three times. I took a more direct course; I was quite thirsty, therefore I may possibly have employed more haste than was becoming to my style of beauty.

As we drew near our haven of refuge—I mean as we rounded the barn—we "saw an aged, aged man a-sitting on a gate."

Emboldened by the presence of his master, the yellow dog waxed importunate. Billy, who was describing parabolic curves of which the Aged Man was the focus, commanded the latter, in language couched in forceful expletives, to "call off his dam-dog." The Aged Man was deeply engaged in the arduous labor of whittling, and heeded us not. And then I had an inspiration. A small bottle is a great pacifier, and a "wee nippy" a powerful advocate. I produced the pacifier; the Aged Man consulted the advocate, and we found ourselves established on a conversational basis.

We explained that we wished to eat our luncheon near the pump, the fates and the yellow dog being propitious. He merely stared, as though the explanation were superfluous, and told the dog in passionless tones to "Charge, you blankety-blank hunk of sausage meat." The command really sounded like one long word.

Billy laid his rod on the ground, and I leaned mine against the corncrib. We sat ourselves down upon a wagon tongue and proceeded to relieve our hunger. The Aged Man continued sitting on the gate, displaying but slight interest in our presence.

We had finished our sandwiches and arrived at the pickles, when a sudden commotion and a great squeaking attracted our attention.

The Aged Man pointed with the stick he had been so deeply absorbed in, and grunted:

"Hi, there! See the hen? You've ketched him."

"Great Scott!" cried Billy, leaping to his feet. "I've caught a fool chicken!"

It was the painful truth. An inquisitive hen had discovered Billy's fly, and seized upon it with an avidity worthy of a better cause. Billy snatched up his rod and proceeded to reel in. The hen had taken all the line. Billy gave her the butt, and she rose from the surface of the earth; that is, she soared aloft with a loud cackling, and then came down in a flutter of wings and feathers. Every fowl on the place joined in the chorus.

"What did he have on the hook?" the Aged Man placidly inquired.

"A fly," I replied.

"Must be," he drawled. Derndest fly I ever see. He went 's high 's the corncrib, by jimminy crimes!"

He absentmindedly stretched out a long leg and kicked the yellow dog. The dog roused himself and looked about for revenge. Espying the frantic hen, he made a dash for her. The hen "broke water" again, and Billy reeled in a yard or more of line.

"Get the net," he yelled, as the hen came my way.

"Not on your life," I shouted back. "I'm afraid of the dog."

"He's the most peaceful hen in the hull bunch," the Aged Man volunteered. Billy played the hen for about half an hour, while I shied corncocks at the yellow dog, who in turn plucked feathers from the hen's tail. The Aged Man was manifestly a mildly interested spectator, until the hen suddenly flew straight at him, when he fell off the barnyard gate, bringing the hen to the ground with him. I anticipated the yellow dog, and captured the squawking fowl. And then we held an antemortem.

"We'll have to cut the hook out," Billy declared. I never saw him look quite so wild before.

The Aged Man assumed a sitting posture where he had fallen, and rubbed his leg. "Ouch! I bumped my shin," he announced. "You suttently ketched him on the fly," he added, meditatively.

"We had better cut the line and pay the man for the hen," I suggested.

"Well, what's he worth?" asked Billy, turning to the Aged Man.

"He's the most peaceful hen in the hull bunch," the latter dreamily made answer.

"Will a quarter be enough?" Billy impatiently demanded.

The aged one nodded assent.

We cut the line as close as possible and released the hen. Billy paid the Aged Man his quarter, and hurried away from the scene of conflict. I waited until we reached home before referring to the painful subject.

About two months later I chanced to be fishing in Lunch Creek alone. I stopped at the Aged Man's house to see the pump; he remembered me—the Aged Man, not the pump—and was mildly scissable.

As I started away a black hen scurried across my path. "That hen makes me think of the last time I was here," I remarked.

"Yaas," said the Aged Man, "only he ain't quite as peaceful as he uster be."

"You don't mean," I began. "Say, what became of that hen, anyhow?"

"Nuthin'," the Aged Man replied. "He ain't as peaceful as he uster be. Barrin' a week or two when he didn't lay, he come out all right. See fer yourself," and he pointed a long, bony finger at the black hen that had just crossed my path.

"Tell your friend to come out and try some more fly-fishin'," he called after me, as I turned away and left him. "Got lots of hens and six roosters."

Nothing but memories! Yet all the yellow gold of Midas could not buy them. The world is bound fast in snow and ice; the trees stretch out their naked branches protestingly to the cold sky overhead, and the trout streams that we love so well flow through ice-fringed channels; but Memory can make the fields fresh and green, can stir the rustling leaves with warm summer zephyrs, and unloose the ice-bound streams.

This is the picture that paints itself so alluringly in the bright glowing coals of the open fire; this is the one great panacea for all the petty ills of this hurly-burly life when the rods and the reels and things are laid aside for the nonce, and the balmy days of last summer seem naught but a dream.

A winding stream in a wooded vale

At the close of a summer day,

Where, as the light begins to fail,

The trout are jumping at play;

And the night winds wak'ning amid the leaves,

Whispering soft and low;

And the shadows deep'ning beneath the trees,

Where the ferns and the mosses grow.

I can hear the voice of this winding stream,

As it chatters upon its way,

I can see the pool where the waters gleam

In the fading light of day;

And the fringing grasses are trailing there

In the eddies swirling by,

Where the big trout lurks in his hidden lair,

Watchful and wary and shy.

O, for a touch of the light bamboo,

And the sound of the spinning reel,

And a day in the dear old haunts with you,

With a rod and a well filled creel.

O, to escape the noise of the street,

And the sight of the hurrying throng,

And breathe the air of that cool retreat,

Where the brook sings its evening song.

FAYETTE DURLIN.

## Public Trout in a Private Cellar.

SYRACUSE, N. Y., Jan. 29.—*Editor Forest and Stream:* I inclose clippings from the Syracuse Herald containing an account of a controversy between Hon. D. C. Middleton and the Anglers' Association of Onondaga.

We, and all sportsmen and others here interested in the protection of fish and game, believe that Mr. Middleton has done a great wrong, not alone to our association, but to all sportsmen and supporters of the law, a wrong in using his office and influence to condone an offense against the law which it is his sworn duty to enforce, a wrong to the whole cause of fish and game protection in this State; and has established a precedent which will work injury to that cause, and which will come back to plague him sorely in the future term of his office.

We know you to be a firm supporter of the game laws, and believing that they have been outrageously violated, we ask you to republish the matter. If you will do so, a statement of the work and character of our association may not be amiss.

The Anglers' Association of Onondaga was organized in 1890 for the protection and propagation of fish in the public waters of Onondaga county, later adding the protection of game as well. We are not a sportsmen's club, have no preserves, and do no work as to private waters or preserves, but all of our work has been done to aid the State in the enforcement of the fish and game laws, and to assist in the labors of the Commission.

We began immediately upon organization to employ a protector, and excepting in the months of December, January, and February of each year, we have kept a man at work every year since. Our protector has captured and destroyed hundreds of nets, has made many arrests of violators of the law, and convicted them. The value of the nets we have captured and destroyed since our organization has easily averaged \$2,000 yearly, and in doing this he has traveled thousands of miles on the lakes, rivers, and streams of this county each year.

In addition to this we have obtained from the State and planted in public waters millions of fish and fry, as you will see from an extract I inclose from our report to the Board of Supervisors of this county, who, recognizing the value of our work and its public nature, annually contribute a sum of money to our assistance.

All of this work, all of our expenditure of money, and all the time devoted to the cause by our officers and members are absolutely and entirely for the benefit of all the people who choose to benefit by it and are entirely on public waters.

Our association numbers nearly 500 members, and comprises in its ranks the best business, professional, and working men of this city and county.

One of the streams which we have spent our time and money in stocking is Onondaga Creek. We have made it one of the best trout streams in the State outside of preserves, and it is from this stream that the trout concerned in this controversy have been taken and impounded, not in a decorative fountain or pond, but in an old cellar, and not for decorative purposes, but for table use in their club house, which is a few rods from the cellar. And it grinds hard to think that these trout which we have put in that stream for the public and for fishermen to take in a legal and sportsmanlike manner should be taken out with nets and kept for the private use of men who haven't a drop of fishermen's blood in their veins and never spent a dollar nor worked an hour for the good of the cause which is dear to us. And then to see that our appeal to the commissioner is disregarded,

and that instead of upholding our hands and the law, he goes over to the side of the pirates and attempts by a retroactive scheme to legalize their piracy; it is more than human nature can endure, and the end is not yet, as Mr. Middleton will find out.

His defense, as reported in the press, is puerile and a deliberate falsification of facts, if he has been correctly reported, for when he states, if he does, that only about a hundred fingerlings were taken and put into the pond or cellar, he states what is directly contrary to the report of his assistant chief protector, Mr. Leavitt, of his Commission. Mr. Leavitt reported that there were 106 trout in the cellar, and that they ranged in size all the way from three to twelve inches in length, and that more than half of them were from eight to twelve inches long.

The Solvay Process Company, who have taken up the case of their employees, and who sent their attorney, Mr. John L. King, to the commissioner to cook up this scheme, is an extensive and wealthy manufacturing institution whom we cannot fight, especially with the commissioner on their side. We can only appeal to the public through the medium of the press, and trust to raise such a storm of indignant protest around the head of the commissioner that he will have to rescind his action or get out.

THE ANGLERS' ASSOCIATION OF ONONDAGA,  
John H. Forey, President.

From the Syracuse Evening Herald, Jan. 27.

On September 14, 1903, it was reported to the officers of the Anglers' Association of Onondaga that on a farm of the Solvay Process Company in the town of Tully there were held in captivity a large number of trout which had been taken from the waters of Onondaga Creek and its tributaries in violation of the game laws of the State.

Protector Perry was at once sent out to investigate and report. He made his report on the morning of September 16 that he found four tanks in the rear of the house of Hugh Graham in which there were thirty-nine trout, varying in length from eight to eighteen inches, and in an old cellar, from which the house had been removed, which had been cemented upon the bottom and side walls and into which a supply of spring water had been conducted, more than 100 trout, varying in length from three to twelve or more inches each. This cellar, measuring about 30 by 20 feet, is on the property of the Solvay Process Company, and adjoining a club house recently erected by this company for the use of its employees in that vicinity.

As the case was of an entirely different nature from any other ever brought to the notice of the association, the president considered that the best thing to do was to report it to the authorities at Albany. This he did on September 16, requesting that a State game protector be sent home at once to investigate and that legal proceedings be begun at once against the violators of the law.

A few days later Assistant Chief Protector John E. Leavitt came to Syracuse and with Protector Perry made a visit to the trout-filled cellar in the Tully Valley. He reported to the chief protector at Albany that the charges made by the Anglers' Association had not been overdrawn, and that the parties who were responsible for the possession of the trout did not deny having procured them from the public waters. He further reported that from what he could learn they had been doing something of a business along these lines, retaining the trout for dinners at their club house, and to send to officers of the Solvay Process Company as occasion required.

As is the usual custom with the Forest, Fish, and Game Commission in cases of reported violations of the game laws, the accused parties were given an opportunity to be heard before legal proceedings were instituted. A short time afterwards John L. King, attorney for the Solvay Process Company, appeared before Commissioner Middleton at Albany and succeeded in making an arrangement whereby the trout in the tanks at the Graham place should be returned to the waters from which they had been taken, but that the trout held in captivity in the old cellar should be allowed to remain, as it was construed that this cellar inclosure was to be considered a "pond or fountain for decorative purposes," and that it was proper that this company should be permitted to maintain such a pond or fountain and keep therein a certain number of trout.

This stipulation or decision was rendered by Commissioner Middleton on October 8. After repeated inquiries by the officers of the Anglers' Association as to what was being done in the case a copy of the stipulation was sent to them on December 5.

At the regular meeting of the association held on December 14, a special meeting of the executive committee was called for December 16, at which the entire matter was fully discussed. The unanimous expression of the members present was that "the authorities at Albany have not treated our association fairly, have exceeded their authority, have undertaken to exercise and legalize a flagrant violation of the game laws of the State, and that, in order to appease public clamor and the law-abiding sportsmen of this county, the commissioner should at once rescind the stipulation of October 8, and that a State game protector should be sent at a very early date to the farm of the Solvay Process Company in the town of Tully, with orders to liberate and restore every one of the trout held in captivity to the waters of Onondaga Creek, from which they were illegally taken."

On November 15 President Forey and Protector Perry drove out to the Solvay Process Company's farm and paid a visit to the trout-stocked cellar, where they counted 104 trout. According to President Forey, under the game laws of the State, someone should be prosecuted and fined as follows:

For violation of Section 40.....	\$1,065
For violation of Section 43.....	60
For violation of Section 57.....	1,065
For violation of Section 40, relating to trout less than six inches long, about.....	525
Total.....	\$2,715

"The anglers of Onondaga have labored hard and faithfully for nearly fourteen years," said President J. H. Forey, president of the association, "and have expended thousands of dollars in stocking and protecting the

streams and lakes of this county. They have captured and destroyed many thousands of dollars' worth of illegal devices for the capture of fish and have caused the arrest and secured the conviction of a large number of persons who have violated the laws relating to fish and game. They naturally take exception to the easy manner in which these violators are allowed to go scot free by the Commissioner of Forest, Fish, and Game in violation of his prescribed duties as laid down in Section 155 of the game laws. They hope by giving all the facts in this case to the public that such a storm of indignation will be raised throughout the State for his failure to attempt to punish the guilty as will cause the commissioner to retire from the position he holds.

"They feel that a great injustice has been done the Anglers' Association and all law-abiding sportsmen of this section. Notwithstanding the attitude of the commissioner in this case, the association has no thought of dropping the matter, but will continue to push it and if possible bring about the punishment of the violators, as they have evidence that the fish were taken with nets and other illegal devices."

Commissioner Middleton was in Syracuse on Monday and in consultation with officers of the local organization. He held firmly to his previous ruling of permitting the trout to be held in the cellar inclosure.

From the Syracuse Evening Herald, Jan. 27.

ALBANY, Jan. 28.—Dewitt C. Middleton, the State Forest, Fish and Game Commissioner, when questioned to-day concerning the charges made against him by the Anglers' Association of Onondaga county, that trout taken from the streams in Tully are being kept in a cellar bottom for officers of the Solvay Process Company, said:

"This is much ado about nothing! The facts of the case are these: The Solvay Process Company, which owns a farm in Onondaga county, has about a hundred trout in a reservoir on its land. The trout were taken from Onondaga Creek by some of the employees of the company. The fish have not been taken for the purpose of destroying or catching them for food or sporting purposes. The company has promised that when the fish are large enough for spawning that they will be put back in the creek from which they were taken. We have issued a permit to the company to take the fish under Section No. 57 of the State game law, which provides: 'Trout or lake trout shall not be taken from any of the waters of the State for the purpose of stocking private ponds or streams, but an owner of a private pond may, with the written consent of the Commission, stock the same with fish from a stream on his own premises.' The permission was granted to the company to take the fish last fall."

"Complaint has been made to us that the fish had been taken without authority. We investigated and the officers of the company assured us that they had no intention of violating the game law. The fish taken were mostly fingerlings. They were too small for the purposes of fishing. The company informed us that the fish had been taken more for the purpose of making them pets than for any other purpose. They assured us that they would never use the fish for fishing purposes, and that they would turn them back into the creek when they had become large enough for that purpose."

"The reservoir, as I understand, is a miniature affair. It has running water sufficient for the wants of the fish when young, and that is about all. I have had several talks with the representative of the Anglers' Association, and he understands the whole matter. Of course, I cannot help what he may publish. I have told you all that there is to be said. The affair does not amount to anything."

To the Editors of The Herald:

In regard to Commissioner Middleton's defense in the Tully case: Section 57 of the game laws says: "Trout or lake trout shall not be taken from any of the waters of the State for the purpose of stocking private ponds or streams, but an owner of a private pond may, with the written consent of the Commission, stock the same with fish from a stream on his own premises."

The cellar pond in question is on a farm belonging to the Solvay Process Company in the town of Tully. The Solvay Process Company made no request of the Commission to take trout from the waters of the streams running through their property for the purpose of stocking this pond, but employees of this company, without any written or other consent from the Commission, captured trout from the near-by public streams and placed them in this pond.

Commissioner Middleton says: "About 100 fingerlings were put into the pond." When Assistant Chief Protector Leavitt and our protector, Perry, made their investigation the latter part of September, they counted 106 trout varying in size from three to twelve or more inches in length, and on November 15, two and one-half months after the trout season had closed, I made a visit to this "decorative" cellar pond and counted 104 trout, about seventy of which were from three to six inches long each, the remainder from eight to twelve or more inches in length; so it would seem that "the fish big enough for spawning" had not been liberated at the close of the fishing season, or that trout from eight to twelve inches long are not big enough to spawn.

In relation to Mr. Hazard's statement, "No trout had been used for table purposes, either by the officers of the company or at the club house," and that "everything had been conducted according to law," Mr. Leavitt, Mr. Perry, and myself were informed by men in the employ of the Solvay Process Company on this Tully Valley farm that trout had been taken from this pond and sent in to the officers of the company for their consumption, and Mr. Leavitt, in his report to the Chief Protector, said, "they were retaining the trout for dinners at the club house." If everything has been conducted according to law, who is the owner of the private pond; when, where, and how did he obtain written consent from the Commission to stock this pond with fish from a stream on his own premises?

No permission was requested until after the fish had been taken from the streams and placed in this pond, and no permission was granted until nearly a month after the Anglers' Association had notified the Forest, Fish,

and Game Commission of the violation of the law.

Among the duties of the Commission, as laid down in Section 155 of the game laws, is that "the Commission shall have charge of the enforcement of laws for the protection of fish and game and the forests," and we fail to see where the commissioner is given power to act as judge and jury in case of violations.

In conclusion, I desire to say that there are not and never have been any personal differences between the officers of the Solvay Process Company and the officers of the Anglers' Association. We have always been courteously received by them when we have had complaints to make, or were in search of information, and we have always been ready to accord to them the same treatment.

In accepting the positions we occupy, the officers of the Anglers' Association promised to do our duty, and in this case we have done no more. We were refused assistance at the hands of the State authorities, and we have tried to set ourselves right before the people.

J. H. FOREY,  
President Anglers' Association of Onondaga.  
Syracuse, January 28, 1904.

John L. King, attorney for the Solvay Process Company, when seen at his office this morning, had this to say regarding the charges of the members of the Anglers' Association against his company and against Commissioner Middleton:

"The facts in the case are these: On the farm of this Solvay Process Company is an old cellar, as near as I can judge, about 12 by 25 feet, in which are kept about 100 small trout, taken from the stream which flows through the property of the company. The pond is merely for decoration purposes, and none of the fish from this inclosure have ever been taken or are to be taken for use upon the table."

"There is a statute that provides for the maintaining of such private ponds with the formal consent of the Commissioners of Forest, Fish, and Game. It is under this statute and with such formal permission of the commissioner that these fish are kept. It looks to me as if some of these anglers who go out and in a day slaughter more trout than we are holding in captivity were trying to get a little notoriety."

"If there is anything unlawful being done why do they not go ahead and prosecute?"

## The Shark Astern.

Editor Forest and Stream:

An article copied from the New Orleans Times-Democrat appeared in the FOREST AND STREAM of January 16 about sharks.

Every once in a while someone will rise up to tell us that there are no man-eating sharks. It would not do to tell an old sailor that. He knows better. Some years ago I met a young man who knows that there are such fish—he had left his left foot and part of his leg with one of them while he was bathing off Key West; and had not the ship's boat got to him the moment it did the shark would have eaten the rest of him.

When sailing in the steam whaler in 1874, one of our amusements was fishing for sharks. I made a hook after a drawing, and with it we caught a number of them. One of our boat steers gave me his opinion of how the shark became a man-eater, and I have often since thought he had it right. Since then I have seen the same opinion advanced to account for the man-hunting tiger. All tigers are not man-hunters, any more than are all sharks man-eaters. His idea was that if a man-eating shark did attack a man, then any other sharks that might also be in the neighborhood would also attack him, and after these sharks had done so, then they, too, became man-eaters.

The shark is like the wolf in one respect. If he gets hurt any of his companions that may be present will tear him to pieces without loss of time. I have seen them do it.

We were under sail and were standing west under a light wind, hardly doing more than keeping steerage way, with the sea as smooth as a mill pond, when one morning just after daylight a shark was seen following us about one hundred yards astern of the ship. He had probably been doing this all night. Only his dorsal fin showed above the water, but he seemed to be a large one. Our hook was thrown to him, but the only notice he took of it was to drop a little further astern; he did not want the hook. At noon he was still in his place astern, and leaving the hook out for him, we went to dinner. He might get bold enough to take the hook when we were not in sight, I thought; but he did not, for when we next came on deck he was still as far astern as before; and now I made up my mind to shoot him.

We had rifles on board, but I could not use one of them without the captain's permission, and just as I had started to go and get his permission, he came on deck, and seeing the shark sent me for his glass and a rifle. I brought up an old Sharp's rifle, and while the captain stood at my elbow with the glass to coach me, I fired three shots, using his fin, the only part of him I could see, to aim by. I wanted to hit him amidships, and as low down as I could, and not have the water deflect my ball. The first shot was too high, the next one not high enough, but the third shot got him, and the ball had hardly hit him when two other sharks that none of us had seen before seized him, one on each side of him, and dragged him down.

For the next few minutes something seemed to be doing back there. The big shark got to the top of the water twice, throwing himself nearly out of it the first time, and giving us a chance to see how large he was; but each time the others pulled him below again. They were still fighting when we had dropped them too far astern to be able to see how the fight terminated.

These sharks will follow a ship day after day, to pick up what may be thrown overboard. The sailor thinks that it is he that they want to pick up. Some of them would not refuse him if he did drop over. When we found them following us we would bring up a bucket of kitchen refuse and throw it to them, then present them the hook; and some one of them generally made the mistake of taking it. When he did we only got him; the rest of them always left.

CABIA BLANCO.

## A Lake Superior Seal Scheme.

BOSTON.—Editor Forest and Stream: Will you kindly give space to the following clipping from the New York World, republished in a Boston paper, and a word of comment:

Preliminary steps for the formation of the Lake Superior Seal Propagation Society have been taken at Ashland, Mich., the object being to stock Lake Superior with fur-bearing seals.

The reported heads of the organization will be Seber Malaroff, a Russian, with thirty years' experience as a sealer, ex-Lieut.-Gov. Fifield, of Wisconsin, and J. S. Robbins, of Rhinelander.

It is figured that ten male and forty female seals in the lake will increase to one thousand in twenty years. The Apostle Islands, together with Isle Royal, and the rock shores of Lake Superior, would, it is believed, be ideal breeding places for seal, while in Malaroff's opinion the climatic conditions are perfect.

Efforts will be made to procure governmental regulation through agreement with Canada. The promoters figure large profits.

Concerning the scheme, Henry L. Ward, custodian of the Milwaukee public museum, and who spent several weeks last summer on the Pacific Coast, observing the habits of seals and sea lions, considers the experiment worth trying; but its practicability, he declares, would depend upon developments.

"The fur seal is naturally a salt water amphibian," said he, "but it has been known to live and breed in captivity one thousand miles from salt water. However, the captive seals were always well cared for and well fed. Fish is their chief food, and if fish are found in sufficient quantity in Lake Superior, that objection to the success of the plan would be removed."

"Climatic conditions are another matter to be considered. It is somewhat questionable if the intense cold of the Lake Superior region would not prove detrimental to the health of the seals. The fur seals of Alaska remain at their rookeries in the Pribilof Islands only during the heated season of the summer. The rest of the year they are somewhere in the Southern Pacific, at their feeding grounds."

"However, the project is one worth trying, and if it proves successful, a new value might be given to the great lake."

The names of at least some of the gentlemen mentioned in the article are such as should give warrant to the public for belief that before they would concern themselves in even "preliminary steps" for the formation of such a society they would discuss carefully the present economic values which might be endangered by such an interference with the present order of nature in the Lake Superior region. Perhaps this investigation has been made. The article, however, gives no hint of any such thing, and the recklessness with which such interferences have been made in the past, often with the result of enormous and irreparable damage makes it easy to believe that the promoters of the scheme may not have included in their calculations any possible damage to result from it.

I do not know what the value of the fishing interests of Lake Superior may be.

Those of Lake Huron certainly were important not very long ago. Those who know how destructive seals are to fishing interests in other parts of the world, and the bounties paid for the destruction of seals for this reason, will wonder what the fishermen of the Great Lakes will have to say about this new plan. I half suspect the whole thing to be only the product of some newspaper man's imagination; but if not it will be worth watching.

Some of the misguided people who put black bass and pickerel into Maine lakes lived to repent bitterly their folly. The same was true of some of the equally misguided persons who brought over from England the house sparrow. A long list of such acts could easily be made. The mischief is done, however, and for all time. "All the king's horses and all the king's men" couldn't undo it.

Seal raising in Lake Superior may be a very novel and interesting idea, but it is also just possible that it may be something worth considering very carefully in its relation to existing interests.

C. H. AMES.

## New Jersey Pound Nets.

ESSEX FISH AND GAME PROTECTIVE ASSOCIATION, Headquarters, 137 Belleville avenue, Newark, N. J., Jan. 29.—Editor Forest and Stream: The association desires to call the attention of your readers to the reasons why we are advocating the passage of House Bill No. 1, and Senate Bill No. 11, to prohibit the placing or maintaining of pound or fixed nets in the water of Sandy Hook and Raritan Bays and tributaries thereof, and compelling the use of 5-inch nets in all other tidal waters.

We positively are not in favor of abolishing the pound nets entirely. We claim that the legitimate demands of the people and markets can be best served by properly regulating the nets, so as to avoid the unnecessary slaughter of millions of small unmarketable food fish by the use of small mesh nets, as are now being used.

Senate Bill No. 11 is intended, and we are convinced will allow all small edible fish to pass through and mature, as nature and the demands of our markets desire in order to supply the future. At the present time the pound nets are surely destroying them at a rate that, according to all history, means extermination.

At the proper time we will produce affidavits from old and professional fishermen, showing that millions of small and unmarketable edible fish are being destroyed by the numerous pound nets and allowed to drift and wash ashore. At some points along our coast the above fish are so numerous that the stench is becoming very annoying to the people who are spending their summers along the coast.

We advocate House Bill No. 1 for the purpose of allowing the fish to enter the waters of Sandy Hook and Raritan bays for the purpose of spawning. As the above waters are especially adapted for this purpose, and are also about the extreme northern points of migration, we feel that after they have escaped the hundreds of nets and traps set for them they should not be molested here.

LEGISLATIVE COMMITTEE.

## Passaic County Association.

PATERSON, N. J., Jan. 27.—The Passaic County Fish and Game Protective Association will have a real sportsmen's show March 21 to 26. There will be everything from a hound to a fish hook, from a rabbit to an English pheasant, and fish of every kind. It is the intention to get sporting goods only. This will be a good chance for dealers to make a display to show their goods. This Association is one of the strongest in the State; each member acts as a game warden. We have a membership of 175. We have measures which we are going to present to the Legislature this winter for the protection of game and fish.

THOS. CARLESS, Sec'y.

## The Kennel.

### Points and Flushes.

The prize list of the twentieth annual dog show, to be given by the New England Kennel Club, February 22-25, Boston, can be obtained on application to secretary's office, Room 16, No. 521 Washington street. Entries close on February 6. The special prize list is long and valuable.

## Southern Beagle Club.

NEW ORLEANS, La., Jan. 28.—The Southern Beagle Club will hold its second annual field trials at Centreville, Miss., on the I. C. Railroad, during the week beginning Feb. 22. We hope that beagle men everywhere will make entries. The fee is only \$5. Southern fanciers of the little hound are especially urged to do so. They should also come forward and join the only organization which affords any opportunity to encourage the fancy of their favorite dog in this part of the country. Surely \$3 a

year, the membership fee, is not a heavy tax on any individual who loves and wishes to advance the cult of the beagle.

There will be four classes at these trials: A Derby for dogs and bitches 13 inches and under, and one for dogs and bitches from 13 inches to 15 inches; an All-Age Class for dogs and bitches 13 inches and under, and one for dogs and bitches from 13 to 15 inches. Entry blanks can be had of the secretary.

HENRY DICKSON BRUNS, M.D., President.  
J. T. JONES, Secretary, Baldwyn, Miss.

## In Southern Seas.

### A Cruise Around the Island of Oahu.

BY ALLAN DUNN.

#### The Story Which Won the Third Prize of \$25 in "Forest and Stream" Cruising Competition.

(Concluded from page 91.)

When the committeemen came over, the time of making the light was found to be 4:45, or 1h. 48m. behind our time, a nice little start for the next day,

paired his jib as best he could. His boat carries 12in. bulwarks, and all had a sloppy time of it, the skipper having no one to relieve him at his helm, his trick being all the harder by the use of a tiller instead of a wheel. Dinner over with healths in bubbling wine, a general talk kept us all up on the wide verandahs later than we meant to stay. At last we parted for the night, the Gladys and Helene crews rowing off to their yachts for the night while the Paloma was left in charge of one man. Before saying good-night the regatta committee handed out instructions for the start, which was arranged for seven or as soon thereafter as two skipper might agree as to the breeze which was reported light in the early morning. On their agreement a gun was to be fired from the Gladys, time to be taken five minutes later, all yachts to be at anchor at gunfire.

We were up at five, after a short night, the sea in the tiny harbor keeping the Gladys rolling all night. We shifted the spinnaker boom to the port side, overhauled everything, brought up on the anchor, threw off gaskets, had breakfast, and were ready by seven, sharp. There was breeze enough for the Gladys to work out, but the others kept us waiting until 7:41 before gunfire, and then we rushed at it. Up came the hook, mainsail and jib, and round we came in our own length just 8s. behind the Paloma. The Helene was too close to the reef to swing as we did and finally fell in irons, having to drop anchor afresh before she got a start, 7m. behind time. The Paloma went out of the entrance fifty yards ahead, but we were soon up to her and skirting the reef, passed to windward of her inside of 3m. To our joy the steady wind promised to be easterly rather than the regular northwest trade, which

The long Pacific surges coming unchecked from the northland, broke in long rollers spume heralded. Now and then a heavy rain squall blotted out the land from view or, bringing wind with the downpour, heeled over the yacht to the garboard strake. We spared the staunch little craft nothing as we bucked into the steadily strengthening breeze, and with short tacks, seaward we devoured the miles, leaving the Paloma steadily behind. The steering was delicate, and the Gladys willing but impetuous. The sea was running very high, and the slightest inattention threw off the bows from the course. Promptness in catching, or

Sloop Helene.

though we needed all of it in view of the running and reaching on the last half of the course, sixty-three miles, with only eleven miles of windward work. The Helene came in with a split jib.

We had breakfast aboard and then went ashore for a freshwater swim, a sleep, and a day's relaxation. First, however, we gave the mainsail a good furl, as it was well dried out, dressed ship with signal flags, and hauled down the club flag from the mast head,

At Waialua Anchorage.

meant a beat rather than a reach along the windward side, and greatly helped our chances. La Paloma tried a pointing match with us and got to pitching, making more leeway than headway, so that the Helene, standing up almost as well as the Gladys, crossed the Paloma's bows within the half hour, and got well to windward of her, ready for a ten mile beat to Kahuku Point. It looked as if the Helene was going to be our medicine, but luck was against her. Her damaged jib split once more, and she lost a man overboard while trying to secure it. The combination proved too much of a handicap for her skipper and he put back into Waialua, giving up the race.

Then the commodore changed his pinching tactics and gave the Paloma a rapitull; but two hours from the start we had her three miles astern and to leeward of us. The coast we were passing proved a perpetual delight. The mountains, sloping upward from the leeward side of the islands here, fall sheer to a narrow strip of level land in vast precipices, perpendicular, yet verdure clad, their summits pinnacled in jagged peaks that suggested, amid the alternating mists and sunshine, an imaginative landscape by Doré. Here an inviting valley opened with rainbow haunted vistas of sparkling river and sun kissed slopes, down the sides of which chase sparkling waterfalls. There a spur ran out from the main chain across the emerald, cane grown levels and showed a frowning forehead to the sea. Islands eroded from the mainland, of curious shape and evident volcanic origin, rose from the ocean bed outside and inside the projecting reef, always running parallel to the shore about half a mile off the beach.

The Only Yawl.

rather anticipating her, was necessary to prevent her starting on a swing. Running seaward she climbed the big combers like a duck sinking in the hollows, and rushing up the slopes without a moment's hesitation. The giant took the wheel after a while, and the crew, as the sun got the best of the clouds, hauled up the slackened halliards as they dried.

The little lady requires careful jib tending to get the

A Pearl Harbor Regatta.

substituting the Gladys' name pennant, an example followed by the Paloma and Helene.

All enjoyed the day ashore at the excellent Haleiwa hotel. Times were telephoned to town, and the afternoon train brought back a short account of the first leg in the afternoon papers. The referee's wife and sister-in-law came down in a state of enthusiasm and helped to enliven the day. With them came the plantation manager who, for a decided resemblance to the chief executive of the nation, is dubbed Roosevelt in lieu of his christened name, and shall be called "Teddy" for the balance of the trip. The Helene skipper re-

Far from Home—Swampscoot Dory Oio.

best out of her, a too flat headsail seriously interfering with good work at the wheel. Getting the jib up to the racing mark was accomplished by passing the sheet across the cockpit from port to starboard cleat, or vice versa, thus giving two men a chance to haul on the sheet. We were not to get off without some trouble during the trip, however, as first the port, and then the starboard back stays, which we kept set up through the trip, snapped their lashings at the spreaders and fell back. This sent the skipper up the hoops with marline to remedy the mishap, and we lost time on both tacks in easing up the boat.

Paloma was still dropping behind, and we beat her by one tack round the first, and two round the second headland. At eight bells, just after we rounded the first point of Kahuku, she was a good six miles to the bad. There was no easing up on our part, however. Even if the head wind was in our favor, there was no telling when it might shift. There was now a thirty-four mile stretch to Mokapu Point, and there was a long spinnaker run from there home. So we kept racing, the crew, soaked through long ago, kept to the-

A New Zealand Crack.

weather rail. Lunch consisted of the passing of a bowl of poi, the national Hawaiian dish, made from pounded taro root, not unlike arrow root in substance, washed down with a tot of grog.

Punaluu, the most prominent cape, took a long time to get by, and five bells struck before we passed it. Then sterile Mokapu Point loomed up out of a rain squall ahead. A mile off shore lies Bird Island, some 200 feet high, cone shaped, and white with sea fowl.

Rides without Whip or Spur.

There is plenty of water between, but the sea boils like a cauldron. It is a short cut, however, and we steered for it. In the shelter of Mokapu lies a big harbor with a narrow entrance, deep water inside, but plenty of shoals or rather tops of miniature craters that need care to avoid. Out of this harbor came a coasting schooner as we neared the island passage. This was close on to 3:30, and the Paloma was now lost to sight behind a rain squall. When it cleared away it was good-by Paloma. We did not see her again until next morning in Honolulu harbor. Pointing well

Commencing Investigations.

into the wind we soon left the schooner astern, and passed between the island and Mokapu. This same schooner acted as a delusion and a snare to the Paloma which overhauled her later with the glee, thinking they had caught us in a calm until they found she had two sticks. As we passed the island we gave a whoop, and the top seemed to lift off it as a cloud of feathered fisher folk rose and wheeled and wheeled again with raucous cries at our rude disturbance.

There was still one more point to pass, and then we would fetch the home side of the island again. This was Makapuu, not Mokapu, which we had just passed at 3:45. Mokapu marks the south eastern corner of Oahu, and an island lying off shore, known as Rabbit Island, and swarming with fuzztails, has often been an objective point in local races. Here, also, many stores of contraband have been landed, opium for the Chinese,

and rifles for revolutionists. Between Rabbit Island and the mainland lie smaller islets of jagged rock, between which there lies perilous passages; often taken advantage of in races, but not to be looked at this time in the growing dusk. The wind was as strong as ever, and rain squalls seemed frequent ahead.

Once round Makapuu there lies a dead run to Honolulu of some twenty miles, and here the heavy pinioned Paloma was sure to make up time. Five o'clock found us rounding Rabbit's Island and Mokapu, forty-four miles of beating in 9h. and 14m. We eased off the sheet as the wind came astern, hauling on the lee topping lift to keep the boom out of the heavy seas that followed us and, rising under our counter, sent us coasting down their sides at eleven knots. We sped along like a surf boat, and there was no necessity for a spinnaker. A heavy squall came up behind and urged the Gladys along like a surf boat. It was fast deepening to twilight, but we left the lights unlit. Ahead, over Honolulu, the sun sunk in sulphurous tinted clouds, while behind lay cold gray, storm-rack edged, with the warm afterglow. The scene was awe inspiring, coasting along the forbidding shore where the two scarred, extinct craters of Koko Head and Kokolipe, stood out with the sunset clouds behind them like

Dreadfully Cut Up.

the wraith of their former fires. Not a habitation was ashore, not a bird in sight, only the little white boat racing through the big green surges.

Teddy started to slacken the jib a trifle, and a gust came up unawares and flicked the wet sheet through his fingers. There was no preventing knot at the end of the sheets, and out flapped the cloth in the wind. Forward went the giant and the skipper, while Teddy and the referee took in the mainsheet and luffed the reluctant Gladys. It took ten minutes to secure the wilful jib with the yacht tossing fretfully on the big billows meanwhile, but soon all was secured once more and again we were winging it home. The rain caught us and washed the salt from our faces, but wind was with it and we welcomed it. All hands were beastly hungry, but Diamond Head, beloved of tourists, the dead crater that, like a lion couchant, rests by Honolulu, showed its rugged outline against the fading sky. The lighthouse at its foot flashed a warning, but we knew these waters, and coasting the reef within half a mile of shore, soon opened up the lights of Waikiki, Honolulu's Long Branch. Soon the range lights of the Honolulu harbor were visible, and before we knew it the spar buoy at the channel entrance loomed up on the starboard beam and the race was over. Time, 7:41:33; just 12h. from the start, a distance of 63 miles. Three short tacks up channel brought us to the wharf where we were to lay for the night, and soon four hungry, but jubilant men climbed ashore. Carriages were in waiting. We, or rather a yacht had been telephoned by Diamond Head Charlie, and the referee's wife, confident in the Gladys coming in first, was waiting. Hardly had we finished our conjugal dinners at home when the Paloma was telephoned from the lighthouse. She had run into a heavy

squall had come flying along, passing the mark at 8:47 an hour and six minutes behind on the second leg. The race was ours with three hours to spars, and no time allowance asked for. Total distance, 108 miles. Total time, 21h. 52m.

Next morning we repaired aboard, refreshed by a night's rest ashore, and still happy from our victory. The Gladys looked as ready for another spin as we

The Sunken Dredge.

were. Everything was a blowing and a drying, the skipper having sent a servant down early to dry out and clean up. The race had brought a little water aboard through the forward hatch, but that was soon pumped out, and putting our provender aboard, we stood out channel bound for Pearl Harbor and the completion of our holiday. The sun dried out sail and sheet speedily, and we were soon running off the eight and a half knots to the cruising club house at the mouth of the channel. The wind was free, the weather fine, and we fought our battle over again in the cockpit. With the mainboom to port we rigged out the jib

The Lone Fisherman.

to starboard on a short spar and so went wing and wing, making the trip in an hour flat.

The lochs are ideal cruising places for our mosquito fleet, and indeed, for all craft of ordinary size. The water runs in places to 138ft. and the channel entrance has been recently dredged to a uniform depth of 30ft, and a width of 200ft. Inside is anchorage for all the fleets of the world. The lochs comprise a body of water some sixteen miles in area, running four miles inland to where streams render the water brackish. Peninsulas divide the water into three natural lochs shallowing for the last half mile, but of ample depth up to that point, varying from four to thirty odd fathoms. One large island and some smaller ones help out regatta courses, to cover which the steady trades blow the year round. Mountain ranges surround the lochs and the shores are emerald with cane.

Anchored off the club house, three and a half miles

CLUB HOUSE OF THE HAWAII Y. C. AT PEARL HARBOR.

up the middle loch, lies the mosquito fleet of the club and some of the bigger vessels, in brackish water that renders a trip to the marine railroad an expense seldom made necessary. Here we have sand baggers, New Zealand cracks, bilge centerboard freaks, fin-keels, centerboards, small cabin boats, cats, skipjacks, a Swampscott dory, sidewalkers, Hawaiian built racers with good records, and one yawl, whose performances, both in racing and cruising, have been so satisfactory that the wonder stands that she is still the only craft of her type in Hawaiian waters. This is the Clytie, the skipper's first love.

The waters teem with fish, mullet in shoals, giant rays, big ulua (tuna) turtle and sharks. Many native and Japanese fishermen make the lochs their headquarters for net and line fishing, often putting out to sea where the Japanese sampans make good weather. They have lately been rigged with jib and mainsail in sloop fashion and do remarkably well, especially on the wind. The Japanese handle them well with a usual crew of wife and child, and are successful fishermen. The big and sporty "ono" ranges the waters, and often

A Japanese Sampan.

gets onto the barbed end of a trolling line. The Hawaiians confine their fishing to the inland waters, sailing their outrigger canoes very speedy on the wind. The Chinese with their own type of heavy rowing boat are very successful with net fishing. Plover are plentiful in season.

The various reefs and shoals, some of which are to be blasted away by Uncle Samuel at his leisure, are all marked with stake or buoy by the yacht club, except when a sampan ties up to a stake over night or carries it away in the dark. Here we stayed for two days, cruising by day and anchoring at night near the harbor entrance in twenty fathoms off a native village, the inhabitants of which made night musical with their songs

Prima Facie Evidence—Two Big Ones.

and guitars. Of how we tried to catch mullet and spoiled our net with a crop of small hammerhead sharks; and of how we caught a 14-footer, a big shovel-nosed brute, there is yarn enough to spin into a separate story. A word as to our modus operandi may not be amiss. The hook, armed with six feet of chain, is baited with succulent beef and dropped into deep water, the line being brought into the cockpit and an alarm set with empty tins. A catch by night is intensely exciting. The big brute fights hard before he comes unwillingly to the surface, a green luminous whirl in the phosphorescent water. His big jaws snap viciously before a bullet between and just back of the eyes gives him the coup de grace. Then a running bowline secures the tail and a fall and tackle hoists him, mouth downwards, when the liver—a shark seems to be all liver—bulges out of the capacious maw. This we give to the natives, who dry it out for the oil. The backbone makes a good walking cane, and the jaws, when they quit smelling, make a notable trophy.

On the last day, before we left the Gladys at her quiet moorings and reluctantly returned to business

cares, we cruised down toward Waialua under easy sailing, trolling a line, and our bid was fortunate in securing two fine ones after a tough fight, in which the skipper nearly fell overboard with the gaff. The camera was brought into requisition, and our last film recorded the catch in characteristic and undeniable fashion.

Hawaiian waters weave a spell which never leaves those who have sailed in them, and Hawaiian yachtsmen are always eager to welcome those from other seas to cruise with them, race with them, eat, drink, and be merry with them for a while. Our club has steadily grown to a fleet of forty craft and over a hundred members, and some day we hope to hold an international regatta along our shores.

## Boston Letter.

Boston, Jan. 31.—The Regatta Committee of the Corinthian Y. C., of Marblehead, has organized, and is first to come out with fixtures for the season. A meeting was held at the town house of the Boston Y. C. last Thursday evening, when H. S. Goodwin was elected chairman, and W. L. Carlton, secretary. The other members of the committee are Lawrence F. Percival, Stephen Bowen, and H. H. Walker. The following list of fixtures was agreed upon:

June 11, Saturday—Club championship.  
June 25, Saturday—Club championship.  
July 2, Saturday—Club championship.  
July 4, Monday—Invitation race.  
July 16, Saturday—Club championship.  
July 23, Saturday—Club championship.  
August 3, Wednesday—Midsummer series.  
August 4, Thursday—Midsummer series.  
August 6, Friday—Midsummer series.  
August 7, Saturday—Invitation race.  
August 27, Saturday—Club championship.

There will be a conference later between representatives of the Corinthian Y. C., the Boston Y. C., the Eastern Y. C., and the Yacht Racing Association of Massachusetts in regard to the selection of dates, so that there will be the same harmony of arrangement that has existed for two seasons past. As the above dates come at about the same time as on previous years, however, it is quite likely that they will stand. After the season has opened, it is quite probable that Commodore John O. Shaw will issue orders for a club cruise.

The annual meeting of the Boston Y. C. held at the town club house, Rowe's Wharf, last Wednesday evening, was very well attended, and there was something doing all the time. The report of the Regatta Committee showed that the club expended on nine races during the season of 1903 over \$1,600. While this is quite a generous allowance, it is estimated that at least \$2,000 will be required another season, and from this estimate it may be inferred that the Regatta Committee expects a lively season for 1904, in spite of the handicaps that have been placed on yacht racing during the winter.

During the year 100 applicants were admitted to membership, and of these 56 were yacht owners. Of 12 admitted to the Dorchester division, 9 were yacht owners, and of seven admitted to the Marblehead division, all were yacht owners. The total membership of the club at the present time is close to 700, and it is expected that this number will be largely increased before the season has reached its height. The fleet of the club numbers 376, which is a very good percentage of the membership.

Many of the members are desirous of having a club cruise during the coming summer. It is the intention to cruise along the Maine coast, stopping at various ports. Yacht owners were consulted last season in regard to a cruise, but there were so few who would guarantee to take part in the port to port runs that it was not deemed advisable to issue orders. If anything like a decent percentage of the whole number of yachts enrolled in the club will take part in the proposed cruise this summer, there should be a fine fleet entering the different ports. Not only has the club a good sized fleet, but in it also may be found some of the finest sailing and steam yachts in the country.

The annual meeting of the Quincy Y. C. will be held next Saturday evening, when the following officers and committees will be balloted for: Com., Eben W. Shepard; Vice-Com., Frank Fessenden Crane; Sec'y, Herbert W. Robbins; Treas., Dexter E. Wadsworth; Meas., Robert A. Grant; Executive Committee—J. P. Bainbridge, Charles W. Hall, George W. Jones, and George H. Wilkins; House Committee—Herbert A. Billings, R. R. Bolles, George D. Follett, Arthur W. Harris, Elmer F. Ricker, Joel F. Shepard, 2d, and Ira M. Whittemore.

A somewhat novel scheme is being agitated by members of this club. It will be proposed at the annual meeting to build a 15-footer under the rules of the Yacht Racing Association of Massachusetts. The money for this boat is to be raised by subscription among the members, and different crews, composed of members of the club, will race her on the Y. R. A. circuit. After the close of the season it is proposed to turn the boat over to the club to be let to members until such sum as may be elected by the subscribers shall have been returned to them.

One of the new clubs in the vicinity of Boston—the Cottage Park Y. C., of Winthrop—is to have a new club house, which will cost upward of \$10,000. The club has a very good membership, and it is felt that a good, modern club house can be handled without difficulty. Some time ago an appropriation for a new house was made. The club at that time had an excellent location, but there arose some question as to the title, in settlement of which it has been found necessary to go to the courts. This obstacle has now been done away with, and the club will be ready to go ahead on a new building as soon as possible.

Another new club house at Winthrop will be that of the Winthrop Y. C., to take the place of the club house that was destroyed by fire a short time ago. At the annual meeting of the club it was voted to raise \$12,000 by bond subscription. As the old club house was not large enough for the accommodation of a growing membership, the club has secured land adjoining its present property. A fine, modern club house is to be erected, taking up about all of the land space in the possession of the club.

A bill has been presented to the Massachusetts Legislature by the Bay State Y. C., of Revere, calling for the erection of a sea wall in front of its club house. The club house faces the ocean, and much damage is often caused by easterly gales.

The utmost secrecy is being maintained in regard to the 30-footer which Mr. Frank Gair Macomber, Jr., is going to have built. Some time ago it was said that he would go to Messrs. Gardiner & Cox, of New York, for his design. The latest piece of rumor on this subject is to the effect that Mr. Macomber either has, or intends to place, an order with the Herreshoffs for his boat. It is also stated that Mr. S. Reed Anthony will have a boat from the same shops, if not on the same design.

JOHN B. KILLEN.

## English Letter.

It is disappointing to learn that the race from Gibraltar to Nice, for which King Edward VII. has offered a cup as first prize, has fallen through, owing to the necessary minimum number of entries not having been received. Only three yachts were entered—Andrée, Harlequin, and the old English boat Samœna, now owned in France—whereas the stipulation was that five at least were to figure on the list. It was hoped that the Scotch boats, Kariad and Bona, would have been fitted out for the Mediterranean regattas this year, but, unfortunately, there is no prospect of either vessel crossing the bay, and the prospects for the French regattas, as regards the larger classes, are poor indeed. Navahoe was also looked upon as a possible entry for the race, but the preliminaries of the Gibraltar-Nice match were a little hurried, and owners did not have quite sufficient time to reflect as to whether they would elect to join in or not. The result has been somewhat of a fiasco; however, it is hoped that the offer of the cup may be renewed next year, in which case the necessary preliminary arrangements will be made with more deliberation, and, consequently, a greater chance of success.

It is unquestionably a fact that English yachtsmen are not nearly so keen on taking part in the early French regattas as they were ten years ago. The reasons for this are threefold. First, the Riviera season begins very early, and this makes it necessary for British boats which are to take part in it to start fitting out early in January. Second, the number of regattas arranged for in British waters has increased so much of late years that yachting men get quite enough racing in their own waters. Third, the German regattas held at Kiel immediately following the annual race for the German Emperor's cup from Dover to Heligoland, have undoubtedly done much to interfere with the success of both French and English seasons by drawing away British yachts to the Baltic which would otherwise have taken part in home regattas, and many of which would have found their way to France earlier in the year.

In truth, there is a glut of regattas, but a scarcity of yachts of the larger size in both England and France, flimsy construction and imperfect rating rules being the chief cause in both countries. In Germany, yacht racing has never been at such a high pitch of excellence as it is to-day, but the reason is not because of better construction or superior measurement rules, but solely on account of the laudable desire of the Kaiser to make yachting one of the national pastimes in Germany. To this end he has spent his own money freely, and his example has been ardently followed by his own family and by a great number of his subjects, with such success that the beautiful waters of Kiel Harbor now present at regatta time as lively a set of white wings as may be seen on the Solent during the most successful of Cowes' weeks. The rise of German yacht racing to the level it has since attained may be said to have commenced with the first race from Dover to Heligoland in 1897, when the object of the Kaiser was nominally to commemorate the diamond jubilee of her late Majesty, Queen Victoria. There is no doubt, however, that the Emperor was very desirous of attracting British yachts to Kiel to swell the German pleasure fleet, which was then of small proportions, and for some seasons the British contingent may be said to have provided the backbone of the racing during Kiel week. Since that time, however, the Germans have themselves built and bought many fine vessels, and last year their big boats were divided into three classes, while the smaller fry were almost innumerable.

It is stated that the race from Dover to Heligoland will this year be thrown open to yachts of all nations. If this be so, there is every possibility of a very large entry, for Germany can produce half a dozen fine schooners, and the new vessel-building on the Clyde from designs by Fife for a German syndicate will be a possible entry. This yacht, which will be schooner rigged, and of about 300 tons, is the largest vessel ever designed by the famous Clyde draughtsman, and, if she is anything like Cicely, will be one of the most beautiful two-stickers afloat.

Yachting matters in England at the present time are in a state of transition. The dead season is upon us, and the yards are not displaying much activity, except in the matter of alterations or repairs to old yachts. There is not much likelihood of new vessels being ordered until something satisfactory has been arranged about scantling and unlimited overhangs, and the sooner that something is arranged the better for all concerned.

E. H. KELLY.

The annual meeting of the Atlantic Y. C. will be held at the New York Club, on Feb. 8. The following officers and committees have been nominated: Com., Harrison B. Moore, steam yacht Zara; Vice-Com., F. D. Underwood, steam yacht Alice; Rear Com., E. B. Haven, sloop yacht Athlon; Treas., Charles T. Pierce; Sec'y, J. Alfred Vernon; Meas., Henry J. Gielow; Regatta Committee, Henry J. Gielow, Frederick Vilmar and W. A. Minott; Membership Committee, Geo. D. Provost, Walter H. Nelson and F. J. Havens; Library Committee, T. Alfred Vernon, John E. Beggs, and F. T. Cornell; Entertainment Committee, S. E. Vernon, Geo. G. McIntosh and Joseph H. Scranton; Nominating Committee, E. B. Havens, George D. Provost, H. G. S. Noble, H. B. Chamberlain, W. L. Pettibone and Paul D. Bernard.

## New Rochelle Y. C.

BY EX-COMMODORE CHARLES PRYER, NEW ROCHELLE Y. C.

THE birth of the New Rochelle Y. C. may be said to have taken place in the cabin of the little sloop *Curlew*, early in the summer of 1885, where a few gentlemen of the place had collected to talk over the advisability of forming a local yachting organization. A few days after that discussion a notice was sent out to all the desirable people in the town supposed to be interested in the subject of the formation of such a club, and a place and time of meeting specified. At this meeting the organization was perfected by the election of the following officers: Com., Chas. Pryer; Vice-Com., J. H. Ryley, Rear Com., E. C. Sterling (their respective yachts were the sloops *Curlew* and *Madeline*, and the schooner *Leona*); Sec'y, Ph. J. Krackel, and Treas., Eugene Lambden. Committees were also appointed to draft a constitution and by-laws, and select a desirable location for a home for the new club. At the next meeting these gentlemen reported, and the result was that the constitution and by-laws were adopted with some modifications and alterations suggested in the discussion that followed the report; and that Echo Island, at the entrance of Echo Bay Harbor, New Rochelle, was leased by the club for a term of years, on which it was proposed to erect a house, and a building committee was appointed. No regatta was sailed under the auspices of the club during the summer of 1885; but the membership grew very rapidly, and a substantial house was started. The first board of trustees was composed of the flag officers, and Messrs N. D. Lawton, C. P. Buchannan, and G. H. Barker.

At the opening of the yachting season, 1886, the club house was completed, and there were about two hundred names on the roll of membership, while the fleet consisted of a little over fifty boats, of all sizes and rigs. The officers were the same, with the exception of the addition of several committees. In June of this year, the first annual regatta of the new organization was sailed, and was most successful. As it was an open race, the yachts of many other clubs were entered, the day perfect, a strong S.W. wind was blowing and the boats crossed the line well bunched when the signal was given. The race was particularly close in the schooner, and one of the cabin sloop classes, so that the spectators were very much interested during the entire contest. The wind was perhaps a little too heavy for comfort or even safety for the smaller craft, as several of the catboats capsized, and many an amateur sailor got a ducking, though nobody was materially the worse for that day's sport, and the members of the young club were much encouraged by the successful issue of the day.

During the year there were a number of entertainments held at the club house, and the Atlantic Y. C. rendezvoused off our club house upon the occasion of their annual cruise. The house and grounds were much beautified during the season, and the club made very material progress. It is not, of course, my purpose to follow each year of the club's existence in detail, as it would be uninteresting to most of the readers, and also take entirely too much space. But we may now be said to have fairly launched the organization in its career, having given it a home, and witnessed the results of its first regatta.

The season of 1887 opened very prosperously for us, and we were early in the field, but nothing of a very interesting character occurred to relate out of the inner club circle, the only important change in the board of officers was that the late W. H. Wilmarth was elected secretary, in place of Ph. J. Krackel, who declined to serve longer. The year may be said to have been a fairly successful one, though there were no particularly marked events, the annual regatta was good. In 1888 the commodore's flag was changed from the *Curlew* to the new *Eurybia*, then just off the ways. During the next few years the club managed to keep itself afloat in a fairly creditable manner, though, like all organizations of its nature, it had its vicissitudes, of which its finances was not the least. At times the membership would drop off considerably, and again it would pick up, but at no time was there any serious trouble. The officers during these years changed frequently, and the club has had numerous commodores, vice and rear commodores and, of course, the other officers were subject to many changes also.

We now come to the most crucial time in the organization's existence. The lease was about to expire, and the owner of Echo Island declined a renewal; but very kindly offered to give the club the house it had constructed, provided they could move it away within a specified time. After much discussion in the committee, appointed to look into the matter, they procured a very advantageous site from the town on the mainland adjacent, for a comparatively low rent. The next question was how to transfer the house from Echo Island to Hudson Park. This problem was solved after much difficulty, by making a contract with a company to float it over the bay on large wrecking scows, and place it on a foundation constructed for the purpose on the newly acquired leasehold in the Park.

The house was slid upon the floats with comparatively little injury, and prepared for its voyage across a sheet of water about half a mile wide, and now the real trouble began; the weather, which for some days had been fair, became cloudy and threatening, the wind shifted to the east and started to blow. The waves of the sound responded almost immediately, and began to roll in in such a menacing manner, that it commenced to look as though the house would be deposited in fragments along the rocks and beaches of the adjacent shore. The scows, though buoyant enough to float the building over under ordinary conditions, were not constructed for such billows as were now breaking over them nor was the house sufficiently strongly belayed to them to stand such pitching and tossing; in fact, it was a shore house and not an arc. For a time the members of the club looked on in great dismay at the struggling tug boat, the rocking floats and the cracking and straining timbers of the building. At last a happy thought struck some of the party, "Why not pull her into a small cove under a lee, and anchor her there until the gale blew itself out." The tug, of course, could not

Echo Bay.—A view of the harbor taken from Harrison Island.

enter the cove, as the water was too shoal, but when she came as near shore as possible, she was cast off, where many willing hands grasped the hawser and pulled their floating home into a place of comparative security, so that when the sky cleared and the sun broke forth once more, the building was found but little the worse for its tempestuous sea voyage. It was finally placed upon the new location; and many were greatly astonished at the small amount of repairs that were necessary to make it habitable for the club once more.

The new locality was found more convenient than the old, and for a time the club prospered greatly, but if it was easier attainable, it was less secluded, being in a public park, and a large portion of members wished we were again on the island, or at least, on some island where we could be more quiet, and less annoyed by the pleasure seekers, who came from all quarters to enjoy the summer breezes from the sound. Years rolled on and the organization progressed slowly, and though many difficulties were met, and at times the clouds were black and threatening, for us there was a gradual advancement. The fleet had increased immensely, and many of the finest racing yachts were enrolled under the club burgee. Most of the races were successful, though of course, in common with all similar organizations, some were marred by calms and storms, but we had our full share of good sailing breezes, and very little complaint can be made against our race days.

In the last year of the last century it became evident that we would have to move once more, not from the old cause, for the town now grown into the city of New Rochelle, had treated us with all courtesy, and we could retain our site as long as we desired; but we had outgrown our accommodations. Harrison's Island, a beautiful piece of property on the northern or inner side of Echo Bay, and containing several acres, was considered very desirable, especially as there was already a mansion of considerable size upon it. So this almost ideal spot for the home of a yacht club, was leased on very favorable terms for a long period of years, and it again became necessary to move the house. Again the floats were called into requisition, and again the building was slid upon them, and a much shorter and more land-locked voyage was started. This time, however, it was accomplished without accident or special incident, the elements being auspicious, and the yachting season of 1901 was started under the most promising conditions; the two houses giving us ample accommodations, while the lawn and shade trees afforded pleasant lounging places for the yachtsmen and their guests while on shore. The restaurant was much improved, and the additional space indoors permitted of numerous sleeping rooms. The club now increased very rapidly, and the roll was nearly, if not quite doubled in less than two years. Many improvements were made, such as floats, runways, etc. The fleet, at anchor in the harbor, kept pace with the increase of membership, until the fleet consisted of one hundred yachts, of all kinds, and unlike many of our sister clubs, a very large proportion of these vessels are always seen at anchor near the club house when not sailing or cruising.

One of the most interesting features of the New Rochelle Y. C., is their summer series of short cruises. These usually started from the club anchorage on Saturday morning, and returned Sunday afternoon. Sometimes, however, we would get away on Friday, and remain away until Monday evening, especially if Monday was a holiday, as in the case of Labor day. Small trophies or run prizes were always awarded to the first boat in each port, and a handicap was made by the regatta committee so that all would have a chance. Often on these short trips the fleet would consist of from twenty to twenty-five vessels of all kinds, and many of these races would be of considerable interest. Last summer, for instance, in crossing the sound from Black Rock to Northport, the yachts were struck by quite a heavy squall in mid sound, and it was a very pretty sight to see those amateur sailors handle their craft in the blow. Many of them were mere boys, and some of the boats were small and hard pressed, but not an accident occurred, and most of the crews managed to keep their respective places in the contest, and the fleet reached Northport well bunched, though not a few decks were wet, and in some instances some water had been taken into the cabins, as we could tell by the great amount of bedding that was on deck when we reached our anchorage to receive the benefit of the last rays of the setting sun.

The racing rules, time allowances, etc., of the New Rochelle Y. C., have been for several years governed by the regulations of the Long Island Sound Y. R. A., of which the club, like most of the other yachting organizations along the Sound, is a member.

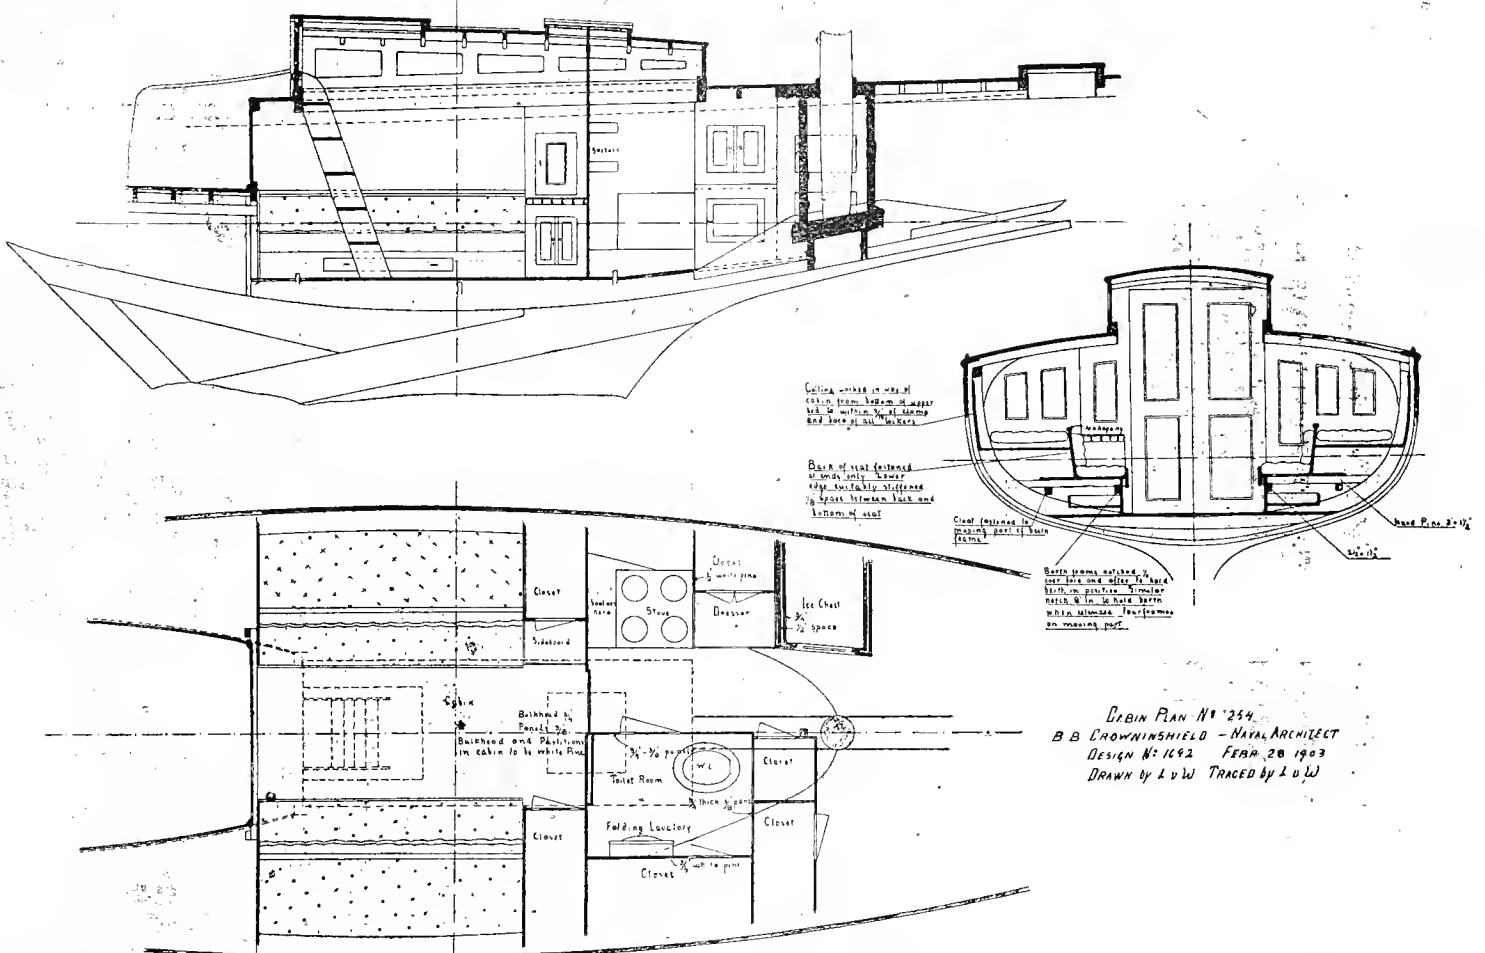

Mr. George Crouse Cook, of the firm of Messrs MacConnell & Cook, has gotten out plans for a 36ft. cruising launch, for Mr. W. A. Brown, of New York City. The boat will be named Chi Psi, and Mr. Brown will use her at Shelter Island, where he spends his summers. Chi Psi is 36ft. over all; 8ft. breadth; 4.6ft. depth; with a displacement of 12,000 pounds on a draft of 2.9ft. The hull is to be constructed of the most selected oak, cedar, and pine, and all fittings, together with the strut and rudder, are to be of special bronze castings. The absolute safety of the launch is assured by water-tight subdivision, and supplementary air tanks which extend under the deck on the port and starboard sides through the length of the boat. A speed of 15 miles is guaranteed in a continuous run. The yacht is being built at the yard of the Poucher Co., City Island.

✱ ✱ ✱

The first American exhibition of pleasure boats moved by screw propellers, and measuring from 15 to nearly 50ft. long, will soon be opened. Its dates are Monday, Feb. 8, to Saturday Feb. 20, inclusive, and its home is the new Herald Square Exhibition Hall, at Broadway and Thirty-fourth St. This show will be open to the public from 10 A. M. to 11 P. M.

PRINCESS—30-FOOTER—SAIL PLAN—DESIGNED BY B. B. CROWNINSHIELD FOR GEORGE WRIGHT.

PRINCESS—30-FOOTER—CABIN PLAN—DESIGNED BY B. B. CROWNINSHIELD FOR GEORGE WRIGHT.

### Princess—30-Footer.

THE pole-mast racing 30-footer Princess, plans of which boat appear in this issue, was designed by Mr. B. B. Crowninshield, and built for Mr. George Wright by Messrs. H. W. Embree & Son.

Princess is a smart looking boat, and the plans show a compact craft of excellent design. She is splendidly put together, and great attention was paid to her construction, as a glance at the plans will show.

As the boat was to be used for racing and ample deck room was essential for the handling of spars and sails, Mr. Crowninshield abandoned the old style of cabin house and substituted the narrow trunk cabin. This change was a great improvement in every way, for it gave much more room on deck, added to the boat's appearance, and did not injure the accommodations below. The cabin house is 10ft. long and 4ft. wide. The cockpit is 11ft. long and 5ft. 6in. in width at the widest point. Two deck beams running athwartships divide the cockpit from the cabin house, and these add greatly to the boat's transverse strength. This plan should be followed in all cabin trunk boats, no matter how small. In some cases it may seem objectionable in getting in and out of the cabin from the cockpit, but if the companionway is made sufficiently large, this will not prove a great annoyance, and more than compensate in the safety and strength gained.

Below, Princess is quite roomy, and there is full head room under the house. The main cabin is 8ft. long. On either side are transoms or sofas, and behind these are wide berths 6ft. 6in. long. At the forward end of the cabin there is a sideboard and locker on the port side, and a hanging closet opposite on the starboard side. The cabin floor is 3ft. wide between the transoms.

A door on the port side of the forward bulkhead leads to the galley, a part of which is under the cabin house. The galley is very completely fitted. On the starboard side, and reached from the galley, is the toilet room,

which is 4ft. long and fitted with a patent closet, a folding wash-basin, and a linen closet. A skylight ventilates the main cabin, the galley and the toilet. The boat is very cheerful below, as the oblong glass ports in the sides of the cabin trunk admit a great deal of light.

The sail plan was worked out with considerable care, with the result that it is a handsome and well balanced rig.

The dimensions are as follows:

Length—		
Over all	50ft.	3 1/4 in.
L.W.L.	30ft.	
Overhang—		
Forward	9ft.	9 3/4 in.
Aft	10ft.	5 1/2 in.
Breadth—		
Extreme	11ft.	2 in.
L.W.L.	10ft.	9 1/4 in.
Transom	5ft.	7 3/4 in.
Draft—		
Extreme	7ft.	9 in.
Fairbody	2ft.	6 in.
Freeboard—		
Stem	3ft.	9 5/8 in.
Least	2ft.	3 3/8 in.
Transom	2ft.	7 1/4 in.
Area—		
Midship section	23.8 sq. ft.	
Rudder	17.30 sq. ft.	
Total lateral plane	124.4 sq. ft.	
Total wetted surface	462 sq. ft.	
Displacement	22,420 lbs.	
Sail area—		
Jib	219 sq. ft.	
Staysail	203 sq. ft.	
Mainsail	1,163 sq. ft.	
Total	1,585 sq. ft.	

PRINCESS—30-FOOTER—LINES AND CONSTRUCTION PLAN—DESIGNED BY B. B. CROWNINSHIELD FOR GEORGE WRIGHT.

### Interlake Yachting Letter.

CLEVELAND, Ohio, Jan. 30.—The little 16ft. restricted class is catching on in a remarkable way, and the prospects are, that at least a half dozen boats will be built in time for next season's use in Detroit. Rear Com. E. F. Floyd has ordered a design from Mr. Carlton Wilby, a young designer that has recently located at Detroit, and she will be built right up to the limit of her class. The preliminary lines have been turned out, are corrected, and the final drawings will be completed this week. Com. Lloyd is negotiating with two Detroit builders, and an Eastern firm, but has not decided just where he will have her built, but it is probable she will be constructed in the East. Several Cleveland yachtsmen have taken kindly to the idea, and it looks as if three would be built here. Mr. James Kenedy is considering a design, and is very favorably impressed with it. Mr. Kenedy has been a power boat man, but is so taken with the idea, that he has about made up his mind to desert the power boat for one of the little restricted boats.

Obtaining crews has been a detrimental feature to yachting hereabouts, but these little single handers, seem to supply a long felt want, and will in all probability become exceedingly popular before the summer is half over. Mr. Summer, of this city, has ordered a design from Chicago for a 16-footer, and she will be built by Cook. The 18-footer building for Mr. Watterson is about completed, and is a neat appearing craft. She is rather more conservative than the average racing boat, having quite moderate overhangs. Her bow is finely drawn out, giving her an easy entrance, and she has a nice run aft. Judging from appearances, she ought to be reasonably fast. She will carry an enormous jib and mainsail rig, having 650 sq. ft. in the two pieces. The yawl building for Dr. N. W. Brown, has been finished, and is a credit to her builder, Mr. Fred Platt. She is a typical cruising boat, and for her over all length has remarkable amount of room, both above and below decks. She will be launched the first of April, and after being

fitted out, will be taken to the head of the lakes, thence to St. Louis, where her owner will remain several weeks, and then return to Cleveland. Mr. James Marshall, of Toledo, is building a 21-footer with which he intends to capture the Walker Cup, at Detroit, next summer; he also intends shipping her to Chicago to enter her in the races for the Sir Thomas Lipton trophy. An 18-footer is being built for Mr. Benis, of Erie, from a design by Mr. B. B. Crowninshield, of Boston. She is to be up to the limit of the class, and will be sailed in the races of the Inter Lake Yachting Association, and will also compete for the Huntington trophy No. 4.

Buffalo has the building fever in earnest, and perhaps more boats are building in that city than at any of the other lake ports. A big yawl is to be built for Mr. Summer Hayward, designed by Crowninshield, a 30ft. cruising yawl for Mr. Hussey, designed by W. H. Hand, Jr.; and a 15ft. one-design class by the same designer, of which four boats were originally to have been built. This number has been increased to nine, or more than double the amount of the original order. A gentleman, whose name is withheld for the present, is having a 21-footer designed in the East, where she will also be built, and the order calls for her completion by April 15. In a letter received yesterday, he stated that the new boat would be as extreme as the law governing the construction of the restricted 21ft. class allows. It has practically been decided to have her canvas made by Messrs Cousens and Pratt, of Boston. Another boat for the same class is being built by one of the Buffalo builders, but has not been sold. Her builder and designer is a peculiar old salt. Each winter he selects some particular class, one he thinks likely to be most popular, gets out his design, and sets to work. When his task is completed, he looks around for a buyer, and invariably finds one. The remarkable part of this story is that in most cases he has turned out the speediest boats in the Buffalo Y. C., in their respective classes. The Hussar II, recently purchased from Mr. Geo. H. McNeely, of Philadelphia, by Com. E. T. Affleck, of Toledo, will start on her trip for the lakes, on or about May 1. On April 15, Com.

Affleck's two sons, accompanied by a picked crew, will leave Toledo. The yacht will be brought through the St. Lawrence River and Welland Canal, stopping at all way ports on the trip. It is expected that the yacht will reach Toledo about June 15, after which she will be hauled out, and cleaned up. She will then leave for Put-In-Bay, to attend the annual regatta of the I. L. Y. A., where she will be entered in the races. After the regatta she will proceed up the lake with the commodore and his family for an extended cruise.

The announcement of the death of Com. Henry Tracy, of Toledo, has been a shock to the fresh-water yachtsmen, and all are deeply grieved at his sudden demise. Com. Tracy was one of the oldest yachtsmen on the lakes, and has done much for yachting. He was an enthusiastic yachtsman, and anything pertaining to the sport was sacred to him. It was primarily due to yachting that he met his death. Last year he was commodore of the Inter Lake Y. A., and when the time for the departure had arrived, it was blowing a gale. This, however, was the commodore's delight, as he enjoyed nothing more than to get out in a good blow. It was also imperative that he arrive at the Bay that night, as he was slated for a speech. To use the commodore's own words, "It was a muzzler, dead ahead, but I could not disappoint my friends," and he didn't. The trip was sixty miles from Toledo, and a beat all the way, but he put her through it, and while an old man, never uttered a single complaint, and that evening, as though nothing had happened, made a speech to the small gathering who had weathered the blow. Next day, after the gale had subsided, and the fleet began to arrive, the old commodore was on hand to greet each new arrival, and attended to the duties of his position as commodore. It was on the trip that he sustained the slight injury that ultimately resulted in his death. A scratch on the fore finger turned into blood poison. Little attention was paid to it at the time, but it failed to heal, and gradually grew worse. Finally the finger was amputated, but it appears that the poison had gone beyond the amputation, and on Jan. 19 he died. He was 67 years of age. A singular coincidence followed his sudden demise. His yacht

Dolomite was completely destroyed two days after his death. A freshet, caused by the breaking up of the ice in the river alongside of which the T. Y. A. yachts were hauled out, failed to go out into the lake. It backed up, overflowed its banks, and several of the huge cakes of ice were thrown with terrific force against a tug, which in turn, was thrown on top of Dolomite, smashing her beyond repair.

Mr. J. Johnson, of Buffalo, who was formerly part owner of Echota, one of the Canadian cup trial boats that was recently sold to a Cleveland yachtsman, has purchased Beaver, the Canadian craft that defended the cup, the year that Echota was built as a possible defender. Mr. Johnson states that he will have a new suit of sails made for the craft, and will enter her in all of the important races the coming season. With the purchase of Beaver, there will be four of the Canadian cup boats on Lake Erie, and there should be some spirited racing in this class. Detroit and Cadillac have had the field practically to themselves, and have run away from everything in sight. Echota, which has been rechristened White Ribbon, will be placed in first-class racing shape, and with a picked crew will try to carry off her share of the prizes. The same can be said of Beaver, and with four of these boats in one race being sailed the limit, and all being quite evenly matched, the racing should be of the very best. White Ribbon is more or less of a conundrum, never having been tried out against Cadillac or Detroit. In a series of races at the Pan American Exposition, in which two were sailed, she was once defeated by Beaver, in a heavy weather contest, by four minutes, and in the next race scored a victory over Beaver, in an eight to ten mile breeze, of more than ten minutes. Last summer the Beaver and Cadillac sailed three races, in which the latter won all three, but they were very close, some being decided by seconds. Detroit has never been tried out against either White Ribbon or Beaver, so that the result of a race between the four is very much in doubt, but at present it is the main topic of conversation, and predictions as to the outcome are heard on every hand.

The following officers were elected at the recent meeting of the Detroit Boat Club Yachtsmen: Com., John L. Dexter; Vice-Com., C. A. Newcomb; Rear Com., E. F. Lloyd; Sec'y and Treas., Northam Warren; Fleet Capt., Dr. T. B. Aldrich. Directors, Com. John H. Smedley, John A. Rathbone, Phil. Wright and Dr. E. M. Houghton.

The Grosse Pointe Ice Y. C., elected the following: Com., John Kies; Vice-Com., Archie Michie; Rear Com., John Pichea; Fleet Capt., J. Van De Spitte; Sec'y and Treas., Miner A. Gregg; Fleet Surg., Dr. Herman Kreit; Meas., Edward Rogers; Asst. Meas., Archie Michie, Jr.

The following officers were elected to serve for the coming year, by the Buffalo Y. C.: Com., Henry Bisgood; Vice-Com., Theodore N. Fowler; Sec'y and Treas., Maj. Frank E. Wood; Fleet Surg., Dr. E. P. Hussey; Meas., Frank D. Wood. Directors, Eugene C. Roberts, John M. Fisher and H. A. Warren. The following Regatta Committee was also elected: Robert A. Henssler, H. A. Chamberlain and H. Wilson Saunders.

Com. G. W. Maytham will build a 40ft. steel boat from designs to be selected from the FOREST AND STREAM designing contest.

C. W. SCHMIDT, JR.

### American Power-Boat Association Challenge Cup for Power-Boats.

The American Power-Boat Association have offered a perpetual challenge cup, to be known as the American Power-Boat Association challenge cup.

The three races comprising the first match for this cup will be held on June 23, 24, and 25, 1904.

The course will be from a starting line in the Hudson River off the Columbia Y. C. club house at Eighty-sixth street and Riverside Drive, Borough of Manhattan, city and State of New York, to and around a stake-boat anchored up the Hudson River not more than twenty miles above the starting line, and return.

Entries for this match must be filed with the chairman of the Cup Committee on or before June 13, 1904, and a certificate of measurement as specified in sub-division "f" of Article VII. of the Declaration must be filed with the chairman on or before said date.

The first match will be managed by the Cup Committee of the association.

All boats entering must be measured by Mr. Gielow, or his assistant, before the race; all arrangements for same should be made with Mr. Gielow, 50 Broadway, New York city.

This match is open to power-boats of all kinds, viz., naphtha, steam, electric, and kerosene, which comply with the provisions of Article II. of the Declaration of Trust.

Except as herein modified, The American Power-Boat Association shall be deemed to be the challenged club in construing the Declaration of Trust.

J. H. Wainwright, American Y. C.; H. J. Gielow, Atlantic Y. C.; E. W. Graef, Brooklyn Y. C.; Edw. M. MacLellan, Manhasset Bay Y. C.; Anson B. Cole, Manhasset Bay Y. C., chairman, 63 Wall street, New York city, N. Y., are the Committee on Challenge Cup.

The races for this cup are for the purpose of promoting speed contests and improving and perfecting models and construction of engines for, and lines of, power-boats. Below are the terms and conditions which shall govern the tenure of the said cup and the competitions therefor.

Article I.—Any organized yacht club in the United States which is a member of the American Power Boat Association, and any organized yacht club of good standing in any other country, shall always have the right to challenge for the cup and to sail a match therefor, provided such challenge shall be made and such match sailed in accordance with the terms and conditions of this agreement.

Article II.—Matches for the cup shall be limited to boats propelled by power only, and whose rating under the rules of the American Power Boat Association in force at the time of the challenge shall be not less than 35ft., and whose waterline length shall be not less than 25ft.; but in no case shall the rating be less than the waterline length.

Article III.—All matches shall be sailed under the rules and regulations of the American Power Boat Association in force at the time of challenge.

Article IV.—The match shall be managed by a committee of three judges, one to be selected by the challenged club, one by

the challenging club, and a third to be chosen by the two thus selected. Each of said clubs shall nominate its representative, and notify the other club of his acceptance of the nomination within fifteen days after the acceptance of the challenge. This committee shall have all the powers of a race committee, and shall elect its chairman from its own number. Subject to the Declaration of Trust governing this cup, the committee shall have entire direction of the match, regardless of the number of entries.

Article V.—The club holding the cup shall defend it between May 30 and Oct. 1, both inclusive, against all challenges, under the conditions as set forth in this instrument. The date for the first race of any series for this cup shall be not earlier than May 30 nor later than Oct. 1.

Article VI.—All challenges shall be in writing, and signed by the proper official or officials of the challenging club. To insure a contest, one challenge must be delivered at least six months before the date set for the match. Subsequently, other clubs may challenge and enter the same contest on the terms proposed and accepted in the first challenge received; but no challenge shall be received later than ten days before the date set for the first race of the match.

Article VII.—(a). A match shall consist of three races, to be sailed on consecutive days, excluding Sundays. (b). Courses shall be not less than twenty nor more than forty nautical miles. (c). Courses shall be laid in water of not less than two fathoms, and as free from turns as practicable, but the finish must be at the starting line. (d). The start shall be one gun flying start, with a preparatory signal to be given five minutes theretofore, all boats to start in one class and at the same time. The time of start shall be sufficiently early to allow the slowest boat to cover the course and finish before one hour after sunset, barring accidents. (e). The winner of the match shall be determined by the point system, whereby each boat entering and finishing a race of a match receives one point for her entry and one additional point for each boat which she defeats, the winner being that boat scoring the highest aggregate number of points in all the races of the match. A boat which starts in a race, but does not finish before one hour after sunset, shall receive no points for that race, but shall be counted as a defeated boat in that race by the boats finishing. (f). Each club whose challenge has been accepted shall name its representative boat in such challenge, and shall file with the challenged club, and the secretary of the American Power Boat Association, at least ten days before the date set for the first race, a certificate of the measurer of such club of the measurement of such boat, as measured under the rules of the American Power Boat Association in force at the time of such challenge, and written upon the blank form provided by the American Power Boat Association. (g). No club shall enter more than one boat for the same match. (h). A boat to be eligible to compete shall be the bona fide property of a member or members in good standing of the club it represents. (i). Boats must be measured previous to the match by the measurer of the challenged club, and must have aboard when measured and when racing a suitable anchor and cable, compass and two life buoys.

Article VIII.—The club challenging and the challenged club may by mutual consent and agreement fix and decide all the terms and conditions of the match (not inconsistent with the terms and conditions of this instrument), whether relating to dates, courses, notices, or any other matter whatsoever pertaining to the match or preliminary thereto, except that the challenged club must immediately upon receipt and acceptance of first challenge notify in writing the secretary of the American Power Boat Association of the fact, and transmit to him a copy of such challenge; and the date for the first race of such match shall not be set for a day earlier than thirty days after the course, dates, and any other matters having been agreed upon, and written notice of the same sent to the secretary of the American Power Boat Association. The challenging and challenged clubs may also, by mutual agreement, waive such provisions of this instrument as would otherwise govern the match or the preliminaries thereof; Provided, however, That the written consent of the executive committee of the American Power Boat Association shall have been first obtained.

Article IX.—If deemed desirable, the terms of this agreement may be modified by the American Power Boat Association while the cup is in their possession, and when not in their possession by agreement between the American Power Boat Association and the club having custody of the cup; Provided, however, That no modifications shall be made during the pendency of any challenge unless consented to in writing by all the challengers.

Article X.—In case the club having the custody of the cup shall be dissolved or shall cease to exist, or shall refuse to or fail to comply with all the terms and conditions hereof, the said cup shall thereupon revert to the American Power Boat Association, and shall continue, subject to the terms and conditions of this instrument.

## Designing Competition.

\$225 in Prize.

Two designing competitions have been given in FOREST AND STREAM. The first was for a 25ft. water-line cruiser; the second was for a 15ft. one-design class. Both competitions were very successful. The great interest taken in those competitions has prompted us to give a third one, open to amateurs and professionals. The prizes which will be given are as follows:

First prize—\$100.

Second prize—\$60.

Third prize—\$40.

Fourth prize—\$25, offered by Mr. Theodore Zerega for the best interior plan.

The designs are for a yacht conforming to the following conditions:

I. Centerboard cruiser, 40ft. l. w. l.

II. Boat must not draw over 6ft with centerboard up.

III. The lowest freeboard to covering board must be 3ft.

The design must be modern in every particular, without containing any extreme or abnormal features. The conditions have been made as simple as possible, that competitors might have all latitude and scope in working out their ideas. We wish to produce an able and comfortable cruising boat, one that shall have ample accommodation for two or three men living aboard for a period of several months, and one that can be easily managed at all times by two or three paid hands. The draft is restricted to 6ft. in order that the boat may have access to nearly all the desirable harbors, and may, thereby, widely increase her cruising field.

### Drawings Required.

I. Sheer plan, scale  $\frac{3}{4}$ in.=1ft.—showing center of buoyancy, center of lateral resistance and center of effort of both rigs.

II. Half breadth, scale  $\frac{3}{4}$ in.=1ft.

III. Body plan, scale  $\frac{3}{4}$ in.=1ft.

IV. Cabin plan, inboard profile and at least one cross section, scale  $\frac{3}{4}$ in.=1ft.

V. Two sail plans, scale  $\frac{1}{4}$ in.=1ft.; one as a yawl; one as a pole mast sloop.

In the case of the yawl rig the position and height of the mast and length of gaff are to be the same as in the cutter rig. Plans must show working topsail and size of light sails.

VI. All ballast outside on keel except amount necessary for trimming.

An outline specification must accompany each design. The drawings should be carefully made and lettered. All drawings should be on white paper or tracing cloth in black ink. No colored inks or pigments should be used. The designs must bear a nom-de-plume only, and no indication must be given of the

author. In a sealed envelope, however, the designer must inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than March 1, 1904. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all of the designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, who passed upon the designs submitted for the 25ft. with great care, has again consented to judge the designs and make the awards.

### House-boats and Inland Waters.

Thomas A. Fulton, whose house-boat Mon Mon was lost off the Oriental Hotel, at Manhattan Beach, on June 14, 1902, has failed in his suit to recover the value of the boat from the president and directors of the Insurance Company of North America, in which company he held a policy of marine insurance. The company had obligated itself to pay damages only in case the Mon Mon was lost in inland waters. Judge Adams, of the United States District Court, before whom the action was tried, has decided that the waters of the Atlantic Ocean, off Coney Island, cannot be held to be inland, even though they are within the lines established by the authority of Congress for the application of provisions concerning inland navigation. Judge Adams said in part: "The policy here was a New York contract, presumably framed with a view to the definition made by the courts of the State, and it cannot, apparently, be affected by the laws of the United States made for the purpose not within the purview of the parties at the time of the contract. This loss occurred over three miles to the eastward of Norton's Point, the western end of Coney Island, and the natural outer boundary of inland waters belonging to New York Bay. Ocean waters cannot be changed to inland waters by legislation particularly designed to secure safety from collision in navigation. \* \* \* House-boats are not as frequent in this country as abroad, but it is well-known that here, as well as elsewhere, they are adapted for use in protected waters only."—New York Times, Jan. 31.

### YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

The schooner yacht Scimitar, owned by Messrs. W. A. and A. B. Hart, has been sold to Mr. George A. Suter. The transfer was effected through Mr. Stanley M. Seaman's agency.

Mr. L. D. Sampsdell will conduct a yacht brokerage business at 612 Gravier street, New Orleans, La., under the name of the Southern Yacht Agency. Mr. Sampsdell will represent Mr. B. B. Crowninshield in New Orleans.

The steam yacht Felicia, owned by the late E. W. Bliss, has been sold to a well-known yachtsman of Providence, R. I., through the brokerage department of Henry J. Gielow. Felicia, which is one of the speediest yachts in the fleet, was tested by a U. S. Naval Board, June 5, 1898, over the measured mile in Narragansett Bay, going four times over the course, and made an average speed of 17.39 knots, or 20.02 statute miles. In the summer of 1899 she made a sixteen days' cruise from New York to Bar Harbor and return, more than 1,000 knots, on a coal consumption of 38 tons for main engine, electric light plant, and all other machinery. She was built of steel in 1898, by the John N. Robins Co., and is of 213 gross, and 145 net tonnage. Her dimensions are: 179ft. over all; 142ft. 4in. waterline; 20ft. beam; 11ft. depth of hold; 3ft. 6in. draft.

She is driven by four cylinder, triple expansion engines, supplied with steam from two Roberts water tube boilers. She has five watertight compartments, so arranged that she would keep afloat if any two of them were flooded.

Telegraphic reports from Key West, Florida, state that the schooner Sylph, owned by Mr. John A. Berkey, of St. Paul, Minn., was wrecked on a reef 10 miles E. of Key West, on January 28. The owner, his guests, and the crew were taken off the yacht by a pilot boat, and were landed at Key West. The yacht lies in a bad position, and it is believed she will be a total loss. Sylph was built in 1889, by J. M. Bayles & Son, of Port Jefferson, L. I.

A race will be held under the auspices of the American Power-boat Association, on Decoration Day, May 30, 1904, open to all boats whose owners are members of clubs which are enrolled in the association. The race will be open to all classes, and will be held in Manhasset Bay, off Port Washington, L. I., starting at 2 o'clock in the afternoon. The course for the smaller classes will be confined to the waters of Manhasset Bay, making a start off Manhasset Bay Y. C. club house. The course for the larger boats will be from the same starting line, out into the Sound and return. For first, second, and third prizes, the association will award their pennant to the boats finishing first, second, and third in each class. The Association Prize Pennant for first prize, is a broad pennant with a blue field and a white propeller in the center. In the upper left-hand corner is the class letter, and in the lower right-hand corner the year. The second prize is the same arrangement, with a red field and a white propeller and letter. The third prize is white field with red propeller and letter. Other prizes will probably be given in each class. The Manhasset Bay Y. C. has extended the courtesies of the club house to the visiting clubs, members of the association. Entry blanks will shortly be mailed to each of the clubs, members of the association. Entries will close at 6 o'clock the day before the race, and from inquiries which have already been received by the secretary, a very interesting race is expected. The association rules and time allowances will govern the contest.

### Officers of A. C. A., 1904.

Commodore—C. F. Wolters, 14 Main St. E., Rochester, N. Y.  
Secretary-Treasurer—John Sears Wright, 519 West End Ave., Rochester, N. Y.

#### ATLANTIC DIVISION.

Vice-Commodore—L. C. Kretzmer, L. C. Schepp Building, New York.  
Rear-Commodore—W. A. Furman, 846 Berkeley Ave., Trenton, N. J.  
Purser—M. Ohlmeyer, Jr., 201 Palisade Ave., West Hoboken, N. J.  
Executive Committee—H. L. Pollard, 138 Front St., New York; N. S. Hyatt, Ossining, N. Y.; H. C. Allen, 54 Prospect St., Trenton, N. J.  
Board of Governors—R. J. Wilkin, 26 Court St., Brooklyn, N. Y.  
Racing Board—H. L. Quick, Yonkers, N. Y.

#### CENTRAL DIVISION.

Vice-Commodore—H. C. Hoyt, 164 Crescent Ave., Buffalo, N. Y.  
Purser—Frank C. Demmler, 526 Smithfield St., Pittsburgh, Pa.  
Executive Committee—Jesse J. Armstrong, Rome, N. Y.; John S. Wright, 519 West Ave., Rochester, N. Y.  
Board of Governors—C. P. Forbush, 14 Main St., East, Rochester, N. Y.  
Racing Board—Harry M. Stewart, 85 Main St., East, Rochester, N. Y.

#### EASTERN DIVISION.

Vice-Commodore—Henri Schaeffer, Manchester, N. H.  
Rear-Commodore—H. M. S. Aiken, 45 Milk St., Boston, Mass.  
Purser—Edw. B. Stearns, Manchester, N. H.  
Executive Committee—B. F. Jacobs, Jr., West Medford, Mass.; D. S. Pratt, Jr., Wellesley Hills, Mass.; Marcus Butler, Lawrence, Mass.; William W. Crosby, Woburn, Mass.  
Board of Governors—Paul Butler, U. S. Cartridge Co., Lowell, Mass.  
Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; H. D. Murphy, alternate.

#### NORTHERN DIVISION.

Vice-Commodore—Chas. W. McLean, 303 St. James St., Montreal, Canada.  
Rear-Commodore—Wm. Sparrow, Toronto.  
Purser—J. V. Nutter, Montreal, Canada.  
Executive Committee—C. E. Britton, Gananoque, Ont.; Harry Page, Toronto.  
Board of Governors—J. N. MacKendrick, Galt, Ont.  
Racing Board—E. J. Minet, Montreal, Canada.

#### WESTERN DIVISION.

Vice-Commodore—Burton D. Munhall, care of Brooks Household Art Co., Cleveland, O.  
Rear-Commodore—Chas. J. Stedman, National Lafayette Bank, Cincinnati, O.  
Purser—Geo. A. Hall, care of Bank of Commerce, Cleveland, O.  
Executive Committee—Thos. P. Eckert, 31 West Court St., Cincinnati, O.; Dr. H. L. Frost, 10 Howard St., Cleveland, O.  
Board of Governors—Henry C. Morse, Peoria, Ill.

### How to Join the A. C. A.

From Chapter I, Section I, of the by-laws of the A. C. A.:  
"Application for membership shall be made to the Division Purser, and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

## Cruise of the Red and the Green.

### A Canoe Cruise in the Lake Temagami Region.

BY ARTHUR L. WHEELER.

The Story which won the Third Prize of \$15 in "Forest and Stream" Canoe Cruising Competition.

(Continued from page 97.)

July 8. From Glasford Lake up McDonald Creek. Short portage to Moxam Lake. Up creek into Burwash Lake. To Ross Lake. Short carry into southeast arm of Rabbit Lake, thence northwest to outlet of Rabbit Lake. Distance, about ten miles.

At breakfast we decided to make the outlet of Rabbit

"The Rabbit" on Rabbit Lake.

Lake before camping. Not far above Glasford Lake we saw another large bull moose feeding in a deadwater, but although we approached within fifty yards, we did not get near enough for a picture. The day proved very hot, and we found it necessary to take a siesta after lunch on Burwash Lake.

The map is wrong in showing a connection between Ross Lake and the southeast bay of Rabbit Lake. The

two bodies of water are absolutely unconnected, although they approach to within a few rods of each other. A very short and easy portage is there necessary.

Another siesta was necessary after we had reached Rabbit Lake, and this was pleasantly supplemented by the discovery of a cold spring brook on the north shore. Springs are very scarce in that country, and this was the first one we had seen. Indeed, when I was told beforehand that there were no springs, I was incredulous, but it is true. Only the most painstaking search will reveal any springs, and then they are few and widely scattered. I suppose this is due to the geological formation of the country. The water of the lakes is perfectly good, but is too warm to be really palatable.

Rabbit Lake seemed to us magnificent after the small lakes through which we had come. It is a splendid sheet of water with high, rocky shores and many deep bays, and so large that one may paddle nearly twenty miles

Deposit of Glacial Boulders in Diamond Lake.

straight away. Nearly every foot of the shores is covered with splendid trees, mostly red pine. The exhilaration of paddling along this beautiful lake made us almost forget the extreme heat, and it was not long before we had covered the two or three miles that separated us from the outlet. We had expected to camp on the right bank of the outlet, but finding two rangers already there, we crossed to the left bank, where we found an excellent spot just at the point where the Metabetchouan leaves the lake. We were now at the place which we should have reached had we come directly up the river from Third Bass Pond.

The fishing in Rabbit Lake was excellent. In about half an hour the fishing contingent caught in one troll five large doré, a large pike, and a good sized bass. They then returned to camp, since these were all the fish that we could eat at two meals. At the entrance to the river, where the water was from ten to twenty feet deep, we could see the doré lying by squadrons and divisions. The doré is a good fish to eat, especially when baked before an open fire with a strip or two of bacon dropped over him just to give him the proper flavor. We found him the equal of bass, and these two fish furnished most of our fish courses. They are inferior to lake trout, but much superior to pike. Indeed, we never ate the last named fish, for we could always secure the others.

The heat continued, and we passed a night that was fairly stifling. But civilization, as we learned later, suffered worse than we.

July 9. The heat and the news from the rangers that there were lake trout (or gray trout, as they call them), in the lake decided us to spend a day in camp, and have a try at the fish. We trolled deep with a pound or two of sinkers, but without success. Once a good fish was hooked, but it proved to be an unusually large doré. But we thoroughly enjoyed the beauties of Rabbit Lake. The northeast bay, with its high cliffs, is especially fine. And it was a perfect day. Who shall say that it is all of fishing to fish?

July 10. Through Rabbit Lake from the outlet around Rabbit Point to the inlet in northwest bay. Camp on an island. Distance, about eight miles.

Eight miles is not much of a day's work on paper, but we had good reasons for going very leisurely. The distance may actually be a hard day's work, if one faces a strong head wind all the way, a common occurrence on these large lakes. The wind was kind to us, however, and if we had been in a hurry we could have left Rabbit Lake behind. Indeed, I suspect that the desire to linger one more night on the lake had something to do with our leisurely pace. Moreover, another perfect day with a bright sky and transparent atmosphere added its persuasiveness. No one cares to waste even part of such a day on the portage.

As we paddled lazily along we saw on the southeast shore many fine glacial markings in the cliffs. Traces of the glacial period are very plain in many parts of the country through which we passed, and a geologist would find them of great interest.

The "rabbit" from which the lake takes its name is a large boulder on Rabbit Point. Somebody has scratched some eyes and improvised some ears with small stones,

and from the lake the likeness is very good. We lunched shortly after rounding the point, and made camp on an island in the inlet at about three o'clock. From this camp we had a magnificent view down the northwest arm. Having plenty of time to fish I tried the fly a little and took at one cast a bass and a doré, each weighing about two pounds. The doré took the tail fly as it was trailed through the water by the bass, which was on the dropper. We also took on the troll a number of doré and a pike about a yard long. It will be seen that we had nowhere any phenomenal luck with the fly, but it was, nevertheless, sufficient to afford us a good deal of sport.

Getting supper at this camp proved to be a task, for a strong wind had risen and everything, especially the biscuit, was pretty thoroughly dusted with ashes. We comforted ourselves with the thought that a little potash occasionally is a good thing for the human system.

July 11. From head of Rabbit Lake up the river and over portage to White Bear Lake. Through west arm of White Bear Lake and portage to Caribou or Snake Lake. Portage to Mud Pond. Portage to northeast arm of Temagami Lake. Distance, about nine miles.

Breaking camp we paddled up the inlet to the portage into White Bear Lake, passing one bit of swift water on the way. The portage is on the left bank, and about a quarter of a mile in length. White Bear Lake takes its name from Chief White Bear, who has a house and the germ—hardly more—of a farm on the northwest shore of the lake. We sent one canoe to interview the chief, and at the same time to secure some fresh milk. Both attempts were futile, for Mr. White Bear was away, and the cow had ceased to be—"too much trouble to feed her," said Mrs. White Bear, whom we found at home. And so milkless, save for the preserved article, we lunched and proceeded sadly on our way.

From the west arm of White Bear we portaged into Caribou or Snake Lake—a short carry. This is not an attractive sheet of water, and it is said that no Indian will camp there because of the legend that snakes once devoured an ill-fated red man who had the temerity to do so. A more cogent reason with us was the fact that the only good camping site was occupied by some engineers, who were at work on the new railroad, which is soon—alas!—to be put through that country. At this point a shower came up, accompanied by a tremendous head wind, into whose teeth we dug in an effort to beat out the rain which was coming fast. It was a dead heat, for we and the shower reached the portage simultaneously. There was nothing for it but to unload our stuff and crawl under the canoes, where we remained curled up for half an hour. We then made the portage (about a third of a mile) up over a steep hill and down through a beautiful grove of red pines to Mud Pond. This portage marks the height of land between the Metabetchouan and Temagami waters. A short paddle across Mud Pond and a portage of a few hundred yards, nearly level, took us to the northeast bay of Temagami. On the portage we found quite a force of railroad workers encamped and a new post-office! There was also a small steamer at the landing which had been hauled in during the previous winter. Not wishing to camp so near civilization, we kept on about a mile down the arm of Temagami, and made camp at a very attractive spot on the south shore.

#### PART II.—THE TEMAGAMI WATERS.

July 12. It was Sunday, and our numerous portages of the preceding day made us very willing to lie over a day and recuperate. We spent the day in resting, writing letters, which we here had the chance to mail, and in eating—always a last resort when other occupations failed. We were at once struck by the difference between

At the End of a Portage—McDonald Lake.

the water of Temagami and that of the Metabetchouan lakes. Here the water was bright and clear with none of the amber tint so noticeable in the lakes through which we had passed. This difference is probably due to the different geological formation, and to the fact that Temagami is the source, not the result, of rivers. For bathing the water was perfect, and one could dive almost anywhere from the shore into very deep water. Another feature of Temagami which immediately impressed us

was the absence—or comparative absence—of mosquitoes. These pests troubled us very little in any part of Temagami.

July 13. Down northeast arm, around Metagama Point to Hudson's Bay Post on Bear Island. Distance, about sixteen miles.

This was a beautifully clear, cool day. Bright sunshine alternated with heavy cumulus clouds. We were soon out upon the broader portion of the arm, which is in places two or three miles wide, and thickly dotted with islands. These islands, rock-bound and densely wooded, are a prominent feature of Temagami, which contains no less than thirteen hundred of them large and small. We skirted the northern shore which is said to comprise some of the finest virgin pine lands left on this continent, and we could well believe it as we beheld the splendid trees occupying every nook and cranny in the rocks, and extending in an unbroken line as far as the eye could reach. Temagami affords the finest of lake scenery. The brilliant water, the rocky islands floating like ships on the distant horizon, the towering red and white pines, all seen in atmosphere of crystalline clearness, make a picture one long remembers.

We rounded Metagama Point early in the afternoon, having been delayed by a couple of short but heavy showers, by one of which we were thoroughly drenched. Here we entered the main part of the lake, although the islands are so numerous that were it not for glimpses here and there between them of twenty miles of distance we might not realize that he is in a large lake. At Bear Island we received a hearty welcome from the fir rangers, who have a very comfortable log house on the southern point of the island, and a little later from Mr. Woods, the Hudson's Bay Company's agent. But we had to make camp, and so, deferring visits to a later time, we struck off to a small island about three-quarters of a mile west of the post and prepared for a stay of several days.

Temagami is an ideal camping place. The water is, as I have said, perfect for bathing. Bass, doré, and lake trout (if you know how to get them) are plentiful, and good camping places are countless. The islands are of all sizes, from the large Tamagama with its three or four miles of feathery pines, to little toy islets with a toy tree, a bush or two, and scarce standing room for one. The shores of both the mainland and the islands are bold and picturesque. There is not a marsh on all the northern part of the lake, though we were told that to the south there are some extensive tracts of low ground. The absence of stagnant water doubtless accounts for the almost total absence of mosquitoes. While we remained in our island camp we did not use our net. I have never been in a country where the air was so consistently clear. There may be sun or there may be clouds, but a hazy, thick atmosphere is very rare.

July 14 and 15. For two days we lived on our island, enjoying a thorough rest and the unwonted luxury of fresh milk and yeast bread, and even some eggs. These we procured of families at the Post, where there is quite a cluster of small buildings, eighteen or twenty all told, mostly built of logs. There is also a variable transient population of Indians dwelling in tents. Some farming is carried on, and there is a goodly number of horses and cows. Here, as everywhere in that region, the birch canoe is king, although there are many Peterboros among the rangers, and our canoes excited general comment and respect.

On the night of the 14th the weather suddenly turned cold with a high northwest wind. A roaring camp-fire was a great comfort, and, as there were no mosquitoes, we opened one end of the tent to gain the full advantage of the blaze. In the morning we tried trolling for lakereels, but with the white caps rolling it was very difficult to keep the proper speed on the dancing canoes, and after two or three hours we gave it up. We had not the proper outfit for deep trolling in any case, for we found that those who had great success made use of the copper line and large, windlass-like reel. It was not difficult, however, to pick up with a surface troll all the bass and doré that we needed to eat.

July 16. Up north arm of Temagami to Sharp Rock inlet. Sharp Rock portage to Diamond Lake. Camp on island opposite the west arm of Diamond Lake. Total distance from Bear Island, about eighteen miles.

Regretfully, for we did not then know that we should return by way of Bear Island, we bade farewell to our camp and turned our faces to the north in quest of Diamond, or Non-wa-kaming, Lake. I well remember what a glorious day it was. The high wind had for the time died away, leaving the air as clear as air can be, and just cool enough to temper the bright sun. We paddled gayly along among the countless islands, where it is easy to lose one's way, and before noon had reached Granny Bay in one of the most picturesque parts of Temagami. On the east, rising sheer from the water, is Devil's Mountain, while the wide expanse of lake is inclosed on the west by high, perpendicular cliffs of bare rock. A few islands lie in the middle of the bay. Towards these we headed in our efforts to make head against the strong north wind which had again sprung up, and for two miles we had the stiffest paddle of the trip. It required all our strength to make any headway, and the bowmen got an occasional lap full of water which did not enhance the joys of the occasion. When at last we reached the northern shore, we were quite ready for lunch and a rest. The bright, cool air and a hot cup of tea soon put us in trim once more, and so we kept on through Sharp Rock inlet to the portage of the same name. The latter is short, not a half mile in length, but is very rocky, though not appreciably more so than most of the portages in that country.

[TO BE CONCLUDED.]

## New Advertisements.

The twenty-first edition of the catalogue of the T. H. Chubb Rod Company, of Post Mills, Vt., has just been received, and is full of interest to anglers. The manufacture of rods both for fly and bait uses has long been a specialty of the Chubb Rod Company; but besides rods, it manufactures parts of rods of every description, reels, lines, leaders, hooks, flies, fly-books, tackle cases, and a hundred other articles useful to the angler, and the man who takes his recreation out of doors. Mr. Chubb's name has long been a familiar one to the readers of FOREST AND STREAM, and this catalogue should be on the table of every angler.

## Marine Hardware.

It is essential that only the best procurable hardware should be used on yachts, canoes and rowboats, for it not only adds greatly to the boat's appearance, but in many cases means the safety of those on board. Many men when fitting out their boats feel the expense of the best hardware is excessive, and finally purchase some of inferior quality. This is always a fatal mistake, for metal is subjected to harder usage on vessels than it ever is when used elsewhere, and the action of water on the metal must also be considered. Many men have been thrown from aloft and badly injured by the breaking of a block of cheap material, and others have been carried overboard through the breaking of a poorly made cleat. Men are subjected to too many dangers on the water without running any unnecessary risks, and when buying hardware for a boat, as in purchasing anything else, secure only the best.

Bliss Bros., 170 Commercial street, Boston, Mass., have for years past devoted great attention to the manufacture of fine marine hardware. Everything they handle is of the best, and they make a specialty of fittings for yachts and launches.

Yachtsmen throughout the world are interested in the building of the boats they sail in. Many are disposed to build their own boats, but the great difficulties of getting out the keel, frames, etc., prevent them from undertaking the work. The really interesting part of boat building is in seeing the craft take shape; that is, in erecting the frames, putting on the ribbands, and starting to plank. Working out a boat's keel from the rough timber, cutting and steaming frames is a long and tiresome job, and requires expensive and elaborate tools and machinery. Mr. Fred Medart, of 3539 De Kalb street, St. Louis, Mo., has a plan whereby the interesting work of boat building can be readily undertaken by amateurs. Mr. Medart's system is simple and satisfactory, as is shown by the great success it has met with during recent years. All the difficult and laborious work of getting out a boat's keel and frame is done in his large and splendidly equipped plant, which is located in a district where the best materials can be secured. After getting out the boat's keel, frame, etc., everything is set up. Then each piece is numbered, and the frame taken apart, crated, and sent to the prospective builder. In this way the amateur gets all the material for his boat, with the work done on it at less expense than he could buy it in the rough.

What is more annoying than hanging over the stern of a row-boat, trying to hang the rudder, when one is getting wet to the shoulders every time the boat dips to a wave? These petty annoyances make up only part of the nuisances connected with this job. Every time one experiences the usual trouble of hanging a rudder by the old eye and pintle method, or finds upon leaving the boat for a little while, without taking it from its place, that it has been washed out, and gone adrift, one secretly makes up one's mind to abandon the use of the rudder entirely, or else find some other way of hanging it. The Galliac Rudder Attachment, recently brought out by Messrs. A. S. Morss & Co., 210-212 Commercial street, Boston, Mass., solves the problem of hanging a rudder easily and securely. The Galliac Rudder Attachment is a device whereby any rudder can be hung easily and without the slightest discomfort or annoyance. All one has to do is to insert the rudder in the slide which is fastened on the transom, and the rudder drops into place of its own weight, and it cannot go adrift because it has to be removed entirely to unship it. The Galliac Rudder Attachment is easily attached, and is strong, neat and durable. Messrs. A. S. Morss & Co. handle all kinds of high grade marine hardware.

It is a well-known fact that yachtsmen almost without exception put everything off until the last minute. When they decide to build a boat they delay placing the contract with a builder until so late in the spring that he is unable to finish the craft until the summer is well advanced. Some enterprising builders, realizing the weakness that yachtsmen show in the direction of procrastination, have made it a point to keep their plants running during the slack season, and turn out saleable yacht hulls of moderate size and keep them in stock. So that the man who has delayed building until too late in the season, or the man who has just decided to get a boat, can be accommodated. After a good hull is secured an engine can be purchased from the many manufacturers and installed in the boat. The Durant Manufacturing Co., of Rochester, have on hand a good stock of gasoline launches, foot-power launches, and metallic joint canoes, all ready for delivery, and those contemplating the purchase of any of the above-mentioned craft will do well to communicate with that firm.

## Rifle Range and Gallery.

### Fixtures.

Feb. 27-March 5.—New York.—At Zettler's, championship rifle gallery tournament.  
June 12-20.—National Schuetzenbund Festival, Union Hill, Schuetzen Park, N. J.

### Zettler Rifle Club.

The members of the Zettler Club in the weekly gallery contest are hard at work, on trying to outdo the other. There is a small group of five or six members who are running a neck-and-neck race for first place on the prize list. At the shoot on Tuesday night only ten members were present; among them was W. A. Tewes, who is behind in his scores and is shooting 100 shots each week to catch up with the group that is in the contest. Tewes made a strong bid for the club's record for 100 shots, which is 2460. Tewes' total was 2457. The best 50-shot score was made by A. Moser, who is a new member, having been elected at the January meeting. The scores are as follows:

Ten-shot scores, 25-ring target, distance, 75ft., 100 shots: W. A. Tewes 2457, C. G. Zettler, Sr., 2377, H. Fenwirth 2350.

Fifty shots: A. Moser 1210, C. G. Zettler, Jr., 1209, E. Van Zandt 1203, Geo. Ludwig 1196, B. Zettler 1191, A. Begerow 1185, Geo. J. Bernius 1159.

### Italian Shooting Society.

The members of the Italian Shooting Society are becoming interested in the winter gallery contests in the Zettler gallery. At the last shoot on Monday of last week twenty-two members took part. The members are divided into two classes. Seloaggi led the first class with a total of 241. In the second class Navoni was first with 236. Ten-shot scores, 25-ring target, distance 75ft.: First class: Seloaggi 241, Conti 237, Gallina 237, Gerbolini 233, Reali 233, Muzi 232.

Second class: D. Navoni 236, Bianchi 233, De Telve 231, Borroni 233, Del Soh 227, De Angelo 218, Ciancimino 216, A. Orsenigo 218, Raimond 209, E. Orsenigo 206, V. Malnat 205, L. Mercanti 196, G. Fontanella 195, A. Ronchi 173, S. Fontanella 165, Migliore 157, Mastroposlo 115.

### Miller Rifle and Revolver Club.

At the last weekly gallery shoot of the Miller Club, on its headquarters' ranges, Washington St., Hoboken, Jan. 27, fifteen members were present and took part. C. Bischoff was high with 246. David Miller, from whom the club derives its name, and whose age is in the sixties, was second with 245. The scores are as follows, 10 shots, 25-ring target, distance 75ft.: C. Bischoff 246, D. Miller 245, F. Unbehaum 244, D. Dingman 243, O. Smith 242, C. Miller 239, R. Goldthwaite 239, R. W. Evans 238, W. Wahlstrom 238, H. Bahn 238, R. A. Blake 230, E. Doyle 233, W. Ericson 228, H. H. Meyns 227, C. Bayha 225, R. Dahlem 223.

## Independent New York Corps.

GUS ZIMMERMANN, who was lately elected captain of the Independent Corps, had his members out on the Zettler ranges for the first time this season on Friday night of last week. The attendance was light, ten members being present. Capt. Zimmermann led the scores. Lambert Schmidt was second.

Ten-shot scores, 25-ring target, two scores to count: Gus Zimmermann 247, 247; L. Schmidt 242, 241; Aug. Begerow 234, 236; H. Koch 229, 229; Wm. Soell 221, 229; H. Zimmer 199, 203; H. J. Behrens 227, 222; G. Bauer 191, 216; H. Kabiske 137, 183; F. C. Halbe 184, 205.

## Trapshooting.

If you want your shoot to be announced here send a notice like the following:

### Fixtures.

Feb. 6.—Trenton, N. J., Shooting Association all-day shoot; merchandise prizes. J. R. Taylor, Gen'l. Mgr.  
Feb. 12-13.—Paterson, N. J.—Jackson Park Gun Club tournament; live birds and targets.  
Feb. 20-22.—Chicago Trapshooters' Association tournament at Watson's Park.  
Feb. 21.—Jersey City, N. J.—All-day shoot of the Hudson Gun Club. A. L. Hughes, Sec'y.  
Feb. 22.—Louisville, Ky.—Jefferson County Gun Club amateur tournament. Emile Pragoff, Sec'y.  
Feb. 22.—Schenectady, N. Y., tournament.  
Feb. 22.—Schenectady, N. Y., Gun Club tournament. Valentine Wallburg, Capt.  
Feb. 22.—Lexington, Ky.—Jefferson County Gun Club.  
Feb. 23-26.—West Baden, Ind.—Colonial Handicap. Targets and pigeons. Open. \$500 guaranteed. John L. Winston, Mgr.  
April 19.—Springfield, Mass., Shooting Club Patriots' Day tournament. C. L. Kites, Sec'y.  
April 27-28.—Americus, Ga.—The Interstate Association's tournament, under the auspices of the Americus Gun Club. H. S. McCleskey, Sec'y.  
May 19-20.—Oklahoma City, O. T.—Territorial Sportsmen's Association's fifth annual tournament. J. C. Clark, Sec'y.  
June 7-9.—Sioux City, Ia.—Soo Gun Club's tenth annual amateur tournament; added money. W. F. Duncan, Sec'y.  
June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 219 Coltart Square, Pittsburgh, Pa.  
June 27-July 2.—French Lick Springs, Ind.—Tournament of the National Gun Club. John M. Lilly, Pres., Indianapolis.  
July 4-6.—Winona, Minn.—The Interstate Association's tournament, under the auspices of the Winona Sportsmen's Club. Oswald Leicht, Sec'y.  
Aug. 10-12.—Brantford, Ont.—Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament. A. B. Cutcliffe, Sec'y.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The Marshalltown, Ia., Gun Club claims May 24-25 for two days' tournament at targets. Added money for high average.

The Buckeye Gun Club, of Dayton, O., held a shoot on Jan. 29, at 50 targets per man. The prize was a handsome silver trophy and the title of championship of Montgomery county for the year. Shooters from all parts of the country were invited, and the match was won by M. E. Lindemuth, after shooting off a tie with Z. Craig. The trophy and title was held by Wilbur Wampler during 1903.

### Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Jan. 28.—Owing to a misunderstanding regarding an order for a supply of bluerocks, it was necessary to-day to use the "pick-ups" that have been accumulating since the snow and cold weather has been with us. Some—in fact, the majority—of these targets were frozen as hard as stone, and any number of them were full of snow and ice, which accounts for the low scores. Capt. Traver, with whom the hard targets seemed to make no difference, scored a win on the cup with a full score. Smith beat Marshall out in the shoot-off of last week's tie. Next week two cups will be shot for, also the Dutchess county championship, when Capt. Traver will defend the title against Ike Tallman.

LOWELL, MASS.

### The Air Spacing of Powder Charges.

A CORRESPONDENT recently wrote to us from India asking if we could make a few experiments to determine whether any benefit could be derived from increasing the air space in shotgun cartridges. He proposed that a cartridge case longer than usual should be employed with an internal shoulder or other wad stop, such as would be capable of giving an absolutely fixed space for the charge of powder. He suggested that the amount of powder used should be equivalent to one-half the total capacity of the available space, the wadding and shot charge to be the normal ones for sporting cartridges. His idea appears to be that possibly the muzzle velocity of a shotgun could be improved by the above treatment, without introducing high pressures and the consequent wild shooting and scattered distribution of the shot pellets. The utility of high velocity shot cartridges would, according to his view, be confined mainly to wildfowl shooting, where conditions demanding great power are generally present.

The proposal above put forward is no doubt derived from the analogy that is provided in rifle cartridges. In this connection it is well understood that the ballistics of a rifle cartridge can be greatly augmented, without going beyond the accepted limits of pressure, by the use of an increased charge of powder combined with a cartridge case of greater proportional capacity than the amount of powder charge would appear to require. The idea, as applied to sporting cartridges, is not, of course, by any means original, but its practical application has not to our knowledge been extensively recognized. In the case of smokeless powders, which are bulked equally with black powders, the principle of air spacing is already established by manufacturing the grains of powder in such a way that their spongy structure shall enable them to fill a greater space than if the explosive matter consisted of leaflets or other form of condensed powder.

A difficulty which is always apt to arise in dealing with air-spaced smokeless powders is to insure the regular and effective ignition of the explosive. Where a charge of powder is compressed into a more or less solid pellet, the igniting influence of the cap is greatly aided by the gas given off by the powder itself. When the powder is unduly air spaced a low breech pressure is registered, with the result that the ignition is not always perfectly performed. An illustration of this condition may be seen on looking down the barrels of most of the miniature rifles which are fired with cartridges containing revolver Cordite. The surface of the bore is deposited from end to end with unburnt grains of powder. Their quantity is considerable, and yet allowance must still be made for what has been blown out of the muzzle. This goes to show that when the density of loading is reduced beyond a certain point, the effectiveness of the combustion is destroyed, and such cartridges cannot be regarded as entirely satisfactory, however well they may otherwise behave, until this error is corrected. A variety of remedies are open for adoption. For instance, the superficial area of the powder grains may be increased, or else a stronger cap may be used. In the same way complete combustion of the powder can be obtained, either by reducing the air space in the cartridge or by increasing the charge of explosive. All these adjustments are for the ammunition manufacturer to determine, but they at any rate show that the air space of a powder charge cannot be indefinitely enlarged in relation to the amount of explosive to be confined.

The condensed varieties of smokeless powder already represent a carrying out of the principles suggested by our correspondent. The conc bases which are formed in the cartridge cases prevent the entry of the wads beyond a certain distance. In fact, we believe that in the case of Ballistite the wads are entirely supported by the cone in the cartridge, and that the powder is not subjected to any compression whatsoever. It would certainly be a great advantage if all condensed powders could be used in a standard type of cartridge, having a wad stop that would insure a suitable powder space. This, however, does not at present appear to be possible, because, so far as we can ascertain, no one capacity of powder chamber would be equally suitable for all the condensed powders that are on the market. Some are more bulky than others, and too small a charge of powder in a given space would create difficulties of ignition likely to give trouble under practical conditions of service.

This, however, is somewhat beside the question raised by our correspondent, though it will no doubt serve to illustrate the practical difficulties involved in giving effect to the principle. Some time ago a continental firm introduced a new form of cartridge case, carrying out the exact idea put forward by our correspondent. The principle adopted was to place a kind of muslin network across the base of the cartridge. This was very tightly stretched a short distance forward of the flashhole. The powder charge was filled into the cartridge in the ordinary way, and the net was sufficiently firm to support the powder against the compression incidental to the seating of the wads. We tested

four sample lots of cartridges which were submitted to us, and the results are shown in the accompanying table:

	Charge in grains.	Oz of shot.	Chamber pressure in tons per sq. in.	Velocity over 20yds. in feet. per sec.
Poudre T.				
1. With diaphragm....	41	1 1/4	2.32	1148
2. With diaphragm....	41	1 1/4	3.17	1128
3. Without diaphragm..	38.5	1 1/4	3.78	1135
4. Without diaphragm..	38.5	1 1/4	4.55	1128
Walsrode.				
5. With diaphragm....	37	1 1/4	3.30	1128
6. With diaphragm....	37	1 1/4	3.30	1101
7. Without diaphragm..	34	1 1/4	4.10	1088
8. Without diaphragm..	34	1 1/4	4.65	1108

As only two shots for pressure and two for velocity were fired in each series, no averages have been calculated. As pressure and velocity were not obtained from the same cartridge, the individual value in the last two columns cannot be related to one another. It will be seen that two kinds of powder were used, and that pigeon charges were employed. In the case of the cartridges fitted with diaphragms, an increased quantity of powder was used to compensate for the loss of effectiveness due to the non-propulsive value of the first few expansions of the gas. In each instance the presence of the additional air space caused a marked reduction of the pressures in the presence of undiminished velocity. A further increase of powder would naturally have resulted in a material increase of velocity, without exceeding the pressures given by the ordinary loading. It might be supposed that the above trials point to an improvement in cartridges which should be generally adopted, but, as a matter of fact, the results obtained are not in any way remarkable. Our note-book contains the following observations, which were recorded at the time: "The diaphragm appears to act in the same way as any other method of air spacing in the charge, viz., to reduce pressure, while maintaining or increasing velocity with the help of an extra charge of powder. The diaphragm is not likely to become widely used. There would always be the danger of its fracture, and, with the confinement of the excessive charge due to the wads passing further into the case, aggravated probably by a larger turnover, the pressures would run very high." So much, therefore, for the diaphragm method of air spacing a shot charge. A cone or other form of shoulder would afford equally satisfactory air spacing of the charge, without the danger above alluded to, for there appears to be no advantage in confining the powder to one end of the chamber available for its combustion, as distinguished from the alternative method of allowing it to lie loosely within the allotted space.

There is no theoretical reason why high velocity shotgun cartridges should not be constructed on the above principle of large powder charges in combination with comparatively small amounts of shot. Provided the chamber were suitably air spaced for appropriate overcharges of powder, there could be no reason why a materially enhanced velocity should not be secured without unduly raising the pressures. Just what combination of results could be obtained it would be impossible to state without making careful experiments; but the question which really arises is whether there is a sufficient demand for a special cartridge of this character, which could only be used in guns of appropriate chamber length. Our own experience of guns used for shore shooting is that many of them fail to reach the standard which is daily attained by ordinary pigeon guns. Hence, before departing from recognized methods of design it would be desirable to see whether shoulder guns used mainly for duck shooting could not be adjusted and regulated so as to give in proportion to their respective charges results on all fours with what is commonly accepted as standard for sporting and pigeon cartridges. We may conclude with the remark that a favorite plan among American trapshooters is to air space the powder charge by using long cases and a huge length of wadding between powder and shot. Using the specified charges of shot, they get a high-counting pattern by the employment of a small size of pellet. By burning a lot of powder without raising the pressure, they considerably enhance the power of the apparently unduly small pellets. —Field (London).

### Boston Gun Club.

THE shooting dates are Feb. 3, 10, 17, 24; March 2, 9, 16, 23, 30; April 6, 13, 27; May 4, 11, for the spring prize handicap series at Wellington, Mass. Conditions: Entrance free, open to all shooters. Distance handicap. Six best scores out of fourteen to count. Score each day to consist of 25 unknown from magautrap.

Special challenge, team mates. Conditions: Two men per team, 25 unknown targets per man. Distance handicap. Special rules governing this contest posted at club house. All shooting under B. G. C. rules. Practice afforded before and after match.

Time table Boston & Maine Railroad, Union Station, Western Division: To Wellington, 12:42, 1:47, 2:45, 3:10, 4:21. Leave Wellington, 2:18, 3:38, 4:36, 5:08, 5:57.

### IN NEW JERSEY.

#### Newark Gun Club.

Newark, N. J., Jan. 26.—The Newark Gun Club pulled off a very successful shoot at its grounds in this village to-day, quite a number of sportsmen from out-of-town being present. Those who distinguished themselves with their marksmanship were J. Knapp, of Auburn, C. J. Cottle, of Skaneateles; Harrison, of Rochester; E. W. Snyder, of Marion, and A. D. Snyder, of Newark. The official scores follow:

Event No. 1, 10 targets: Harrison 6, E. Snyder 9, B. Snyder 8, Cottle 8, Knapp 9.

Event No. 2, 15 targets: Harrison 9, E. Snyder 10, B. Snyder 13, Cottle 14, Knapp 11.

Event No. 3, 20 targets: Harrison 13, A. Snyder 18, B. Snyder 16, Kelley 13, Knapp 13, Cottle 20.

Event No. 4, 10 targets: Harrison 9, E. Snyder 8, B. Snyder 6, Kelley 8, Knapp 8, Cottle 6.

Event No. 5, 15 targets: Harrison 12, E. Snyder 11, B. Snyder 13, Kelley 11, Knapp 13, Cottle 13, Witt 11.

Event No. 6, 15 targets: Harrison 8, E. Snyder 13, B. Snyder 9, Kelley 11, Knapp 12, Cottle 13, Witt 11.

Event No. 7, 20 targets: Harrison 14, E. Snyder 13, B. Snyder 18, Kelley 18, Knapp 16, Cottle 16.

Event No. 8, 10 targets: Harrison 8, E. Snyder 7, B. Snyder 9, Kelley 9, Knapp 9, Cottle 10, Witt 7.

Event No. 9, 15 targets: Harrison 12, E. Snyder 14, B. Snyder 12, Kelley 9, Knapp 13, Cottle 12, Witt 12, Parmer 8.

Event No. 10, 20 targets: Harrison 15, E. Snyder 16, B. Snyder 15, Parmer 12, Kelley 13, Knapp 18, Cottle 17.

#### Hudson Gun Club.

Jersey City, N. J., Jan. 24.—The Hudson Gun Club, of Jersey City, held the second shoot for January. The scores were not as good as generally on account of the high wind.

Events:	1	2	3	4	5	6	7	8	9
Targets:	25	15	25	25	15	15	10	10	25

Next shoot Feb. 7; all-day shoot on Feb. 21. Shooting dates for 1904: Feb. 7, 21; March 6, 20; April 3, 17; May 1, 15, 29; June 12, 26; July 10, 24; August 7, 21; Sept. 4, 18; October 2, 16, 30; November 13, 27; December 11, 25.

JAS. HUGHES.

#### Watson Park Gun Club.

CHICAGO, Ill., Jan. 29.—At a meeting held Jan. 22, a new gun club was formed, to be known as the Watson Park Gun Club, and the following officers were elected: President, J. H. Amberg; Vice-President, D. A. Hanagan; Secretary and Treasurer, George H. Steenberg; Board of Directors, L. Willard, Dr. C. W. Carson, O. Von Lengerke, and S. E. Young.

The club starts out with a membership of about twenty, among whom are some of the most prominent shooters in Chicago, and bids fair to become one of the best trapshooting clubs in Chicago, as it has started out right by joining the Chicago Trapshooters' Association. It is not the intention of this club to limit its membership, and members need not be residents of this city. An invitation is extended to all lovers of the manly sport of target shooting to join us in the promotion of trapshooting. The membership fee is \$2, and \$1 yearly dues. For further particulars address the secretary. At our meeting it was resolved that we issue a challenge for a team shoot to any five men in the United States, to be held at a date that may be agreeable to those accepting the challenge. For further particulars address the secretary, George H. Steenberg, 2372 115th St., Chicago, Ill.

#### Indiana League of Trapshooters.

INDIANAPOLIS, Ind., Jan. 25.—The Indiana League of Trapshooters will hold their annual shoot on the grounds of the Indianapolis Gun Club, Tuesday and Wednesday, April 12 and 13. The dates first selected were June 9 and 10, but the dates selected for the Grand American Handicap, June 20 to 24, to be held on the grounds of this club, made it necessary to change the date of the State shoot.

W. B. ALLEN, Sec'y.

### Baltimore vs. Wawaset.

WILMINGTON, Del., Jan. 29.—In its return match with the Baltimore Shooting Association in Baltimore, Md., yesterday, the Wawaset Gun Club, of this city, lost the shoot by 55 points, the score being 829 to 774. This majority is smaller than in the other shoot, when Baltimore team was defeated by the Wawaset by 80 points.

The delegation of local shots accompanying the Wawaset team was disappointed at the result, for the scores made by the local shots were not as good as were expected, and did not even come up to those made in the practice shoot. The shoot was pulled off under unfavorable conditions, for it was both dark and cold when the shoot began, and snow began to fall before it was at an end.

Beyond saying that the disagreeable weather conditions were responsible for no better scores, the Wawaset shots have no excuse to make for their defeat, but a number of local sportsmen think it was hardly fair that L. S. German, H. L. Worthington and George Burroughs were permitted to shoot for Baltimore. German is a resident of Aberdeen, Md., and Worthington is of Rising Sun, while Burroughs' home is in this city. The Wawaset team agreed to allow any member of the Baltimore Shooting Association to participate, however, the matter of residence not to be considered. Baltimore took advantage of this, and it is held by those who are objecting that the Wawaset Club might have allowed Fred Gilbert and others to shoot on that team. Burroughs shot twice for the Delaware State championship, being defeated by M. Roser in the last shoot. Another argument offered by a few who were opposed to him shooting for Baltimore is the fact that at the annual Maryland county shoot he was barred from participating on the ground that he was not a resident of Baltimore.

Baltimore intended to have E. B. Coc, formerly of that city, but later of Mississippi and Tennessee, present to shoot on that team, but he could not attend.

There were ten men on each team, and 100 targets were shot at. Hawkins, of Baltimore, was high gun with a score of 93 out of a possible 100. McKelvey was high gun for the Wawaset, getting 84 out of a possible 100. The shoot was well attended, a large number of Maryland shots being present.

The local shots were met in Baltimore by J. M. Hawkins and escorted to the grounds of the B. S. A., where it was found that the Baltimore team had been practicing all the morning for the event. Following the shoot the local team was entertained at dinner by the Baltimore sports. Several speeches were made. The scores follow:

Baltimore.	Wawaset.
J M Hawkins.....23 24 24 22—93	Jas McKelvey.....22 20 21 21—84
L S German.....23 21 23 22—89	L J Squier.....22 18 18 22—80
H Worthington.....22 19 22 21—84	M Roser.....17 20 21 22—80

829

774

The return match between these teams will be pulled off at Aberdeen, Md., within thirty days, and as each team has won a shoot, the coming one will be full of interest.

### ON LONG ISLAND.

#### Crescent Athletic Club.

THERE was a large attendance at the Saturday afternoon shoot of the Crescent Athletic Club at Bay Ridge, Jan. 30. D. C. Bennett won the January cup on a score of 25 with a handicap of 4, and his three best scores for the month totalled 73 out of a possible 75. The runner-up was Grant Notman, with 24 for the day. He was second for the month also, with a total of 70. A. G. Southworth was third for the day with 22 and third for the month with 69.

Bennett also won a 15-target trophy shoot, tying with Grant Notman with a clean score, and winning on the shoot-off with a full score to Notman's 2 less. Charles A. Sykes won a 15-target event for a trophy from a field of eighteen contestants with a clean score of 15, four men tying for second; they were T. W. Stake, F. T. Bedford, Jr., Daniel C. Bennett and H. B. Vanderveer, with 14 each.

The Sykes team-cup race was won for the day by H. B. Vanderveer and E. H. Lott, after tying with Capt. A. W. Money and Lewis C. Hopkins, each team getting 40. On the shoot-off Vanderveer and Lott scored 45 to their opponents' 43.

The Palmer memorial cup, at 25 targets, was shot for in two divisions. The first division was won by F. B. Stephenson with a score of 23, and the second by A. G. Southworth with a score of 24. A trophy shoot at 15 targets was captured by Frederick T. Bedford, Jr., with a straight score; the runner-up was George G. Stephenson with 14. A renewal of the same event found A. G. Southworth and the veteran W. W. Marshall tied with 15, and on the shoot-off Marshall broke 12 to Southworth's 7.

Frederick T. Bedford, Jr., won in another 15-target event with

a straight score of 15, four men tying for second—F. B. Stephenson, A. G. Southworth, Capt. A. W. Money and H. B. Vanderveer—each of whom made a score of 14.

The final event was one of the best of the day. Henry C. Werleman won with a score of 14, and Capt. A. W. Money was second with 13. The scores follow:

Trophy shoot, 15 targets: D. C. Bennett (2) 15, G. Notman (1) 15, F. T. Bedford, Jr. (1) 13, A. G. Southworth (1) 13, C. A. Sykes (3) 13, H. B. Vanderveer (1) 13, J. C. Mack (3) 12, W. W. Marshall (2) 11.

Shoot-off: D. C. Bennett 15, G. Notman 13.

January Cup, 25 targets: D. C. Bennett (4) 25, G. Notman (3) 24, A. G. Southworth (3) 22, H. B. Vanderveer (3) 21.

Trophy shoot, 15 targets: C. A. Sykes (3) 15, T. W. Stake (3) 14, F. T. Bedford, Jr. (1) 14, D. C. Bennett (2) 14, H. B. Vanderveer (1) 14, E. H. Lott (0) 13, Dr. S. P. Hopkins (4) 13, L. C. Hopkins (2) 13, H. Werleman (4) 13, G. Notman (1) 12, A. G. Southworth (1) 12, L. M. Palmer, Jr. (0) 11, F. B. Stephenson (1) 11, Capt. A. W. Money (1) 11, J. C. Mack (3) 11, G. G. Stephenson (1) 9, W. Sherer, Jr. (4) 9, W. W. Marshall (2) 8.

Sykes team cups, 25 targets: H. B. Vanderveer (3) 21, E. H. Lott (1) 9; total 40. A. G. Southworth (3) 24, W. W. Marshall (4) 12; total 36. Capt. Money (2) 25, L. C. Hopkins (4) 15; total 40.

Shoot-off: H. B. Vanderveer 23, E. H. Lott 22; total 45. Capt. Money 25, L. C. Hopkins 18; total 43.

Palmer trophies, 25 targets.—First Division: F. B. Stephenson (2) 23, Capt. Money (2) 21, F. T. Bedford, Jr. (2) 20, E. H. Lott (1) 19.

Second Division: A. G. Southworth (3) 24, W. W. Marshall (4) 15, L. C. Hopkins (4) 18.

Trophy shoot, 15 targets: F. T. Bedford, Jr. (1) 15, G. G. Stephenson (1) 14, L. M. Palmer, Jr. (0) 13, L. C. Hopkins (2) 13, D. C. Bennett (2) 13, T. W. Stake (2) 13, A. G. Southworth (1) 13, H. B. Vanderveer (1) 13, Capt. Money (1) 13, W. W. Marshall (2) 12, Dr. Hopkins (4) 12, W. Sherer, Jr. (4) 12, G. Notman (1) 12, E. H. Lott (0) 11, F. B. Stephenson (0) 10.

Trophy shoot, 15 targets: W. W. Marshall (2) 15, A. G. Southworth (1) 15, O. C. Grinnell, Jr. (3) 14, E. H. Lott (0) 14, Capt. Money (1) 14, H. B. Vanderveer (1) 14, F. B. Stephenson (1) 13, L. C. Hopkins (2) 13, D. C. Bennett (2) 13, F. T. Bedford, Jr. (1) 13, Dr. Hopkins (4) 13, W. Sherer, Jr. (4) 12, T. W. Stake (2) 11, H. Werleman (4) 11, G. G. Stephenson (1) 10, G. Notman (1) 10, L. M. Palmer, Jr. (0) 9.

Shoot-off: W. W. Marshall 12, A. G. Southworth 7.

Trophy shoot, 15 targets: F. T. Bedford, Jr. (1) 15, F. B. Stephenson (1) 14, A. G. Southworth (1) 14, Capt. Money (1) 14, H. B. Vanderveer (1) 14, L. M. Palmer, Jr. (0) 13, W. Sherer, Jr. (4) 13, T. W. Stake (3) 13, O. C. Grinnell, Jr. (3) 13, H. Werleman (4) 13, L. C. Hopkins (2) 12, E. H. Lott (0) 11, Dr. Hopkins (4) 11, G. Notman (1) 11, W. W. Marshall (2) 10.

Trophy shoot, 15 targets: H. Werleman (4) 14, Capt. Money (1) 13, W. Sherer, Jr. (7) 11, H. B. Vanderveer (1) 11, A. G. Southworth (1) 11, O. C. Grinnell, Jr. (3) 9, W. W. Marshall (2) 6.

### Cincinnati Gun Club.

THE attendance at the grounds on Jan. 30 was good. The day was mild and clear, with no wind; but the sun, shining on the snow, made the light rather trying. No special events were on the card for to-day, and those present indulged in a race at 100 targets. This, with the practice shooting, kept the traps busy until dark.

There was some talk of the Columbia Gun Club, of Barberton, Ohio, challenging for the Phellis trophy, but a letter received this week stated that it would be impossible to send a team.

No one seems anxious to accept the challenge to a team race at 1,000 targets issued by Gambell and Barker.

Ahlers and Gambell will try conclusions in a match next week.

The club holds its meeting on Friday, Feb. 5, in the afternoon; Parker prize gun contest on Feb. 2.

Following are the scores made in to-day's events:

Match, 100 targets, 16yds.:

Targets:	20	20	20	20	20
Block.....	12	13	14	15	14—68
Harg.....	13	17	15	13	18—76
Herman.....	12	15	13	13	11—64
Bullerick.....	15	17	18	13	14—77
Gambell.....	16	17	18	16	19—86
Ahlers.....	18	14	17	13	18—81
Williams.....	14	18	16	16	19—83

Practice:

	Shot at.	Broke.
Jay Bee.....	95	59
Linn.....	95	74
Ackley.....	90	35
Colonel.....	95	38
Underwood.....	95	57
Medico.....	50	31
Norris.....	60	45
Roanoke.....	80	51
Harry.....	60	24
Barker.....	65	54

Targets:	20	20	20	20	20

### New Cash Prize Shoot.

The new series of cash prize shoots will begin on Feb. 13; the members to be divided in two classes, A and B; the amount of cash, \$240, to be equally divided between the two classes, \$120

in each. The series will consist of twenty-seven contests, and members must compete in at least fifteen in order to be eligible. Ten best scores to be counted. If five members qualify, the money will be divided as follows: \$40, \$35, \$20, \$15, and \$10. If six, \$35, \$30, \$20, \$15, \$10 and \$5. If seven, \$30, \$25, \$20, \$15, \$10, \$10 and \$10. If eight, \$28, \$23, \$18, \$14, \$11, \$10, \$8 and \$8. If nine, \$25, \$20, \$18, \$14, \$11, \$10, \$9, \$8 and \$5. If ten, \$20, \$18, \$16, \$14, \$12, \$10, \$9, \$8, \$8, \$5. BONASA.

### Middletown (Del.) Shooting Association.

The Middletown, Del., Shooting Association held an exciting shoot yesterday afternoon on its grounds, and some good scores were made. Perhaps the most interesting event was the Parker Gun Trophy event. This was the third event of a series of eight, to be decided by the six best scores. The standing of the members who have shot in one or more events:

	Counting 3 events.	Dropping 1 event.	Dropping 2 events.
S E Massey.....	56	42	22
Steele.....	54	40	20
G Massey.....	54	39	20
Barnard.....	53	37	19
Duryea.....	49	36	22
Burris.....	49	33	18
Kates.....	46	34	19
E Massey.....	45	33	20
H Pool.....	34	34	17
Stephens.....	30	30	15
F Pool.....	30	30	18
Black.....	17	17	17
Pearsons.....	16	16	16

Dr. Barnard captured the silver handicap medal and successfully defended his gold challenge medal against S. E. Massey by a score of 22 to 18 out of a possible 25.

### Indianapolis (Ind.) Gun Club.

INDIANAPOLIS, Ind., Jan. 23.—Match for the Julius C. Walk & Son cup:

Events:	1	2	Handi-
Targets:	25	25	cap. Broke. Tot'l.
J M Lilly.....	20	12	16 32 48
J W Bell.....	23	22	.. 45 45
C A Medico.....	14	19	6 33 39
E C Dickman.....	18	20	.. 38 38
Gus Moeller.....	13	15	3 28 31
W B Scott.....	16	10	4 26 30
W T Nash.....	10	19	.. 29 29

Miserable weather conditions and awful poor street car service, on account of high water damaging bridges, caused small attendance.

The handicap system now in use not proving satisfactory, will be revised for next Saturday's contest.

Coming events on our grounds will be the Erb-Michaelis contest for English Hotel cup, Feb. 6; State tournament April 12, 13, and G. A. H., June 20 to 24. In connection with Erb-Michaelis contest sweepstake events will be arranged to suit the shooters, and those desiring to shoot for targets only may do so. Shooting will commence at 10 A. M. JAS. W. BELL, Sec'y.

### The Tower Trap at Pinehurst.

PINEHURST, N. C., Jan. 20.—The new tower trap was used for the first time in a tournament last week in the third in the winter's series. The event was 60 targets, 10 each, right, left, overhead, unknown and doubles, and it developed into a pretty contest, which kept the shooters guessing.

C. A. Lockwood, of New York, won with a score of 35, to 31 for H. Nelson Burroughs, of Philadelphia.

In starting it looked very much as if Mr. Lockwood would have a walkover, but Burroughs pulled up splendidly on the second string, and gave his opponent a good match. The feature of the event was the breaking of three straight doubles by Lockwood, a feat hitherto unequalled. The scores of the leaders were as follows:

Lockwood.....	011010101100111111	10 00 10 00 10—17
	101011100111000001	10 10 11 11 11—35
Burroughs.....	000011010101000000	01 00 10 10 10—11
	1100011111111110010	00 11 10 11 10—31

Le Roy W. Johnson, of New York, scored, and W. C. Spalding, of Freeport, L. I., was the referee.

### The Interstate Association.

PITTSBURG, Pa., Jan. 30.—Editor Forest and Stream: Please announce to the readers of FOREST AND STREAM that the Interstate Association will give a tournament at Americus, Ga., April 27 and 28, under the auspices of the Americus Gun Club.

ELMER E. SHANER, Sec'y-Mgr.

### SIDE LIGHTS OF TRADE.

The Lefever Arms Co., of Syracuse, N. Y., informs us that Mr. Lyon won high average at the shoot held Jan. 23, at Montreal, Canada. Mr. E. W. Arnold, of Larned, Kans., won high amateur average at both live birds and targets at the shoot held Dec. 15 at Great Bend, Kans. Mr. Arnold also tied for high amateur average at the January tournament held at St. Joseph, Mo. Both these gentlemen shot Lefever guns.

finer specimens are in existence.

The game bird exhibit at the coming show will be one of its biggest features, and will far excel anything of the kind ever shown in this country.

### The Southern's Palm Limited.

Leaves New York daily, except Sunday, 12:40 noon, via P. R. R. and Southern Railway.

Is operated through from New York to St. Augustine, with the exception of one Double Drawing and Stateroom Sleeping Car, which is operated to Aiken and Augusta, Ga. The train is composed of Pullman Compartment Cars, Drawing and Stateroom Sleeping Cars, Club, Library and Observation Cars, and up-to-date, exquisitely appointed Southern Railway dining car, with service equal to any high class hotel.

Other Handsome Trains.—Two other first-class through trains, with elegantly appointed Pullman Sleeping Cars and up-to-date Dining Cars, speed between New York, Washington, and Florida, making travel on the Southern Railway a pleasure and delight. Thus it will be noted that three high-class trains are operated between the East and Florida by the Southern Railway.

Round-trip tourist tickets are on sale at reduced rates to all the principal resorts of Florida and the South, which will allow stop-overs en route, thus enabling passengers to make side trips to other resorts, if desired. For further information call on or address New York offices, 271 and 1185 Broadway, Alex. S. Thweatt, Eastern Passenger Agent.

## Why Not Shoot A BAKER?

Do you know that we build to order special Trap and Field Guns at \$60 and \$75 that, for efficiency and finish, equal most \$100 and \$150 grades of other makes?

MANY MEDIUM AND HIGHER GRADES ALSO.

Send for a copy of the BAKER GUN QUARTERLY containing full information.

### Exhibits of Game Fowl at Sportsmen's Show.

A FEATURE of this year's show at Madison Square Garden that will be at once attractive and striking is the exhibit of game fowl. In this department of the show three of the most famous collectors of upland and water fowl will be represented, and nearly every known species of game fowl will be embraced. The pheasants of Turkey, Asia and Africa, with their brilliant plumage, will make a striking exhibit. These will occupy space on the main floor, which will extend for eighty running feet along the north promenade. It is needless to say that these birds, representing years of labor and the investment of many thousands of dollars, will prove a big attraction of the show. It will embrace over twenty varieties of pheasants. There will also be shown the jungle fowl, the famous Madagascar pigeons, wild turkeys and several varieties of peacock in brilliant plumage, among which will be some specimens of the white peacock. In Mr. Davenport's collection, there will also be shown Persian sheep, Persian lambs, Angora goats, clothed in their silken coats, which give these animals high commercial value the world over.

In other divisions will be shown from sixteen to twenty varieties of wild duck, as well as geese, including the Canadian, snow and other species.

Another exhibit will embrace a very large and rare collection of game water fowl and geese, including every known variety. Beginning with the second week of the show, will be substituted the wild duck exhibit, of which it is said that no

### WILLIAM D. BISHOP.

WM. D. BISHOP died at his home in Bridgeport, Conn., on Thursday, Feb. 4, aged 76 years. He was a successful business man, an able lawyer, a shrewd and honorable politician, a great railroad man, a keen sportsman. Mr. Bishop was one of the earlier railroad builders in Connecticut, taking up unexpired contracts begun by his father, and building certain railroad lines which are now part of the system of the New York, New Haven, and Hartford Railroad. He was active in politics, having represented his district in Congress, and at various times been State Senator at Hartford. For several years he was the president of the New Haven Railroad, and for very many years a member of its board of directors.

He was thus successful in many fields; constantly occupied by affairs of great moment and affecting a great number of people. Yet his chief delight was to be abroad in the field with gun and dog, or at the proper season to follow the stream with the fishing rod. Up to a late period of his life he tramped the Connecticut woods and swamps for partridges, quail, and woodcock, and it was only a year ago last fall that he went rail shooting on the Housatonic River. Nearly forty years ago he was one of a party who journeyed far up the then hardly known Nipigon River for trout, and only last autumn he went fishing in Canada.

Mr. Bishop had a very wide acquaintance among business men and sportsmen, and was everywhere beloved for his kind heart, his genial nature, and his quaint and delightful humor. In far greater measure than most men, he possessed those qualities of mind and of heart and of manner which tend especially to endear a man to his fellows, and the sense of personal grief felt at his death by a wide circle of friends and associates is very keen.

### WILD FLOWER PRESERVATION.

CIVILIZED man and nature do not go well together. The preparing of the ground for cultivation, and then making it produce a crop, puts an end to many of the plants which originally grew from the soil. The destruction of the forests for timber or for purposes of agriculture, destroy the plants which once delighted in its shade, while the draining of the swamp kills those moisture-loving species which flourish there in nature. All this is inevitable. When the problem of supporting a dense population—making money—is in question, nature must be destroyed or move on. Civilization drives out or kills the animals first, but a little later she none the less surely drives out and in a large measure kills the plants.

In unfrequented places—those not adapted to the growth of crops—the wild plants flourish a little longer, but if especially attractive by their beauty or their fragrance, they are gathered and carried away by those who fancy them with the same lack of thought for the future and consideration of others as is shown by the boy who crushes the butterfly under his hat.

In many places in New England the May flower, or trailing arbutus, is now entirely extirpated. In others the few plants that remain are carefully watched by persons who long for them, and as soon as the buds open the flowers are gathered and carried away. Many commoner flowers are eradicated by those who thoughtlessly tear them away; thus for an hour's pleasure destroying the plant for the whole locality. The rarer flowers suffer still more, and are more readily exterminated.

The harm done by such destruction is coming to be generally recognized, and there are a number of societies in the United States which have for their object the protection of the wild flowers. So also there is a society to protect the beautiful edelweiss growing on the Alps of Switzerland, which is now in danger of extermination, while in England the Selborne Society is urging the protection of ferns, primroses, and other rarer plants.

In Boston and in New York, and in other cities in America, there are wild flower societies the sole object of which is the protection from extermination of such flowers. These efforts should appeal to all lovers of nature, but the botanists are especially interested.

At the annual meeting of the American Association for the Advancement of Science, recently held in St. Louis, Professors C. E. Bessey and S. Coulter before the Botanical Section read papers which were strong pleas for the preservation of our wild flowers. In substance they said:

"Cultivated flowers are planted and cared for by man, but no one cares for the wild beauties of the woods and meadow. We must preserve them. It is our privilege, as lovers of plants, to care for them and to see that they are not exterminated. The rarer the plant the greater the danger that it will be eradicated. Who are the offenders? The tourists, who lay their vandal hands on everything pretty; the amateurs, who desire to have samples of everything; and some botanists who think more of collecting specimens than of the beauties of nature in the field. At Colorado Springs the once beautiful Cheyenne Cañon has been made barren by the vandals, and there is scarcely a fern or a pretty flower now left in it. What shall we do about it? First of all, let us talk vigorously against this vandalism. Talk in season and out of season, and denounce the wholesale destruction of wild flowers in the strongest language possible. Then write against vandalism. Do not fail to say what you think through the public press. The newspapers will help you every time if you call upon them. Then organize clubs, and guilds, and societies. Do this as you please. If you prefer to form a local chapter of the Wild Flower Preservation Society, well and good. We shall take great pleasure in helping you. But if you prefer to form an independent club, do so by all means. It is not how you do it; it is only that you do something. Agitate the matter persistently and vigorously, and keep at it. In this way only may we hope to save our wild flowers from extinction."

These are strong words, and should be pondered by all to whom they come. Such a work is one in which every man and woman and child who lives in the country may take some part, with the result of adding much to the beauty and attractiveness of our fields and woods.

### CROCKETT, SCOTT, AND THE 'COON.

EVERYONE has heard of "Davy Crockett's 'coon," the one which said, "Don't shoot, I will come down." To "come down like Davy Crockett's 'coon" is a colloquial expression in common use. Crockett and the 'coon that came down are so popularly associated that to attempt to disconnect them is well nigh to attempt the impossible. To explain a thousand times that it was not Davy Crockett to whom the 'coon came down were without effect; the world has it "Davy Crockett's 'coon," and the world will have it so, and there it stands.

The real hero of the 'coon story was Capt. Martin Scott; the story was a tribute to his skill as a rifle shot. Scott was a brave man and a good American soldier of the Mexican War period, and he deserved to be remembered; but even such credit as the 'coon story attributed to him has been filched from him and given to another, who did not need it. Davy Crockett fills a generous niche in the history of the Southwest; his tragic death in the Alamo gave him secure place among the heroic spirits of his time. Crockett's own favorite aphorism, "Be sure you are right, then go ahead," might well be enjoined upon those who cite the 'coon story to point a moral or adorn a tale. The 'coon that came down came down to Capt. Martin Scott.

Scott was a native of Vermont. From his youth he was famous as a shot. An exploit of his twelfth year was the slaying, unaided and alone, with his father's purloined smooth-bore, of a marauding bear which had defied the entire *posse comitatus* of the grown-ups of the neighborhood. There were no laws in those days for the protection of sheep stealing bears. A feat of Scott's mature years was the cure of a sick man by shooting him. This heroic treatment was administered in a duel. Scott shot his antagonist through the lungs. The man had been sick with consumption, but from that moment began to mend, and got well. If Scott did not actually effect the cure, he at least had the credit of it.

The 'coon story was printed about the year 1840, five years after the death of Crockett. It was told of Capt. Scott, and ran like this:

Capt. Martin Scott was out in the woods one day with a party of friends, hunting. They were scattered through the woods, each hunting separately. One of the party at length came upon a raccoon that was sitting in one of the highest branches of a very tall tree. He fired at him and missed. One by one the rest of the party came up and tried their hand, each missing the distant 'coon, who grew saucier as they proceeded. At length Capt. Scott arrived,

and was in the act of pulling trigger, when the 'coon looked slyly around the limb and said:

"Who are you?"

"I am Scott."

"What Scott?"

"I am Capt. Scott."

"Are you Capt. Martin Scott?"

"The same."

"Well," said the 'coon, unlimbering himself, "you need not shoot; I will come down."

Capt. Scott fought in the Mexican War, and died before Molino del Rey. Major H. W. Merrill, a veteran of the Mexican War, well known to older readers of *FOREST AND STREAM* as a contributor to its columns, was in Scott's troop, and witnessed his death. It was in a position exposed to the enemy's fire; the Americans sheltered themselves by lying on the ground in the rifle pits and trenches. Scott stood erect, and was warned to lie down. "Martin Scott never lies down," was his answer. They were his last words. A Mexican bullet came singing, and Scott fell, mortally wounded.

### LOCOMOTIVE SPARKS AND FOREST FIRES.

At a recent hearing before the Senate Forestry Committee of the New York Legislature, testimony was taken to show that in a considerable proportion Adirondack forest fires may be charged to incendiaries who are inspired by resentment and revenge because of the closing of large tracts of what were formerly free hunting grounds. The 40,000-acre fire on the Rockefeller preserve was ascribed to this cause. But 50 per cent. of the forest fires, experts estimate, must be charged to the railroads. They are caused by sparks from the locomotives or by the dumping of ashes. This holds true not only in New York, but in other States as well. The railroads have destroyed many square miles of forest, and millions of dollars' worth of timber. They will continue the destruction just so long as, through lack of law, or laxity of law enforcement, they shall enjoy immunity from punishment for their destructiveness. There is no necessity for a locomotive to fire the woods. Such fires are not inevitable; they are avoidable. Whether or not railroad managers adopt the practical preventives which will guard against woods and prairie fires, depends upon whether managers are granted immunity or are made to pay the damages. In the Adirondacks, for example, where the railroads are not compelled to pay for the ruin they inflict, spark arresters are not employed, and the firemen dump their ashes where they will start fires. In Wisconsin, on the other hand, where the laws provide that property owners may bring suits for damages, the railroads not only obey the laws, but enforce special stringent rules of their own.

These things are clear:

The railroads are responsible for many forest fires.

The fires are preventable by the use of spark arresters and the exercise of care as to the dumping of ashes.

The railroads will not adopt such preventive devices and regulations until they shall be impelled to do so by considerations of profit and loss.

It is of the highest public importance that in every State where adequate laws are not already in force, legislation should be adopted to compel the railroads to conduct their business after approved modern methods as to the prevention of fires.

America may well take a lesson from Germany. In that country, as told in a current report by Vice-Consul-General Dean B. Mason, forest fires are comparatively infrequent for three reasons: First, that the country has a rainfall so uniform that droughts which render woodlands easily inflammable are relatively rare; second, where railroads traverse tracts of pine forest they are ditched and dyked along both sides of the line, so as to confine a fire to a small and easily controlled area; and third, because every precaution which inventors can devise to arrest locomotive sparks and prevent them from escaping into the open air is practiced on the State railways and enforced on all private corporate lines.

If German railroads can prevent the escape of locomotive sparks, American railroads can do the same thing. American inventive genius can accomplish what that of Germany has secured; and will accomplish it just as soon as the American law follows the German law and puts an end to forest conflagrations kindled by the railroads.

# THE SPORTSMAN TOURIST

## St. Patrick of Nipigon.

We saw him the first time on Friday morning, and we hailed him and his wagon as the solution of our troubles for the day.

Three of us—two Indian guides and the writer—had come up from the Hudson Bay post the night before, camping at the lower end of the first and longest carry on the river. This carry or portage is two and a half miles long. It avoids the impossible passage of the Long Rapids, and Cameron's Pool, once famous for its big trout, now seldom fished; nearly all parties going higher up the river, passing by this beautiful piece of water, which in consequence is again yielding good sport to the fly.

Pat is care-taker and man-of-all-work for the syndicate that has secured permission from the Ontario Government to erect a pulp mill about half way up the Long Rapid. Last year they cut all the large timber in the immediate section, and are now running a small saw mill, getting out the lumber to build the mill. Three substantial log buildings represent their plant so far, one for an office, one used as a stable, and a larger two-story one for cook-house, dining room, and bunk-house for the hands, when the mill is built. In this last one Pat lives and dispenses hospitality to all comers alike. "Born in Ireland and proud of it, sor-r," he spends about nine months of the year in solitude, except for the Indians and a few mill men. An Irishman is a born talker, and so Pat makes up for his long winter's silence by putting in good licks the three months of the fishing season—June, July, and August. At this time the stream is visited by scores of anglers. When he hurries he stutters, and as he has to make up for lost time, he generally prefaces his remarks with a hurried, struggling "Aa-a-a-h."

We named him St. Patrick because of his "swate" disposition. Nothing seems to worry him. He says, "I sometimes git mad enough to throw m' job, y' know, but I git over it." But we saw no evidence of this bad temper. So he's still in the calendar as St. Patrick of Nipigon.

It takes about half a day for two guides to carry an outfit over this Long Portage. Everything must be carried on the back. Still, it is astonishing what loads these Indians will take. Stories are told of five hundred pounds having been carried at a time. However, Pat's wagon will take the whole outfit across in less than an hour. His services are consequently in demand.

Before going to bed, Toma, the head guide, remarked he would go over and see Pat early next morning. It rained during the night. It seems to rain so easily in that northern country. When six o'clock came, Martin was making the fire. Everything was wet, but sparkling in the clear, pure light of the rising sun. Toma had been over to Pat's, two miles, and now reported that Pat had to go to the mill, and couldn't come for us.

This changed our plans. Just below camp a noisy brook tumbled into the river, and looked a likely place for small trout. We were not in a hurry, anyhow. We would spend the morning, or the day, if necessary, at this camp, explore the brook called Frazier River, follow it four miles to a lake which Toma said was full of bass, and so wait until Pat could come for us. In the meantime breakfast was cooking, but without trout. The rod hadn't even come out of its case yet.

Toma stopped still. "Listen!" In the distance a rumbling, bumping rattle could be heard. "That's Pat," he said. Soon the noise became louder. We hurried our meal, in the midst of which the team and driver came into sudden sight from the bushes.

The team and wagon were good and strong—fit for this country of rocks and logs—but it was the driver that had our attention; five feet four, weight two hundred and ten, an old woolen sweater stretched ready to burst, trousers rolled up almost to the knees, gray woolen socks which shrank away from the trousers, and heavy shoes completed his costume, except for his hat. The hat was typical, an old battered felt, with narrow rim. It would have told his birthplace without the map of his face or the brogue of his tongue, and was rammed down on the back of his head—the habit of generations—where it would do the least good. It might have come from Killarney. It certainly was at home on the wearer.

Pat and his team, on this two and a half miles of road (if such it can be called) occupy the furthest outpost of civilization up the river. Beyond are no roads—nothing but Indian trails, traveled for more than a hundred years now by the employes of the Hudson's Bay Company. Above the Long Portage no teams can go, no wheel turn, until roads are cut through the forest. In the summer supplies go up the river to other posts of the Hudson's Bay Company by canoes. In the winter the dog sledges come into use, following a winter trail well back from the river, on the east. An electric road, following the river on the west, is talked of. With its presence, and that of the pulp mill, now assured, will vanish much of the charm that now draws anglers from all over the world to this king of trout streams.

"Goo-o-od mornin', gintlemín. I tho't I'd come, anyhow. Y' see, I told Tommy I had t' go t' the mill. Well, I did, but m' harges got out in the night, an' whin I found 'em they was almost over t' the mill itself. So I jis' says

to m'silf, I'll jis' go back an' help the byes out, an' so I'm here. I'm bin out for two hours. Jis' look at me, how wet I am. Ain't I a daisy? An' say, if y' have a drop of anythin' warm 'round here to dr-rink I sartinly would be glad to get it. Ain't got any? Well, it's all right. Some folks does and some don't, but it's mighty warmin' whin a felly's bin out and got all wet through this way. Have I had breakfast? Not a bite. Well, I don't care if I do. I always was a good hand at the table, and this mornin' I'm powerful hungry."

During the meal, and in answer to questions, he rambled on to tell of himself.

"Y'd think I'd come straight from Ireland. Well, I was born there, all right. Y' could tell that, couldn't y'? I come over t' this Canady whin I was a little felly. Lived down near Montrial 'till 'bout four years ago, thin come up here. I ain't bin down t' the post since in April [this was August], an' I won't git down there agin till things freeze up."

"Where'd y' say y' was from? Saint Louis! Are there any Ir-rish down there? I knew there was. Any of the Carrolls? That's my name, y' know. Y' say there's wan of 'em in politics there. I'll bit he's some kin to me."

The breaking camp and loading the wagon was soon over. The road wound in and out, avoiding trees and boulders, and finally crossed a good sized brook on a corduroy bridge. Beyond rose a hill of blue clay, bad at all times, but now made doubly slippery by the rain of the night before. Pat was for unloading and sending the wagon up empty, but we finally decided to try it first, and unload afterwards if we had to. All went well for about a minute after the start, when the horses began to slip. The wheels were blocked with the ever-present loose stones, and so we held our own. Pat and Toma each cut a heavy switch—a gad, Pat called it—and we moved again. The stone once more came into play, and we had gained another vantage point. Then came the worst piece of the hill. Pat bragged, coaxed, threatened, stormed, but didn't swear. The occasion was certainly a good opportunity, but the noise and the gads carried us up and on, and when we reached the top Pat remarked, "I could 've cussed 'em plinty, but the n'ise does jis' as well. I didn't do much wor-rk, but I'm a dandy on the holler. Tommy, how's that gad—'bout wore out, ain't it? I tho't so."

At the far end of the portage we found three separate parties getting ready to go up the river. They had crossed the carry the evening before. One of the crowd, an artist from Boston, admired Pat's muscles and felt of a pair of biceps as big as a stove pipe. Pat said, "Yis, I've got a good ar-rm on me. Las' winter I broke a hame strap the byes fastened round m' ar-rm. (But it was a small wan.) I jis' want to tell y' of a felly that was up here this spring. He was wan of thim typewriter fellys, an' he saw me a-liftn' things 'round kinder easy, an' he says to me, 'How did I do it?' So I said, jis' feel of that ar-rm, an' after that I couldn't git him near me."

"But," he said, "that's nothin'. Jis' feel of m' leg. Y' see, I sometimes git dr-runk. Whin I'm out with the byes I have t' be wan of thim, y' know, an' I tell 'em I'm only a poor Ir-rish lad with a wooden leg; an' they'll feel of m' leg an' say, 'Too bad; poor felly.' Thin I tell 'em, feel of the ither wan, an' thin the dr-rinks is on 'em." Then addressing himself direct to the artist, he said, patting his left leg, "Bite it; jis' set y're teeth in it. Y' can't hur-rt it." The invitation was neither declined nor accepted.

Coming up on the train the writer had met a young woman bound for the post, to visit her father, a prospective millionaire miner. At the post was the parent, unshaven and dressed for the camp, but evidently a diamond in the rough, and the daughter was welcomed to his arms and the one hotel of the place, kept by mine host Hogan. It happened that Pat knew the father; and Toma, knowing of the acquaintance, told of the visitor. Pat was delighted. "So the old man's darter has finally come, has she? He's bin tellin' me 'bout her, an' promised to intro-jooce me to her whin she come. Begob, I'll git me a tin cint soot of clo's, an' a dood cane, an' a five-cint collar 'round m' neck, an' I'll go down an' be presinted. My, but he says she jis' knows an or-ran by hear-rt. Why, she can jis' br-reak a or-ran or a pianny! An' sing—jis' like a bir-rd! But, say, was th' old man sober? I'm glad he was. My, but he's a good wan. He's from 'cross the lake—Michygan or Wisconsin, I forgit which."

"I've got an uncle over in Wisconsin. He's always a-wantin' me to come see him. He's rich—well fixed—got a far-rm an' only wan darter. He says he'll set me up if I'll only come. D'ye know, I've started several times, but I niver git farder than Port Arthur. There I sure git dr-runk, an' the first thing I knows I'm dead broke intirely, an' have to come back here. Some day I'm goin' to buy m' ticket clear through before I sta-art. Thin, maybe, I'll git to see the old man."

"Whin y' come back I want y' t' stay a day with me, an' take a picture of m' shanty. It's a dandy. Y' haven't seen it yit. I'll be lookin' for y'."

Coming down the river we again hunted up Pat to take our lighter load across the carry, and found him at his "shanty." A large party from Minneapolis had gone down the river the first of the week, among them that prince of good fellows, Mr. Charles Vealie, and they had told Pat

of our intention to stop a day with him. This was now impossible, owing to the sickness of one of the guides, which made it necessary for us to hasten to the post.

Pat greeted us with a running fire of questions and explanations.

"Well, I was a-lookin' for y' but not quite so soon. The folks from Min-nyap-polis, the Jedge and the rest, they told me y' was goin' to make me a visit. What, can't stay? One of your byes sick? Well, I'm sorry, shure. Can't y' stay jis' wan day? I've got bread all ready to bake. (It won't giv' y' the indyspepsy, nayther.) An' to-morrow we could have a fine time."

"No, I ain't got no woman. But y' know Cha-arley, the game warden. Well, he's part Indian, an' he's got a darter, an' if I take her I'll be in the tr-ribe thin, won't I? An' I'll have somebody to wor-rk for me. (But, oh, my! What will the children be—Ir-rish or Indian?)"

"I've got to hunt up wan of m' harges an' fix a single tree, an' thin I'll git yer things over."

Here he produced a new timepiece and remarked, "Cha-arley—he gi' me a wa-atch. Cha-arley? Why, Cha-arley Feeley. We're so well acquainted; he always calls me Pat, an' I call him Cha-arley. It's wan of thim Ingersoll wa-atches. Ingersoll he was an infydel, but it don't hur-rt the wa-atch none, y' know. He gi' me a wa-atch las' year. He gits 'em down t' Min-nyap-polis fer 'bout a dollar an' a qua-arter apiece. Say, is that Saint Louis farder off than Min-nyap-polis? Almost a thousan' miles! My, but y're a long ways from home. Well, he gi' me a wa-atch las' year; an' whin he sees I ain't got it now he wants to know what wint with it. So he says, says he, 'What did y' do with the wa-atch I giv' y' las' year—did y' lose it?'"

"An' I says, 'No, I didn't lose it.'"

"An' he says, 'I'll bit y' giv' it away.'"

"An' I says, 'No, I didn't giv' it away.'"

"An' thin he says, 'Did y' dr-rrown it?'"

"An' I says, 'No, I niver dr-rrowned it.'"

"Thin he says, 'If y' didn't lose it, an' didn't giv' it away, nor didn't dr-rrown it, what did y' do with it?'"

"An' I says, 'I ra-afed it, so I did, and got most five dollars for it.'"

"So he gi' me this wan."

"Las' year he was up here with his sister, and she gi' me a go-old pin. So he wanted to know what had become of it. I told him I still had it, but [aside with a wink] it's down t' Nipigon. I'll see it on her nixt time I go down."

"I sartinly am sorry y' can't stop a day anyhow. We c'd git over t' a little lake I know of, that's jis' full of bass, great big five and six-pounders—ain't it, Tommy? D'ye know, Cha-arley, the game warden, calls 'em 'baths,' but thin he's an Indian an' don't know no better. If y' come ag'in we'll shure go over there."

"Comin' ag'in nixt year, are y'? Well, I'll be right here t' meet y'. Goin' to bring yer wife? Well, Pat will be glad to see her, too. How do I git m' mail? Y' can address it t' P-a-t, Pat, r-i-c-k C-a-r-r-o-double-l, Patrick Carroll, Nipigon, care of Aleck McFar-land. Be shure an' send me a pictur' of m' shanty."

And when we were well out in the stream there came to our ears, "Good-by, Mister Faerguson, be shure an' come ag'in nixt year."

FERGY.

## In Old Virginia.

### XVIII—Woodcock and Other Things.

THE first woodcock was an accident, both as to finding and losing. We had been out some time and were passing through a strip of heavy timber growing along a small stream, when the bird flushed and went boring almost straight up through the tall trees. Although a gunner of many years' experience, this bird is one that has very rarely entered into my game pockets, and I might almost say that my only knowledge of it is that gained by examining specimens in collections, or market stalls, and cursory reading.

It is a strange and marvelous thing how much valuable information comes to us a few days after the time has passed, or the event transpired, when it would have been of use. And so it is not surprising that a few days after my first real engagement with the woodcock, when I shot at it under the impression that when flushed it flew at great speed for a great distance, I should read in our own ever to be relied on FOREST AND STREAM that this beautiful bird is slow of flight, and only inclined to move aside a bit, as if to barely get out of the way when disturbed.

This is entirely in harmony with my experience—the little I had—but without the testimony of such high authority I should probably have continued in error, explaining the variation noted by thinking I had happened on only young birds. Error dies hard, and while I can now see that the said woodcock went up through the trees with a slow, even flight, I then honestly believed that it was going away with the speed of a rocket, and felt sure that the quickest possible action was demanded. I shot quick, both barrels, and stood watching the bird out of sight through the trees with a greater sense of real loss than I could remember to have felt in many years on account of a lost bird. I was sure that no other

shot was possible at that woodcock, and the probability of finding another very remote.

When I could no longer catch even a glimpse of the bird, I slipped in fresh shells and turned to my companion, who had stood quietly by, and was much surprised when he said: "Come on, if you are ready, I saw where it lit and we will get it up again." Seriously doubting, but sincerely hoping, I took the direction indicated by him, and after going but a little way the bird flushed again, and flew straight away into an almost impenetrable thicket. The trees were very thick, and I waited a little with the hope of getting a fairer view of the bird than first offered, and at last had to take a chance shot at long range. Apparently I scored, but although we searched every foot of the ground that we could get to, including some that would have been hard traveling for anything but a snake, we never could find the bird. My sorrow was real when we finally concluded to give up the quest, and I felt an almost irresistible inclination to wear out a little of the all too abundant small growth on the dog, whom I could not get to take any interest in the recovery of our bird. "Fray him! Fray him!" the Esquire shouted, as I called and whistled him back for about the twentieth time. "A dog that will run his legs off after a rabbit and then refuse to hunt a bird which you prize so highly ought to be worn out. Here, let me cut you a hickory." I was strongly tempted to take it out of the dog, but resisted the temptation, knowing that it would do neither present nor future good.

Seeing how real was my disappointment, the Esquire suggested that we let the quail off for the remainder of the hunt, and continue up through the strip of timber and try to get up another woodcock. To this I gladly assented, although the going was something fearful. Cat briers, bamboo and blackberry vines, to say nothing of small growth of every variety, were thickly interspersed with swampy spots, where we would find ourselves sinking over shoe-top in cold water when we stopped to unwind some thorn-studded vine in which our feet had become hopelessly entangled. But there was an occasional bit of open woods, and ever the chance of getting up another woodcock, so I slowly and painfully worked along, with the Esquire abreast of me fifty feet away, and Roscoe at heel, looking disgusted and penitent. We received a reinforcement after going a little way in the person of "Richard," a darkey, who loved a gun and had heard us shooting and come to investigate. "He hunts a great deal," said the Esquire, "and will know if there are any woodcock here, and I will make him go along and help us."

"Howdy, Mistah Gawge," said the boy, as he drew near, and "Howdy, suh," to me, but looking at my gun. "Has you all had good luck?" The Esquire answered briefly, and inquired about the woodcock, but called them snipe.

"Yas, suh, dey is snipe in heah. I see two or three mos' ev'y time I come squill huntin'," was the encouraging reply.

And so, covering a little more ground, and kindly allowing our new ally the roughest and hardest of it, we moved on. As far as I knew the habits of the bird, we were in the very best of woodcock cover, but I began to feel somewhat discouraged when we reached the upper end of the long stretch of timber without finding a bird; but we had the other side to hunt back, with the encouraging statement from the boy that it was "De besses part of de groun' foh snipeses, enny way."

After a short rest, we started back, working down the other side of the branch, and finding the vines as thick and tough, and the thorns as sharp. We were getting back almost to the starting point, and I was beginning to regret the undertaking, when a shout from Richard, who was on my left, announced a bird flushed. Making our way to him, he said the bird had flown but a short distance, and he had it marked down and could take us to it. Encouraged by the boy's confident air, I followed him, my hopes high, and the walking nothing like as bad as it had been a moment before. The bird had not flown far, and after leading the way for a short distance, the boy stopped, and, pointing to a large tree, said: "He drap des by dat tree, dis side, I think." And he was right.

Buck agree is not the only form of agree that attacks sportsmen. I have seen a small boy shaken by snowbird agree, and a strong man tremble with quail agree. It is not the size of the quarry, alone, it is the earnestness of the sportsman that makes him susceptible to this malady. I had worked hard, and undergone much suffering in search of that bird, and I wanted it, and wanted it badly, and the consequence of this state of affairs was a by no means mild attack of woodcock agree as I approached the spot where I expected to find the bird. I was still laboring under the delusion that, if I missed, the bird would probably fly into the next township before lighting again, which delusion did much to aggravate the malady. It was where I expected to find it, and flitted up with its flute-like whistle from my very feet, swinging over my left shoulder up through the trees, drifting back at the report of my second shot like a handful of brown velvet, and the next moment I stood smoothing the soft plumage of America's greatest game bird. I bagged no more game in all my trip that afforded the pleasure that my first woodcock did.

We worked out the remainder of the woods, finding no more woodcock, but getting up a small covey of quail, and a lusty old brown-backed woods rabbit. I could only get down one of the birds on the flush, but stumbled on another later on which was kind enough to fly straight away through timber sufficiently open to afford a shot. The rabbit simply fell victim to its size, as in such cover no ordinary rabbit would have afforded anything like a fair shot, but it was extraordinary, and left a wake as it bored through the brush that made the shooting easy.

Near the upper end of the woods, where we stopped for a short rest, was a sight to cause a tree lover to want to do murder. A magnificent poplar tree had been felled by some trifling darkeys to get a 'coon that had taken refuge in a hole in one of the long branches. The trunk of the tree was over five feet in diameter, and sound when felled, and there it lay, rotting on the ground, and not another tree to compare with it for miles around. The sight of such a forest monarch towering above his fellows would be an essay on patience, power, and peace,

to the artistic soul; and a quick bid to calculations to the commercial man. With a temperament in which the poetical and practical permeate like the bones in a shad, and with a real affection for trees, I waxed eloquent in my wrath at the sight of such vandalism. Inquiring of my companion if it was a common occurrence, he assured me it was not, as the average African who prowled by night was too lazy to cut anything but the small trees, showing one instance in which a vice is positively a virtue.

Just before leaving the woods I found another surprise—a pleasant one. A pair of deer horns, shed, but in an excellent state of preservation, and lying together. The fact of their being together was not surprising to me, as I did not know how unusual this was, but the Esquire, and many others with whom I talked on the subject, assured me that it was a very unusual circumstance, as the deer in shedding nearly always dropped one horn at a time, and finding the pair together was unheard of in that country.

After leaving the woods and getting well out in the fields on the way home, we had the good fortune to find a few more birds. A large hawk making suspicious dashes into the edges of a blackberry thicket attracted our attention, and we went to investigate. The hawk sought the seclusion of a near-by wood on our approach, leaving ten or a dozen badly frightened quail that he had been harrying, pattering about in the brier thicket. Roscoe struck scent as he approached the thicket, and creeping up to the edge, pointed, but the birds were so demoralized by the raid of the hawk, instead of lying close, they went rushing away to the other side. The dog held his point for a moment, rolling his eyes in great excitement, and then, breaking away, dashed around to the other side of the thicket near where the birds had retreated, and pointed again. The birds promptly turned and made for the other side as before, followed shortly by the dog. We walked around the thicket several times, but could not flush a bird, although we could plainly hear them running back and forth as the dog circled round. He had given over trying to stand them, and in great excitement was running first to one side and then the other, as the birds moved. "I see one," the Esquire finally said, "right in there" (pointing). "It won't fly, and I couldn't shoot it if it did, so I am going to shoot it sitting, and it may make the others fly out, so you can get a shot." At the roar of the big gun the birds flushed, and went away, flying very low. With the brier patch to shoot over, my chance of scoring was remote, but I did get one bird down. While the dog was bringing my bird, my companion was working his way into the briers after his game, and, judging by the running fire of exclamations, was having a rough time. "Well, I got it," he said, backing out with a sound of rending and tearing as though he were leaving the greater part of his apparel behind, "and ain't he a beauty, though?" And it was a "beaut," at least what was left was. It consisted of about a foot of ragged meat and feathers, with a leg and two ragged wings hanging to it.

"I don't shoot at them often, but certainly get them when I do," he remarked, as he stood ruefully contemplating the wreck his big gun had made of the bird. "Guess I will let you kill the rest. I seem to kill them too dead."

The covey had flown to the woods, and as it was late and all hands tired, we concluded not to follow them. A single bird which had lingered behind flushed as we turned away, and flying but a short distance dropped on the edge of a line of small growth where had once been a fence. The dog was off ranging in the direction the others had gone, but as I had marked the exact spot where the bird had pitched, I did not wait his return. Approaching the place I found the ground comparatively bare, and looking carefully discovered the bird flattened out on the very spot he had first touched. I stood for a moment admiring it, and then stepping forward flushed the bird in the direction the others had taken. The ground in the direction of its flight lay almost level for twenty or thirty yards, and then pitched down quite a steep bank. This bird also flew low, just along the top of the grass, but steady and straight away. As the bird neared the edge of the level ground my finger pressed the trigger, and at that very instant the dog's head appeared over the hill in line with the bird. I was fairly holding between his eyes when the bird dropped, and cannot imagine why he was not killed, but he was absolutely untouched. After a quick duck of the head and a start of surprise, the dog caught up the bird, which had fallen at his feet, and brought it in as though nothing out of the ordinary had occurred, but if ever he has a closer call with a gun in the field, I do not want to be the author of it.

Arriving at home my woodcock made the round of the entire house, admired by all, and lay in state until after supper before a feather was removed.

LEWIS HOPKINS.

## Captain Miles Keough.

Editor Forest and Stream:

While trying to tell what I knew about horses with curious appetites, in a late number of the FOREST AND STREAM, I had occasion to mention the only horse which escaped the Custer massacre, and this brought to my mind again the man who rode that horse into that camp of Sitting Bull's on the Little Big Horn, and died there. He deserved a better fate.

In the summer of 1864 the cavalry General, Stoneman, came from the eastern army to take command of Sherman's cavalry, and brought with him a young staff officer who looked as though he had just stepped out of some tailor shop. He wore a neat new uniform, a white shirt, and linen collar, and seemed to be entirely out of place here. This was Captain Miles Keough, a young Irishman, twenty-four years of age, who had belonged to the Pope's army, but had left it to come to the United States in search of adventure. He found it.

Stoneman attached himself to our regiment; we were the only regulars here, all the rest being volunteers. Had Keough been in the ranks, the men would have worried him into a decline, or would have tried to do it. They would not have succeeded with him, though. But those officers who had set him down as being a mamma's good

little boy, who would faint and fall out of his saddle the first time a Johnny fired a shot at him, contented themselves with passing remarks when Keough was where he could hear them, as to where the nearest laundry could be found, or had the officer who was being addressed paid his tailor last pay-day? Had they only known him as well then as they afterwards came to know him, some of these remarks might not have been made. There was a danger, though they did not know it then, of some of them being asked to come out and look at this linen collar across the barrel of their pistol. But Keough took their remarks good naturedly, and in time lived down the poor impression he had made when he first came. The cavalry officers, when in the field, dressed in much the same way that their men did; they had to; their tailor and ours was carrying a carbine now, and was not doing anything in the tailoring line, for them or us, either.

The officer had on generally a pair of our blue woolen trousers, a coarse flannel shirt, and one of our blouses. The only way he could be distinguished from one of us was by his shoulder straps, and they would often be missing. But he would have on a white soft hat, with a pair of small cross-sabres on front; our black hat would have sabres twice the size of his; that is how we could tell he was an officer, and often the only way.

Sherman was in front of Atlanta and Stoneman was breaking up railroads, or trying to; he tried to oftener than he succeeded. While in one of these railroad destroying trips, Stoneman was stopped one day by a force of Confederate cavalry, who had posted themselves on top of a heavily wooded hill. Some of our troops were sent to dislodge them, and made the charge, but were driven back each time. While they were forming again to make another charge, Keough rode down to them and said to the captain who was in command that General Stoneman had been kind enough to direct him to take command during the next charge. He was welcome to it, and the officers were now anxious to see what he would do with it after he had got it.

He formed his four troops in column of fours, each troop parallel with the next one; that made a solid column with a platoon front. The Confederates, who were hid by the timber, had stopped firing after the last repulse. They might as well stop, they could not hit anyone from where they were on top of the hill, and the timber prevented them from seeing much, anyhow. But as soon as Keough had started his column up at a trot, he riding at its head, the firing began again. Keough stood up in his stirrups, and, facing his men, swung his cap above his head and yelled, "Give them a cheer, boys, and go for them now."

The cheer was given, and they went for them, sending the Confederates clear across the hill and down the other side of it; and here the rest of the regiment that had followed him to support him, took up the chase and kept the enemy going.

Whenever a charge was made after this, if Keough was present, he took part in it, whether he had any command or not, and always came out without a scratch even.

When the Seventh Cavalry was raised a few years after the close of the war, he was given a troop in it, and his troop was one of the five that Custer took into that charge, when he struck "the biggest Indian camp on top of the ground." This was Custer's description of that camp when he first saw it.

Keough's body was found not far from where Custer lay, within the circle where they had made their "last stand," and to-day all that remains to commemorate him is a little post that was afterwards built upon the Yellow-stone, Fort Keough.

There lately hung in the State House at Lincoln, Neb., an oil painting of "Custer's Last Charge." The portraits of Custer, his brother Tom Custer, and Keough were in it, and very naturally, too. Some crank of the Carrie Nation type destroyed it a few weeks ago by cutting a strip out of the middle of it. She did it because the picture had been given to the State by a brewing firm.

CABIA BLANCO.

## The Maryland Law.

THE Maryland State Game and Fish Protective Association has prepared a game warden's law and a ducking law, which it is about to ask the Maryland Legislature to pass. The laws are prepared with a view to bringing the laws of Maryland into harmony with the game laws of other States, and for the preservation of wild animals, birds and fish, conserving the future supply of game in a rational manner.

The officers of the Association have consulted with game dealers, wholesale and retail, and with sportsmen, before preparing the new law, and it is believed that they meet the general approval of all who are interested.

Mr. Ogden Milton Dennis, secretary of the Association, in explaining the proposed application of the law recently, made the following statement:

"First—The proposed new law has for its primary and main object uniformity of the game laws of this State. There is no change in the open season, except that the new law will make it lawful to shoot birds and game, except certain shore birds, from Nov. 1 to Dec. 24, but it will be lawful for those who have game in their possession killed on or prior to Dec. 24 to use or sell the same up to Jan. 1 following.

"That provision is put in for this reason: Many dealers have a large stock of birds on hand on the last day of the closed season, to wit, Dec. 24, and it is unfair to them to say that they must destroy these birds or throw them away. To meet this the season for having in possession is extended one week, but of course during that week no birds may be caught or killed.

"Second—Many dealers are under the impression that they cannot sell or export game at any time during the open or closed seasons. The bill makes no such provision. All reference to the sale and export of game and birds is to the closed season, to wit, Jan. 1 to Nov. 1. In this instance, the law remains the same as it has been for years.

"Third—As to the license bill. This bill does not make it unlawful for a resident to kill birds or game in his own county without first obtaining a license. It provides that a non-resident of the State shall pay a license fee of \$10 before hunting; but that all resident hunters other than those who reside in a particular county shall procure a license and pay therefor the sum of \$1. That is to say, if Mr. E. lives in Anne Arundel county he will not have to procure a license to shoot in Anne Arundel county, but if he wants to shoot in any of the other counties of the State, he will have to procure a license, paying \$1 therefor.

"This bill will give the landowner the privilege of inviting any one to shoot on his property, provided he has a hunter's license. The bill is introduced mainly for the purpose of preventing a man in one county cleaning up the game in his county, and then stepping over the line and cleaning up the game in his neighbor's county. Of course, sportsmen and gentlemen do not do this thing, but market and pot hunters do."

## Natural History.

### Breeding Bears in Confinement.

ALTHOUGH bears are among the commonest animals shown in menageries and zoological gardens, they very seldom breed in confinement, and little is known about their breeding habits. Even old hunters are ignorant of this subject, and there are many men of wide experience who will tell you that they have never known of the killing of a female bear carrying young.

An early instance of the breeding of the black bear in captivity was told by Mr. F. J. Thompson, then in charge of the Cincinnati Zoological Garden, in *FOREST AND STREAM* in 1879. He bred some black bears and reared them successfully. Subsequently, at the same gardens, a pair of grizzly bears were born, but did not live. From Mr. Thompson's experience, and that of others later, we know that the young are born in January, are very small when they make their first appearance, are covered with a fine down, and are blind for a long time—forty days, we believe. A few years ago a litter of black bears were born in the Prospect Park Zoo in Boston, and, we believe, were reared. This very winter a Russian bear at the park of the New York Zoological Society in the Bronx is said to have given birth to young.

By far the most notable success in the breeding of black bears is told of in a paper recently printed in the Smithsonian Miscellaneous Collections by Mr. Arthur B. Baker. Mr. Baker says:

It is well known to those familiar with collections of wild animals in zoological gardens and parks that bears in such places seldom produce young, and that to rear the cubs is still more unusual; so that it is generally conceded that the conditions incident to captivity almost preclude successful propagation. It is therefore worthy of notice that in a private park near Akron, Ohio, a pair of black bears has regularly bred and raised cubs during the last twelve years.

A little more than twenty years ago, Mr. R. H. Lodge established a picnic park along the shore of little "Silver Lake," at Cuyahoga Falls, near Akron, Ohio, operating it for several years by himself, and later with his son, Mr. W. R. Lodge. From the outset a small collection of North American animals was one of its features, and this was increased from time to time. In 1888 a pair of black bears was added. The female, captured on the north shore of Lake Superior, was received in July when about six months old, and a male of the same age was obtained shortly afterward from central Michigan. The two grew up together, and when too old to be safely handled were placed in a brick pit built for their use. Here they have since lived (August, 1903), and that they have thrived during the fifteen years of captivity is apparent from the accompanying illustration, which shows the two old bears and their three seven-months-old cubs.

The first cub was born toward the end of January, 1892, when the parents were four years old. The male was then seen at the entrance to the den with a dead cub in his mouth, but a prompt and careful examination of the premises failed to discover any others. With the exception of three years, when conditions were unfavorable, this pair of bears has since produced young each year, the record of births being as follows:

1892, January 23. One male cub, found dead.

1893, January 24. Two males and one female.

1894. No cubs born, owing to young of previous year having run with the mother throughout the summer.

1895, January 23. One male and one female.

1896, January, 24. Two males and one female.

1897. One male (exact date of birth not noted, but between January 21 and 27).

1898, January 24. One male and one female.

1899, January 27. Three males.

1900. No cubs born, as young of previous year had run with the mother during the summer.

1901, January 26. Two males and one female.

1902. No cubs born.

1903, January 21. Two males and one female.

After the first litter, all of the cubs were raised, except five which met accidental death at ages varying from one to eight months.

The bears are kept in a circular brick pit 20 feet in diameter and 12 feet deep, built on the eastern slope of a hill, where the ground is dry, and there is good drainage. On the upper side, the top of the brick wall rises about three feet above the surface of the ground. The floor of the pit is of terra-cotta blocks set in cement and slopes toward the entrance gate, where drainage is provided by a gutter of the same materials. The brick-lined entrance passage, about 10 feet long and 6 feet high, is provided with inner and outer gates of iron grating and thus affords a chamber to separate the bears from the main pit when desirable. There is a water tank about 3 by 6 feet at one side of the pit. Two retiring dens are excavated in the bank, each about 5 by 6 feet and 4 feet high. These are 8 or 10 feet beneath the surface of the ground, are lined with brick, and connected with the pit by a 24-inch circular opening. The entrance passage is

provided with a similar but somewhat larger retiring den with a ventilating shaft in the top, while the only opening in the others is that leading to the pit. There is a supply of water, under pressure, within convenient reach, and the pit is frequently and thoroughly washed with a hose. When the retiring dens require to be cleaned, the bears are confined in the gateway passage.

The male bear is put with the female about the first of June and they mate in the latter part of June or the first week in July. They remain together in the pit until the time of hibernation. The cubs are born between the 21st and the 27th of January. Their presence in the den is at once made evident by their whimpering, which can easily be heard at the ventilator, but they are not seen till early in March. They are surprisingly small as compared with the size of the adult, for they weigh, at birth, only nine to twelve ounces. The eyes are closed and remain so for a month or more, and a little short, velvety hair on their bodies is the only indication of the heavy coat which they later acquire.

As the mother is likely not to breed while giving attention to the cubs, they usually are separated from her before the end of May, and thereafter are raised by hand. For the first few weeks their food consists entirely of milk; then they are gradually transferred to the mixed

weeks with only a grating between. She had seemed to recognize them, but when they were put together she at once caught the little male by the head and killed him, and only forcible measures prevented her from climbing the tree and repeating the operation on the other cub, which had taken refuge there. The father cannot be trusted at all with his offspring while they are very small. This fact is recognized at Silver Lake Park, and has been only too often proved in zoological collections elsewhere.

A number of the bears reared at Silver Lake have been sent to other parks, while some have been sold for meat. Several females were kept till they reached breeding age, at four years, and a second pit was built for them similar to the original one. They have produced a number of cubs.

The success of the Messrs. Lodge with their bears should not be attributed to any one feature of their management. The large amount and the character of the uncooked vegetable food used probably have much to do with it, but the opportunity for isolated hibernation in snug, dry dens, and the manner of treating the mother and young, must have contributed largely to the result. The fact that there has not been a case of sickness among their bears, nor a death except through accident, is sufficient measure of their success.

It must not be inferred that bears have not bred in captivity elsewhere in the United States, for instances are well known, including the following: A grizzly bear in one zoological garden produced, in twelve litters, twenty-two cubs, but only one was reared. In another, twelve cubs out of thirteen died on the day of birth, and one lived eleven days. Mr. W. T. Hornaday, Director of the New York Zoological Park, writes as follows regarding a birth in Prospect Park, Brooklyn: "In a den of about 20 by 30 feet, in which were five black bears, the oldest female gave birth to two cubs, and reared them. Her den was shallow, and its interior was badly exposed, but the mother persistently fought off all would-be intruders, and took good care of her young."

In Forest Park, at Springfield, Massachusetts, several cubs were born, one of which was reared. A black bear from the Yellowstone National Park, which was received at the National Zoological Park at Washington, on October 15, 1893, gave birth to two cubs on the 4th of the following February; one was accidentally killed by the mother the following day, while the other she reared to maturity. The weight at birth was nine ounces, and the length eight and a half inches. The eyes were first opened on the thirtieth day.

Hibernation in captivity appears to be more unusual than breeding, though several instances of this have been noted, and one, given by Mr. W. T. Hornaday, is especially interesting. The bear in question was at Mandan, North Dakota. He was kept on a long chain in a vacant lot, and on the advent of severe weather dug a hole about five feet deep in the open prairie, going down at an angle of about 45 degrees. He retired into this hole on December 14, and did not reappear until March 17 of the following year.

In closing this brief account, acknowledgment is made of the courtesy of Messrs. R. H. and W. R. Lodge in giving information and furnishing photographs, also of attentions received from them during a visit to Silver Lake Park. It is hoped that a knowledge of their methods in caring for bears may be of service to others who have these animals in their charge.

In response to our inquiry as to the recent birth of the bear cubs at the New York Zoological Park, Mr.

Hornaday, the Director, has very kindly written us: "The Russian bear cubs which we now have were born on January 31, 1904, or at all events that was the date on which their cries first made us aware of their existence. We are unable to state the length of the period of gestation. The mother of the present cubs gave birth, on January 17, 1903, to her first litter of two cubs, both of which died because the mother did not properly care for them. Three days after birth, the male specimen of the two measured as follows:

"Length of head and body, 8½ inches.

"Tail, ½ inch.

"Circumference of chest, 6¾ inches.

"Height at shoulders, if standing, 3¾ inches.

"Weight, 15 ounces.

"For a newly born bear, this specimen was quite well clothed with hair.

"We suppose that the specimens in the present litter are now of about the same dimensions as those given above.

"None of our bears hibernate in winter; but in severely cold weather the sloth bears remain the most of the time in their den. In fine weather, however, they come out in the middle of the day, and do not by any means appear to suffer from the cold. Of the eleven species now in the dens, the Syrian bears, from Asia Minor, are the most lively and playful. All the bears from Alaska are more quiet and less playful than in warm weather; but there is positively no hibernation. Beyond doubt hibernation is a habit born of sheer necessity.

"It is my belief that breeding in captivity is only a question of satisfactory seclusion and sufficient food; but in a zoological garden 'seclusion' often spells 'impossibility.'"

THE FAMILY OF BEARS AT SILVER LAKE PARK.

diet of the older bears. The cubs are vicious in their greediness, and cannot be trusted to take their milk together; when only three and a half months old, one killed his brothers in a fight over a pan of milk.

The food given to the older bears is approximated as nearly as circumstances permit to that which they would obtain in the wild state. Scraps from the hotel and picnic tables furnish a considerable part of their fare during the summer, but throughout the season they are liberally supplied with such suitable green food as can be obtained. Dandelion tops, clover, and some other vegetables come with early spring, and are followed by green corn, berries, and watermelons; and in the fall acorns are gathered for the bears. Green corn seems to be the favorite food, and is consumed most largely in the fall, when the bears become very fat.

Accumulated fat and the approach of cold weather combine to dull the bears' interest in the outside world, so that they turn their attention to securing retreats for winter, for at the first severe weather each animal begins to make ready its den by dragging into it large quantities of dry leaves. They become more and more sluggish, and about the middle of December withdraw to the dens for their long winter sleep. Usually they remain undisturbed until the beginning of March, when the first warm days bring them out to reconnoiter, and they soon afterward resume their interest in the activities of bear life.

The old bear is a model mother to the cubs as long as they remain under her care, even refusing, on their account, the attentions of her mate, but when they are taken away her affection for them seems soon to end. The two cubs of 1898 were removed in May and returned to the mother early in October, after first being kept for two

## Feeding the Birds.

STONEHAM, Mass., Feb. 5.—Staggering under backloads of grain, and with baskets of suet and beef scraps under their arms, school children of this town are weekly spreading dining tables in the great Middlesex Fells reservation for the succor of starving birds. The relief expedition began in a small way immediately following a severe storm of sleet that encased trees in ice and hermetically sealed the bark from the insectivorous flocks. Snow already had fallen to a depth of several feet in the reservation, where woodlands stretch over an area of several square miles. The outlook for the birds was forlorn, indeed, till Ernest Harold Baynes, of this town, requested permission of the school board to interest the high school pupils in organizing a relief. The response was spontaneous. The first effort to save the birds was of considerable magnitude, and there is little doubt that the good accomplished was considerable.

Armed with shovels, brooms, and food, the young folks, accompanied by Mr. Baynes and other adults, started for the Fells one bright morning. It's but a short walk into the edge of the preserve, which is bounded by several townships, and abounds in varied and picturesque outlooks. For a distance of two miles the little band walked and slumped and puffed toward Bear Hill, the most important eminence in the locality. When suitable localities were reached the shovels soon dug circular holes into the hard snow till the bare ground was uncovered. Then the brooms swept the surface as free from snow as possible. On these improvised dining tables grain, bits of bread, and other things that certain species love to eat were spread with lavish hand. The suet and such stuff for the insect eaters was wired to trees and bushes. Care was exercised to burrow out the snow at the very foot of trees so the creepers might easily find their collation. Fully 25 of these places were cleared and primed with food.

While the children were sowing the seed that might avert famine in the cold, white forests, the birds were hovering near with chatter that seemed to denote their pleasurable anticipation of a feast. The visitors withdrew a little distance, and the birds—chickadees, nuthatches, and snowbirds—dove into the midst of the good things and ate ravenously. Woodpeckers and kinglets soon found the suet on the trees and proceeded to break what may have been a long fast. For a time the snow-whitened evergreens formed a background to an interesting scene. From everywhere, out of the sky and from the dark depths, came the hungry hordes. The air was alive with streaks that flashed hither and yon. The jargon was unintelligible, and if the birds expressed their thanks for the food they certainly left nothing undone.

This work of humanity is being prosecuted in other places bordering the reservation, and the birds are being cared for with a persistency that surely rivals man's thoughtfulness for his unfortunate fellows.

G. S. H.

## Shooting a Friend in the Woods.

*Editor Forest and Stream:*

In your last issue (February 6), your correspondent, Mr. Hardy, loaded his gun and called his dog and went out to do things. Had I known he was after such big game I might have kept out of his way. Had I seen him squinting along the barrel of his old fusée I might have called out with Davy Crockett's 'coon, "Don't shoot, Brother Hardy! I'll be down directly." But I had no chance, and while going peaceably about my own business was peppered with bird shot because Mr. Hardy heard a rustle in the underbrush. Naturally one's sensations and desires are somewhat mixed up under the circumstances. Mr. Hardy makes me feel much as I did one moonlit night, not so many years ago, when an irate farmer fired a load of salt into my legs because I followed a family of 'coons into a field where some other boy had been stealing watermelons.

One might as well get at whatever humor there is in the situation; but I must still protest feebly against promiscuous shooting—which is, however, not half so bad as to rush into print and shoot deadly letters at a man's reputation on the strength of some faint rustle from an unknown newspaper.

For all that I have ever said or written of animals or men I hold myself strictly accountable; but I refuse absolutely to be responsible for what any reporter said I said, or to enter into any discussion founded upon a garbled newspaper account of a lecture. When I tell my audience distinctly that I am talking about the toothsome little crab that they discover in their oyster stews, I refuse to swallow the reporter's big soft-shell, or the correspondent's *Callinectes hastatus*, which tastes to me something like a bit of fried sea-bottom. And as for pain—"Why does a dog yelp when you tread on his toe?" asks the quidnunc. That is a deep question. It sets me thinking. But Mr. Hardy plainly has the root of the matter in him, and if he will give his days and nights to the study of Aristotle, he will undoubtedly reach the conclusion—to which I also came after years of philosophical meditation—that a dog yelps when you step on his toe because it hurts him. In the lecture referred to I was speaking of wild animals in their natural state, of the infinite pains Mother Nature takes to keep them free from most of our artificial aches and pains and anxieties, and especially of that marvelous dreamy (and probably painless) doze she lets fall upon them while she is quietly binding up their wounds. And now I am called up in *FOREST AND STREAM* before the sportsmen and naturalists of the country to answer the profound question whether it hurts a dog to tread on his toes, or beat him with a club, or smash his leg in a steel trap. It's too ridiculous. Let us summon Dogberry to give judgment.

So let your correspondent "keep his shirt on." Guns should be half-cock when one is swashing around in the woods. And there are others who know a little about crabs and dogs and sich, and who can even tell a hawk from a handsaw when the wind's nor'east. There are seven or eight of my animal books to be had in any good library or bookstore, and if Mr. Hardy read these, instead of newspaper cuttings, and can add anything to my small stock of animal lore, I will gladly travel a hundred miles

to meet him, and will take his information with gratitude, and his correction with the best of good nature.

But there is just one point in the discussion which I take more seriously. It is this—and here I must chide an old hunting companion—would it not be more humane, friend *FOREST AND STREAM*, when you have a letter which reflects on a gentleman's reputation, or character, or intelligence, to give him a fair show *before* you publish that letter to the world? For once a lie or a slander is started, it is vain to chase it. It is like a tramp fox, carrying his evil doing over into another county, and you might as well call off your dogs before they run out of hearing. This is but repeating your own injunction to look well before you shoot, and to be sure what your game is before you pull trigger. Many of your published letters of late seem to me to savor more of scrapping than of courtesy. They have, sometimes, rather too much of sting, or ridicule, or calling of names, to be worthy of sportsmen who would share their last crust or their last two shells with another. And you are responsible for this, because yours is the final authority. Your voice is continually raised to protect innocent animals and to give the hunted creature an honest chance. I have even heard you grow angry at a man, as well as admonish him, for shooting his friend for a bear in the Adirondacks. Now finish your good work and be yourself a little fairer to the men who are unfortunate enough to be often named in public, and who frequently get shot at because your eager correspondents see something stirring in the bushes.

I submit this as a fair question: Would it not be well for *FOREST AND STREAM* to do as many other responsible journals do, that is, whenever your correspondents, in their zeal for truth, send you letters criticising another man, if there be the slightest question as to the truth or justice of such criticism, to submit such letters to the men most concerned before publishing them to the world? So that, if there be any injustice, it may be suppressed at once; if there be any lie, it may be nailed before it sets out on its evil way; and if there be any question raised by an honest criticism, the criticism and its answer may go out side by side, like gentlemen, and your readers, with the evidence before them—not weeks later, when opinions have been formed, but at the moment when the criticism is first offered—may judge for themselves what is right. That is but flushing a bird, like a sportsman, *before* you shoot at him; it is but slipping the dogs *after* the game is afoot. In a word, it is something like fair play for the hunted as well as for the hunter; and anything else seems to me to be rather like that pot-hunting which you yourself have so often and so vigorously condemned.

I submit the question, therefore, in the interest of honest sport, and I have small doubt of your own and no doubt whatever of your readers' answer.

STAMFORD, Conn., Feb. 4.

## The Interest of Bird Study.

DETROIT, Mich.—*Editor Forest and Stream:* For many years I have been much interested in keeping a record of all species of birds observed during every month of the year. To the ornithologist who has not kept such a record, it is a happy surprise to note how interesting and instructive this monthly catalogue develops. One becomes on the alert to find each species, and to keep his ornithological eyes open for new kinds. To give one an accurate knowledge of the birds of the observer's section of country, the migrations, the arrival and departure of the birds, their relative abundance, etc., the plan is especially advisable. Several well-known ornithologists have followed a somewhat similar plan; Bradford Toney, in several of his charming essays, writes of his monthly lists in many sections of the country.

In illustration I give my list for the month of January, usually supposed to be a very barren ornithological month. The number following each species is the number of seasons in which the bird has been observed. This list includes 49 species, 7 of which are stragglers: Robin, 4; brown creeper, 8; chickadee, 11; tufted titmouse, 6; white-breasted nuthatch, 11; red-breasted nuthatch, 3; golden-crowned kinglet, 5; cardinal, 2; cedar waxwing, 2; northern shrike, 4; junco, 3; Amer. crossbill, 1; evening grosbeak, 1; pine siskin, 1; goldfinch, 9; snowflake, 4; tree sparrow, 12; song sparrow, 2; meadow lark, 3; rusty blackbird, 1; cowbird, 1; crow, 10; bluejay, 11; belted kingfisher, 1; flicker, 1; downy woodpecker, 11; hairy woodpecker, 6; red-bellied woodpecker, 1; red-headed woodpecker, 4; prairie horned lark, 7; screech owl, 6; Am. long-eared owl, 3; sawwhet owl, 1; short-eared owl, 1; snowy owl, 1; great horned owl, 5; red-tailed hawk, 1; red-shouldered hawk, 5; bald eagle, 2; sparrow hawk, 5; Am. rough-legged hawk, 2; mourning dove, 1; Bob White, 5; ruffed grouse, 10; great blue heron, 1; Am. merganser, 4; Am. golden-eye, 4; herring gull, 12; ring-billed gull, 8.

Of the above, the cowbird, rusty blackbird, cardinal, red-bellied woodpecker, belted kingfisher, evening grosbeak, and great blue heron, are accidental stragglers.

BRADSHAW H. SWALES.

## Michigan Ornithological Club.

THE quarterly meeting of the Michigan Ornithological Club was held February 5 at the Detroit Museum of Art. A fair attendance, owing to the wretched weather. J. Claire Wood presided.

Mr. Blain read a paper entitled, "Our Winter Visitors," by W. G. Klugh, of Guelph, Ontario.

Walter C. Wood spoke at length of his observations at the La Cheneaux Islands, and in Mackinac county, in October, 1903. He listed 48 species while there. Pine grosbeaks were fairly common. Flocks of American crossbills seen, nearly all in the brownish phase of plumage. Out of a flock of five American scoters he secured one; local hunters claim never to have seen this duck before. Pileated woodpecker fairly common. A few flocks of passenger pigeons are occasionally seen here by the residents.

Chas. E. Wisner read an extremely interesting paper on a trip made to the Hen and Chickens Islands in Lake Erie June 3, 1903. A colony of common tern were breeding in immense numbers; an actual count resulted in

1,169 sets, 2,462 eggs, 1,214 pairs. A few crows were detected feeding on the eggs.

J. Claire Wood spoke on "Migration." He discussed the various theories, and advocated the tagging of nestlings as a means of confirming these theories.

T. Jefferson Butler brought up the matter of the formation of a chapter of the Audubon Society in Michigan. Moved by Mr. Swales that Mr. Butler be recommended by the Michigan Ornithological Club to organize this chapter. Carried.

Letters of acceptance of honorary membership by Messrs. William Brewster, Robert Ridgeway, and J. A. Allen were read by Mr. Swales.

The annual meeting of the club will be held at Ann Arbor, April 1-2, in connection with the Michigan Academy of Science. BRADSHAW H. SWALES, Sec'y.

## How do the Starlings Live?

No. 58 W. FIFTY-SIXTH STREET, New York, Feb. 1.—*Editor Forest and Stream:* I am anxious to know about the food of the starling in winter. Who can tell us? A flock of about fifty starlings has spent the winter near my house in Lawrence Park at Bronxville. They may be seen at all times of day near the southwest corner of the park, and are never engaged in serious occupation, so far as I can observe. If they eat anything it must be tree buds, for there is nothing else in sight, and they must even do this on the sly, for I cannot catch them at it. They are still whistling, but I doubt if the steam is from the safety valve.

ROBERT T. MORRIS.

[The question asked by our correspondent is an interesting one, and to be answered only by observation. Certainly the starlings in many places about New York are numerous, and, notwithstanding the bitter weather of this severe winter, appear in good condition.]

## Camp-Fire Flickerings.

"That reminds me."

## Seasonable Stories.

IN the spring of the year before the frost has quite left the ground, and when the snakes are yet in a torpid condition, we read accounts of how, at a certain quarry, a blast was let go exposing a den of snakes in close community, a sort of snake merger, in the form of an interwoven yarn-like base six feet in diameter, most of them six foot rattlers, some copperheads, and just enough of blacksnakes here and there in the bunch to give a little harmonious color effect. Then with the opening of the fishing season we get the fish stories, and about them nothing need be said, for even a preacher will become lax as to veracity when describing his catch.

Fall comes along, the ducks come down from the north, winter crowds the fall a little, and before the ducks have left for the feeding grounds further south a freeze sets in and the lucky farmer walks out upon his frozen slough and chops out a wagonload of fine, fat, wheat-fed greenheads. Poor mallards! Lucky farmer!

And now when everything in animal life has left this country that can fly and walk, but the quail, pheasants, and rabbits, we get the rabbit story. It is too strong even to attempt to copy, so I clip it from the Pioneer Press where it appeared this morning. And here it is:

## HAS TO MOW RABBITS.

HUNDREDS FREEZE TO ICE AROUND A DRINKING HOLE.

LE SUEUR, Minn., Feb. 1.—[Special.]—Dr. A. T. Conley, of Cannon Falls, while in town to-day on a visit to his brother, D. C. E. Conley, of Le Sueur, informed your correspondent that he saw in Cannon Falls yesterday a double wagon box piled full of jack rabbits, which he heard had been caught in the following peculiar manner: Abram Wister, a farmer who lives near Cannon Falls, learned that large numbers of jack rabbits were in the habit of visiting an open spring on his place every day to drink. To get to the spring they had to cross a strip of ice about thirty feet wide, and, while drinking, to stand on the ice immediately about the spring. In a circle around the open water and extending out about ten feet from it Mr. Wister scattered salt which thawed the ice on the surface and kept it thawed, though the temperature was 30 degrees below zero. When the rabbits came to drink their feet were wet by the water on the surface of the ice, where the salt was, so that when they stepped on the clear ice beyond the salt they froze fast in a moment and stayed there until Mr. Wister rapped them on the heads and mowed them loose with a scythe.

Why didn't the farmer hitch up his mowing machine and do the thing up artistically and in style? He might have shot into those rabbits like potting a bunch of mallards in a slough.

Farming is slow when the mercury hugs 40 below zero, and while the convention held around the sheet iron stove in the general cross-roads store may be comfortable, yet with no one to oppose Roosevelt on the Republican ticket and no one in sight on the Democratic ticket, things get slow and conversation lags, and no doubt the above may be credited up to some inventive genius who knew the telegraph operator. The market price of rabbits in the St. Paul markets has not been affected by the above piece of rabbit news, so I am told.

Somewhere I have read how the famer's boy, when the corn is in the milk, hies to the store and procuring bird-lime smears the inclosing fence rails. How the 'coons and squirrels running along the fence rail smear their feet, and, jumping from the frying-pan into the fire, as it were, leap from the fence and landing among the dry leaves ball up their feet so as to make locomotion impossible. This being so, the quadruped turns on his back and holds his feet up to the heavens for relief, and in this attitude the farmer's boy finds him. All of which may be so.

Now comes down from the north a tale of a man with

a club and some molasses candy—but instead of commenting on it I annex it hereto to speak for itself:

"LE SUEUR, Minn., Feb. 4.—Special.—Henry Brilcut, of Lake Prairie, west of here, had a close call for his life last night.

"He and Miss Bernice, eldest daughter of William Woesthocker, who lives near St. Peter, have lately become betrothed, and he was on his way last evening to a betrothal party at the home of his lady love, carrying with him a large basket of popcorn and a bundle of cakes of molasses candy in the manufacture of which he particularly excels. Most of the way lay through thick woods along the river, and he had not gone a mile when, to his horror, he was attacked by a pack of seven large gray timber wolves. Cutting a club to have ready for defense if the worst should come to the worst, he took to his heels and ran for his life, dropping his basket of popcorn, which impeded his flight. For a mile and a half he ran

at the top of his speed, but by that time he was completely exhausted, and the ravenous animals close at his heels.

"Too tired to run any more, he sprang into the branches of a small tree close at hand, dropping his club and the molasses candy, and having the lower part of his legs quite badly torn by the claws of the wolves just before he got high enough to be out of reach. Almost immediately, however, he laid hold of a rotten branch, which broke beneath his grasp, and he fell into the snow, at the mercy of the beasts below.

"Determined to sell his life as dearly as possible, he sprang to his feet, and, as he did so, saw a strange sight around him. When the molasses candy had fallen from his hands, the wolves had sprung upon it, torn the package open, and every animal had seized a piece and tried to eat it. The candy, slightly warmed by the heat of their mouths, had given way to the pressure of the white teeth

into it, but had refused to let them be withdrawn, and every wolf, his mouth stuck tight together, as helpless as a muzzled dog and frightened at the strange situation, was rolling about in the snow, uttering mournful whines and tearing at his jaws with his fore paws.

"When Brilcut had recovered from the amazement which at first overwhelmed him, he killed all the wolves with the club and proceeded on his way to the party, where he promised Miss Bernice a fine silk dress from the proceeds of the wolf scalps."

If Little Red Riding Hood had only handed out a block of taffy to that old wolf as it lay ensconced in her grandmother's bed, how different would have been the history as heard in the nursery.

I don't know who this individual may be who concocts these rabbit-scythe and wolf-taffy stories, but he certainly is a "good one," and his fame should extend round the world.

CHARLES CRISTADORO.

## Life in the Woods.

### III.—The Gorge.

BEAVER Lake and vicinity was one of our favorite spots for making "drives." There were several places in this neighborhood where if deer were started from a certain direction they were almost always sure to follow runways, and once started on them the physical formation of the country was such that they were compelled to pass given points or turning back meet their pursuers. It was a practice of ours to send members of our party around on trails to get to the most advantageous spots for shooting, and then, after enough time had elapsed, one or more of those left behind would start in and make the "drive." I have nothing to say for or against this method of hunting, but for the sake of adding my experience to that of others, I will state that I have as often shot deer on a fair and square still-hunt alone as I have succeeded in capturing them by using this strategy.

Our favorite "drive" in the Beaver Lake region we called the "Gorge." The reason for the name was ample. High above the waters of the lake rose a ledge the sides of which were one hundred feet or more perpendicular in some places, and formed of barren rocks. This ledge was of an average width of thirty rods or more, and starting from a rather hilly country beyond it extended about one-third of a mile along the lake. The final approach to it was broad and easy, but along its sides were only two places where man or beast could descend with any safety until the other end was reached. Here it ran out by two narrow gulleys, guarded on each side and in front by high masses of rock. These gulleys passed out, one to the end of the lake and the other to a broad stretch of level country along the Pembine Creek. The Colonel had discovered the place, and at first glance his military training had told him it was the key to the position. He was right. On that ledge, in the thick hazel brush, the old bucks, in early fall, loved to hide away and sun their fat sides in supreme laziness. Later, on that ledge, the fawns, when bereft of the motherly does, were wont to gather. It was indeed a famous resort.

It was a wild, lonesome sort of a place in the Gorge, which was really the outlet proper. Rough rocks as large as houses laid around promiscuously, as if Vulcan or some other god of mythology had been at play there and tossed them about as the small boy does his snowballs. On one side toward the lake were dark swamps, through which the outlet of the lake bubbled with a mournful sound as it sped away to join the river in its flight to the Great Lakes. The pine trees stood thick and tall there, and made weird uncanny sounds as they swayed to and fro and in places rubbed against one another. It was always cold there. The air always moved between the rocks with a chill, damp draught, and bird or squirrel seemed seldom to invade its precincts. I noted all these things one early morning, as, perched upon a rock, I waited and listened and watched with all my eyes. The minutes rolled by and no sound broke the silence. When suddenly what was that? A twig snapped. Between the trees I saw something move. It must be the Colonel coming on the "drive," but no; out steps a half grown fawn with dainty tread, with head thrown up and ears turned back. I let him come. I count him mine. With throbbing heart I aim as best I can and press the trigger, but before the crack of the rifle is heard a leaning tree lets forth a direful, curdling squeak, and the deer, with lightning quickness, is gone. A bullet with a crash that sets the echoes speeding far and wide, flies after him. Again I count the minutes and when the rest come to ask my luck, I tell them they will surely find a dead deer a little way back in the ravine. However, they look, I look, and we all look, but in vain. I hit a tree and that was all. The old hunters say: "Charlie, hereafter beware of squeaking trees."

But that was only once. Another morning finds me at the same place, cold and shivering as before. Two shots, not far distant, ring out upon the air; and the tingling of expectation warms me in an instant. I wait and wait, and wait. From the ravine on the left comes one of the drivers, but at a sign stands motionless to await the

advent of the others. The two from the other "stands" soon appear, and they, too, wait for the Colonel. We have nearly given up, when suddenly from between the rocks, with the velocity of an express train, there dart three deer running as only scared deer can. A quick aim, the gun speaks out, the smoke settles around in an impenetrable cloud, but above the noise I hear someone say, "There goes one down," and my heart bounds with joy. Then bang, bang, bang, bang, on my right, and as the smoke clears away I see the two fawns darting by the two on my right, and mid a parting trio of shots from us all they escape without a hair harmed.

But this is only one of many experiences at the "Gorge." One morning we put the Old Trapper and Mack on the stands, and I began the drive. Very soon I hear Mack's gun crack twice, and not long after the .45-90 of the Old Trapper spoke in no uncertain tones. I hurry along and find my friends holding a jubilee over a big fat doe. We dress and hang her up, when the Old Trapper, returning from the brook where he had washed his hands, exclaims: "Boys, where did this blood come from?" Looking along the ground we find every sign of a wounded deer having passed along and escaped unnoticed into the swamp beyond. We take the track, and while the others follow along I run around and gain the other side and just in time, for as I reached the other end out jumped a deer. Hurriedly I shoot and miss and then, realizing the folly of shooting blindly even at point blank range, I take more aim and at the second shot the deer turns a somersault and falls dead. It was a nice buck fawn, and had been shot in the hind leg just above the gamble. Investigation showed that it was one of the two which Mack had shot at, at long range, early in the "drive," and supposed he had not touched. On another day the Colonel, not having had much luck, took one of the "Gorge" stands and we drove out a nice young buck. When we reached his stand, the Colonel was looking in vain for the track or some signs of blood. He had only a snap shot, and had about given up, when we stumbled on the spot and found plenty of hair and blood, which led to our getting the deer and carrying him in triumph into camp.

But my crowning success at the "Gorge" occurred quite unexpectedly on this morning, and fulfilled the Colonel's prophecy of the night before. I had been making drives all the morning for the others, and so the Old Trapper and the Colonel finally agreed, on our way to camp, to "drive" the Gorge and give me a chance for a shot. So I started for the stand. The sun shone warm and bright, and as I moved slowly through the open pine woods I could see how sharply my shadow was cast before me on the ground and against the trunks of the trees and the big rocks. I wanted to reach the top of a small rocky knoll that stood near the outlet of the Gorge, and I knew that in order to do it it would be necessary for me to move very cautiously and still. Finally, after much toil, I reached its base and commenced the ascent, walking as carefully as if treading on eggs. All was still save the call now and then of an angry bluejay. Not a breath of air moved. The dry leaves that hung on the little birches around were motionless. Step by step I slowly advanced. My head reached the level of the top of the knoll. A few inches further and I could see my shadow commencing to show on the trees in the gulley beyond. A few more steps and I would be in the coveted place, when, with a crash that sent the blood racing through every vein in my body, a bunch of gray and white flashed before my eyes, moving almost squarely in front of me, and in the very bottom of the Gorge. The old Winchester swung to my cheek. Another flash of gray and the old gun belched forth with a roar that set the echoes chasing one another around the rocks. Another flash, and again the old gun spoke, then all was still save the beating of my heart, which seemed almost as loud as the echoes of the shots. The smoke hung round me so that I could see nothing. I then ran to the further side of the knoll and peered out from the smoke, but still could see nothing. I began to grow cold and sick at heart. I was ready to toss my gun on my shoulder and return to camp, when slowly there raised from the ground, about twelve rods away from me, first an enormous pair of horns, and then the head

and neck of a big buck. Quickly the blue barrel was brought to bear on him again, and as the gun cracked his head dropped to the ground, and by the time I reached him the deer was lifeless. A hurried examination showed one bullet hole in one ham ranging forward, and another through the backbone about a foot behind the shoulders, and the last one through the neck. A minute or two to stick him, and I was back on my stand to wait for the "drive" to be finished, for this deer I had started, and there was a show for some to come from the other direction, but none came.

In the course of twenty minutes I heard the welcome whistling of the boys. I called them to me and told them I thought I had wounded a deer, which I wished them to help me look for. The Old Trapper, lighting his pipe, followed my directions, and soon found blood. In a moment or two he stumbled on the deer. "You didn't fool me any," was the first thing he said. "I knew well enough you had a deer, but I didn't expect to find an ox." The buck, after hanging in the woods about ten days, weighed 207 pounds. Had he been fat he would have pulled the beam at not less than 240. He had a peculiarly large and broad pair of horns, and these, with his head and neck, look down on me from the post of honor in the dining room. But this was not all of that eventful day. After we had dressed and hung up this monarch, the Colonel and myself started for camp, while the Old Trapper went to look at his traps along the creek. While on the way down I remarked to the Colonel that I had heard three shots, and we were both of the opinion that Mack also had been having some fun.

When we reached camp Mack was inside. His face shone like a burnished tin pan. The pleased look had settled all over him, and he was wiping out his new gun, a Marlin, as if his life depended on the job. The minute I stuck my head inside the camp he thrust out his hand and said, "Shake." "Mack," says I, "you have killed a deer." "Yes, he has," echoed the Colonel. "You bet I have," answered Mack. It had been Mack's ambition to kill a big buck. He had prowled for one in vain. He had stood on runways while others drove for him, but none ever came. He had watched, as the evening shadows crept through the woods, and had sat around their feeding grounds until almost frozen, but no big buck had he seen. But now his wish had been realized, and he was happy.

I have two maxims which I constantly think of when deer hunting. The first is, "The unexpected always happens." The second is of a similar nature, "All things come to him who waits." To me they have been proved many, many times. Well, the unexpected had happened to Mack. He had gone over to the lumber camp to get our mail, and also a small piece of salt pork and some potatoes. He was returning homeward with the above mentioned luxuries strapped to his back, and when within a quarter of a mile or so of camp, lured by the brightness and warmth of the sunshine and general beauty of the day, he had planted himself on a big log to rest and look around a bit. Mack had been hunting every minute of the time and had had his nerves all tuned up. His eyes and ears had been open all the time, but luck hadn't been coming his way. For a long time after he sat down his eyes roamed around without seeing anything to attract particular attention, and he began to get sleepy. Suddenly something moved the bushes on the edge of a little swamp on his right. They stirred in an unnatural manner. Mack was all alert, and when out walked a big buck not far from him and walked along as unconcerned as if there was no man nearer to him than Oshkosh, he was not a bit excited (so he says). Carefully he drew a bead on the big fellow's shoulder, and fired. Again and again the .44-40 spoke, and at the last shot down fell Mr. Deer. Mack baptized his new knife in the deer's throat, and then hurried to camp for help, and had just arrived when we came in. All three immediately hurried back to the spot, and in short order the buck was hanging in a tree. He weighed over 180 pounds, and a curious fact about him was that one eye had been put out, apparently only a short time before he had been shot. Evidently it had been done in a fight, for his neck and ears were covered with fresh scratches. If he could have spoken, he might have told us, "You ought to see the other fellow." How-

ever, we did not see him.

Two big bucks in one day made a pretty satisfactory record. The boys were remarking that it was rather strange that Mack's buck did not fall until the third shot struck him, when S. B. told what happened to him one time while hunting in the same vicinity.

"One day near our favorite gorge I saw a sudden motion which I believed was made by a deer. Sure enough, for all of a sudden out sprang a large deer, which I shot at, after catching a good sight. Another deer then sprang from the same vicinity which I shot at and wounded. Running about twenty rods the second deer stopped and seemed to hump itself up in a strange manner. I shot at it again; and it still stood there in the same position. Thinking it strange if it was not hit, I slipped in a third cartridge and fired a third time. This time the deer went down. On going up to it I found three holes through it. The second shot that was fired passed through its body, and it never moved. It was a large doe, too heavy for me to hang up, but pretty soon the Colonel and my brother John came along and helped me to take care of it. I told them that I believed I had hit another, and we proceeded to look for signs. Presently we discovered blood, and soon came across another very large doe—in fact, the largest I have ever seen in my life. It weighed 180 pounds, and it kept all three of us busy to hang it up."

It was late that night before the party turned in, as there were many other stories to tell, and the hours slipped away without being noticed. But when the older ones commenced to yawn and fix their beds, the yarn spinning ceased. Fresh venison with some thin slices of pork were cut for breakfast, potatoes made ready, and a goodly kettle of coffee provided for, and then the god of slumber was wooed as only he can be in the great pine woods after the toil and excitement of a good day's hunt. The bright stars twinkled above the solitary camp, and the busy brook sang some of its choicest songs, as it danced on its way or bubbled noisily around the big boulders. Later the moon peeked out over the tops of the trees, and smiled in a kindly way on the home of the hunters, and, as if to show how nature bestows on her faithful followers her richest gems, she turned to silver every tree and brush and stick as it stood there in its covering of white. But the tired men slept on, only to wake when old Sol had hurried over the ridges and transformed the sheen of silver into the grandest display of precious stones; until every frosty particle shed forth all the colors that delight the eye. How good the hasty wash in the icy water made the boys feel, with what keen relish they ate their breakfast, and with what eager anticipation they shouldered their guns can only be appreciated by those who have been there. CAROLUS.

[TO BE CONTINUED.]

## Snipe Shooting on Shinnecock.

Do you know Shinnecock Bay fairly well? Do you know that part of the bay between Quogue and the life-saving station at Tiana? and how well do you know it?

Can you crawl out of bed some fine August morning—say about 3 o'clock—and find your way to the bay shore anywhere in the vicinity of East Quogue, and at some point, for example, near Weesuck Creek find your scooter or small gunning boat, stow away forward your lunch pail, gun, box of stool and water (cover these with your oiler, for that little boat of yours is given to taking in water if the wind should breeze up a bit), hoist your sprit sail, and lay your course cocksure to your favorite gunning point?

Now, this seems to be a very simple matter if one has any knowledge of the bay; given a decently favorable wind it should be quite an easy thing to do.

I do not intend debating the question for a minute, but I shall relate how you walk down to the bay in the early morning all eager for the fray (the walk is just long enough to open your eyes after a short but sound sleep), with your lunch pail, oiler, and shells (you have taken the precaution to put your stool with the water jug into the scooter the night before, if you were wise), but with heavy rubber boots, gunning coat, etc., you find that the walk is plenty long enough, and are glad when you are in your boat and with a very gentle breeze—hardly any, in fact—you slowly move out into the bay.

Did you ever notice how still everything is down there at this time in the morning? And how blessed dark? What wind there is comes, say, from the southwest this morning.

Now where are you going? You know the favorite gunning points in the bay and with your early start have a good chance to pick a fairly good place. You make up your mind to try Hong Kong Channel—that's easy, no matter how dark it is—you surely can't go far astray; but it is very dark, and it does seem as though everything was turned around. You may have discovered a light in the Walker House, some gunner, perhaps, getting ready to go out; you chuckle to yourself as you imagine him rubbing his eyes, looking for his belongings, thinking of your own experience only a short time before; at the same time you take advantage of his light—it will help you a lot to make Hong Kong at one fell stroke. You are now quite confident that you can lay your course right to the channel, especially now that you can just see the dim outlines of a sail leaving the shore, bound, as you know, for Rack Channel; this gunner is there every morning, and you can judge your course by his if you can keep his sail in sight. But as you draw out into the bay familiar outlines disappear, the light you so depended upon has gone, and it is impossible to follow the sail bound for Rack. You are now entirely upon your own resources, and your knowledge of the gunning points in Shinnecock is soon to be brought to a test.

You are moving slowly but surely with just a gentle ripple of water playing round your bow; there is hardly any motion, hardly a sound; once in a while you may hear faintly the call of some waterfowl in the distance, but everything seems painfully quiet. Now, that part of Shinnecock is not so wide; it's a small bay, comparatively, not more than a mile and a half across to the gunning points; it should be quite a simple matter, I can hear you say, to make Hong Kong Channel. You intend to go to the west of "Dry Bar," and after you once sight that

point, or I should say, bog, you are all right. How it does loom up in the daytime; have you ever noticed this especially? It would seem almost impossible for you to miss it even on a dark night like this; you are quite confident in your own mind that you will soon find it; feeling sure from the course you have taken that you are right, on you go; the boat has been increasing its speed ever since you started, and you should be across soon, but from all appearances you are still well out in the bay. Every now and then a small wave comes aboard over your bow, indicating that you are still in deep water. No sign of any shallow water. No sign of anything. Where are you, do you know? You don't know, you might as well own up; you are disgusted.

You are heading for the beach side of the bay, of that you are sure. Shinnecock light gleams on you down east, and that is about all you know. You could swear that you were heading right for Hong Kong, and have kept your course, and you should now be in shallow water on the flats. "Hello, what's this—a bog dead ahead! Where in the world am I?" You head your boat into the wind to the lee of the bog, put your feet overboard—it's quite shallow here, only about a foot of water, muddy bottom, and bogs all around. Nothing looks natural or familiar—nothing but darkness, through which you can just see outlines of strange bogs and meadows. Hark, you hear voices to leeward. You recognize the high squawk of the gunner east trying to find his boxes, and the paralyzing fact dawns upon you that you are 'way east of Hong Kong and must tow your boat to that point, as you can't very well go there on this wind. So there you are, chagrined, fearful that someone will get there first, and in a most uncomfortable frame of mind. How in the world did you get there? Don't ask me—I don't know. Ask the winds and other things—the stars, the light in the Walker House—don't ask me. I never could solve conundrums of that sort; don't ask the baymen, they would only laugh at you and think it a fine joke. Keep quiet and tow your boat. You will find that it goes much easier with the centerboard up through the shallow places into Hong Kong. I have tried both ways, and consider myself an expert in this particular line of seamanship. Now, don't swear and get discouraged; to be sure, it's quite a pull from where you are around into Hong Kong, and not the best of walking, so on you go, and you are getting hungry and thirsty, too. Aren't you glad you brought along that big stone jug of water? Yes, yes! My, how warm you are, too. Oh, well, you are getting on, you can see now on either side of you the bogs just at the end of Hong Kong. You tow your boat through them, and head toward the beach. Now, on this wind, you say to yourself, I should rig quite well in; so in you go toward the drain. Ah, well, here is the spot at last, and you are glad to get there. You let your boat run by you into the grass, draw yourself up, face south, and take in a good long draught of old ocean air. How fresh and invigorating it is! I can see you now taking out the mast, toting it ashore with the sprit sail, pole and all, and bringing your boat well into the little bay where you are to construct your blind.

Soon you have your stool out and your boat well hidden, and it's really quite a job to hide that boat; it takes some time to pull clumps of meadow grass up by the roots and plant them around you in such a way that you will be satisfied with your hiding place. But you are well into the bog, and the long grass protects you fairly well.

You will notice a faint tinge of red in the eastern sky, and objects around you are beginning to put on tangible shape; your decoys are beginning to show up well, and seem to be nodding to you as the quickening breeze sends small ripples of water through them. Shinnecock light is beginning to look like a large candle in the distance, growing dimmer as the dawn approaches. A tiny wren hops on to the reeds in front of you and cocks his little head on one side, probably wondering what sort of a lunch you are going to divide with him during the day.

You are now sitting comfortably in your boat on your stool box, your gun on one side ready for the first sound of the snipe. The wind is growing stronger every minute, and you keep your eyes and your ears open to leeward, but how thirsty and how empty you feel; you must have a bite of something. Now, did you ever in your shooting experience—as you will this particular morning—open your lunch pail, take from it a nice chicken sandwich so daintily prepared by your wife, and just as you are fairly under way with your first or second mouthful, suddenly hear that call which once heard is never forgotten—the metallic call of the yellow-leg? I can see you now, your frantic endeavor to clear your mouth—were you ever in such a fix? Good gracious! what a whistle you give forth. You know you were always rather pleased with your yellow-leg call, but now you tremble as to what the result will be. But yellow-legs are not very particular; they hear you and answer. You can hear their call growing stronger every minute. There they are, well to leeward, heading your way, perfectly sure that your wooden frauds are some of their kind, and, eager to join them, they circle off to windward, turn and come down the wind with wings set, eight fine yellow-legs rolling softly to each other and to their new-found friends. Your whistle is by this time in better working order, and you can answer them softly. Now they are quite sure of themselves, and turning with a graceful sweep are well over your stool. You will agree with me that this is a very critical period—will you try for two with your first? Sometimes they come in such a way that this is easily done; but don't try it—take one. You will do this. Bang! your bird is down. Bang! Another and one cripple in the water bobbing his head from side to side. The others are in the air, and to all appearances have made up their minds to make their next stop somewhere in the vicinity of Cape Hatteras, but they hear your whistle again and the call of the wounded bird, and you can see them waver—will they come back? You are nervously reloading your gun, doing your best with that sandwich whistle of yours, and sure enough they turn, calling; they circle again, set their wings, and are now very near, will soon be over your stool again; here they are up in the wind and hovering right over your decoys; they can't stop, they would like to do so very much, but the water is too deep for them. You know this, and if you don't it should make no difference, Bang! You have another,

and should have had the next clean, but he is down on the meadow and not feeling very well.

The others have gone. Your visit this time is limited to two calls, you have five out of eight, providing you get that bird in the meadow, and you have done fairly well. You are inclined to find fault with your non-ability to get the whole bunch, and charge it to the whistle defect. You have done well, so be satisfied. As you pull up your boot tops and wade out for your birds, a smile of satisfaction plays over your face, a comfortable sensation pervades your system; you get your cripple on the meadow, although not until you have brought him down with another shot; he seemed to gather strength over there waiting for you, and had just enough left to make a final struggle for his life.

Now tell me, has not even this experience paid you for all your trouble, your early rising, your scrambling about in the dark, and your blundering about down below? I am sure that it has. I can tell from the way you handle your birds—placing them carefully under cover, admiring their plumage and condition—that you are a good sportsman, and that the working of that little bunch of yellow-legs has given you pleasure enough, even if you get nothing more to repay you for your early morning's experiences.

Now back again, you are in your boat; by this time the sun is well up and it's beginning to get quite warm, and your thirst once more calls your attention to the lunch pail. I should like to ask you if it will be possible to commence operations in that direction again without a slight trace of nervousness on your part? You remember your last whistling effort, and I am sure that with your next mouthful anxiety is depicted on your countenance. I can see your furtive glances to leeward, the sudden stoppage of your jaws as perhaps you hear a faint whistle from some gunner east—upon my soul I don't believe you know what you are eating! You can see a long distance now, and should birds call can locate them better; you can eat your breakfast in peace, and how good it tastes. Your wife has prepared the lunch for you; she knows how melons taste out there, chicken sandwiches, nice fresh bread and butter, and perhaps a little beach plum jelly or preserve; it goes well, I assure you. And I think you will agree with me that a bottle of coffee (or if you don't wish to carry a bottle, fill the upper part of the lunch pail) is most desirable. Did you ever say, upon opening your lunch box, "Good gracious! My wife has put up enough for four," and ever reflect how much you carried home with you? Isn't it quite astonishing how one's appetite improves out there?

Eight or ten sharp, quick, short whistles in the minor key bring you down into your hiding place as far as you can go with a jerk. A jack curlew, by all the gods! You can hear his repeated call in the distance, growing stronger; he flies rapidly and is anxiously looking for real comrades. Now don't misunderstand me, he is not so darn sociable as to take up with everything he sees; you know that. You can see him away down east coming like a train of cars. Will he go down to the gunners there? No, he is over the beach banks to windward of them and can't hear their call; you try your metallic whistle, which does very well with jack, it's very penetrating and if anything will make that "cagey" bird turn, that whistle will do the business. He sees your stool, and you may congratulate yourself that you have several of his kind out. Now it's always a good idea to have a few jack stool out—say four or five—they are large and make a great showing; put them well outside your yellow-legs. Jacks like their own kind; this particular jack curlew acts as though he were anxiously looking for some friend who has an appointment to meet him just about where you are, and he has but a very few minutes to spare; his flight is nervous and quick; he circles back and forth high in the air, calling continually, evidently looking everywhere for his friend. Isn't it a trying time? You have your gun clutched nervously, knowing that you must shoot the second he comes into range; if you wait for this beggar to come down and hover gently over your wooden images, you may be mistaken—you can't depend upon them. Suddenly, with one quick swoop, he is down; he circles again to windward, calling frantically. Don't wait for him to stool well; he is wild; he comes down the wind waving his long bill from right to left, looking for that friend of his. Don't move or you are lost; he is going to come through your stool; he turns, his mind is made up, he is sure everything is as it should be. What a big chap! Take your time now, it's easy to miss even a bird of his size. Wait a minute; there you are now—bang! down he comes, dead as a door nail. That was a good clean shot. I was glad to see you slip a No. 8 into your gun when you heard his first call; they can carry off smaller sizes quite well. Isn't he a beauty? You get something when you bring down a good fat jack. I see you now in the middle of your decoys, standing there in the water admiring that fine bird, your gun tucked under your arm, and so perfectly satisfied with yourself that I really hate to place you in an awkward predicament again, old man, but yellow-legs are right over your head. Not a sound did they make; the first thing you know of their nearness is when a glance shows you ten or a dozen birds setting their wings to windward of you and coming for you head on.

Reader, shall I draw the curtain, or do you still wish to see the fun? What are you going to do, old chap? You must think quick; in about five seconds your thinking will be of no particular account if you wait until then. The boat is, say, twenty good long paces from you. Shall you try to reach it and get under cover? It's too late; you crouch down to the water, calling softly to the birds; they are tame as chickens; they pass you to leeward; now turn and will come within gunshot at least. Hear them rolling to you—is there any prettier music than that? They are everywhere now, and you must take what you can get. Your being out there has broken up the bunch in such a way that they seem to be all over the place. Your only chance is to pick your single bird. They are criss-crossing all around you; you can get two, at least. Let them have it now—bang! bang!—and two are down. The rest are off. You scramble back to the boat, whistling as you go. How you do make the water fly! What a distance that blind of yours is away! I wish I had a snap shot of you, as, with gun in one hand, your jack in the other, you are making desperate efforts to

reach the boat, your whistle doing gallant work. Now you are in, bringing with you considerable water; down you go—and where are the birds now? They are well off to the west, close together, and your whistle is of no avail. You groan as you think of the lost opportunity, and your only comfort is the two birds in the water. Out you go again to pick them up, but not without a sharp look-out, and the operation of picking them up is accomplished without much delay, I can assure you.

You go over in your mind, as you are once again ready for business, the last incident. Now where did those birds come from? It is hardly possible, you say, that they came from the east; it was only a few minutes before their appearance that you carefully looked in that direction. Nothing was anywhere in sight. Oh, well, those dead birds can't tell you, and no one knows. They may have been spending the night somewhere inland, and just started on their southern trip, coming from the west. You see they are quite young, and it was evidently their first experience with the gun, and nothing had disturbed them, or you may be sure they wouldn't have "come so gently," as the phrase is down there. What infernal luck to be out there among those decoys like a scarecrow in a cornfield. It's a blessed wonder that you got a shot at them at all, so say nothing; thank your stars that you got two.

The sun is now well up, and the shooting will be slow, probably, until later in the day. You have time to pick up and get home in plenty of time for lunch. You stalk out into the water, pick up your stool, and pack it away in the box, storing everything well forward in the scooter. Your mast up, and sail spread, you can, with a good breeze from the southwest, make your run home quickly; you slowly run out through the channel into the bay, wondering, as you do so, how you could have missed Hong Kong so easily in the dark.

Try this some fine August morning, if you have never done so, and let me know your opinion. SCOOTER.

### Connecticut Cover Notes.

NEW HAVEN, Conn., Jan. 30.—The unusual and prolonged severity of our New England winter, has caused me to pay more than casual attention to the condition of our feathered friends who make their sojourn with us through these difficult winter months; and from personal observations, and reports gathered from the surrounding country districts, the conclusion is one which makes us indeed solicitous for their existence, with the hope of early prospects for milder weather.

As for the quail, they seem to be holding their own very well against such adverse conditions, and only one instance is recalled where they have succumbed to the rigors of weather—a pathetic remnant of four birds being found, which had escaped dog, gun, and other "varmints" of the open season, only to pass over to the happy feeding grounds, where it is hoped there is no pursuer.

Two large coveys have been seeking food in the stable yard of a farm nearabouts, for the past three

weeks, and the thoughtful proprietor has furthered their larder by scattering buckwheat and wheat so that they can readily find it.

A week ago, after one of our severe snow storms, I took a tramp through a winter cover where quail invariably are found, and was much elated to start two medium sized coveys which flushed strong and vigorous, and evidently had stood the battle well. Subsequently a few spaces of six or eight feet square have been cleared of snow, and feed scattered thereon for them.

Probably it is well known, to the ever increasing membership of the FOREST AND STREAM "Humane Society," that after a snow storm, quail will seek bare ground upon which to feed if such be available, and a little time and trouble thus employed in clearing a small space where one is about to feed the birds, well assuredly attract them the more readily.

Situated in the town of North Madison, about twenty-five miles from New Haven, is the home and cosy club house of the Hammonasset Fishing and Shooting Association, the membership being a small one, and composed of sportsmen from New York and New Haven, and the president and leading spirit of this organization is Stephen Whitney, Esq., of New Haven, a true sportsman of both the old and the new schools. This meagre description of the club is given at this time, as by their good works let them be known.

Not only have dozens of southern and western quail been liberated in the early springtime throughout their broad acres, thus increasing the depleted covers for many miles around, but annually buckwheat is planted on cleared field and left without harvesting, wholly for the food and benefit of the quail. At the edge of each buckwheat field a heavy brush shelter is constructed, or a barrel is placed, open at one end, toward the south, and firmly fixed by stakes, then covered with brush; so that when snow, sleet and cold rains come the quail have a dry and sheltered roosting place. When the snows are deep and crusty the employees of the club distribute grain to them, and seldom if ever are dead birds are found.

Recently, upon one of our coldest mornings, a crow was found walking about the writer's kitchen porch, apparently blind, pecking haphazardly at everything with which he came in contact. Picking him up, which was accomplished without the slightest show of fear on his part, it was seen that his eyes were entirely white and resembled small globules of ice. He was ravenously hungry when food was offered him, and for two weeks was warmly housed and fed, but the sight was entirely gone from his former watchful eyes, and with regret he was helped over the divide. Song sparrows and chickadees have been daily visitors at the kitchen door, and the small favors rendered have undoubtedly been thankfully received.

Never in my experience of twenty years' observation have the conditions of bird life and winter been so perplexing—robins a numerous flock, two rose-breasted grosbeaks, bluejays, and song sparrows contending against the seeming never ending snow and cold.

Let us hope that the worst of our winter has passed, and that when the warm winds from the southland bring their messages of returning bud and leaf, the pipe of the quail will reward us for any little attention we have given him during his struggle with the northern winter. NUTMEG.

### A Law Against Boys' Guns.

Editor Forest and Stream:

If such action proves necessary to defeat the measure, every gun owner in the State ought to protest against the bill introduced in the Senate by Mr. Armstrong to prohibit the use of small rifles, air guns, etc., by boys under sixteen years of age. So many needless and vexatious laws are passed thoughtlessly that this one may go through if no one appears in opposition, and the result might be widespread injury.

If I am allowed in time to take the seat in the Assembly to which I was elected, I shall oppose the passage of the bill on the ground that it proposes to violate the Constitution of the United States, and is against public policy. The second amendment to the Constitution says: "A well regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed." This would seem to guarantee a boy of fifteen years old the same right to carry a gun that a boy of sixteen would have under the proposed law. The bill would infringe on the instrument in such a marked manner that there can be no doubt of its fate on the first occasion it came before a competent court.

But even if it were constitutional, it ought not to pass, for it not only deprives boys of a source of wholesome outdoor sport, but would work injury to the State. We spend a large sum of money annually to train members of the National Guard in the use of arms, but this bill would close the best school in which familiarity with arms can be learned—a free school that costs the public nothing, but turns out experts in the most important branch of a modern soldier's art—that of shooting straight.

The avowed purpose of its author is to protect boys from hurting themselves with guns. The intention is commendable, of course, but age is no assurance against the careless handling of arms, or there would not be the annual list of hunters who are shot in mistake for deer. If boys must be guarded by statute against danger, the next law will, no doubt, be one to prevent them putting on skates, for they sometimes break through the ice and get their feet wet.

The earlier boys learn to handle guns the better, if they are ever to use them with effect. The famous President Paul Kruger, of the South African Republic, shot a lion and saved his own life when he was but twelve years old; and we know that the heroic defense of their country made by his followers was largely carried on by boys under sixteen years of age. The fathers of youngsters ought to know when boys are old enough to have a gun. Better that now and then a lad should blow a finger off than a whole generation grow up ignorant of the art of shooting. EDMOND REDMOND.

ROCHESTER, N. Y., Feb. 1.

### The Camp-Fire Club.

THE dinner of the Camp-Fire Club, held last Saturday evening, Feb. 6, at the Aldine Club, in this city, was an event of very great interest. About ninety persons were present, and President W. T. Hornaday, Director of the New York Zoological Park, occupied the chair. Mr. W. H. Boardman was toastmaster, and the guests of the evening were Rev. William J. Long and Col. C. J. Jones, better known as Buffalo Jones.

Among the members present were: D. T. Abercrombie, A. A. Anderson, T. E. Batten, Daniel Beard, T. P. Berens, W. H. Boardman, M. T. Bogert, Henry M. Bristol, Dickson Q. Brown, H. L. Cadmus, Dr. A. Caille, Wm. Edw. Coffin, C. C. Curtis, E. W. Deming, M. P. Denton, W. H. Drake, J. Seymour Emans, E. H. Fitch, F. L. Gamage, Wm. T. Hornaday, L. C. Ivory, H. L. Luques, A. J. Millbank, Dr. R. T. Morris, J. E. Nichols, Carl Pickhardt, George D. Pratt, E. H. Raymond, Jr.; E. H. Raymond, E. B. Rogers, George T. Rogers, A. F. Rice, Carl Rungius, Martin Schenck, William Schickel, Edmond Seymour, Julius H. Seymour, Chas. S. Sheldon, Abel I. Smith, Jr.; Olen J. Stephens, C. H. Stonebridge, Benjamin B. Tilt, H. H. Todd, C. H. Townsend, Theo. K. Tuthill, H. Vreeland, H. C. Walsh, H. D. Whitfield, A. D. Williams.

Among the guests were F. S. Hyatt, C. W. Alling, Frank Bartlett, Geo. Bird Grinnell, Robt. B. Lawrence, Kenneth Fowler, George Henry Clemmons, Knox Taylor, Jas. M. Seymour, Jr.; Louis A. Ziegler, Dr. H. J. Gundacker, H. W. Hall, Dr. M. W. Ayers, Walter Brown, D. B. R. Chapman, A. J. McGrath, William Lawrence Breeze, Jack Willard, T. Wallace McMullen, Donald Geddes, W. W. Greene, G. V. Schenck, Richard W. Hubbell, Dean Sage, E. M. Ward, Alex. J. Fraser, Roderick Stephens, Frederick W. Becker, Albert Tilt, Pitt Barrows, John Bannon, Beverly S. King.

Dinner was served about seven o'clock, and among the unusual edibles were Puget Sound oysters and Tye (chinook) salmon—presented by Mr. Chas. B. Hurley, of Tacoma—and seaweed soup. With the oysters and the salmon Mr. Hurley had sent on some of the giant long clams of the north Pacific Coast, but they had been so long in transit that they were more pleasing to the eye than they would have been to the palate, and so were not served. The salmon was highly enjoyed by all, and the oysters were delicious to the few whose taste was educated, though not so acceptable to those accustomed only to our eastern molluscs.

After the coffee the toastmaster began his duties in most happy vein, and after a short and very humorous introduction brought to his feet the Rev. Wm. J. Long. Mr. Long spoke on the wild life of the woods, and from the first held his audience closely. He referred to the criticisms of his writings, declaring that it was impossible to judge the acts of animals by any other standard than that of human psychology, since that is the only psychology that we know anything about. On the question of instinct he spoke at length, expressing the view that each animal was a free agent, and that while externally all members of a species were alike, there was within the species as much individuality as among men. Each individual of the species, therefore, must be judged by its own acts, which man must interpret as he can. This is not science, he said; this is nature study.

Mr. Long told of a great number of things that he had seen in the woods, and gave the theories which he had devised to account for them. For example, he stated that the otter and the beaver, both good natured and peaceable animals, invariably fight when they meet, and that he believed that for this hostility there were these reasons: (1) The otter sometimes swims through the canals or trenches made by the beaver, and the beaver, when it sees this, takes the otter for a muskrat, which may burrow through its dams and so destroy them. (2) In winter,

when streams and lakes are ice-covered, the otter often takes its prey into the entrance of the beaver's house to devour it, instead of going to an air hole for this purpose. Now, the beaver dislikes fish, and because the otter leaves the bones and slime of the prey in the entrance to the beaver's house, the beaver feels injured, and treats the otter as its enemy. (3) The fisher, a close relative of the otter, is a fighter, and kills young beaver; the beaver takes the otter for the fisher and so fights with it. Incidentally it was mentioned that the otter is a good tree climber, and that when fish cannot be had in the streams, it takes to the woods and hunts other prey. Much was said about the schooling of young animals, and about communication between animals, not by sound or language, but by some sixth sense representing what we call telepathy. The now familiar example was given of the osprey, which, the speaker said, would naturally hunt birds and rabbits in the woods, except for the instruction of the parent bird. Several examples were given of the peculiar direction sense possessed by an Indian that Mr. Long had known, who at night, in terrible storms over mountain and valley and marsh, had led his companions to camp and safety.

Mr. Long talked rapidly, earnestly, and often eloquently. His hearers listened to him with close attention. His address was an interesting mixture of fact and theory, and was beyond all question most entertaining.

Dr. Robert T. Morris told of the difficulties and disappointments encountered in procuring the food for this dinner. He had written to a friend in the north for a white bear, a seal, and a caribou, but had received no response; then he had applied to a member residing on Puget Sound with the result already given. He gave a number of interesting reminiscences of life in the north, including some habits of the white bear and the seal, and some odd foods that he had eaten.

When the toastmaster called on Buffalo Jones, he asked

the president of the club to say a few words about the speaker, which Mr. Hornaday did with much feeling. Col. Jones spoke most interestingly of his early life and of his adventures on the plains and in the far north, where he captured a number of muskox calves, the first ever taken, so far as known. The most interesting story of Mr. Jones' experience in capturing buffalo and crossing them with domestic cattle, of his journeying to the far north, his suffering from cold and hunger, and the danger to which he was exposed from Indians and wolves, are given in his interesting book, "Forty Years of Adventure," but it was most interesting to hear some of these things told by him who had done and endured them, and the attention of his auditors to Mr. Jones' address was not less than that which they had manifested in listening to Mr. Long. Mr. Jones' allusions at the close of his address to the Yellowstone Park and to President Roosevelt were loudly cheered.

Mr. H. D. Whitfield spoke entertainingly on sport in England, and other speakers occupied the short time before adjournment. Altogether the occasion was one of great interest and pleasure to all who were present, and it was commonly remarked that this was the best meeting that the club has had.

## Anglers' Casting Tournament.

Sportsmen's Exhibition, Madison Square Garden, Feb. 19 to March 5, inclusive.

### TOURNAMENT COMMITTEE.

Harold G. Henderson, T. Elmer Batten, C. G. Levison, Robert B. Lawrence, David T. Abercrombie.

### GENERAL COMMITTEE.

Chas. A. Bryan, J. S. Farlee, Loyd Smith, Will. K. Park, Nathaniel S. Smith, L. Bouglé, H. W. Van Wagenen, Robert Lefferts, G. H. Gerard, W. F. Kimber, Geo. B. Hayes, Chas. R. Flint, W. D. Cloyes, Theo. A. Knapp, Harry Palmer, Harry L. Cadmus, Milton Smith.

### General Rules Governing all Contests.

Rule 1. All contests shall be governed by two judges and a referee. In case of disagreement the referee shall decide.

Rule 2. No one shall be permitted to enter any contest except those "open to all," who has ever fished for a living, who have ever been a guide, or who has been engaged in either the manufacture or sale of fishing tackle.

Rule 3. All persons competing shall pay an entrance fee of \$1 for each event.

Rule 4. The order in which the contestants shall cast shall be determined by the judges. The contestants must be ready to cast when called upon by the judges.

Rule 5. The leader and fly or lure in each contest must be intact at the time of record by the judges, and the length and weight of the rod must be recorded.

Rule 6. Arrangements shall be made by the judges to accurately determine the point at which the fly or lure falls.

Rule 7. Contests shall be called promptly at 3:30 P. M., and 8:30 P. M.

Rule 8. After the contestant has taken his place on the stand, which is a platform not more than 18 inches above the surface of water, his time shall be counted from the moment he says "Ready," and the first cast thereafter shall count. The longest cast during the five minutes succeeding the word "Ready" shall be taken as his record for distance.

Rule 9. The rod must be held in one hand, and no rod shall exceed 11½ feet in length, except when otherwise specified. The line must not be weighted.

Rule 10. The barb and point must be removed from all hooks.

Rule 11. Trout flies on hooks no smaller than No. 12, old scale, shall be used unless otherwise specified. Leaders, which must be of single gut, shall not exceed the length of the rod by more than 2 feet, unless otherwise specified.

Rule 12. Time will be allowed, in case of accident, to make repairs at the discretion of the judges.

Rule 13. The switch style of casting will not be allowed except in the class so devoted to that method.

Rule 14. All difficulties or disputes arising, and not provided for in these rules, or the rules governing each contest, shall be referred to the judges, whose decision shall be final.

Rule 15. When the method of casting to be employed is specified in the rules governing an event, no other style than that designated will be allowed.

Rule 16. In all events where the weight of the rod is limited, an allowance of ¾ of an ounce shall be made for a solid metal reel seat and ¾ of an ounce for an independent handle, providing such handle and butt joint of the rod are each made with the usual metal ferrule.

Rule 17. The standard for hooks is that of Harrison's Sproat, regular sizes, old scale.

### FRIDAY EVENING, FEB. 19, AT 8:30.

Class A—Trout Fly-Casting for Distance Only.—Open to youths not over twenty years of age. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### SATURDAY AFTERNOON, FEB. 20, AT 3:30.

Class B—Trout Fly-Casting for Distance Only.—Open only to those who have never cast more than 60 feet in any single-hand, club or tournament contest. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### SATURDAY EVENING, FEB. 20, AT 8:30.

Class C—Switch Trout Fly-Casting Contest; Distance Only.—Open to all, excepting those who have cast more than 75 feet in any similar club or tournament contest. An obstacle will be placed 15 feet back of the contestant. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### MONDAY AFTERNOON, FEB. 22, AT 3:30.

Class D—Single-Handed Bait-Casting Contest; Distance Only.—Open to all excepting those who have cast more than 100 feet in any similar contest. Five casts shall be made overhead with half-ounce rubber frog to be furnished by the committee. The longest cast to count. Each contestant may make not more than three trial casts before casting to score. No limit to weight of rod or line; but cast must be made from free-running reel. Should the frog fall outside the side boundaries of the tank the cast shall count, but will not be scored. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### MONDAY EVENING, FEB. 22, AT 8:30.

Class E—Black Bass Fly-Casting Contest; Distance Only to

Count.—A fly on No. 4 hook to be used. These will be furnished by the committee. Open only to those who have never cast more than 75 feet in any similar contest in either club or open tournament. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### TUESDAY AFTERNOON, FEB. 23, AT 3:30.

Class F—Light Trout Fly-Rod Contest; Distance Only.—Rod must not weigh more than 5 ounces. For allowances, see Rule 16. Open only to those who have never cast more than 60 feet in any similar contest in either club or open tournament, with a rod of 5 ounces or less. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### TUESDAY EVENING, FEB. 23, AT 8:30.

Class G—Switch Trout Fly-Casting Contest; Distance Only.—Open to all. Weight of rod and length of leader unrestricted. An obstacle will be placed 15 feet back of the contestant. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### WEDNESDAY AFTERNOON, FEB. 24, AT 3:30.

Class H—Light Trout Fly-Casting Contest; Distance Only.—Rod must not weigh more than 5 ounces. For allowance, see Rule 16. Open only to those who have never cast more than 75 feet in any similar contest in either club or open tournament with a rod weighing 5 ounces or less. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### WEDNESDAY EVENING, FEB. 24 AT 8:30.

Class I—Light Rod Trout Fly-Casting Contest; Distance Only.—Rod must not weigh more than 4 ounces. For allowances, see Rule 16. Open only to those who have never cast more than 75 feet in any similar club or open tournament contest with a rod weighing 4 ounces or less. Length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### THURSDAY AFTERNOON, FEB. 25, AT 3:30.

Class J—Trout Fly-Casting Contest; Forward Obstacle; Distance Only.—Open to all. A horizontal bar or tape supported by two upright posts, one on each side of the tank, under which the cast must be made, will be placed in front of the contestant at a distance of 30 feet, and 6 feet above water level. Distance between the posts within which the cast must be made under the bar is 9 feet. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### THURSDAY EVENING, FEB. 25, AT 8:30.

Class K—Black Bass Fly-Casting Contest; Distance Only.—Open to all excepting those who have cast 85 feet in any similar contest in either club or open tournament. A fly on No. 4 hook to be used, to be furnished by the committee. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### FRIDAY AFTERNOON FEB. 26, AT 3:30.

Class L—Bait-Casting Contest; Distance Only.—Open to all. Stripping the line, "Greenwood Lake style," with half-ounce rubber frog, to be furnished by the committee. No limit to rod or line or reel; but cast must not be made from the reel. The longest cast forward made within the five minutes succeeding the time the contestant announces "Ready," to count. Unless the frog falls within the side boundaries of the tank, the cast shall not score. Frog must touch the water on the back cast, and be raised therefrom for each forward cast. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### FRIDAY EVENING, FEB. 26, AT 8:30.

Class M—Single-Handed Bait-Casting Contest for Distance and Accuracy.—Open to all, excepting those who have cast more than 100 feet with a quarter-ounce lure in either club or open tournament. Five casts shall be made for distance with a quarter-ounce rubber frog, to be furnished by the committee. Ten casts shall be made for accuracy—five at each of two buoys—60 and 70 feet distance from casting point. These casts to be made with quarter-ounce rubber frog, and for each foot or fraction of a foot that the frog falls from the buoy cast at, a demerit of 1 shall be counted; the sum total of such demerits, divided by 10, shall be considered the demerit per cent. The demerit per cent. deducted from 100 shall be the accuracy per cent. For distance five casts shall be made, and the average added to the percentage of accuracy, shall constitute the score. Highest wins. No limit to rod or line or method of casting, but all casts must be made from a free-running reel. Should frog fall outside the side boundaries of the tank, the cast shall count, but will not be scored. Two trial casts for distance and one trial cast at each buoy may be made by each contestant before casting to score. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### SATURDAY AFTERNOON, FEB. 27, AT 3:30.

Class N—Contest for Accuracy.—Open to all. No restrictions as to weight of rod and line. The contest is to be conducted as follows: When the contestant has taken his place on the platform and has said "Ready," he shall begin to cast at a buoy; and after saying "Count," or after having made five casts, the subsequent five shall be noted for record. The buoy shall be placed against the bank of the stream and 30 feet from contestant under an overhanging bush, which shall extend 3 feet over and be 3 feet under the water. The score shall be kept as follows: The buoy at which the casts are made is a semi-circular disk, 6 feet in diameter. It is level with the surface of the water, and marked by concentric circles 6 inches apart. The fly landing in the center counts 10; in the next space 9; in the next space 8; and so on down to 5. The highest score wins the contest. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### SATURDAY EVENING, FEB. 27, AT 8:30.

Class O—Light Trout Fly-Casting Contest for Distance Only.—Rod must not weigh more than 4 ounces. See Rule 16 for allowance. Open to all excepting those who have cast more than 80 feet in any similar club or tournament contest with a rod weighing 4 ounces or less. Length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### MONDAY AFTERNOON, FEB. 29, AT 3:30.

Class P—Trout Fly-Casting Contest for Accuracy Only.—Open to all. Distance at buoys 40, 45 and 50 feet. Weight of rod and length of leader unrestricted. There shall be five casts at each buoy. If the fly falls within 1 foot of the buoy cast at, the cast shall be considered perfect; for each foot or fraction of a foot in excess of 1 foot from such buoy a demerit of 1 shall be counted. The sum total of such demerits, divided by 15, shall be considered the demerit per cent. The demerit per cent. deducted from 100 shall be the accuracy per cent., and the highest score wins. Should the fly be whipped off, time will be allowed to replace it, and one minute allowed to extend line to buoy then to be cast at. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### MONDAY EVENING, FEB. 29, AT 8:30.

Class Q—Light Rod Trout Fly-Casting Contest for Distance Only.—Open to all. Rod must not weigh more than 4 ounces. For allowance see Rule 16. Length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### TUESDAY AFTERNOON, MARCH 1, AT 3:30.

Class R—Dry Fly-Casting for Accuracy.—Open to all. The flies to be used in this event will be furnished by the committee. At buoys 20, 30, 40, 50 and 60ft. The contestants shall start taking aim at the first buoy by making a reasonable number of false or preparatory casts in the air, and when the distance is determined, shall allow the fly to fall on the water as near as possible to the center of the first buoy. The fly must be permitted to remain floating on the water a few seconds, and then retrieved as delicately as possible, and the next buoy aimed at in a similar manner, and so on, until five casts have been made, one at each buoy. If fly falls within 1 foot of buoy cast at, accuracy shall be considered perfect. For each foot or fraction of a foot in excess of 1 foot from such buoy a demerit of 1 shall be counted, and for each time the fly fails to float while on the water, a demerit of 1 shall also be counted, the sum total of such demerits, divided by 5, shall be considered the demerit per cent. The demerit per cent. deducted from 100, shall be the accuracy per cent. Should the fly be whipped off, time will be allowed to attach a new one. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### TUESDAY EVENING, MARCH 1, AT 8:30.

Class S—Trout Fly-Casting Contest; Right and Left Hand Event—Distance Only. Weight of rod and length of leader unrestricted. Open to all. The contestant is allowed six minutes

for two alternate trials of one and one-half minutes' duration to cast with each hand. The longest cast made during each one and one-half minute term shall be counted, and the average of these four casts shall be the score. Highest wins. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### WEDNESDAY AFTERNOON, MARCH 2, AT 3:30.

Class T—Single-Handed Bait-Casting Contest for Distance and Accuracy.—Open to all. Five casts shall be made for distance. The half-ounce rubber frog to be furnished by the committee. Ten casts shall be made for accuracy—five at each of two buoys—60 and 80 feet distance from casting point. These casts to be made with half-ounce rubber frog, and for each foot or fraction of a foot that the frog falls from the buoy cast at a demerit of 1 shall be counted; the sum total of such demerits, divided by 10, shall be considered the demerit per cent. The demerit per cent. deducted from 100 shall be the accuracy per cent. For distance, five casts shall be made, and the average added to the percentage of accuracy shall constitute the score. Highest wins. No limit to rod and line or method of casting; but all casts must be made from a free-running reel. Should frog fall outside the side boundaries of the tank the cast shall count, but shall not be scored. Two trial casts for distance and one trial cast at each buoy may be made by each contestant before casting to score. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### WEDNESDAY EVENING, MARCH 2, AT 8:30.

Class U—Light Trout Fly-Rod Contest for Distance Only.—Open to all. Rod must not weigh more than 5 ounces. For allowance see Rule 16. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### THURSDAY AFTERNOON, MARCH 3, AT 3:30.

Class V—Trout Fly-Casting Contest for Distance Only.—Weight of rod and length of leader unrestricted. Open to all excepting those who have cast over 90 feet in any club or tournament. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### THURSDAY EVENING, MARCH 3, AT 8:30.

Class W—Single-Handed Bait-Casting for Distance Only.—Open to all. Five casts shall be made overhead for distance with a quarter-ounce rubber frog to be furnished by the committee. Each contestant may make not more than three trial casts before casting to score. No limit to weight of rod or line, but cast must be made from free-running reel. Should the frog fall outside the side boundaries of the tank, the cast shall count, but will not be scored. Longest cast to count. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### FRIDAY AFTERNOON, MARCH 4, AT 3:30.

Class X—Single-Handed Trout Fly-Casting Contest for Distance Only.—Open to all excepting those who have cast over 100 feet. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### FRIDAY EVENING, MARCH 4, AT 8:30.

Class Y—Black Bass Fly-Casting Contest for Distance Only.—Open to all. A fly on a No. 4 hook to be used; these to be furnished by the committee. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### SATURDAY AFTERNOON, MARCH 5, AT 3:30.

Class Z—Single-Handed Bait-Casting Contest for Distance Only.—Open to all. Five casts shall be made overhead with half-ounce rubber frog to be furnished by the committee. The longest cast to count. Each contestant may make not more than three trial casts before casting to score. No limit to weight of rod or line, but cast must be made from free-running reel. Should the frog fall outside the side boundaries of the tank, the cast shall count, but will not be scored. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

### SATURDAY EVENING, MARCH 5, AT 8:30.

Class ZZ—Single-Handed Trout Fly-Casting Contest for Distance Only.—Open to all. Weight of rod and length of leader unrestricted. First prize, gold medal; second prize, silver medal; third prize, bronze medal.

## Benjamin C. Milam.

FRANKFORT, Ken., Feb. 2.—*Editor Forest and Stream:* Few men—molded into the image of a perfect manhood—are found as exemplars to guide humanity in this rushing, busy world of ours. One of these men, Capt. Benjamin Case Milam, died at his home in Frankfort, Ky., on Friday afternoon last, after rounding out the period of a full-orbed life, at the age of 82, profoundly lamented by all who knew him. Preceded by Daly, Meek, Sage, and Gayle, he was the last of the Kentucky line of inventors and makers of hand-made fishing reels to answer the summons to cross the Great Divide.

The Milam reel, so well known throughout the entire world of anglers, was the product of his genius and handiwork. Joe Jefferson visited his workshop and bought an entire line of his inventions. Grover Cleveland wrote him letters expressing the greatest pleasure in the use, and delight in the perfect workmanship of his reel. And hundreds of other testimonials from all parts of the world, filed with his personal records, show how well he has done his part to supply the wants of those who love the favorite pastime of Izaak Walton. One of the latest inventions emanating from his hand was a heavy reel with self-acting drag, made for the use of the fishermen of the Pacific Coast, in capturing the valiant tuna. In his little den in the second story of a building on Main street, Frankfort, spent nearly fifty years of toil at his trade, ending his labors only a few hours before his death. The business will be conducted by his son under the same firm name.

Captain Milam was a veteran of the Mexican war; he commanded a company in Humphrey Marshall's Regiment of Kentucky Volunteer Cavalry; and at the head of his command was in the famous charge of cavalry on the Mexican lancers at the battle of Buena Vista. By a strange coincidence, almost at the same hour of his death, Cyrus Calvert, the last surviving member of his company, died at his home, a few miles away, and the two were buried within a few hours of each other in the State Cemetery at Frankfort.

In all the higher qualities of life, Capt. Milam was a man among men. Possessing rare judgment, fortified by an intuitive knowledge of men, and integrity unsullied by even the taint of suspicion, kindly and genial in temperament, prominent in all public enterprises, and with a tender heart and liberal hand, he lightened the burdens of many weary souls by his unostentatious benevolence. Within a year of his death an incident, illustrative of the latter trait, occurred one day while I was in his office. Poised on the propriety of extending aid to a questionable applicant, he solved the matter by remarking, "Well, what are we in this world for except to help others?" and the aid was extended.

OLD SAM.

There's a funny clam digger in Pelham,  
Who digs clams on purpose to selham;

People ask, "Are they nice?"

And, "What is the price?"

But they never can get him to telham.

—New York Times.

## The Tarpon Record.

MIAMI, Biscayne Bay, Fla., Feb. 1.—*Editor Forest and Stream:* In the recent issue of a brochure setting forth the attractions of Miami, Fla., to the angling public, there appeared a cut of a tarpon caught by Mr. N. M. George, of Danbury, Conn., and the weight stated as full 213 pounds. This picture was used and statement made after carefully authenticating the facts, which were fully printed in FOREST AND STREAM of July 6, 1901; the same issue reproducing the log of the schooner Privateer. The catch was also recorded in the daily press at the time, and by such conservative papers as the New York Herald. Mention is made of it in "Where, When, and How to Catch Fish on the East Coast of Florida, by Mr. Wm. H. Gregg, Sr., of St. Louis.

In spite of this accumulative evidence, the weight of Mr. George's fish has been challenged, and the statement printed that it was never substantiated by anyone.

In order to correct any false impression that this publication might raise in the minds of some, the affidavit of

MEASUREMENTS OF MR. N. M. GEORGE'S TARPON.

Messrs. Charles A. and B. T. Ball, owners of the Privateer, who were present when the fish was caught, and who weighed and measured same, has been secured. This affidavit is published below, together with a photograph of the fish, showing just where the measurements were taken.

If this sworn statement is not sufficient to convince this one "doubting Thomas," many others can be secured.

Mr. Chas. F. Weber, of New York, a prominent fisherman, saw this fish upon its arrival at Miami, and measured it. He reported the circumstance at Punta Rassa, giving the dimensions from his measurements as even greater than claimed, and was corrected by Mr. George.

H. W. MERRILL.

BRAINARD T. BALL and CHARLES A. BALL, being duly sworn, say that on the 8th day of April, 1901, Mr. N. M. George, of Danbury, Conn., caught with rod and reel, at Bahia Honda, Fla., a tarpon seven feet two inches long, forty-six inches girth, weighing 213 pounds, large, on their scales; that they weighed and measured said fish in the presence of Mr. George and Mr. R. B. Seager, of Jefferson Highlands, N. H., and said weight and measurements were recorded in the Log Book of the schooner Privateer; that upon their arrival at Key West, on April 9, their scales were tested at Wm. Currey's Sons and found to be a little more than one pound short, making the actual weight of said fish to be over 214 pounds.

BRAINARD T. BALL,  
CHARLES A. BALL.

Subscribed and sworn before me this twenty-third day of January, A. D., Nineteen hundred and four.

MEDFORD R. KELLUM,  
Notary Public, State of Florida, at large.

## Albany Legislation.

ALBANY, N. Y., Feb. 8.—The game committees of the Senate and Assembly have settled down to work in earnest now, and have begun passing upon some of the numerous measures submitted for their consideration.

The Assembly committee has reported favorably the following bills:

Assemblyman J. T. Smith's (Pr. No. 381, Int. No. 293), adding a new section, to be known as Section 3a, which provides that there shall be no open season for deer in Dutchess county before Sept. 1, 1908.

Assemblyman Hubbs' (Pr. No. 380, Int. No. 282), amending Section 103 so as to provide that ducks, geese and swan shall not be taken from April 1 to Sept. 30, instead of from Jan. 1 to Sept. 30, nor possessed from April 1 to Sept. 30, instead of from March 1.

Additional bills amending the game law have been introduced as follows: (Where no printed number is given the bills have not yet been printed)

Assemblyman Hayden's (Pr. No. 220, Int. No. 213), adding a new section, to be known as Section 12c, which provides that black and gray squirrels shall not be taken at any time in Cattaraugus county for the purpose of transporting them out of the county.

Assemblyman Nichols' (Pr. No. 284, Int. No. 284), amending Section 26 so as to provide that the close season for grouse and woodcock in Sullivan and Greene counties shall be from Dec. 1 to Sept. 30, and in Orange county from Dec. 1 to Oct. 15.

Assemblyman Robinson's (Pr. No. 228, Int. No. 221), adding a new section, to be known as Section 79b, and providing that fish, except lake trout, may be taken through the ice with hook and line in Hemlock Lake during February and March.

Assemblyman Hayden's (Pr. No. 222, Int. No. 215), adding a new section, to be known as Section 29b, which provides that woodcock, grouse and quail shall not be taken in Cattaraugus county at any time for the purpose of transporting the same out of the county.

Assemblyman Hayden's (Pr. No. 221, Int. 214), adding a new section, to be known as Section 43b, and providing that trout and bass shall not be taken from any of the waters of Cattaraugus county at any time for the purpose of transporting the same out of the county.

Assemblyman Bridgeman's (Pr. No. 314, Int. No. 300), amending Section 20 so as to allow the taking of mergansers or sheldrakes or sawbills at any time in Orleans county.

Assemblyman Bridgeman's (Pr. No. 315, Int. No. 310), amending Section 73 so as to permit the use of sturgeon nets of not less than 11-inch mesh in Lake Ontario, except within one-half mile of the shores or islands.

Assemblyman Pearsall's (Pr. No. 337, Int. No. 321), amending Section 59 so as to allow the use of tip-ups in the ponds in the town of Smithville, Jefferson county.

Assemblyman Wemple's (Pr. No. 348, Int. No. 332), adding a new section, to be known as Section 27c, and providing that there shall be no open season for grouse, woodcock and quail in Schenectady county prior to Sept. 30, 1906.

Senator Bailey's (Pr. No. 246, Int. No. 246), amending Section 103 so as to provide that ducks, geese and swan shall not be taken on Long Island from April 1 to Sept. 30, instead of from Jan. 1, nor possessed from April 1 to Sept. 30.

Senator Townsend's (Pr. No. 281, Int. No. 266), providing that trout shall not be taken from any waters in counties included in whole or in part in the forest preserve. Private hatcheries are excepted.

Assemblyman Coutant's (Pr. No. —, Int. No. 389), amending Section 59a so as to provide that tip-ups and set-lines may be used in fishing through the ice in the waters of Ulster county, not inhabited by trout, but no person shall operate at the same time more than five tip-ups in that county.

Assemblyman Coutant's (Pr. No. —, Int. No. 390), amending Section 27b so as to provide that the close season for grouse, woodcock and quail in Ulster county shall be from Dec. 16 to Oct. 15, both inclusive.

Assemblyman Wolf's (Pr. No. —, Int. No. 383), amending Section 112 so as to provide that fish shall not be taken at any device other than angling in Sheepshead Bay, Rockaway Inlet, or in any of the waters inside of a line drawn from the westerly end of Rockaway Point to the Centennial Tower on Coney Island.

Assemblyman Monroe (Pr. No. —, Int. 372), repealing Section 80a, which allows fishing with fyke nets for bullheads, eels, suckers

and dogfish in Tompkins county from Oct. 31 to March 31.

Assemblyman Charles's (Pr. No. —, Int. No. 387), amending Section 59a so as to allow the use of tip-ups and set-lines in fishing through the ice in the waters of Dutchess county.

Assemblyman Reeve's (Pr. No. —, Int. No. 376), amending Section 101 so as to provide that deer shall not be taken at any other time than between one-half hour before sunrise and one-half hour after sunset, instead of between daylight and sunset, as at present. Possession of wild deer or venison between Aug. 31 and the first Wednesday after the first Tuesday in November, and between the second Friday after the first Tuesday and the 20th of November, shall be conclusive evidence of a violation of this section unless it appear that the same was lawfully killed within the State, or was killed without the State.

Assemblyman Whitney's (Pr. No. —, Int. No. 423), to add a new section, to be known as Section 73a, which provides that nets may be used from May 1 to Dec. 1 in the waters and the bays of Lake Ontario in the towns of Sandy Creek and Richland, Oswego county, except the waters within half a mile, either way, from the mouth of the Salmon River, and except within one-half mile, either way, from the mouth of the outlet of Big Sandy Pond; provided, That a net shall not be set or used until a license therefor has been granted by the State Forest, Fish and Game Commission. The license fee will be \$1, and a single license may be for five nets.

## The Kennel.

### U. S. Field Trials Club's Trials.

THE fifteenth annual trials of the United States Field Trials Club, held at Grand Junction, Tenn., commenced on January 25. The attendance of visitors was not large. Eminent among them were Mr. and Mrs. Hobart Ames, of Boston, and Mr. and Mrs. H. B. Duryea, of New York. They are staying at Hickory Valley, Tenn., enjoying life in the South during the winter months. There was Mr. G. Teasdale Buckell, famous world wide as a sportsman and writer on subjects pertaining to sport. Mr. Jesse Sherwood, of Chicago, an active participator in early field trial days, both as a gracious, forceful writer, and as a breeder; Mr. A. C. Nall, an eminent sportsman of Louisville; Mr. Edmund H. Osthaus, of Toledo, O., though at present of New York, where he has a studio; Mr. Nick Daniel, of Williamsburg, Ky.; Mr. C. W. Keyes, of Boston; Mr. M. C. Falkner, Oxford, Miss.; Mr. C. D. Stuart, of Benton Harbor, Mich.; Mr. C. H. Faust, Warren, Ind.; and Mr. W. B. Stafford, the club secretary. The press representatives were Major J. M. Taylor, of Rutherford, N. J.; Mr. W. Lee Cook, of Glasgow, Ky.; and B. Waters, of New York.

The handlers present were Messrs. C. Askens, D. E. Rose, J. M. Avent, C. E. Buckle, E. Shelly, W. D. Gilchrist, J. T. Jones.

The judges were Messrs. Phil M. Essig, Atlanta, Ga., and Mr. L. W. Blankenbaker, Louisville, Ky. Each gentleman has had a long and thorough experience in matters of field work, and field trial competition. However, it is regrettable that their official decisions in the Derby were not well received. They worked industriously, devoting their best effort to their judicial duties, and there is no doubt whatever but what they scrupulously and conscientiously decided according to their best judgment. There was, nevertheless, a general belief that it was a sad mistake to ignore Pioneer in the awards. There was an almost unanimous belief that he deserved a place. An important part of the talent present held the opinion that he should have been awarded first on the merits of the competition. He beat out his ground well and with excellent judgment. He ranged wide or close as his handler desired, and he showed commendable judgment and accuracy in his locating and pointing. Some flushes on singles were charged to him, but such errors are incidental to the competition, and in his case were mere trifles when considered relatively to his general excellence as a worker. I fancied him for first place.

The dogs were placed as follows: First, Uncle Sam;

second, Hickory; third was divided between Baby Ale and Shawnee.

The judges managed the competition rather loosely at times. The handlers were mounted, and were often permitted to ride faster than was consistent with good bird work. A number of times they were permitted to separate and work on distinct grounds, where, as a matter of course, there was no equitable competition. To have competition it is necessary that both dogs have like opportunities on the same grounds at the same time. Otherwise the running ceases to be competitive. It is apparent that if one dog runs alone on a certain course he should find all the birds therein without difficulty, yet if running with another dog he might not find any, for the reason that his competitor, being so much quicker and better, he would find them first. Again, when the heat is split into distinct parts, each judge, in the main, sees but the work of one dog, and therefore he has no data for comparison. Moreover, all the equity as to like opportunities of birds, grounds, ranging, etc., is seriously abandoned. This was one of the most serious and persistent errors of the management.

Derby—United States Field Trials Club's fifteenth annual trials for pointers and setters whelped on or after January 1, 1902. First prize, \$300; second, \$200; third, \$100. Entries closed September 1. First forfeit, \$10; October 15, \$10 additional; \$10 to start. There were twenty-one starters, which were run in the following order:

C. K. Brown's b., w. and t. setter dog Uncle Sam (Uncle B.—Minnie R.), D. E. Rose, handler, with W. F. Watkins' b., w. and t. setter bitch Maxim Whitestone (Whitestone—Queen), J. T. Jones, handler.

Mrs. John Cowley's b., w. and t. setter dog Oakley Hill's Pride (Oakley Hill—Gleam's Daisy), E. Shelly, handler, with Charlotteville Field Trial Kennels' liv. and w. pointer Arab (Young Jingo—Toxie), C. E. Buckle, handler.

Avent & Duryea Kennels' b., w. and t. setter dog Hickory (Mohawk—Bonnie Lit), J. M. Avent, handler, with J. Lemon's b., w. and t. setter bitch Cam's Pink (Uncle B.—Cam), D. E. Rose, handler.

G. C. Cooper's liv. and w. pointer bitch Baby Ale (Jingo's Coin—Fannie Ale), W. D. Gilchrist handler, with F. P. Harter's b., w. and t. setter bitch Cleopatra, Shelly, handler.

J. C. Tignor's b., w. and t. setter bitch Chesterfield Sue (Jack—Tignor's Vic), W. D. Gilchrist, handler, with E. Raimor's b., w. and t. setter dog Count Rodfield IV. (Rodfield—Count Lady's Gladstone), D. E. Rose, handler.

Avent & Duryea Kennels' b., w. and t. setter bitch Itaska (Prime Minister—Youma), J. M. Avent, handler, with Highland Kennels' b., w. and t. setter dog Rod Warfield (Rodfield—Louise Danstone), C. Askens, handler.

W. W. Titus' o. and w. setter dog Pioneer (Count Whitestone—Bonnie Doone), E. Shelly, handler, with John Wootton's b., w. and t. setter bitch Blue Belle (Mohawk—Bonnie Lit), J. M. Avent, handler.

Avent & Duryea Kennels' b., w. and t. setter dog Algonquin (Prime Minister—Clip Windem), J. M. Avent, handler, with W. Brett's b., w. and t. setter dog Brett's Sport (Sport Count Danstone—Belle Cincinnati), C. Askens, handler.

J. Lemon's b., w. and t. setter dog Imperial (Uncle B.—Cam), D. E. Rose, handler, with Avent & Duryea Kennels' b., w. and t. setter dog Shawnee (Tony Boy—Cads), J. M. Avent, handler.

Avent & Duryea Kennels' b., w. and t. setter dog Chip-pewa (Tony Boy—Lady Rachel), a bye, J. M. Avent, handler.

Monday, Jan. 25.

The weather was raw, with a stiff southwest wind blowing. A start was made near the Mississippi line, south of which the 14,000 acres of the club preserve are situate.

Uncle Sam and Maxim Whitestone were cast off at 9:22, and were ordered up at 10 o'clock. Sam ranged independently, while Maxim was disposed to follow his lead at times, and to range close at other times. The work on birds was meagre. Sam in open weeds pointed a bevy. In woods on the scattered birds the work was not sharp and accurate. Maxim pointed as a single flushed, and, holding her point, more birds were flushed to it. Maxim pointed a single. Sam made a point; nothing found. The heat was not noteworthy for any special excellence.

Oakley Hill's Pride and Arab were cast off at 10:08, and were ordered up at 10:49. Neither displayed sharp and accurate work on birds. They ranged irregularly, with moderate judgment in beating out their ground. Arab pointed two beveys and a single; Oakley pointed a single bird. Arab backed poorly.

Hickory and Cam's Pink started at 10:54, and were ordered up at 11:40. Hickory displayed wide and fast ranging, and sharp work on birds. Hickory made the better performance on birds, though he made a few errors on singles. He made a point on one bevy and divided the point on another bevy with his competitor, though he pointed the bevy a moment sooner.

Baby Ale and Cleopatra were cast off at 12:38, and were ordered up at 1:18. Baby pointed a bevy; Cleopatra called in to back pointed in the middle of the bevy. Baby did some work on a bevy which was not quite determinate. Next Baby pointed a bevy and was well backed. The bevy flushed wild. The pointer ranged wide and fast with excellent judgment.

Chesterfield Sue and Count Rodfield IV. were started at 1:24. Sue pointed a bevy and Count backed or pointed. The birds were followed into woods, where Count made several good points, and Sue made one. Count was sharp and accurate in his bird work.

Itaska and Rod Warfield started at 2 and were ordered up at 2:33. The work of both was rather ragged on birds. Itaska pointed some birds prettily. Itaska pointed in some plum bushes and about fifty yards up wind the birds were flushed by horsemen. Rod ranged moderately. Itaska was fast, pointed well, but sometimes inaccurately.

Pioneer and Blue Belle were started at 2:38; up at 3:28. Both ranged wide and fast, Pioneer cutting out the work. Pioneer ranged with excellent judgment, and wide or narrow according to the character of the grounds. Both pointed in woods, Pioneer down wind flushed a single.

Going down wind in woods he dropped to a flush, and stayed down pointing, and a single was flushed to the point. Pioneer in cotton field at the edge of woods pointed a bevy and Belle backed to order, and was steady to order. This brace made the best performance of the day, all things considered. Pioneer was pleasingly obedient, and worked to the gun whether near or far.

Algonquin and Brett's Sport were cast off at 3:34, up at 4:10. Sport pointed a bevy in woods, and later he made a point on some marked birds. Sport pointed a bevy in open sedge. Sport's range was not wide.

Imperial and Shawnee began at 4:14, and ended at 4:47.

Chippewa ran a bye commencing at 4:55. He pointed a bevy and a single bird.

Tuesday morning was cold and wintry, the ground being covered with snow. The management wisely postponed the competition to the next day.

Eight dogs were retained in the running, namely, Hickory, Pioneer, Baby Ale, Chippewa, Uncle Sam, Blue Belle, Shawnee, and Brett's Sport.

#### SECOND SERIES.

Hickory and Pioneer were started at 10:40, and up at 11:45. Hickory flushed a bevy and Pioneer flushed a single. Moved on, and soon Pioneer was found dropped to a point on a bevy. Hickory backed on the scattered birds. Pioneer flushed a single. Hickory made a point on a single and a false point. Hickory pointed a bevy soon after being sent on again. Hickory false pointed. Pioneer pointed a bevy and in the scattered birds made a flush. Hickory false pointed. Pioneer ranged well. He was the faster of the two. Hickory trailed and did not stay out at his work properly.

Baby Ale and Chippewa started at 12:05, ended at 12:41. Baby showed a range and pace equal to the best. No birds were found. Chippewa trailed betimes and pottered betimes also.

Uncle Sam and Blue Belle ran from 12:50 to 1:55. Sam pointed a bevy; Blue Belle broke her back and ran in, but did not flush. Sam was steady. Belle was difficult to control. On the scattered birds. Sam pointed a single prettily, and worked nicely to order. Working on some scattered birds, Belle made a point; nothing found. Sam roamed about fifty yards and pointed some running birds. Next Belle pointed a bevy. On the scattered birds she pointed a single. Sam pointed and Belle broke her back. Sam roamed on to a point on a bevy, and Belle joined in the point. On opposite sides of a ravine Belle pointed a single, Sam a bevy. Belle was the faster, and took wide casts. Sam beat out his ground with judgment.

Shawnee and Brett's Sport began at 2:54 and ended at 3:24. Shawnee pointed a bevy and flushed it. Sport backed and was unsteady. On scattered birds the work was poor.

Cam's Pink ran a bye from 3:31 to 3:51. She pointed a bevy and was steady to shot and wing. She ranged moderately. This concluded the Derby. The judges awarded places as follows: First, Uncle Sam; second, Hickory; third, divided between Baby Ale and Shawnee.

#### The All Age Stake.

There were fifteen starters in the All Age Stake.

The conditions of the All Age Stake were as follows: For pointers and setters, which have never won a first prize in the Eastern, Continental or United States Trials All Age Stakes, previous to Nov. 1, 1903. Winners of the National Championship Association were barred. Prizes, \$250, \$150 and \$100. Forfeit, \$10; \$20 to start. Entries closed Dec. 19.

The dogs were run in the following order: C. K. Brown's b., w. and t. English setter bitch Annie B. (Uncle B.—Pride of Abercorn), D. E. Rose, handler, with Avent & Duryea's b., w. and t. English setter dog Mohawk (Tony Boy—Countess Meteor), J. M. Avent, handler.

Dr. C. I. Shoop's o. and w. English setter dog Ortiz Lad (Rodfield—Grace G. Darling), D. E. Rose handler, with Faust & Dickey's liv. and w. pointer dog Alford's John (Dave Kent—Cleade), John T. Jones, handler.

Avent & Duryea's b., w. and t. English setter bitch Youma (Tony Boy—Countess Meteor), J. M. Avent, handler, with Paul Rainey's b., w. and t. English setter bitch Portia (Sport's Gath—Pansy B.), D. E. Rose, handler.

W. W. Van Arsdale's l. and w. pointer dog Doctor Daniel (Plain Sam—Dolly Dee II.), C. Askins, handler, with Charlottesville Field Trial Kennels' b., w. and t. English setter dog Alambagh (Dash Antonio—Lark), C. E. Buckle, handler.

Jesse Sherwood's w. and o. t. English setter dog Jessie Rodfield's Count Gladstone (Lady's Count Gladstone—Jessie Rodfield), E. Shelley, handler, with I. W. Canaday's b., w. and t. English setter dog Sure Shot (Lady's Count Gladstone—Jessie Rodfield), C. Askins, handler.

H. B. Pauler's b., w. and t. English setter dog Victor Okaw (Lady's Count Gladstone—Ortiz Vic's Vic), W. D. Gilchrist, handler, with C. B. Cook's b., w. and t. English setter dog Prince Rodney (Lady's Count Gladstone—Jessie Rodfield), D. E. Rose, handler.

W. W. Van Arsdale's w., b. and t. English setter bitch Peach Blossom (Count Gladstone IV.—Peach Mark), C. Askins, handler, with Avent & Duryea's b., w. and t. English setter dog Tony Man (Tony Boy—May Blue), J. M. Avent, handler.

Wm. Brett's b., w. and t. English setter dog Sport's Count Danstone (Count Danstone—Sport's Maid), C. Askins, handler, a bye. The winners were: First, Tony Man; second, Mohawk; third, Peach Blossom.

#### Wednesday.

After the conclusion of the Derby, the All Age Stake was begun.

Mohawk and Annie B. were cast off at 4:10. Mohawk took a long cut entirely out of control of his handler, and when found was pointing a bevy. The dogs were worked apart thereafter for a long while. He made three more points on bevs, and was once unsteady to wing. Annie pointed twice on singles. Annie was working in a common-place manner and Mohawk was quite lawless, ranging independently of his handlers course.

#### Thursday.

The weather was raw and damp, and the ground was frozen.

Ortiz Lad and Alford's John began at 9:33. The handlers soon separated with Lad off the course. John soon made two points, to which nothing was found. Lad backed. John pointed a bevy in a cornfield; Lad backed. On the scattered birds, each pointed a single. Up at 10:26. Lad ranged much the wider and faster. John was not up to his form.

Youma and Portia were cast off at 10:29. Portia made a good point on a lone bird. Portia was rounding up wind of a bevy, when Youma came across it further down wind and pointed it. Up at 11:14. Both had speed, but commonplace judgment in ranging.

Doctor Daniel and Alambagh ranged from 11:21 to 12:09. Alambagh pointed a bevy in sumac. Each got a point on the scattered birds, in looking for which Doctor pointed a bevy.

Jessie Rodfield's Count Gladstone and Sure Shot were cast off at 12:59, and shortly Sure Shot bolted and was seen no more during the heat. Jessie found and pointed a bevy neatly. He ranged well. Up at 1:40.

Victor Okaw and Prince Rodney ran from 1:45 to 2:26. Rodney was lost for a while. He was found on a point to which there was nothing. The dogs were brought together again. On some remaining birds of a flushed bevy, Vic flushed.

Peach Blossom and Tony Man began at 2:32. Up at 3:15. Peach pointed a bevy, and on the scattered birds she pointed one and flushed one. In jumping out of a gully she excusably flushed a bevy. On the scattered birds in sedge she made some points and flushes; the birds seemed to be holding the scent. A smart gallop brought the dogs together. Peach made a point nicely; nothing found. The dogs were headstrong, and the heat was chaotic.

Sport's Count Danstone ran a bye from 3:40 to 5:14. He ranged fast and wide. He made two points on scattered birds.

#### Friday.

The day was raw, cloudy, and threatened a storm. It was not a day for good bird work.

#### SECOND SERIES.

Six dogs were retained for the second series. Jessie Rodfield's Count Gladstone and Youma were cast off at 10:25. Count made a good showing. He made a good point on three birds. Youma made two points, to which nothing was found; Count backed well. Sent on, he soon located and pointed a bevy, about fifty yards away. Youma backed. Count pointed a single and dropped to a point as a single flushed. Both ranged well and sustained their speed to the finish. Up at 1:05.

Peach Blossom and Mohawk were started at 11:32. After some time, Peach was found on point. She roamed down wind, and the bevy flushed wild. Seeking the scattered birds, Mohawk pointed; nothing found. Next, Peach made a good point on a bevy. Mohawk flushed a single, and next pointed a single. He showed symptoms of unsteadiness. Peach pointed a bevy. Next, both pointed the same bevy at the same time. Next, both pointed and nothing was found. Up at 1:05. Mohawk was a bit faster in pace and wider in range, but he hunted with less judgment and was less of a finder.

Tony Man and Sport's Count Danstone started at 1:55, and ran one hour and a half. Both started at a lively rate. Tony soon pointed a bevy, and on the scattered birds he pegged four single points and made one flush. Sport, in the meantime, pointed and soon afterward again pointed with nothing to either point. Tony pointed a bevy as a single flushed; next he made a number of good points on singles. The dogs were separated about a half-hour. Sport made a point to which three birds were raised. Tony made two finds and points on bevs, and on another bevy which he pointed, Sport coming up, made a point on it independently. The dogs were placed as follows: First, Tony Man; second, Mohawk; third, Peach Blossom.

### National Championship Trials.

GRAND JUNCTION, Tenn.—The trials of the National Championship Field Trial Association commenced on Monday, February 1. The weather and ground conditions were so unfavorable that a start was not made till afternoon. The running was on the private preserve of Mr. Hobart Ames, between Grand Junction and Hickory Valley, west of the Illinois Central Railroad.

Mr. Ames kindly permitted the club to use his grounds, and besides provided a bountiful and excellent lunch for the entire field trial party each day. The neat, orderly manner in which it was served added to its dainty, appetizing features. Mr. Ames owns 6,000 acres of excellent plantation land, comparatively free from gullies and wash-outs, and has about 10,000 acres more under control, present and prospective. No better field trial grounds are obtainable, and better are not necessary.

The judges were of great renown. Mr. G. T. Teasdale Buckell, of England; Mr. C. W. Keyes, of East Pepperell, Mass., and Mr. Herbert Spencer Bevan, of Somerville, Tenn., kindly consented to face the judicial perils. It is a pleasure to state that they managed the competition skillfully. They recognized that the responsibility of the handlers is in the handling and that of the judges is in managing and judging. There was no wild riding on the part of the judges looking for lost dogs. If the handler could not handle his dog, the judges properly recognized that such was a part of his competition, and they were not stampeded. Nothing is more undignified and unnecessary than the frantic riding after lost dogs on the part of the judges. Nevertheless, in some of its features, owing to mild insubordination of one handler, the competition was not entirely easy to handle.

There were ten dogs in the competition. The conditions and order of running were as follows:

Prize, \$500 and Edward Dexter memorial cup to winner. Open to any dog that has won a place in an open field trial, \$25 to accompany nomination; second and

final payment, \$25 additional January 1; 16 nominations, 10 starters; 9 English setters, one pointer. Each heat was three hours' duration.

W. W. Henry's b., w. and t. English setter bitch Sport's Lady (Marie's Sport—Jeannette), C. Askins, handler, with Charlottesville Field Trial Kennels' b., w. and t. English setter dog Alambagh (Antonio—Lark), C. E. Buckle, handler.

Faust & Dickey's liv. and w. pointer dog Alford's John (Dave Kent—Cleade), J. T. Jones, handler, with W. W. Van Arsdale's b., w. and t. English setter bitch Peach Blossom (Count Gladstone IV.—Peach Mark), C. Askins, handler.

Dr. C. I. Shoop's o. and w. English setter dog Ortiz Lad (Rodfield—Grace G. Darling), D. E. Rose, handler, with Avent & Duryea's b., w. and t. English setter dog Tony Man (Tony Boy—May Blue), J. M. Avent, handler.

Chas. B. Cooke's b., w. and t. English setter dog Prince Rodney (Lady's Count Gladstone—Jessie Rodfield), D. E. Rose, handler, with Wm. Brett's b., w. and t. English setter dog Sport's Count Danstone (Count Danstone—Sport's Maid), C. Askins, handler.

C. K. Brown's b., w. and t. setter bitch Annie B. (Uncle B.—Pride of Abercorn), D. E. Rose, handler, with Avent & Duryea's b., w. and t. English setter dog Mohawk (Tony Boy—Countess Meteor), J. M. Avent, handler.

Winner—Mohawk.

#### Monday.

The afternoon was not unfavorable for good work. Sport's Lady and Alambagh ran in the afternoon, and made a fairly good showing.

#### Tuesday.

The forenoon was clear and strongly windy. In the afternoon the wind subsided, and the temperature rose till in the middle of the afternoon it was clear and warm.

Alford's John and Peach Blossom were cast off at 9:37. John started rather slow, but toward the middle of the heat he was ranging steadily at good speed, and finished strong. He was going at the finish much better than his opponent. Peach pointed two bevs, made a false point, and broke shot once. She was identified with several flushes. John pointed three bevs, made two false points, and was near some flushes. Each backed well.

Ortiz Lad and Tony Man were started at 1:40, after lunch. Lad quit in the last hour. Lad made a very good find and point on a bevy in a creek bed. Soon afterward each pointed separate bevs. Both were lost quite a while. Sent on when found, Tony pointed a bevy. Lad pointed in woods; nothing found. Tony pointed a single and was steady to shot. Next he pointed fruitlessly. Tony roamed to a flush on a bevy; the flush was excusable. Next he pointed; nothing found. He was going moderately well at the finish.

#### Wednesday.

The weather was clear and cold. A light wind prevailed.

Prince Rodney and Sport's Count Danstone were cast off at 9:45. Sport was soon lost, entailing a long wait till he was found. Both pointed in woods; nothing found. Rod dropped to a flush of two birds, held point, and a bevy was flushed to it. Prince dropped to a point and was backed; each was steady to shot. Each made points on scattered birds. Count dropped to a point, roamed, and the bevy flushed wild a few yards down wind. Prince pointed; nothing found; next he flushed. Count pointed; nothing found. The brace was worked fifteen minutes over time to make up for delays. Prince had practically quit. Count was going fairly well at the finish.

Mohawk and Annie B. were cast off at 2:05, after lunch. As to finding and skillful locating and pointing of singles or bevs, Annie was much superior to her competitor. She was infinitely more obedient, hunted to the gun better, and was very much better broken. As a champion dog, Mohawk is deficient in many features. Judging him by his work in this heat, he was entirely unmanageable at times, broke away from control, and was self-hunting, and, like all dogs which do not work to the gun, he worked out his ground poorly from the view-point of the hunter, though not poorly from the view-point of the self-hunting dog. He was very faulty in locating his bevs. If he had the wind of the birds he went to them with a sharp dash; if he had to solve any problems across or down wind, he was completely at sea. He was unreliable on a back; indeed, he broke a back and stole a point flagrantly in spite of the commands of his handler. He was unsteady to the gun and wing. In short, he was hardly half broken. As an exponent of high class work, he was far inferior to Annie B. The latter toward the latter part of the heat, had shortened her pace and was very tired; but at the end Mohawk also had let down to a trot, and was trailing close after Annie. Neither, however, had quit. It would be interesting and instructive if the judges would explain wherein lies Mohawk's superior excellence with his serious faults coincidentally considered. Annie pointed a bevy. Mohawk, in the open, ran close by a bevy which flushed wild. Mohawk, in an open bottom, ran up to a bevy with much dash and pointed it. Annie made three good points on single birds; Mohawk made two points on singles. The dogs were separated some time. Annie roamed to a good point on a bevy; she was steady to shot. The dogs were brought together. Mohawk pointed a single on birds which the judges ordered the dogs away from. Mohawk pointed, left point close by bevy, roamed up wind and pointed. Annie took up roading near the same bevy. Mohawk went back, flushed an outlying bird or two, and dropped to point. Sent on. Mohawk pointed a bevy; he flushed, and next he pointed some singles. Annie roamed a bevy, which flushed some yards away to a horseman. This was hard luck for Annie. Sent on, Annie pointed a bevy. Mohawk backed, broke back, rushed by Annie and stole the point in the open field. Sent on. Annie pointed a bevy in open sedge. Mohawk was not near. Next Mohawk pointed, and about fifty yards down wind Mohawk pointed the bevy. Mohawk false pointed. Next Mohawk found and pointed two bevs. Annie false pointed. Annie pointed a rabbit. Both tired when ordered up.

## Officers of A. C. A., 1904.

Commodore—C. F. Wolters, 14 Main St. E., Rochester, N. Y.  
Secretary-Treasurer—John Sears Wright, 519 West End Ave., Rochester, N. Y.

### ATLANTIC DIVISION.

Vice-Commodore—L. C. Kretzmer, L. C. Schepp Building, New York.  
Rear-Commodore—W. A. Furman, 846 Berkeley Ave., Trenton, N. J.  
Purser—M. Ohlmeyer, Jr., 201 Palisade Ave., West Hoboken, N. J.  
Executive Committee—H. L. Pollard, 138 Front St., New York; N. S. Hyatt, Ossining, N. Y.; H. C. Allen, 54 Prospect St., Trenton, N. J.  
Board of Governors—R. J. Wilkin, 26 Court St., Brooklyn, N. Y.  
Racing Board—H. L. Quick, Yonkers, N. Y.

### CENTRAL DIVISION.

Vice-Commodore—H. W. Breitenstein, 511 Market St., Pittsburg, Pa.  
Rear-Commodore—H. C. Hoyt, 164 Crescent Ave., Buffalo, N. Y.  
Purser—Frank C. Demmler, 526 Smithfield St., Pittsburg, Pa.  
Executive Committee—Jesse J. Armstrong, Rome, N. Y.; John S. Wright, 519 West Ave., Rochester, N. Y.  
Board of Governors—C. P. Forbush, 14 Main St., East, Rochester, N. Y.  
Racing Board—Harry M. Stewart, 85 Main St., East, Rochester, N. Y.

### EASTERN DIVISION.

Vice-Commodore—Henri Schaeffer, Manchester, N. H.  
Rear-Commodore—H. M. S. Aiken, 45 Milk St., Boston, Mass.  
Purser—Edw. B. Stearns, Manchester, N. H.  
Executive Committee—B. F. Jacobs, Jr., West Medford, Mass.; D. S. Pratt, Jr., Wellesley Hills, Mass.; Marcus Butler, Lawrence, Mass.; William W. Crosby, Woburn, Mass.  
Board of Governors—Paul Butler, U. S. Cartridge Co., Lowell, Mass.  
Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; H. D. Murphy, alternate.

### NORTHERN DIVISION.

Vice-Commodore—Chas. W. McLean, 303 St. James St., Montreal, Canada.  
Rear-Commodore—Wm. Sparrow, Toronto.  
Purser—J. V. Nutter, Montreal, Canada.  
Executive Committee—C. E. Britton, Gananoque, Ont.; Harry Page, Toronto.  
Board of Governors—J. N. MacKendrick, Galt, Ont.  
Racing Board—E. J. Minet, Montreal, Canada.

### WESTERN DIVISION.

Vice-Commodore—Burton D. Munhall, care of Brooks Household Art Co., Cleveland, O.  
Rear-Commodore—Chas. J. Stedman, National Lafayette Bank, Cincinnati, O.  
Purser—Geo. A. Hall, care of Bank of Commerce, Cleveland, O.  
Executive Committee—Thos. P. Eckert, 31 West Court St., Cincinnati, O.; Dr. H. L. Frost, 10 Howard St., Cleveland, O.  
Board of Governors—Henry C. Morse, Peoria, Ill.

### How to Join the A. C. A.

From Chapter I., Section 1, of the by-laws of the A. C. A.:  
"Application for membership shall be made to the Division Purser, and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

## Cruise of the Red and the Green.

### A Canoe Cruise in the Lake Temagami Region.

BY ARTHUR L. WHEELER.

The Story which won the Third Prize of \$15 in "Forest and Stream" Canoe Cruising Competition.

(Concluded from page 118.)

#### PART III.—DIAMOND, LADY EVELYN, AND OBABIKA.

We were now on the northern watershed from Temagami. Our camp on Diamond Lake was pitched on an island at about the point where the north and west arms unite to form the body of the lake. This camp was some distance in from the water, and about twenty feet above it on a ridge, and we remember it well because there only were we able to drive all four posts! The place had been used by hunters, probably Indians, as was proved by the presence of an old pair of moose horns. Indeed, Diamond Lake is a good locality for moose, for there are several fine marshes on its shores, but of this more anon. It is famous for its bass, also, and we had no difficulty in proving this reputation to be well founded.

July 17. From west arm of Diamond Lake up the north arm to portage into inlet of Lady Evelyn Lake. The portage is on the east shore, and is less than a quarter of a mile long. Down inlet to Lady Evelyn Lake; camp on island near the east shore. Distance, about ten miles.

We did not tarry in Diamond Lake, for the lust of travel was on us and we felt that there was scant time to see more of that wonderful country. Glorious weather still favored us, and we got a fairly early start. The outlet of Diamond Lake, the point at which the portage begins, is unique. With no intermediate stream of any sort, Diamond Lake overflows like a full cup. The water drops over the edge of the lake in a fall of ten or fifteen feet, and then after a few hundred yards of rapids it passes into the long and tortuous inlet leading to Lady Evelyn Lake. This inlet was the most dangerous place for sunken rocks that we encountered. Huge glacial boulders lie thickly at some points in the narrow, sluggish stream, and waylay the unwary canoeist. We got through to the lake with no other mishap than running one canoe high upon a rock, but fortunately with no damage to the canoe.

Lady Evelyn is a fine large lake, containing many

islands and having a finer distant view—that of Maple Mountain—than Temagami can boast, but the water is far less brighter and clear, and the beautiful pines have been terribly devastated by a large fire that swept over them about thirty years ago. The scars of this conflagration are now in great measure obliterated by the hardwood second growth, but thousands of acres of magnificent timber are gone forever. Here and there a skeleton trunk, towering above the deciduous trees, stands as a reminder of the giants of former days.

Our camp lay on the northwest point of a large island about half way up the eastern shore of the lake. We had to hurry up the tent for showers were visible to the north. Mosquitoes and midges were very thick.

In the evening we held a council of war. We had now reached the parting of the ways. From Lady Evelyn Lake it was easy to go out to Temiskaming by way of the Montreal River, or to double back on our course and return by way of the Metabetchouan, taking in some side trips on the way. We had also some idea of going from Lady Evelyn to Sucker Gut Lake, where there is a stream offering brook trout fishing. As the country along the Montreal is of inferior interest, and as the trout was known to be nothing remarkable, we decided to return to Temagami by way of Diamond, Wakimika, and Obabika lakes, and try for lake trout instead of their more refined cousin, the *Salvelinus fontinalis*.

July 18 and 19. Meanwhile we spent two days in exploring Lady Evelyn Lake. Mosquitoes were numerous, as I have said. So were showers. But bass and blueberries were equally in evidence. Few good things come to us in this life without alloy, but one must not mistake the alloy for the pure metal. And so we ate blueberries and bass with full enjoyment, meanwhile philosophically slapping mosquitoes and dodging showers.

July 20. From Lady Evelyn Lake back to our old camp on Diamond Lake. Distance, about ten miles.

A bright morning promised a cessation of the almost continuous showers, but the end was not yet, as we were to learn. On the way to the portage we passed a large bark canoe with an Indian family aboard, two men, a woman, and three children. It was amusing to watch the little five-year-old boy with a miniature paddle dig over the side into the water with all the swing of a veteran. We had an object lesson of the reason why the Indian is an incomparable canoeist. At about this time shower number one put in an appearance, and the Indians lay to under the shelter of a rock. We continued on our way, as the shower was not a heavy one, but going slightly out of our way behind an island we reached the portage just behind the Indians. The rain now came down in floods, and everyone was soaked except the Indian woman and the children, for whom the men improvised a rude shelter with a piece of sail cloth. As we were very wet we decided to keep on to our old camp. We arrived at about half-past one, lunched, and partially dried ourselves. In the afternoon we tried trolling for lakers in the west arm and caught our first specimen, a small one of a little over two pounds in weight. Just to end the day as we began it, we had a close race to camp with another shower, which we beat out by a few seconds. Verily it was a day of showers.

July 21. Having caught one laker we decided to remain on Diamond Lake a day and try for more. The net result of three or four hours' work with our clumsy apparatus was three fish averaging less than three pounds. But we were all satisfied, especially as we saw a cow moose and two calves, and succeeded in beating out another shower. At the latter sport we were becoming quite proficient. In the course of the day we landed at the old Hudson Bay clearing, now abandoned, on the northwest shore. The place is now farmed by somebody, probably an Indian, and there is a good sized cabin on the shore. It is farming under difficulties, however, for a considerable portion of the one crop (potatoes) had been badly trampled by trespassing moose. The owner was not at home when we called.

That night we regaled ourselves with a plentiful feast of which baked lake trout formed the chief attraction. For once we had enough of these fish, and found them very good.

July 22. From Diamond Lake by way of the west arm to portage into inlet of Wakimika. Down inlet to the lake. The portage is a double one, divided by a pond which must be crossed. Total distance, about twelve miles; of which the portage is nearly a mile. Camp on Wakimika about three-quarters of a mile from south end on western shore.

It was a beautifully clear morning on which we started for Wakimika Lake, and the west arm of Diamond was never more lovely than when we paddled leisurely along beneath its high wooded shores. On the way we sighted a queer looking craft steering across our bows, which, on nearer inspection, proved to be a large porcupine whose quills projected from the water like a sail. We photographed him and then proceeded on our way.

In a long curve the arm bends to the south and narrows to a few rods in width as one nears the portage. In many places here the solid cliffs along the shore are marked and grooved by glacial action, and not far from the portage there is in the lake a remarkable deposit—"esker" is the scientific term—of glacial boulders. This heap is a hundred yards or more in length, and thirty or forty yards wide. The stones average three or four feet

in diameter, and are deposited in the lake as evenly as though they had been put there by the hand of man to form a breakwater. Our photograph gives but a poor idea of the size and impressiveness of this witness to the Titanic forces that once molded that region.

The portage is on the west (right-hand shore) and is not very plainly marked. We fumbled about a little before finding it. One turns into the inlet to the right of the last small island in the arm. The landing is made among the huge boulders, and the trail, after passing through some trees, runs up over a ledge of solid rock covered by scarcely anything but a thin skin of moss. It then follows the edge of the rock for some distance, and finally descends sharply to a small pond. Here the canoes must be reloaded and the pond crossed diagonally to a point about half way down the opposite shore. There the trail is resumed once more. Again it leads up over a hill of solid rock and down through the woods to the inlet of Wakimika Lake. It is not an easy portage, and was especially hard for us because one of the party had an attack of lumbago, and although he stuck manfully to his loads on the first half of the portage, we forced him to give them up on the second half. To cap the climax, the inevitable shower appeared just as we completed the last trip, and we had a cheerless lunch beneath the dripping trees.

Just off the landing, as we were bowling along in what we thought was deep water, one canoe nearly ran upon a pile of huge boulders lying just beneath the surface. Luckily the bowman saw them in time. After this we continued without accident to Wakimika Lake, into which we slid by way of a brook only a few rods in length, and so shallow that one man had to leave each canoe in order to float them through.

Not knowing where to camp we headed at first for two small islands about half way down the east shore. There have been camps on these islands, but there is no very good place for a tent. While we were prospecting we found quantities of very large and luscious blueberries, but since there was nothing else to our liking we struck across to the west shore. There we found several excellent spots. The shore is formed by a long, smooth ledge shelving gently into the water. Thirty or forty feet back from the water the forest begins, and there are plenty of level places for a tent, although the rock is so near the surface that no tent posts can be driven. We were accustomed to this, however, and as a shower was threatening in the northern horizon, we made haste to get up the tent. But this time the shower passed us by.

Wakimika is by long odds the finest of all the smaller lakes that we saw. It has but three or four islands, so that the view is unobstructed, and to the northwest one commands a prospect of distant mountains rivaling that on Lady Evelyn Lake. It is the haunt of the loon; and we saw five of these haunts together. We did little fishing, but one of our largest bass was taken with the fly, while we were at breakfast the next morning. The fisherman had three attentive coachers who still sat at the table, coffee cup in hand, while he played his fish. Shouts of "Keep cool!" "Give him the butt!" and "Reel him in!" were obeyed until the bass was drawn exhausted upon the rocks.

And I must not neglect to describe the bathing in Wakimika, for it was unique. The would-be bather took his stand on the edge of the ledge, and then stepping carefully into the water, slid in an upright posture far out to sea like a ship from the ways. The ledge was perfectly smooth, and no ice was ever more slippery.

July 23. From Wakimika down the outlet to Obabika. No portage, although two are marked on the map. Camp on Obabika, on an island opposite the portage into Temagami; distance, about twelve miles.

Thanks to a good rubbing and dry clothes, our lame man was much improved in the morning, and we decided to keep on to Obabika. Our map showed two portages to the south of Wakimika, but noticing that the outlet stream had apparently been cut out, we determined to go through in the canoes. This proved a fortunate decision, for we had one of our most interesting morning's paddling down that narrow, sandy stream, through a dense forest. Many times we had to use a great deal of care in working our way under windfalls and around snags, but never once did we have to leave the canoes. It is doubtful whether the stream was at any point wide enough so that we could have turned a canoe about in it. After about two miles of twisting and turning we emerged upon a small, reedy pond. From that point to Obabika the stream was much wider, the woods were further back, and navigation was easy. Along this portion of the stream we saw many wild ducks.

Out upon Obabika a strong north wind was blowing, and we had a delightful paddle down the lake on the crests of the whitecaps. We lunched upon an island near the west shore where there had been an Indian camp. It was here that one of our canoes chafed a small hole through the canvas, the only leak that was caused during the trip. We repaired it the same evening with a little whitelead and canvas. Shortly after lunch we fell in with a couple of ranges who accompanied us as far as the island on which we made our camp.

Obabika is a fine lake with a total length of seven-teen or eighteen miles. It differs from Temagami in two important respects: it has few islands, and the water is amber-hued, like that of Lady Evelyn Lake and the Metabetchouan waters. Our camp was a very pleasant one, although for a time it looked as though we might have to go without a bed, since a colony of hornets dwelt perilously near the only fir trees. After supper, in the glow of a fine sunset, we took the lame man out trolling, and he took the largest lake trout of the trip, a fish weighing nearly four pounds.

July 24. From Obabika, over portage to Obabika Bay, an extension of the northwest arm of Temagami. Down the arm to our old camp near Bear Island; distance, about thirteen miles.

The rangers had promised to pass our way on their way back to Temagami, and we had half agreed to go over the portage with them. About seven o'clock I was aroused by the swift click of paddles against the gunwales of a canoe. Presently the sound ceased and I knew that the rangers were inspecting our camp for any signs of that early start that we were going to make. Seeing no signs of life—for nobody but myself had heard them—they continued on their way without us. About an hour later we tumbled out, disgracefully late—but why not at times have your nap out in the woods as elsewhere?

It was but a short paddle from our island to the portage, and the portage itself is only a few hundred yards in length. We were soon following the tortuosities of Obabika Bay, and reached the wide expanse of the Northwest Arm in time for lunch. A two-hour fight with a cross wind took us back to the little island camp near the Post at about half past three. It was homelike to find our bough beds undisturbed, and tent poles all cut and ready for use, for all of which we were grateful, for we were tired.

July 25. The wind shifted to the north in the night, and by morning a fine, cold rain was driving down the lake. By afternoon this had degenerated into a mist which interfered with our movements about camp very little. We celebrated our return by having a "royal gorge" that night. The menu consisted of bacon and boiled beans, fried rice cakes and maple syrup, hot biscuits and cocoa. This followed by a pipe before a roaring camp-fire put us in the proper frame of mind for a sound night's rest. But before we turned in, we discussed our enforced return to civilization, and decided to make an early start on the following day, fully expecting to start in the rain.

July 26. From Bear Island to end of Northeast Arm of Temagami. Camp, the same we occupied going in; distance, about sixteen miles.

We were off about eight o'clock, agreeably surprised to find that the rain had blown over in the night, and that it was a most beautiful day with clear, crisp air and a strong north wind. We had reduced our loads to the smallest dimensions, leaving behind everything that had served its purpose and repacking the remnant in the smallest possible space. Portages could now be made in practically one trip, although one man had to go back each time for some of the light stuff.

Bidding good-by to Mr. Woods and the friendly rangers at the Post, we headed for Metagama Point aided by the wind. After rounding the point we hugged the north shore as closely as possible, but even so, we caught it pretty strongly off one or two bays that we had to cross, and we congratulated ourselves that this same wind was not blowing from the east.

Passing over this portion of the country, which I have already described, I will pass on to the outlet of Rabbit Lake, which we reached on the afternoon of Monday, the 27th, having made four portages and about thirty-five miles in two days. This was good time for us, although in reality, rather slow going. While we were encamped at the outlet of Rabbit Lake, a voyageur passed us about nine o'clock in the evening, who made the whole trip from Temagami to the mouth of the Montreal River, a distance of about fifty miles, in eleven hours, traveling nearly all night and making nine portages. But he was professional, and we, as amateurs, were entirely satisfied with our rate of progress.

July 28. From outlet of Rabbit Lake down the Metabetchouan to head of Third Bass Pond. Four portages, all on the right bank. Camp, the same we had occupied before at the head of Third Pond; distance, about seven miles.

This was emphatically a day of work. But two miles down the river we came to the first portage. This is made necessary by the Rabbit Chute where the river boils down through a cleft in the rocks, and thence over a series of ledges. The portage is about three-quarters of a mile long. Then follow two more portages, and finally the long Side Rock, where the trail leads up and along the side of a hill of solid rock covered by a scanty growth of trees and bushes, among which are many blueberries. It is about a mile in length, and the footing in many places is none of the best. A spring brook crosses the trail just below its upper end, and we availed ourselves of its cold water at lunch. Here we saw the only clms we had noticed during our wanderings, likewise the only minister, an itinerant Presbyterian, carrying his own Peterboro canoe. He was bound for the country south of Rabbit Lake. It is not an easy parish for pastoral calls; but the life has its charms, and he seemed well content.

From the foot of the Side Rock Portage it was, but a short paddle to Fourth Bass Pond, where we struck our own trail again; for it was at this point that we had turned aside to enter McDonald Lake. Running down the swift water up which we had towed our canoes, we were once more at our former camp on Third Bass Pond. A fine drizzle set in as soon as we reached camp, and continued most of the night, but we had a good fire, and even accomplished a little fishing before darkness came on. Among the spoils was a good two-pound bass, taken off the rocks with the fly.

July 29. Through Third, Second, and First Bass Ponds. Over Clay Hill Portage, down the Metabetchouan, to Bonner's (Montreal River); distance, about eight miles.

We had now but one more portage to make, the dreaded Clay Hill; but we had a day in which to accomplish it, and so we decided to put all our duffle in practically final shape before leaving camp. After a heavy shower at about eight o'clock the sun came out, but the day was close and warm. We breakfasted at about half-past ten, and spent the rest of the morning in packing. In the course of this we made an inventory of our supplies, and it may perhaps interest those who take similar trips to know how we came out. There remained about 8lbs. of bacon (besides about 6lbs. given away at Bear Island), 1/2lb. macaroni, 1/2lb. sugar, 3/4lb. baking powder, 2lbs. salt pork, 3/4lb. tea, 3lbs. rice, 1/2 bar of soap, and 1 1/2 cans milk. Everything else had been eaten clean. On the whole, we were pleased with the closeness of our estimate. This surplus we left in our remaining box, and we have reason to believe that there was no waste, for we told one of the rangers where it was.

Then, having dedicated our cast-off clothes to the gods of the woods, we girded our loins for the final struggle with Clay Hill. It proved pretty hot, but a good bath at the end and clean clothes put us in fine fettle once more, and the three miles to Bonner's were made in good time.

Our trip was virtually at an end, and of the return to civilization little need be said. Early on the next day we took the steamer for Temiskaming, where we sold one of our faithful canoes, and saw it start back into the woods within an hour whither we should have been glad to accompany it. The same night we boarded the express at Mattawa, arriving next morning at the Canadian Capital. In Ottawa we were forced to spend most of the day, but the city is so beautiful that the time was well spent. Yes, our trip was over. But no one ever visits the Temagami country without bringing away a resolve to go again, and we are living in hopes that the happy time may not be overfar in the future.

## The Maiden Cruise of Istar.

From Greenport L. I., to St. Johns, N. B., and Return,  
July 16 to September 8, 1903.

BY BROOKS H. WELLS, NEW YORK CITY.

"O Ægir, friend, thy years are fleet—  
Soon comes the time of couch and staff;  
We follow thee with earnest feet,  
Nor dream thy joys in half.  
The hurrying wine of living strife  
Upon the eager lip is sweet,  
And to the jeweled brim we'll quaff  
Thé glorious cup of life.

"O Ægir, take my hands in thine—  
Soft ease and safety are but vain;  
We'll quaff with thee the windy wine  
And dare the farthest main.  
Thy breath is round us, wild and warm,  
And bright along the rushing brine  
We sweep with all thy shining train  
On pluméd wings of storm."

—McNeal.

THE Maine coast is beautiful, and could we eliminate the fog would be a paradise for the small boat. Even with the fog, cold, wet, and blinding, and with weather as fickle as chance, it is most fascinating to him who would lie near to nature's heart, who loves the sea, and who delights in overcoming difficulties purely for the pleasure of it.

If he goes as he should, as his own skipper, crew and cook, or with a companion or two to do their share, he is certain to be a better man for it both in body and mind, for the work exacts persistence, courage, coolness in the face of danger, and quick decision. Try it if you can get a boat that is strongly built, decked, and made so that all openings can be securely closed, and deep enough so that a capsizes is unlikely. Size is of less importance than staunchness. The yawl rig is the safest and most easily managed.

Starting from Long Island Sound the first bit of open sea comes in the twenty-five miles from Watch Hill by Point Judith to Newport, but the nearly completed har-

bor of refuge just west of the point makes a convenient, even if somewhat treacherous, haven for the belated sailor. From Point Judith to the Vineyard Sound is another long stretch of about twenty-five miles of open water, but, if you like, you can coast along by Newport, Sakonnet, and the Hen and Chickens and never be more than five miles from a harbor.

The most exposed part of the run is that from Hyannis

Vineyard Sound Light Vessel.

over the shoals and up the cape to Provincetown or Cape Ann. For this the little fellow must wait for favorable weather, and while waiting should study the Current Table for Nantucket and the Vineyard Sound in Part III. of the U. S. Coast Pilot, so as to be able to get clear over the shoals with a fair tide. If drawing under five feet he may try the Point Channel after he has carefully studied the large scale chart, remembering that he must have a fair tide and must keep close in to the beach until past the Monomoy light. The shoals near the beach off Monomoy require care, as they change from year to year.

From Cape Ann to Portland you are seldom more than eight miles from a harbor, and from Portland to Little

River there is always a shelter in sight. From Little River to St. John, N. B., the way is more exposed, but may be negotiated with care.

The small boat should usually be content with a point not further east than Mt. Desert, or Winter Harbor, and should not venture beyond until both skipper and boat have been proved worthy.

In preparing for a cruise, be extravagant when it comes to matters of safety, and have good side and anchor lights.

Get the best 3 1/2-inch or 4-inch liquid compass that you can buy, and a good binnacle. Set it carefully so that a line passing through the lubber's point and the center of the card is exactly parallel with the fore and aft line of the keel.

Know the deviation of your compass on all courses. There may be none on a small boat, but be sure about it. Always stow all iron articles in the same place, and as far away from your compass as possible. Don't, in a fog, stand your horn upright near the compass, and expect to fetch where you think you are pointing.

Carry the latest buoy and light list and a full set of Government largest scale charts of the waters you expect to sail over. Until you become expert, lay off every course with parallel rule and dividers and sail by compass and log. You then soon learn to allow for leeway and current, and to know your exact position at all times, so that when fog comes you have confidence to hold your course, and skill to make it.

Keep yourself familiar with every line, spar, and fastening of your boat and rigging, so as to detect and remedy any sign of weakness or wear.

Carry two anchors of good weight, long shanked and stocked, and plenty of spare cable, not too heavy, but reliable. Then carry an extra anchor below. If you have to drop your hook on rocky bottom, first carry the cable down the shank of the anchor and secure it to the crown by a clove hitch, then bring the cable back to the ring and make it fast with a single loose turn of marline. Neglect of this precaution has lost many an anchor, but when an anchor is "muzzled" in this way don't put too much faith in it, as it may break out when you most wish it to hold.

The blue pigeon" is not so frequently needed on the Maine coast, where the rocks and reefs usually rise abruptly from deep water, as it is on the sandy shores and bars south from Boston, but don't forget it. Carry

a seven-pound lead with seven fathoms of light line to use in picking your way to an anchorage in a fog and for making sure of the character of the bottom. If you expect to go offshore, a deep sea lead that can find the ooze at one hundred fathoms will be useful.

Always know that your pump is in working order. Keep your fresh water tank full when you can, and have stores to last a fortnight in case of the possible accident of being blown to sea.

Keep an observant eye on the weather, and learn to read the lessons of the air, clouds, and sky. Carry a good aneroid barometer. Always expect fog when the wind comes off the ocean from E. by S. to W.S.W., and always expect an early morning north wind to fail by 8:30 or 9 A. M. Sometimes you will be pleasantly disappointed in both cases, but expect the worst.

Try your boat to the utmost limit on occasions when

Wood Boat on the St. John River.

you have a harbor close under your lee, and so learn what she can do in a fight against sea and wind, and give her your confidence accordingly, but when caught outside in a blow, go easy.

Istar is a younger sister of Altair, and in time may win her way as deeply into her skipper's heart. She is described and pictured in the *FOREST AND STREAM* for March 21, 1903; 41ft. 3in. over all, she is 27ft. 6in. on the waterline, and has an extreme beam of 10ft. She draws 5ft. 6in., and has a least freeboard of 2ft. 8in. With 7,000 pounds of lead on her keel she was not stiff enough to suit her skipper, and about 900 pounds more were stowed inside, with a remarkable increase in stability. She is rigged as a yawl with double headsail, and carries a topsail on a pole mast. Her balloon jib is large, and is arranged so that it can be used also as a spinnaker. This sail proved of the greatest value in the light winds of midsummer, and would pull like a horse when everything else hung flat. The boat is framed in oak, and planked with cedar. There is 6ft. headroom in the cabin, berths for four, and room for a man forward. On the present cruise the skipper was accompanied by a friend, Sedgwick S., and carried for the first time a paid hand, who will be known in the narrative as the mate.

In all the glory of fresh paint and shining varnish, Istar slid off the ways on the morning of July 16, just as the sun had risen high enough to peep at her over the top of the Greenport breakwater, and at 9:30 she was running with all sail set toward the east and the fascination of the wide sea. The cruise had begun auspiciously. The air was fresh and the heavens a transparent blue. The West Wind was turbulent, but as clear-eyed and sunny as the skies above him, and the Sea smiled as he kissed her.

The Virgin's Breasts—Moosabec Reach.

At 11:10 passed the Gas Buoy off Gardiner's Island and set a course E. by N. for the whistle off Point Judith. A little later, while looking at the fort on Little Gull, we saw the flash of a gun, a second after heard the roar of a heavy shell passing directly over us, and turning quickly caught a glimpse of the black dot of the projectile as it dropped toward the point where a jet of white water marked its fall.

Passed Judith at 5, and at 7 were getting supper in Newport Harbor.

We left Newport the next day at noon, having waited to compare our watches at the falling of the time ball on the torpedo station, and sailed away over a little rounded swell to the Vineyard, anchoring for the night well up in Tarpaulin Cove. The next morning ran over to the Vineyard Haven and anchored off the village at the head of the harbor. Quite early in the morning the sky began to darken and looked smooth and greasy, except where the clouds banked heavily in the south. At noon south-

west storm signals were set on East Chop. About 3 P. M. the barometer began to fall slowly, and at 10, when the gale broke loose, had dropped three-tenths of an inch. The wind backed suddenly to E.S.E., and blew furiously for three hours while we rode securely to two anchors with a long scope of cable. Others were not so fortunate, for a number of small yachts dragged or broke away from their moorings and went high on the beach.

This blow was one of the most dangerous summer storms that have swept Nantucket Sound in years. Fortunately it gave many hours' plain warning of its coming, and nearly all craft were able to make harbor. That Ayaya and Emblem were able to ride safely through the fury of the night in the open water of the Sound, exacts the highest tribute to the staunchness of the craft and to the skill, courage, and efficiency of their skippers.

The skipper had to wait several days at the Vineyard for certain important letters, and then ran down to Hyannis Port. The next morning opened showery with thin fog. At 9:30 we ran out from behind Hyannis breakwater and started to beat with light S.E. wind and head tide down the Sound to the Handkerchief Light vessel, which we passed at 3:15 in a clear air and the first of a fair tide. At the entrance to the Pollock Rip Slue an extremely dense fog rolled in, through which the Shoal Light vessel loomed gigantic when we passed her close aboard to port at 5:15. By log and compass we sailed along through the night, passing many sailing vessels and steamers, but all at safe distance. At 2 A. M. the fog was extremely thick and the wind light S.S.E. By dead reckoning we were then five miles N. 3/4 E. from the Highland Light, and heading in the same direction for Cape Elizabeth Lights, 86 1/2 miles away. In answer to three blasts on our horn, from somewhere ahead in the blackness came the hoarse call of a steamer's whistle. Again we blew, and again came back the answer, this time much nearer and from well off our port bow. A few seconds later the white bow lights of a big steamer came into view seemingly higher than our masthead. There was an instant's vision of a knife-like bow towering over us and the hissing of a steel stem through the sea. The mate had thrown the tiller hard up, and, as it rushed by with hardly two feet to spare, we came around parallel with the steamer, and in the white water from its bow.

The skipper had been forward manipulating the horn. As he went aft he felt that he was curiously unmoved by the incident, and appreciating fully the danger, rather wondered that he was not frightened. Yet it was with a feeling of almost resentment that he saw the mate, who, by his quickness in making the right move at the right instant, had turned us aside in the nick of time, sitting with

A Day Mark—Mussel Ridge Channel.

one hand on the tiller and the other pressed over his heart, and with wide eyes that still stared unwinking into the blackness. Sedgwick slept peacefully below. We held our course until twenty-six miles from the Highlands. Then, the dense fog and light airs which had kept us awake all night continuing with no prospect of a change, we ran off for Eastern Point, smelled our way into Gloucester, had an early dinner, and turned in before five for a good long sleep.

July 24-26. Beautiful clear, cool morning. Light N.W. wind. Sailed at 5:30 A. M., and had breakfast under way. Becalmed three miles N.E. from Halibut Point at 9 A. M., and drifted with occasional light airs all day, so that it was 6:30 when we passed the gray tower of Boone Island. After this the wind came light but steady from the north, and carried us to an anchorage in Portland harbor by 2 A. M. Slept soundly until 8. Breakfasted luxuriously at 9, and early in the afternoon sailed away among the ever-lovely islands of Casco Bay, and put in for the night at Potts Harbor. It rained hard all night, but was clear and calm the next morning. Sailed about noon and drifted along in light airs to Boothbay. Soon after we got under way the strap holding the upper peak halliard block parted, fortunately in a light air, while we had the topsail on her so that the slender line of the topsail sheet held the gaff from dropping. A few minutes later the shackle holding the sail at the jaws of the gaff was found to be broken, and then, with a sudden leap from the deck, one of the main sheet blocks went flying out to the boom end. "This is because we are sailing on Sunday," said the mate, solemnly, as we were making temporary repairs. Barometer dropped steadily all day, falling from 29.98 to 29.61. A heavy dark cloud bank in the north and west promised wind by nightfall, and it kept its promise.

July 27. A fresh gale blew from N.N.W.

The mate, who is very expert in all that pertains to the sailor's handicraft, finished the new strap for the peak block about 10 A. M. As Istar was dragging two anchors and in danger of going ashore, the wind having freshened to over forty-five miles an hour, we got under way with close reefed mainsail, small jib and mizzen, but had to take in the mizzen a few minutes later. Ran off easily and expected to make Owl's Head, but when we opened up the bay beyond Pemaquid the flying spray driven from the crests of the steep offshore chop, soon filled and swamped the tender which we towed close under the

counter. The wind came out more ahead, the swamped boat towed very heavily, and we found it best to run into the Herring Gut, where we dropped both hooks and rode with forty fathoms of cable to each.

July 28 we made one of the most enjoyable runs of the cruise. Passed out by Marshall Point Light at 7:45 A. M. Wind light N.; Whitehead at 9:03, fair tide. In the Mussel Ridge were becalmed for a few minutes until the S.W. wind came and blew us along across west Penobscot Bay, Fox Island Thoroughfare, with its charming reaches, and by Goose Rock Light at 1 P. M. Here the wind freshened and held true and steady for the rest of the day. Passed Lazygut Ledges at 3, Bass Head at 4:15, and Winter Harbor Light at 6:45, making the average speed for the day's run six miles an hour. A thickening in the S. and S.E., falling barometer, increasing moisture in the air, and increasing wind presage rain and wind for to-morrow.

July 29 gave us rain, fog, and S.E. wind. On the 30th

An Eel Fisherman—St. John River.

the wind had become a gale, with a rising barometer. The 31st opened beautiful and clear. A good sailing breeze came out from the west about 9:30, and we ran out from Winter Harbor into the great swells that were rolling heavily in from the S.E. By Schoodic, Petit Manan, through Moosabec Reach, by the Virgin's Breasts to the rocky islets of the Brothers the wind held fair and fresh, so we sailed on over the blue for Little River. Alas, the tide began to run ebb and the wind to fail as Istar turned inquiringly along the west shore of Machias Bay until she found her way to a snug berth in the beautiful little cove called Buck's Harbor, where she closed her wings for a night's rest. The run of forty-three miles was made in six hours and thirty-six minutes.

August 1. The sun was shining high above the hills through an air so crisp that one felt it a joy merely to be alive, when we ran between the heads of Buck's Harbor, across Machias Bay and through the intricate passage of Cross Island Narrows. Here we met the strong ebb coming out of the Grand Manan channel, and made slow headway, not passing Quoddy Head until 12:20 with the first of the flood. Went by Lubec to Eastport for letters and provisions, then across the line into Canada and up through the islands at the entrance of Passamaquoddy Bay to Bliss Harbor.

The tidal currents about here are very strong, and one should study chart and Coast Pilot carefully before sailing. At the entrance between Eastport and Deer Island whirlpools are formed at certain times of the tide which rival the famed Maelstrom and have been known to engulf vessels of twelve tons. At the other entrance, the Letite Passage, the swirling tides setting over sunken reefs form dangerous overfalls. Bliss Harbor, an oval basin a mile and a half long, with deep water, bold, rocky

Passamaquoddy Bay—Off Eastport.

shores, and good holding ground, is an ideal anchorage, but lonesome, desolate, and deserted most of the time. The skipper never sees it without wishing that he could "rub the lamp" and transport it bodily to some place where it could be appreciated.

The next day we ran up to St. John. The coast is bleak, desolate, and bold, with a sombre beauty of its own. St. John is a picturesque and active shipping port of some fifty thousand inhabitants, and much of interest to the visiting yachtsman. The river, a noble stream navigable for ninety miles, pours its flood into the bay through a defile in the rocks scarcely forty yards wide. The tidal change above the defile is very small, while on the bay side is a rise and fall of from twenty-three to twenty-seven feet, so that the water of the sea is alternately far above and far below that of the river. Vessels can only pass through these "reversible falls" during the few minutes in each tide when the waters are at the same level. We went ashore to report at the Custom House

and to pay our respects to Mr. A. E. Adams, a prominent business man, a member of the Royal Kennebecasis Y. C., and a most charming and courteous gentleman to whom, and to Dr. Daniel, a former mayor of the city, we were indebted for many favors and much information. To them we extend our thanks and heartily commend any visiting yachtsmen. The yacht club have issued a small plan of the river which makes it easy for a boat drawing under eight feet to go up as far as Fredericton. Below Gagetown the navigation is very easy, above that point it is safer to have a pilot, and there is none better than Capt. Ferley. The river is ideal for sailing or canoeing, and one could spend a whole summer exploring its beauties.

One bright morning a tug pulled us through the falls on the "flood slack," and we sailed away up the river through picturesque placid reaches edged by high, rounded, wooded hills, and with many glimpses of little sandy points and stretches of gleaming waters. Anchored for the night off the grassy edges of the Mistake, and when morning came hoisted sail and again resumed our dreamy way up the river. By and by the hills began to recede, and we sailed through a flatter and more fertile land. But the wind kept light, we only crawled slowly up, and we reached our time limit at the upper end of Little Musquash and turned Istar's bow homeward.

The minute she started for home she began to go like a hungry horse turned toward his stable. With a freshening wind and fair tide she reached rapidly down the stream, running in three hours nearly to our anchorage of the night before. Choosing a little cove by the church just above Van Wart's, we made snug for the night out of the way of any stray steamer or raft that might come along. Did not get away from our anchorage until about 9 A. M., and then soon had to anchor again and wait until noon for wind enough to enable Istar to beat her way against the incoming flood. Shortly after the wind freshened to a good whole sail breeze, but from dead ahead, and each time we came to a turn in the river the wind was still ahead. At 5:30 we were tying up alongside a tug at Indiantown just above the falls, and at 8 the next morning were passing a line to the Wm. H. Murray for a tow through the gorge and out to the southern end of Partridge Island.

Here we found a confused old sea and a light wind from S.E. The wind freshened rapidly and kicked up a stiff chop against the eastward-flowing current. At 9:45 Musquash Light, marking the harbor where Altair had rested for several days on her last cruise, was abeam, and it was slack water. At 11:20 passed Point Lepreau close in to keep out of the rip and bore away for Bliss Harbor. Wind fresh E. When five knots N.E. from East Wolf decided to run down to Grand Manan Channel. Day cloudy. Considerable sea. Beautiful sailing. Passed South Wolf Light at 1:30. Set spinnaker, and at 3:10 Quoddy Head was N.W. by W., distant two and a half miles. Here we met the three-mile current of the flood and made slower progress, not entering Little River, twelve miles beyond, until 6:24. Night closed in with rain and fog.

[TO BE CONCLUDED.]

## Norwalk Y. C.

BY GEORGE E. CURTIS, SECRETARY NORWALK Y. C.

It has been said that the happiest nations are those which have no history. Be that as it may, it is certain that the existence of the Norwalk Y. C. has been as harmonious as its history is brief and uneventful.

Back in the early '90s, there existed in South Norwalk, Conn., an organization known as the Norwalk C. C. Its membership, which was very small, was composed of good fellows who loved the water and who were never happier than when navigating the perilous expanse of Norwalk Harbor in their little craft.

The "club house" was a little shack at the eastern end of the drawbridge, at the head of the harbor proper.

The writer, not having been a fellow member with those choice spirits, cannot tell from experience of the doings in that little boat house when the members were gathered there after their boats were hauled in out of the wet. But no one who knows the crowd will suppose that they spent the time in sleep. As time passed, it was borne in upon this little group, who numbered less than a dozen all told, that for various reasons their quarters and facilities were inadequate. To remain where they were meant that the membership could not be increased, nor was there suitable anchorage there for real boats, which by that time some of the members aspired to own. So out of their necessity was born the idea that resulted in the organization of the Norwalk Y. C. A committee was appointed to consider ways and means, and search for a suitable site was begun.
